(Ib)

EDUC 180. Interdisciplinary Topics in Education. 4 Units.
Analysis of issues in education from interdisciplinary perspectives. Topics covered vary with interests of instructor.

Repeatability: Unlimited as topics vary.

EDUC 181A. Principles and Practices of Coaching Sports I. 4 Units.
Focuses on foundational theories and instructional practices in coaching sports from fourth grade to the collegiate level. Prepares students for the coach's mandatory state certification examination for high school sports in California.

EDUC 185. Social Development in Education. 4 Units.
Examination of contextual, psychosocial, and biological factors contributing to the social development of children and adolescents. Theoretical perspectives, empirical findings, and methodological issues are emphasized. Implications of the scientific evidence for practical and policy decision-making surrounding development are discussed.

EDUC 190. Principles and Practices of K–6 After School Sports and Fitness. 4 Units.
Focuses on foundational theories and instructional practices in after-school sports and fitness for K–6 students. Includes a 20-hour field experience in an after-school setting.

EDUC 191. Advanced Fieldwork in After-School Education. 4 Units.
Capstone fieldwork experience for students seeking to earn the Department of Education-sponsored Certificate in After-School Education. Students are required to complete 50 or more hours of fieldwork and related assignments at an instructor-approved after-school program.

Prerequisite: EDUC 160

EDUC 193. Directed Studies in Early Childhood Education. 2-4 Units.
Advanced study of early childhood education under the direction of a faculty member, coupled with a community-based practicum.

Repeatability: May be repeated for credit unlimited times.
EDUC 198. Directed Research in Education. 2-8 Units.
Individually or in small groups, students are exposed to or participate in work related to a faculty member's research. Students also attend a weekly seminar and complete a research paper or comparable project.

Repeatability: May be taken for credit for 12 units.
Restriction: Sophomores only. Upper-division students only.

EDUC 199. Individual Study. 1-4 Units.
Intensified advanced study in areas in which a student has considerable background, under the direction of a faculty member who will guide and evaluate the study.

EDUC 201. Teachers' Lives and Policy Environment of Teaching. 4 Units.
Examines research and public perceptions about school-based educational processes, the influence of institutional structures and educational policy on the lives of teachers, and the challenges of school reform at the local and classroom level.

Restriction: Graduate students only. Education-MA/PhD Majors only.

EDUC 202. Outcomes of Schooling/Student Assessment. 4 Units.
Focuses on establishment of learning goals and assessment tools that are valid for all students, inform educational decisions, and promote educational success. Provides critical examination of different forms of assessment used in K–12 schools, including developmental assessments and appropriate interventions.

Restriction: Graduate students only. Education-MA/PhD Majors only.

EDUC 203. Advanced Concepts in Learning and Cognition. 4 Units.
Theories of cognition and their application to thinking and learning in school settings. Topics include memory, information processing, knowledge representation, problem solving, meta-cognition, and intelligence.

Prerequisite: EDUC 173
Restriction: Graduate students only. Education-MA/PhD Majors only.

EDUC 205. Critical Assessment of Teaching Practice and Learning. 4 Units.
Student articulates a problem in instructional practice and uses research on cognition, assessment, and other tools to understand the problem. Capstone course emphasizes practices of teacher inquiry, reflection, and professional collaboration. Student's written analyses are evaluated as program's Comprehensive Examination.

Restriction: Graduate students only. Education-MA/PhD Majors only.

EDUC 206. Design of Learning Environments for Teachers in Secondary School Subjects. 4 Units.
Research on comprehension, conceptual understanding, reasoning, critical thinking, and problem solving with applications to pedagogy in secondary school subjects. Required for M.A.T. single subject students, unless substitution of Education 207 is authorized.

EDUC 207. Cognition and Pedagogy in Quantitative Literacy. 4 Units.
Reviews research on cognition in elementary mathematics, including numeracy, fractions, probability, proportionality, measurement, geometry, algebra. Emphasizes instructional approaches consistent with this research knowledge. Required for M.A.T. multiple subjects students, unless substitution of Education 206 is authorized by the Department.

EDUC 208. Reading Development. 4 Units.
Course will focus on the language and literacy development of typically-developing native English-speaking students in the U.S. Students will learn about seminal and recent research in the field of reading development.

Restriction: Graduate students only.

EDUC 210. Language, Literacy, and Discourse. 4 Units.
Introduces students to the interdisciplinary study of language, literacy, and discourse across historical and educational contexts. Addresses theories of how people learn, interact, and make meaning through a variety of semiotic resources, including oral communication, print, and digital media.

Restriction: Graduate students only.

EDUC 211. Writing Theory and Practice. 4 Units.
Offers an overview of histories, theories, and research in the field of composition studies from 1950 to the present. Addresses the influences of theory and research on teaching practice at K–12 and college levels.

Restriction: Graduate students only.
EDUC 212. Literacy and Technology. 4 Units.
Examines theoretical, historical, and contemporary relationships of technology and literacy. Topics include online communication, multimodality, video games, the use of technology for literacy instruction in schools, and research approaches for investigating literacy development with technology.
Restriction: Graduate students only.

EDUC 218. Special Topics in Teaching and Learning. 4 Units.
Advanced seminar designed to engage students in highly interactive examination of current issues in teaching and learning. Topics and content vary by quarter, depending upon research interests of the faculty and students.
Repeatability: May be taken for credit 10 times as topics vary.
Restriction: Graduate students only.

EDUC 220. Developing Adolescent Literacy. 4 Units.
Examines how adolescents leverage vocabulary knowledge, word-reading skills, background understanding, and knowledge of content-specific text features to master an increasing range of texts both independently and for subject-area learning.
Restriction: Graduate students only.

EDUC 222. Research Epistemologies and Methodologies. 4 Units.
Introduction to epistemological underpinnings of educational research and to a range of research methodologies in education. Includes examination of quantitative and qualitative studies through reading and analyzing contemporary research. Critique of selected research studies pertinent to educational practice and policy.
Restriction: Ed.D. Program students only.

EDUC 225. Learning, Development, and Culture. 4 Units.
Explores issues of learning and development through a cultural lens. The interplay between culture and learning and culture and development is analyzed through the discussion of relevant readings from both psychological and anthropological research traditions.
Restriction: Graduate students only.

EDUC 229. Theories of Human Development. 4 Units.
Examines developmental theory as a guide for research and practice in education. The evolution of classical development theories and the emergence of new theoretical models are considered. Theoretical perspectives include ecological systems, life course, psychobiology, attachment, and social-cognitive theories.
Restriction: Graduate students only.

EDUC 230. The History and Culture of Schooling in the United States. 4 Units.
Considers the historical, cultural, and structural processes that contextualize American schooling. In particular, examines the roles of race, class, and gender in the context of public education in the United States.
Restriction: Master of Arts in Teaching Degree students only.

EDUC 235. Psychology of Reading Acquisition. 4 Units.
Surveys theory and empirical evidence concerning acquisition, cognitive processes, and consequences of skilled reading. Explores psychological models of skilled reading, how children acquire reading and writing skills in their home and second languages, cognitive consequences of acquiring literacy skills.
Restriction: Graduate students only.

EDUC 238. Special Topics in Human Development. 4 Units.
An advanced seminar designed to engage students in highly interactive examination of current issues in human development. Topics and content vary by quarter, depending upon the research interests of the faculty and students.
Repeatability: May be taken for credit 10 times as topics vary.
Restriction: Graduate students only.

EDUC 240. Instructional Design and Education Technology. 4 Units.
Design of high-quality instructional units consistent with current theory and research in cognitive psychology and constructivist-compatible instructional practice and infused with appropriate uses of computer and video technologies. Students design a complete instructional unit using these principles.
Restriction: Graduate students only. Education-MA/PhD Majors only.
EDUC 241. Children’s Sense Making in Science. 2 Units.
Investigates elementary students as individuals who construct understanding of concepts through their interactions with others and the world around them. Observations of children in informal settings to analyze learning in context.
Restriction: Master of Arts in Teaching Degree students only.

EDUC 243. The Policy Environment of Teaching. 2 Units.
Examines research and public perceptions about school-based educational processes, the influence of institutional structures and educational policy on the lives of teachers, and the challenges of school reform at the local and classroom levels.
Restriction: Master of Arts in Teaching Degree students only.

EDUC 245. Learning Inside and Outside of School. 2 Units.
A field-based course focused on observing adolescents in out-of-school contexts to examine adolescent learning and development in a range of contexts, how out-of-school contexts motivate learning and development, and consider the implications for teaching.
Restriction: Master of Arts in Teaching Degree students only.

EDUC 246. Teaching Investigations: Identifying Dilemmas of Practice. 4 Units.
Focuses on identifying problems of teaching practice that arise in student teaching, examining the theoretical foundations that underlie problems of practice, and developing approaches for inquiring into strategies to systematically address instructional challenges.
Restriction: Master of Arts in Teaching Degree students only.

EDUC 247. Teaching Investigations: Exploring Dilemmas of Practice. 4 Units.
Focuses on exploring problems of teaching practice that arise in student teaching, drawing on research to examine the theoretical foundations that underlie problems of practice, and to propose courses of action to address and study educational interventions.
Prerequisite: EDUC 246
Restriction: Master of Arts in Teaching Degree students only.

EDUC 248. Understanding Teacher Agency. 4 Units.
Considers how teachers can become agents of change within their school contexts, through their participation in professional organizations and via social media. Candidates experiment with using different avenues for sharing images of practice and action research.
Prerequisite: EDUC 246
Restriction: Master of Arts in Teaching Degree students only.

EDUC 251. Educational Policy and Politics. 4 Units.
An in-depth study of topics relevant to educational reform and policy-making. Topics include: the policy-making process, the role of values and interest groups, policy analysis, equality of educational opportunity, systemic reform, implementation, and politics at the school site.
Restriction: Graduate students only.

EDUC 254. College Access and Persistence. 4 Units.
Introduction to how social, political, and economic forces impact college access and persistence in the U.S. higher education system. Investigates historical perspectives and theoretical underpinnings of college access and retention research and the link between K–12 schooling and postsecondary stratification.
Restriction: Graduate students only.

EDUC 255. Immigration and the New Second Generation. 4 Units.
Focuses on Asian, Latino, and Black children of immigrants. Investigates how today’s second generation adapts, incorporates into the U.S. social structure, transforms the social and economic landscape. Explores assimilation, immigrant families/communities, language, racial/ethnic identities, gender, education, changing U.S. racial structure.
Restriction: Graduate students only.

EDUC 258. Special Topics in Educational Policy and Social Context. 4 Units.
An advanced seminar designed to engage students in highly interactive examination of current issues in educational policy and social context. Topics and content will vary by quarter, depending upon the research interests of the faculty and students.
Repeatability: May be taken for credit 10 times.
Restriction: Graduate students only.
EDUC 259. Community Research and Action. 4 Units.
Introduces the theoretical underpinnings and research approaches of the field of Community Psychology. Project-based course focused on research and action in communities, organizations, and other extra-individual units (e.g., schools).
Restriction: Graduate students only.

EDUC 261. Social and Cultural Foundations of Education. 4 Units.
Provides a critical understanding of the social and cultural foundations of education through reproduction theory. Explores the unique ways in which culture and power intersect within schools and schooling systems to reproduce and resist educational inequality.
Restriction: Graduate students only.

EDUC 264. Economic Foundations of Education and Social Policy. 4 Units.
Beginning/intermediate microeconomics course provides students with an introduction to how economists think about household decision-making, markets, benefit-cost analysis, social policy issues in general and education policy in particular.
Restriction: Graduate students only.

EDUC 265. Applied Regression Analysis for Education and Social Research. 4 Units.
Provides students with a working knowledge of multiple regression and the statistical analysis of longitudinal data. Topics include a review of the OLS regression model, event-history methods, and various other techniques for analyzing longitudinal data.
Prerequisite: EDUC 288B
Restriction: Graduate students only.

EDUC 267. Classroom Research Methods. 4 Units.
Uses students’ research problems as the basis for exploring methods—teacher and student observation, interview, case studies, think alouds. Intended for doctoral students with a specific research question and very good grounding in the literature related to their question.
Restriction: Graduate students only.

EDUC 274. Studies of Professional and Staff Development. 2-4 Units.
Research and theory of effective strategies for professional and staff development. Topics include: adult learning as related to professional growth of teachers, staff development as vehicle for systemic reform, reforms to enhance teacher professionalization and empowerment.
Restriction: Doctoral students only.

EDUC 278. Experimental Designs in Educational Research. 4 Units.
Designed to enable students to think critically about experimental research, and to develop an understanding of how to design and conduct experiments. The overall goal is to prepare students to independently plan and implement an experimental research study.
Prerequisite: EDUC 222
Restriction: Graduate students only.

EDUC 280. Research Methods. 2-8 Units.
Provides practitioners at advanced degree level with insight and leadership skills for working with increasingly diverse school populations. Content varies with interest of students and instructors. May focus on populations or broader content area such as education reform in California.
Repeatability: May be taken for credit 3 times.
Restriction: Doctoral Degree candidates only.

EDUC 282. Graduate Seminar in the History of the Philosophy of Education. 4 Units.
Draws upon results in the historical development of the philosophy of education from Plato, Quintillian, Augustine, Locke, Rousseau, to more contemporary thinkers such as Dewey, Freire, Egan, and Rorty.
Repeatability: May be repeated for credit unlimited times.

EDUC 283A. Qualitative Research Methods in Education I. 4 Units.
Introduces students to qualitative research methodologies and methods and explores strengths and challenges of this research tradition. Topics include logistical and ethical issues, reliability, validity and generalizability, and the role of reflexivity. Students will also engage in fieldwork.
Prerequisite: EDUC 222
Restriction: Graduate students only.
EDUC 283B. Qualitative Research Methods in Education II. 4 Units.
Provides methods for conducting and analyzing qualitative research in educational settings. Topics include data collection, coding, representing qualitative data, and using software for qualitative data analysis.

Prerequisite: EDUC 283A
Restriction: Graduate students only.

EDUC 285. Theories of Learning Cognition. 4 Units.
Overview of theories applicable to learning in schools and extracurricular contexts. Cognitive, psychometric, behavioral, and neuroscience perspectives are applied to such topics as memory, knowledge structures, problem solving, motivation, self-referent beliefs, expertise, assessment, and cognitive abilities, including intelligence.

Restriction: Graduate students only.

EDUC 287. Quantitative Data Analysis in Education Research and Evaluation. 4 Units.
Covers statistical aspects of survey-based evaluations and quantitative research in education. Includes sampling, coding open-ended information, data management, scale construction, statistical analysis, and presentation of findings. Students analyze data sets—a district-based evaluation and a national survey—using SPSS.

Prerequisite: EDUC 281

EDUC 288A. Educational, Social, and Behavioral Statistics. 4 Units.
Designed for graduate students with previous course work in statistics, including experience with statistical software such as SPSS. The emphasis is on regression analysis and the general linear model. Students learn to analyze real data using Stata software.

Prerequisite: Prior coursework in statistics, and experience with statistical software such as SPSS.
Restriction: Graduate students only.

EDUC 288B. Structural Equation Modeling for Educ, Soc & Behavioral Analysis. 4 Units.
Rigorous introduction to structural equation modeling for students with strong prior course work in statistics. Topics include path diagrams, SEM with observed variables, factor analysis, SEM with latent variables. Maximum likelihood estimating, goodness-of-fit measures, nested models, related topics.

Prerequisite: EDUC 288A
Restriction: Graduate students only.

EDUC 289. Use of Video in Educational Research. 4 Units.
Provides students with conceptual and methodological tools for using video in educational research. Students work with their own video data or with publicly accessible databases.

Restriction: Graduate students only.

EDUC 295. Pre-Dissertation Research. 1-12 Units.
Independent study course taken under the direction of a faculty member who guides the student's research. May include guidance on data collection, methodology, human subjects protocol, conference presentation, scholarly publication, program benchmark activities.

Grading Option: Satisfactory/unsatisfactory only.
Repeatability: May be repeated for credit unlimited times.

EDUC 296A. Professional Writing in Educational Research I. 2 Units.
First of a two-course series designed to extend students' knowledge of conducting and publishing educational research. Topics include the logic of research and how to effectively communicate research findings, with particular emphasis on proficient scientific writing.

EDUC 296B. Professional Writing in Educational Research II. 2 Units.
Second of a two-course series designed to extend students' knowledge of conducting and publishing educational research. Topics include the logic of research and how to effectively communicate research findings, with particular emphasis on proficient scientific writing.

EDUC 298. Independent Study. 1-8 Units.
Independent research on topics related to education.

Repeatability: May be repeated for credit unlimited times.
Restriction: Graduate students only.
EDUC 299. Dissertation Research. 1-12 Units.
Specifically designed for students researching and writing their dissertations.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Restriction: Doctoral students only.

EDUC 301. Directed Elementary Field Experiences in Diverse Schools. 2 Units.
Fieldwork experiences and seminars to provide introduction to the California Teaching Performance Expectations, including guidelines for professional expectations, observation and participation in classrooms, instructional planning, classroom management, and formative experiences and preparation for the state-mandated Teaching Performance Assessment.

Grading Option: Satisfactory/unsatisfactory only.

Restriction: Master of Arts in Teaching Degree students only.

EDUC 302. Directed Secondary Field Experiences. 2 Units.
Field work experiences and seminars to provide introduction to the California Teaching Performance Expectations, including guidelines for professional expectations, observation and participation in classrooms, instructional planning, classroom management, and formative experiences and preparation for the State-mandated Teaching Performance Assessment.

Restriction: Master of Arts Degree students only.

EDUC 304. Student Teaching in the Elementary Schools. 4-12 Units.
Student teaching seminars prepare candidates for assumption of classroom instructional responsibilities in accordance with State credentialing requirements. Four full days a week of student teaching in public school elementary classrooms in winter quarter and five full days in spring quarter.

Repeatability: May be taken for credit 2 times.

Restriction: Master of Arts Degree students only.

EDUC 305. Learning to Learn from Teaching in Secondary Schools. 4 Units.
Analytic tools for (1) observing and reflecting on observed instruction; (2) examining student thinking and the relationship between teaching and learning; (3) understanding particular components of the teaching/learning process; and (4) planning effective instruction including innovative teaching practices.

Restriction: Master of Arts in Teaching Degree students only.

EDUC 306. Supervised Teaching in Bilingual Education, Elementary. 4-12 Units.
Student teaching experiences in bilingual public school classrooms to include orientation, regular seminars, and preparation for bilingual classroom instructional responsibilities in accordance with State credentialing requirements and in conjunction with the public school calendar.

Repeatability: May be repeated for credit unlimited times.

Restriction: Master of Arts in Teaching Degree students only.

EDUC 307. Student Teaching in Intermediate/Secondary School. 2-16 Units.
Student teaching includes orientation, seminars, and preparation for and assumption of secondary school classroom instructional responsibilities in accordance with State credentialing requirements and in conjunction with public school calendar. Five full days a week in both winter and spring quarters.

Repeatability: May be taken for credit for 20 units.

Restriction: Master of Arts in Teaching Degree students only.

EDUC 308. Performance Assessment for California Teachers, Multiple Subjects. 1 Unit.
Preparation and technical support for multiple subjects teacher candidates to complete State-required Teaching Performance Assessment for the California preliminary credential. Includes assistance in planning, teaching/ videotaping, assessment and reflection, and document production.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be taken for credit 2 times.

Restriction: Graduate students only. Education Majors only.
EDUC 310. Performance Assessment for California Teachers. 1 Unit.
Preparation and technical support for teacher candidates to complete the required Teaching Performance Assessment for California credential licensure. Structured support for planning, videotaping, and document production occurs in meetings scheduled to coincide with the timeline for the project.
Repeatability: May be taken for credit 2 times.
Restriction: Graduate students only. Education Majors only.

EDUC 320. Teaching Physical and Health Education in Elementary School. 4 Units.
Methods of teaching physical education for the elementary classroom teacher. Through an interactive environment, students experience the California Physical Education and Health content standards with appropriate pedagogy. Concepts address motor skills, physical fitness, and personal responsibility for lifelong health.
Grading Option: Satisfactory/unsatisfactory only.
Restriction: Master of Arts in Teaching Degree students only.

EDUC 322A. Curriculum and Methods for Elementary School Mathematics I. 4 Units.
Scope, sequence, and methods of teaching mathematics at all levels of elementary school. Presented through lectures, discussions, demonstrations, and exploration of a variety of materials. Covers how to plan lessons, motivate students, diagnose difficulties, and evaluate learning in mathematics.
Restriction: Master of Arts in Teaching Degree students only.

EDUC 322B. Curriculum and Methods for Elementary School Mathematics II. 4 Units.
Part two of a course addressing pedagogical methods for elementary mathematics. Lectures, discussions, and exploration of instructional strategies and materials support preservice teacher development in the critical areas of planning, instruction, and assessment for conceptual understanding in mathematics.
Restriction: Master of Arts in Teaching Degree students only.

EDUC 323. Curriculum and Methods for Elementary School Science. 4 Units.
Prospective elementary teachers learn how to teach science in grades K-8. Covers States science requirements, a variety of teaching methods, criteria for selecting science curriculum materials, and how to plan science lessons, units, experiments, projects, and demonstrations.
Same as ECO EVO 323.

EDUC 323A. Curriculum Methods in Elementary Science. 2 Units.
Prospective elementary teachers learn how to teach science in grades K-8. Covers state science requirements, a variety of teaching methods, and criteria for selecting science curriculum materials.
Restriction: Master of Arts in Teaching Degree students only.

EDUC 323B. Curriculum Methods in Elementary Science. 2 Units.
Prospective elementary teachers learn how to teach science in grades K-8. Covers state science requirements, a variety of teaching methods, criteria for selecting science curriculum materials, and how to plan science lessons, units, experiments, projects, and demonstrations.
Prerequisite: EDUC 323A
Restriction: Master of Arts in Teaching Degree students only.

EDUC 324. Curriculum and Methods for Elementary School Language Arts Integrated with Social Studies. 4 Units.
An integrated approach to language arts and social studies instruction at the K–6 level based on California State English/Language Arts and Social Studies Frameworks and Standards. Focus on teaching content through literature and writing and providing access for all learners.
Restriction: Graduate students only. Education Majors only.

EDUC 325. Teaching the Visual and Performing Arts in Elementary School. 2 Units.
Introduction to the issues and practices — including student diversity, academic literacy, and interdisciplinary content — involved in integrating the California visual and performing arts curriculum framework and academic content standards with developmentally appropriate teaching strategies for the elementary classroom. Materials fee.
Repeatability: May be taken for credit 2 times.
Restriction: Master of Arts in Teaching Degree students only.
EDUC 326. Curriculum and Methods for Elementary School Reading. 4 Units.
Teaching an integrated reading/language arts program in the elementary classroom. Implementing theories, principles, and methods which are research and reality-based. Creating a child-centered, language-rich program to meet needs of children in multicultural/multilingual settings.

Restriction: Master of Arts in Teaching Degree students only.

EDUC 329. Theories and Methods of English Language Development Applied to Elementary Students. 4 Units.
Theories and methods of English language development and instruction of English language learners, with focus on elementary students. Includes language acquisition theory, language and content, assessment strategies, and preparation of curricula and instruction for grades K–6 English language learners.

Restriction: Graduate students only. Education Majors only.

Grading Option: Satisfactory/unsatisfactory only.

EDUC 334. Literacy and Technology in the Secondary Classroom. 2 Units.
A view of literacy expanded beyond typological print, students learn: (1) strategies for incorporating, (2) tools for evaluating and selecting, and (3) learning theories for understanding how information and communication technologies and online resources contribute to general and disciplinary literacy.

Prerequisite: Limited to students accepted into the Teacher Credential Program

Restriction: Graduate students only. Education Majors only.

EDUC 336. Methods of Teaching Languages other than English in Secondary Schools. 4 Units.
Prepares future teachers of foreign language or primary/home language. Emphasizes hands-on, practical strategies for communication-based instruction and authentic assessment in reading, writing, listening, speaking, and culture.

Restriction: Master of Arts in Teaching Degree students only.

EDUC 337. Methods of Teaching Social Science in the Secondary School. 4 Units.
Theories, strategies, and methodologies related to the teaching of history and social science in the secondary school. Emphasis on the planning, delivery, and assessment of lessons reflecting an understanding of the History-Social Science Framework for California.

Restriction: Master of Arts in Teaching Degree students only.

EDUC 338. Methods of Teaching English in the Secondary School. 2-4 Units.
Introduction to teaching reading, writing, and speaking skills in secondary school. Emphasis upon integrative approach to teaching literature, composition, and grammar consistent with the California State Framework. Practice in the design of lesson plans that are both integrated and cumulative.

Repeatability: May be taken for credit 2 times.

Restriction: Master of Arts in Teaching Degree students only.

EDUC 339. Methods of Teaching Visual and Performing Arts in Secondary Schools. 4 Units.
Theory, curriculum, and strategies for teaching visual and performing arts in the secondary school. Emphasis on the planning, delivery, and assessment of lessons consistent with California State Framework and content standards.

Restriction: Master of Arts in Teaching Degree students only.

EDUC 340. Methods of Teaching Mathematics in Secondary School. 2-4 Units.
Theories, strategies, and methodologies related to the teaching of mathematics in the secondary school. Emphasis on the planning, delivery, and assessment of lessons reflecting an understanding of the Mathematics Framework for California and the recommendations of professional organizations.

Repeatability: May be taken for credit for 4 units.

Restriction: Master of Arts in Teaching Degree students only.
EDUC 341. Teaching Science in Secondary School. 4 Units.
Prospective secondary science teachers learn how to teach science in grades 7-12. Covers State science requirements, a variety of teaching methods, criteria for selecting science curricular materials, and how to plan science lessons, units, experiments, projects, and demonstrations.

Same as ECO EVO 341.

Restriction: Master of Arts in Teaching Degree students only.

EDUC 342. Applied Instructional Strategies in Secondary Schools. 4 Units.
Application of pedagogy and research to practice teaching experiences in the secondary schools. A continuation of the methodology course series with an emphasis on the needs of students with culturally diverse backgrounds.

Repeatability: May be taken for credit 2 times.

Overlaps with EDUC 342A, EDUC 342B.

Restriction: Teaching Credential Degree students only. EDUC 342 and EDUC 342A-B may not both be taken for credit.

EDUC 342A. Applied Instructional Strategies in Secondary Schools. 2 Units.
Application of pedagogy and research to practice teaching experiences in the secondary schools. A continuation of the methodology course series with an emphasis on the needs of students with culturally diverse backgrounds. Conducted in a five-week format.

Repeatability: May be taken for credit 2 times.

Overlaps with EDUC 342.

Restriction: Master of Arts in Teaching Degree students only. EDUC 342 and EDUC 342A may not both be taken for credit.

EDUC 342B. Applied Instructional Strategies in Secondary Schools. 2 Units.
Application of pedagogy and research to practice teaching experiences in the secondary schools. A continuation of the methodology course series with an emphasis on the needs of students with culturally diverse backgrounds. Conducted in a five-week format.

Repeatability: May be taken for credit 2 times.

Overlaps with EDUC 342.

Restriction: Master of Arts in Teaching Degree students only. EDUC 342 and EDUC 342B may not both be taken for credit.

EDUC 345. Child Development and Educational Equity. 4 Units.
Explores theories of child development applied to teaching and learning in elementary schools. Attention is given to role of cultural norms in defining goals for child development and for educational practices and in creating equal learning opportunities for all children.

Restriction: Graduate students only. Education Majors only.

EDUC 346. Reading and Writing in Middle School and High School Classrooms. 4 Units.
Emphasis is placed upon understanding the literacy processes (listening, speaking, viewing, reading, and writing) as they relate to all Single Subject areas. Teachers are guided to integrate literacy-related strategies with curriculum-based goals supported in the California State Frameworks.

Restriction: Master of Arts in Teaching Degree students only.

EDUC 347. Culture, Diversity, and Educational Equity . 4 Units.
Survey of the history of and social theories about the origins and consequences of U.S. racial, gender, and social inequality, and the effects of poverty and racism on the educational opportunities and outcomes of minority groups in the United States.

Restriction: Master of Arts in Teaching Degree students only.

EDUC 348. Educational Equity and the Exceptional Learner. 2 Units.
Knowledge, skills, and strategies to teach exceptional learners in the general education classroom. Legislation pertaining to the education of exceptional learners. Role of general education teacher in the special education process. Inclusive curriculum to provide equal access to content.

Restriction: Master of Arts in Teaching Degree students only.

EDUC 348A. Educational Equity and the Exceptional Learner I. 2 Units.
Focuses on knowledge, skills, and strategies needed to teach special populations in general education secondary classrooms. Covers categories and characteristics of disability and exceptionality, state and federal legislation, and the role of general education teachers in the special education process.

Restriction: Graduate students only. Education-MA/PhD Majors only.
EDUC 348B. Educational Equity and the Exceptional Learner II. 2 Units.
Emphasizes the use of differentiated instruction to meet special needs and the creation of a positive, inclusive learning environment that provides access to the core curriculum for special needs students.
Restriction: Graduate students only. Education-MA/PhD Majors only.

EDUC 349. Theories and Methods of English Language Development Applied to Secondary Students. 4 Units.
Theories and methods of English language development and instruction of English language learners, with focus on secondary students. Includes language acquisition theory, language and content, assessment strategies, and preparation of curricula and instruction for grades 7–12 English language learners.
Restriction: Master of Arts in Teaching Degree students only.

EDUC 350. Adolescent Development in Education. 4 Units.
Secondary teachers must understand adolescent physical, cognitive, emotional, and social development, particularly how educators can promote healthy adjustment in their students. Focuses on why and how changes occur in each of these areas as children grow older.
Restriction: Graduate students only. Education Majors only.

EDUC 352. Creating a Supportive & Healthy Environment for Student Learning in Secondary Classrooms. 2 Units.
Creation of healthy environments for student learning in secondary classrooms. Personal, family, school, community, environmental factors. Academic, physical, emotional, social well-being of students. Legal responsibilities of teachers related to student health, safety. Communication with family and use of community resources.
Restriction: Graduate students only. Education Majors only.

EDUC 358. Media and Information Literacy in the Secondary Classroom. 2 Units.
Focuses on how teachers can help their students to become critical, ethical, and effective users of technological resources in the secondary classroom. Students learn tools for evaluating, selecting, and incorporating appropriate learning technologies into the secondary classroom.
Restriction: Master of Arts in Teaching Degree students only.

EDUC 359. Curriculum and Methods for Elementary Social Science and Information Literacy. 4 Units.
Methods of instruction for Social Science at the K–6 level. Includes integration of the use of technology, development of content literacy, and use of evidence to construct arguments.
Restriction: Master of Arts in Teaching Degree students only.

EDUC 361. The Adolescent Learner . 4 Units.
Issues of adolescent development and learning in family, school, and community contexts from biological, psychological, cognitive, and social perspectives. Focuses on how adolescents learn, what motivates them to learn, and how schools and teachers contribute to adolescents’ growth.
Restriction: Master of Arts in Teaching Degree students only.

EDUC 362. Curriculum and Methods for Elementary Language Arts and English Language Development. 4 Units.
Methods, instructional practices, and assessment strategies for teaching English-Language Arts, with a focus on instructional practices for supporting English Language Learners. Focuses on core language arts topics, including composition of persuasive, expository, and narrative texts; speaking; and listening.
Restriction: Master of Arts in Teaching Degree students only.

EDUC 364. Instructional Design and Education Technology for the Elementary Classroom. 2 Units.
Focuses on how teachers can effectively integrate educational technologies for teaching and learning in the elementary school classroom. Students learn tools for evaluating, selecting, and incorporating appropriate technologies into their classroom activities.
Restriction: Master of Arts in Teaching Degree students only.

EDUC 373. Cognition and Learning in Educational Settings . 4 Units.
Foundational concepts in cognition and development as applied to student learning. Primary topics include historical behaviorism, basic cognitive structure and processes, complex cognition, cognitive development, and motivation.
Restriction: Graduate students only. Education Majors only.
EDUC 374. Learning and Child Development . 4 Units.
Issues of child development and learning in family, school, and community contexts from biological, psychological, cognitive, and social perspectives. Focuses on how young children learn and develop, how schools and teachers contribute to children's growth, and implications for instruction.

Restriction: Master of Arts in Teaching Degree students only.

EDUC 398. Special Topics. 3 Units.
Meets induction and program planning requirements for students enrolled in Professional Administrative Services Credential. Also serves as final course in program, wherein the candidate, the University instructor, and a representative of the involved school district assess and evaluate candidate competency.

Repeatability: May be taken for credit 2 times.

Restriction: Professional Administrative Services Credential students only.

EDUC 399. University Teaching. 1-4 Units.
Limited to teaching assistants.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.
The Henry Samueli School of Engineering

Overview

The academic mission of The Henry Samueli School of Engineering has been developed to be consistent with the missions and goals set for it by the State of California, the University of California, and the University of California, Irvine (UCI) campus. Specifically, the academic mission of the School is to educate students, at all levels, to be the best engineers and leaders in the nation and world by engaging them in a stimulating community dedicated to the discovery of knowledge, creation of new technologies, and service to society.

The individual engineering and related programs have published program objectives that are consistent with the missions and goals of the University of California, UCI, and The Henry Samueli School of Engineering.

The School offers undergraduate majors in Aerospace Engineering (AE), Biomedical Engineering (BME), Biomedical Engineering: Premedical (BMEP), Chemical Engineering (ChE), Civil Engineering (CE), Computer Engineering (CpE), Computer Science and Engineering (CSE), a jointly administered program with the Donald Bren School of Information and Computer Sciences), Electrical Engineering (EE), Engineering (a general program, GE), Environmental Engineering (EnE), Materials Science Engineering (MSE), and Mechanical Engineering (ME). The undergraduate majors in Aerospace, Biomedical, Chemical, Civil, Computer, Computer Science and Engineering, Electrical, Environmental, Materials Science, and Mechanical Engineering are accredited by the Engineering Accreditation Commission of ABET (http://www.abet.org), http://www.abet.org; Computer Science and Engineering (CSE) is also accredited by the Computing Accreditation Commission of ABET (http://www.abet.org), http://www.abet.org. The undergraduate major in Biomedical Engineering: Premedical (BMEP) is not designed to be accredited, therefore is not accredited by ABET.

Aerospace Engineering considers the flight characteristics, performance, and design of aircraft and spacecraft. An upper-division series of courses in aerodynamics, propulsion, structures, and control follows a common core with Mechanical Engineering. The skills acquired in those courses are integrated in the capstone aerospace design course. The intent of the program is to produce highly proficient engineers who can tackle the aerospace engineering challenges of the future.

Biomedical Engineering applies engineering principles to solve complex medical problems and focuses at improving the quality of health care by advancing technology and reducing costs. Examples include advanced biomedical imaging systems, the design of microscale diagnostic systems, drug delivery systems, and tissue engineering. Specializations are available that focus student’s technical expertise on biophotonics or biomems.

Biomedical Engineering: Premedical shares introductory engineering courses with Biomedical Engineering, but replaces senior engineering laboratories and design courses with biology and organic chemistry courses required by medical schools for admission. The intent of the program is to produce students with a basic engineering background who are qualified to enter medical school.

Chemical Engineering applies the knowledge of chemistry, mathematics, physics, biology, and humanities to solve societal problems in areas such as energy, health, the environment, food, textiles, shelter, semiconductors, and homeland security. Employment opportunities exist in various industries such as chemical, petroleum, polymer, pharmaceutical, food, textile, fuel, consumer products, and semiconductor, as well as in local, state, and federal governments.

Civil Engineering addresses the challenges of large-scale engineering projects of importance to society as a whole, such as water distribution, transportation, and building design. Specializations are provided in General Civil Engineering, Environmental Hydrology and Water Resources, Structural Engineering, and Transportation Systems Engineering.

Computer Engineering addresses the design and analysis of digital computers, including both software and hardware. Computer design includes topics such as computer architecture, VLSI circuits, data base, software engineering, design automation, system software, and data structures and algorithms. Courses include programming in high-level languages such as Python, Java, C, C++; use of software packages for analysis and design; design of system software such as operating systems and hardware/software interfaces; application of computers in solving engineering problems, and laboratories in both hardware and software experiences.

Computer Science and Engineering is designed to provide students with the fundamentals of computer science, both hardware and software, and the application of engineering concepts, techniques, and methods to both computer systems engineering and software system design. The program gives students access to multidisciplinary problems in engineering with a focus on total systems engineering. Students learn the computer science principles that are critical to development of software, hardware, and networking of computer systems. From that background, engineering concepts and methods are added to give students exposure to circuit design, network design, and digital signal processing. Elements of engineering practice include systems view, manufacturing and economic issues, and multidisciplinary engineering applications. The program is administered jointly by the Department of Electrical Engineering and Computer Science in The Henry Samueli School of Engineering and by the Department of Computer Science in the Donald Bren School of Information and Computer Sciences.
Electrical Engineering is one of the major contributors to the modernization of our society. Many of the most basic and pervasive products and services are either based on or related to the scientific and engineering principles taught at the Department of Electrical Engineering and Computer Science. Students specialize in Electronic Circuit Design; Semiconductors and Optoelectronics; RF, Antennas and Microwaves; Digital Signal Processing; or Communications.

The major in Engineering is a special program of study for upper-division students who wish to combine the study of engineering principles with other areas such as the physical and biological sciences, social and behavioral science, humanities, and arts. Students may construct their own specialization. Click on the "Undergraduate Study" tab above for information about this major.

Environmental Engineering concerns the development of strategies to control and minimize pollutant emissions, to treat waste, and to remediate polluted natural systems. Emphasis areas include air quality and combustion, water quality, and water resources engineering.

Materials Science Engineering is concerned with the generation and application of knowledge relating the composition, structure, and synthesis of materials to their properties and applications. During the past two decades, Materials Science Engineering has become an indispensable component of modern engineering education, partly because of the crucial role materials play in national defense, the quality of life, and the economic security and competitiveness of the nation; and partly because the selection of materials has increasingly become an integral part of almost every modern engineering design. Emphasis in the Materials Science Engineering curriculum is placed on the synthesis, characterization, and properties of advanced functional materials; analysis, selection, and design related to the use of materials; the application of computers to materials problems; and the presence of an interdisciplinary theme that allows a qualified student to combine any engineering major with the Materials Science Engineering major.

Mechanical Engineering considers the design, control, and motive power of fluid, thermal, and mechanical systems ranging from microelectronics to spacecraft to the human body. Specializations allow students to focus their technical electives in the areas of Aerospace Engineering, Energy Systems and Environmental Engineering, Flow Physics and Propulsion Systems, and Design of Mechanical Systems.

The School offers M.S. and Ph.D. degrees in Biomedical Engineering; Chemical and Biochemical Engineering; Civil Engineering; Electrical and Computer Engineering, with concentrations in Computer Engineering and Electrical Engineering; Engineering, with concentrations in Environmental Engineering, and Materials and Manufacturing Technology; Materials Science and Engineering; and Mechanical and Aerospace Engineering. Specialized research opportunities are available within each of these programs. In Biomedical Engineering, areas of research include micro/nanoscale biomedical devices for diagnostics and therapeutics, biophotonics, systems/synthetic bioengineering, tissue/organ engineering, cardiovascular engineering, cancer biotechnology, and neuroengineering. Bioreaction and bioreactor engineering, recombinant cell technology, and bioseparation processes are research areas in Biochemical Engineering. In Civil Engineering, research opportunities are provided in structural/earthquake engineering, reliability engineering, transportation systems engineering, environmental engineering, and water resources. Research opportunities in Electrical and Computer Engineering are available in the areas of parallel and distributed computer systems, VLSI design, computer architecture, image and signal processing, communications, control systems, and optical and solid-state devices. Research in combustion and propulsion sciences, laser diagnostics, supersonic flow, direct numerical simulation, computer-aided design, robotics, control theory, parameter identification, material processing, electron microscopy, and ceramic engineering are all available in Mechanical and Aerospace Engineering. The School also offers the M.S. degree in Engineering Management, a joint degree program with the Paul Merage School of Business; and the M.S. degree in Biotechnology Management, a joint degree program with the School of Biological Sciences and The Paul Merage School of Business.

Additional publications describing undergraduate and graduate academic study and research opportunities are available through The Henry Samueli School of Engineering, and the Departments of Biomedical Engineering, Chemical Engineering and Materials Science, Civil and Environmental Engineering, Electrical Engineering and Computer Science, and Mechanical and Aerospace Engineering.

Requirements for the Bachelor’s Degree

All students in The Henry Samueli School of Engineering must fulfill the following requirements.

All students must meet the University Requirements (p. 91).

All students must meet the School Requirements:

The following are minimum subject-matter requirements for graduation:

**Mathematics and Basic Science Courses:** Students must complete a minimum of 48 units of college-level mathematics and basic sciences.

**Engineering Topics Courses:** Students must complete a minimum of 72 units of engineering topics. Engineering topics are defined as courses with applied content relevant to the field of engineering.

**Design Units:** All undergraduate Engineering courses indicate both a total and a design unit value. Design unit values are listed at the end of the course description. Each student is responsible for the inclusion of courses whose design units total that required by the program of study.

The Academic Plan and Advising Requirements: To remain affiliated with The Henry Samueli School of Engineering, all students enrolled in the School are required to meet annually with their designated faculty for advising and mentoring and to have an academic plan on file with the Student Affairs Office which has been approved by their academic counselor. Students who do not have a plan on file, or deviate from this plan without approval from an academic counselor will be subject to probation. Students on probation for two consecutive quarters who do not have a plan on file, or deviate from this plan without approval from an academic counselor will be subject to disqualification. Students who fail to meet with a faculty advisor each year will be subject to disqualification.

**Duplication of Subject Material:** Students who take courses which involve considerable duplication of subject material may not receive full graduation credit for all units thus completed.

**Residence Requirement:** In addition to the University residence requirement, at least 36 upper-division engineering units specified by each major must be completed successfully at University of California.

**Variations:** Variations from the general School degree requirements may be made subject to the approval of the faculty of the School. Students wishing to obtain variances should submit petitions to the School’s Student Affairs Office.

Undergraduate Study

**Michael M Green, Associate Dean for Undergraduate Student Affairs**

Student Affairs Office
305 Rockwell Engineering Center
949-824-4334

- Admissions (p. 564)
- Undergraduate Programs (p. 564)
- General Undergraduate Major in Engineering (p. 570)

Admissions

The sequential nature of the Engineering program and the fact that many courses are offered only once a year make it beneficial for students to begin their studies in the fall quarter. Applicants wishing to be admitted for the fall quarter, 2019, must have submitted their completed application forms during the priority filing period (August 1 - November 30, 2018).

**High school students** wishing to enter the UCI Engineering program must have completed four years of mathematics through pre-calculus or math analysis and are advised to have completed one year each of physics and chemistry. That preparation, along with honors courses and advanced placement courses, is fundamental to success in the Engineering program and is vital to receiving first consideration for admittance to an Engineering major during periods of restricted enrollments. Students applying for admission for fall quarter should complete their examination requirements during May or June of their junior year or during their senior year, but no later than the December test date. (Typically, this means that students will take the
SAT or the ACT Plus Writing Test in October or November. Applicants are strongly encouraged to take a math or science AP or SAT exam. Applicants should favor the Math Level 2 SAT Subject Test over the Math Level 1 Test. Applicants must apply for admission to a specific Engineering major or Engineering Undeclared.

If enrollment limitations make it necessary, unaccommodated Engineering applicants may be offered alternative majors at UCI.

**Transfer students** may be admitted to The Henry Samueli School of Engineering either from another major at UCI or from another college or university. A student seeking admission to The Henry Samueli School of Engineering from colleges and schools other than UCI must satisfy University requirements for admission with advanced standing and should complete appropriate prerequisites for their major of choice. Applicants should prioritize completing subject requirements (math, science, engineering) over completion of IGETC or UCI general education and lower-division requirements prior to transfer. IGETC is not considered in transfer selection while subject requirements contribute directly to reducing time to graduate. Since requirements vary from major to major, those contemplating admission to The Henry Samueli School of Engineering from colleges and schools other than UCI must consult each Department’s Catalogue section and the UCI Office of Admissions and Relations with Schools, 949-824-6703, for the specific requirements of each program. All transfer students should arrange for early consultation with The Henry Samueli School of Engineering Student Affairs Office at 949-824-4334.

**Change of Major:** Students who wish to change their major to one offered by the School should contact the Engineering Student Affairs Office for information about change-of-major requirements, procedures, and policies. Information is also available at the UCI Change of Major Criteria website (http://www.changeofmajor.uci.edu).

### Engineering Gateway Freshman-Year Curriculum

Students who know that they want to major in engineering but who are unsure of the specific major should apply for the Engineering Gateway Curriculum and follow the Sample Engineering Gateway Curriculum. Students following the Engineering Gateway Curriculum are required to meet with an academic advisor every quarter and are strongly encouraged to declare a major as soon as possible and then follow the appropriate sample program of study for that major.

**Sample Engineering Gateway Curriculum - Freshman**

Select one of the following:

- EECS 10
- EECS 12
- ENGRMAE 10
- I&C SCI 32

1 Students who choose to major in Biomedical Engineering or Biomedical Engineering: Premedical should enroll in BME 1 in the fall quarter of the sophomore year. Students who choose to major in Computer Engineering should enroll in EECS 20 by the spring or summer quarter preceding their sophomore year.

2 Students who are considering the Computer Science and Engineering major should enroll in I&C SCI 32

Students who choose certain majors during the first year may replace Chemistry courses with required major courses.

Students should choose a major by the end of the spring quarter of their freshman year or earlier. Some modification in the program of study might be appropriate if the student chooses a major before the end of the freshman year. In any case, when the major is chosen, the student must meet immediately with an academic counselor to plan the program of study.

### Undergraduate Programs

Specific information about courses fulfilling School and major requirements can be found in the department sections. Note that some majors require more units than the School requirements.

- Aerospace Engineering (p. 759)
- Biomedical Engineering (p. 653)
- Biomedical Engineering: Premedical (p. 653)
- Chemical Engineering (p. 673)
- Civil Engineering (p. 699)
- Computer Engineering (p. 727)
- Computer Science and Engineering (p. 1167)
- Electrical Engineering (p. 727)
Minors/Concentrations of Interest to Engineers

Minor in Earth and Atmospheric Sciences
The minor in Earth and Atmospheric Sciences focuses on the application of physical, chemical, and biological principles to understanding the complex interactions of the atmosphere, ocean, and land through climate and biogeochemical cycles. See the Department of Earth System Science (p. 673) in the School of Physical Sciences section of this Catalogue for more information.

Minor in Global Sustainability
The interdisciplinary minor in Global Sustainability trains students to understand the changes that need to be made in order for the human population to live in a sustainable relationship with the resources available on this planet. See the Interdisciplinary Studies section (p. 1160) of this Catalogue for more information.

Concentration: Engineering and Computer Science in the Global Context
The globalization of the marketplace for information technology services and products makes it likely that The Henry Samueli School of Engineering graduates will work in multicultural settings or be employed by companies with extensive international operations, or customer bases. The goal of the concentration is to help students develop and integrate knowledge of the history, language, and culture of a country or geographic region outside the United States, through course work both at UCI and an international host campus, followed by a technology-related internship in the host country.

All of The Henry Samueli School of Engineering majors in good standing may propose an academic plan that demonstrates the ability to complete the concentration (a minimum of eight courses) and other requirements for graduation in a reasonable time frame. It is expected that a student’s proposal will reflect a high degree of planning that includes the guidance of academic counselors and those at the UCI Study Abroad Center regarding course selection, as well as considerations related to internship opportunities, housing, and financial aid. Each student’s proposed program of study must be approved by the Associate Dean for Student Affairs in The Henry Samueli School of Engineering. The Associate Dean will be available to assist qualified students with the development of a satisfactory academic plan, as needed.

The concentration consists of the following components:

1. A minimum of eight courses at UCI or at the international campus with an emphasis on the culture, language (if applicable and necessary), history, literature of the country that corresponds to the international portion of the program, international law, international labor policy, global issues, global institutions, global conflict and negotiation, and global economics;
2. A one- or two-semester sequence of technical courses related to the major and, possibly, culture, history, and literature courses taken at an international university;
3. A two-month or longer technical internship experience in the same country as the international educational experience.

More information about the requirements for the concentration is available in The Henry Samueli School of Engineering Student Affairs Office.

The concentration in Engineering and Computer Science in the Global Context is open to students in Aerospace Engineering, Biomedical Engineering, Biomedical Engineering: Premedical, Chemical Engineering, Civil Engineering, Computer Engineering, Engineering (General), Electrical Engineering, Environmental Engineering, Materials Science Engineering, and Mechanical Engineering.

Academic Advising
Academic advising is available from academic counselors and peer advisors in the School’s Student Affairs Office, 305 Rockwell Engineering Center, and from faculty advisors. Students must realize, however, that ultimately they alone are responsible for the planning of their own program and for satisfactory completion of the graduation requirements. Students are encouraged to consult with the academic counselors in the Engineering Student Affairs Office whenever they desire to change their program of study. All Engineering majors are required to meet with their faculty advisor at least once each year.

Some engineering students will need more than four years to obtain their B.S., particularly if part-time employment or extracurricular activities make heavy demands on their time. Normally, such students can stay on track, and are encouraged to do so, by enrolling in summer sessions at UCI or at other institutions when a petition has been approved in advance.

High-achieving students may declare a second major. Early consultation with the School is advisable.

Required courses may be replaced by other courses of equivalent content if the student substantiates the merits of the courses in the program of study and obtains prior approval from faculty in the School.

Students should be aware that most Engineering courses require the completion of prerequisites. The sample programs shown in each departmental description constitute preferred sequences which take into account all prerequisites.
School policy does not permit the deletion of Engineering courses after the second week or addition of Engineering courses after the second week of the quarter without the Associate Dean’s approval.

Undergraduate students who have high academic standing, who have completed the necessary prerequisites, and who have obtained permission from the School may qualify to take certain graduate-level courses.

Students are required to complete UCI’s lower-division writing requirement (see the Requirements for a Bachelor’s Degree section) during the first two years. Thereafter, proficiency in writing and computing (using a higher-level language such as Python, C, C++, Java, or MATLAB) is expected in all Engineering courses.

The Pass/Not Pass option is available to encourage students to enroll in courses outside their major field. Pass/Not Pass option cannot be used to satisfy specific course requirements of the students school and major. Students must take courses to fulfill the UC Entry Level Writing requirement for a grade. For more complete information, see the Academic Regulations and Procedures section (p. 129) of this Catalogue.

Career Advising

The UCI Career Center provides services to students and alumni including career counseling, information about job opportunities, a career library, and workshops on resume preparation, job search, and interview techniques. See the Career Center section (p. 145) for additional information. In addition, special career planning events are held throughout the year including an annual Career Fair. Individual career counseling is available, and students have access to the Career Library which contains information on graduate and professional schools in engineering, as well as general career information.

Proficiency Examinations

A student may take a course by examination with the approval of the faculty member in charge of the course and the Dean of the School. Normally, ability will be demonstrated by a written or oral examination; if a portion of the capability involves laboratory exercises, the student may be required to perform experiments as well. The proficiency examination is not available for any course a student has completed at UCI.

Honors

Graduation with Honors. Undergraduate honors at graduation in The Henry Samueli School of Engineering are computed by using 50 percent of the overall UCI GPA and 50 percent of the upper-division Engineering GPA. A general criterion is that students must have completed at least 72 units in residence at a University of California campus. Approximately 2 percent of the graduating class shall be awarded summa cum laude, 4 percent magna cum laude, and 10 percent cum laude, with no more than 16 percent being awarded honors. Other important factors are considered visit at Honors Recognition (p. 90).

Dean’s Honor List. The quarterly Dean’s Honor List is composed of students who have received a 3.5 GPA while carrying a minimum of 12 graded units.

Gregory Bogaczyk Memorial Scholarship. This scholarship was established in memory of Gregory Bogaczyk, a former UCI Mechanical Engineering student, and is contributed by the Bogaczyk family and friends. An award is given each year to a junior or senior Mechanical Engineering student.

Haggai Memorial Endowed Scholarship. This memorial fund was established in honor of Ted Haggai, an electrical engineer. This scholarship is awarded to an outstanding senior electrical engineering student and member of Tau Beta Pi. Primary consideration will be given to members of Tau Beta Pi who have contributed outstanding service to both UCI and The Henry Samueli School of Engineering.

Christine Jones Memorial Scholarship. This scholarship was established in memory of Christine Jones, an Electrical Engineering graduate, Class of 1989. The primary focus of this scholarship is to provide financial support to a female undergraduate student in The Henry Samueli School of Engineering.

Deborah and Peter Pardoens Memorial Scholarship. This scholarship is awarded each year to a graduating senior in Mechanical Engineering or in Aerospace Engineering. The scholarship is based on outstanding service to The Henry Samueli School of Engineering and the community.

Henry Samuelsi Endowed Scholarship. This premier scholarship, established by Henry Samuelsi, is awarded to outstanding freshmen and transfer students in The Henry Samueli School of Engineering. Recipients are chosen by the School based on their academic excellence. The award is renewable up to four years for freshmen and up to two years for transfer students.

Additional awards in other categories are made throughout the academic year.

Office of Access and Inclusion

200A Rockwell Engineering Center; 949-824-7134
Sharnnia Artis, Assistant Dean for Access and Inclusion

The Office of Access and Inclusion (OAI) facilitates and supports the recruitment, retention, and graduation of undergraduate and graduate students from historically excluded populations who are currently underrepresented in the Samueli School of Engineering and the Donald Bren School of Information and Computer Sciences. Services include mentoring, tutoring, career and academic workshops and coaching, and assistance for students looking to conduct undergraduate research or prepare for graduate school.
Special Programs and Courses

Campuswide Honors Program

The Campuswide Honors Program is available to selected high-achieving students from all academic majors from their freshman through senior years. For more information contact the Campuswide Honors Program, 1200 Student Services II; 949-824-5461; honors@uci.edu; or visit the Campuswide Honors Program website (http://www.honors.uci.edu).

Engineering 199

Every undergraduate student in The Henry Samueli School of Engineering has the opportunity to pursue independent research under the direct supervision of a professor in the School. Interested students should consult with a faculty member to discuss the proposed research project. If the project is agreed upon, the student must fill out a 199 Proposal Form and submit it to the Engineering Student Affairs Office.

Undergraduate Research Opportunities Program

The Undergraduate Research Opportunities Program (UROP) encourages and facilitates research and creative activities by undergraduates. Research opportunities are available not only from every discipline, interdisciplinary program, and school, but also from many outside agencies, including national laboratories, industrial partners, and other universities. UROP offers assistance to students and faculty through all phases of the research activity: proposal writing, developing research plans, resource support, conducting the research and analyzing data, and presenting results of the research at the annual spring UCI Undergraduate Research Symposium. Calls for proposals are issued in the fall and spring quarters. Projects supported by UROP may be done at any time during the academic year and/or summer, and the research performed must meet established academic standards and emphasize interaction between the student and the faculty supervisor. In addition, all students participating in faculty-guided research activities are welcome to submit their research papers for faculty review and possible publication in the annual UCI Undergraduate Research Journal. For more information, contact the UROP Office, 1100 Student Services II; 949-824-4189; urop@uci.edu; or visit the Undergraduate Research Opportunities Program website (http://www.urop.uci.edu).

Accelerated M.S. or Ph.D. Status Program in The Henry Samueli School of Engineering

Exceptionally promising UCI undergraduate Engineering students may, during their junior or senior year, petition for streamlined admissions into a graduate program within The Henry Samueli School of Engineering. Accelerated M.S. Status would allow a student to petition for exemption from UCI’s Graduate Record Examination (GRE) requirement for graduate school admission. (The exemption applies only to current UCI students applying for admission to one of the M.S. programs in The Henry Samueli School of Engineering; other graduate schools may still require the GRE.) A current UCI undergraduate student whose ultimate goal is a Ph.D. may apply for Accelerated Status, however, a GRE score must be submitted.

Accelerated Status applicants would in all other ways be evaluated in the same manner as other applicants to the School’s graduate programs. Occasionally, a candidate for Accelerated Status may be required by the faculty to submit GRE scores in support of the graduate application.

Students who successfully petition for Accelerated Status, upon matriculation to the graduate degree program, may petition to credit toward the M.S. degree up to 18 units (with a grade of B or better) of graduate-level course work completed in excess of requirements for the UCI bachelor’s degree.

Visit the UCI Undergraduate Accelerated Status website (https://www.eng.uci.edu/admissions/graduate/accelerated-status-program) for more detailed information about this program and its eligibility requirements.

UC Education Abroad Program

Engineering students may participate in a number of programs which offer unique opportunities for education and training abroad. The University’s Education Abroad Program (UCEAP) offers engineering course work for UCI academic credit at a number of universities. Some of the UCEAP-affiliated engineering schools require proficiency in the host country’s language, while others are English speaking. Study abroad may postpone the student’s graduation for one or two quarters, depending primarily on the student’s language preparation (which can begin in the freshman year), but the added experience can add to the student’s maturity and professional competence. UCEAP students pay regular UCI fees and tuition and keep any scholarships they may have. Visit the Study Abroad Center website (http://www.studyabroad.uci.edu) for additional information.

Student Participation and Organizations

Faculty and committee meetings (except those involving personnel considerations) are open meetings; in addition to designated student representatives, all students are encouraged and expected to participate in the development of School policy. Student evaluation of the quality of instruction for each course is requested each quarter.

Engineering students may join any of a number of student organizations. Most of these organizations are professionally oriented and in many instances are local chapters of national engineering societies. A primary function of these groups is to provide regular technical and social meetings for students with common interests. Most of the groups also participate in the annual Engineering Week activities and in other School functions.

Associated General Contractors (AGC). A student chapter of the national organization, AGC at UCI is an academic engineering club for students interested in the construction field.

American Indian Science & Engineering Society (AISES). The mission of AISES is to increase the representation of American Indians in engineering, science, and technology. Chapters emphasize education as a tool that will facilitate personal and professional growth opportunities through mentor programs, leadership training, scholarships, conferences, and summer job opportunities.
American Institute of Aeronautics and Astronautics (AIAA). The AIAA is a technical society of 40,000 professional and student members devoted to science and engineering in the field of aerospace. The local chapter’s primary activities include seminars, tours of industries, and mentoring for students by professional members.

American Institute of Chemical Engineers (AIChE). AIChE, a student chapter of the national organization, provides Chemical Engineering majors with the opportunity to interact with faculty and professionals in the field.

American Society for Civil Engineers (ASCE). One of the larger engineering clubs, ASCE at UCI is a student chapter of the national organization. The ASCE focuses its efforts on interactions with professional engineers, sponsorship of Engineering Week activities, and participation in the annual ASCE Southwest Conference.

American Society for Materials (ASM). The student chapter of ASM at UCI provides the opportunity for Materials Science Engineering (MSE) students to meet engineers and scientists from local industry, attend seminars organized by the Orange Coast Chapter of ASM International, and organize discussion sessions that focus on progress and advances in the MSE field and that promote interactions between MSE students and materials faculty.

American Society of Mechanical Engineers (ASME). The student chapter of ASME at UCI provides the opportunity for Mechanical Engineering majors to meet with professors, organize social events, and participate in events and competitions supported by the ASME national organization.

Biomedical Engineering Society (BMES). The student chapter of BMES at UCI is an academic club for students in the field of Biomedical Engineering.

Chi Epsilon. This organization is a national engineering honor society which is dedicated to the purpose of promoting and maintaining the status of civil engineering as an ideal profession. Chi Epsilon was organized to recognize the characteristics of the individual that are fundamental to the successful pursuit of an engineering career.

Electric Vehicle Association/UCI (EVA/UCI). EVA/UCI gives students an opportunity for hands-on work on electric car conversions coupled with design experience.

Engineering Student Council (ESC). The ESC is the umbrella organization that provides a voice for all Engineering student chapters. A significant activity of the Council is organizing UCI’s annual Engineering Week celebration.

Engineers Without Borders (EWB). This humanitarian organization combines travel with the idea that engineers can play an instrumental role in addressing the world’s assorted challenges. Through the implementation of equitable, economical, and sustainable engineering projects, EWB-UCI works to improve quality of life within developing communities abroad.

Eta Kappa Nu. A student chapter of the National Electrical Engineering Honor Society, Eta Kappa Nu’s purpose is to promote creative interaction between electrical engineers and give them the opportunity to express themselves uniquely and innovatively to project the profession in the best possible manner.

Filipinos Unifying Student-Engineers in an Organized Network (FUSION). Fusion is the merging of diverse, distinct, or separate elements into a unified whole. The mission of FUSION is to promote the academic and professional development of student engineers by providing an organized network of support.

Institute of Electrical and Electronic Engineers (IEEE). A student chapter of a multinational organization, IEEE at UCI encompasses academic, professional, and social activities.

Institute of Transportation Engineers (ITE). ITE is a student chapter of a national group of transportation engineering professionals. Offering opportunities to meet both professionals and other students, ITE focuses its activities on an annual project with practical applications.

Mexican-American Engineers and Scientists (MAES) / Latinos in Science and Engineering. Open to all students, MAES is a student and professional organization with the purpose of aiding students in their academic, professional, and social endeavors.

National Society of Black Engineers (NSBE). The NSBE, with almost 6,000 members, is one of the largest student-managed organizations in the country. The Society is dedicated to the realization of a better tomorrow through the development of intensive programs to increase the recruitment, retention, and successful graduation of underrepresented students in engineering and other technical majors.

Omega Chi Epsilon. The student chapter of the National Chemical Engineering Honor Society aims to recognize and promote high scholarship, original investigation, and professional service in chemical engineering.

Phi Sigma Rho. This national sorority is open to women in engineering, engineering technology, and STEM majors. Its purpose is to provide social opportunities, promote academic excellence, and provide encouragement and friendship.

Pi Tau Sigma. The mechanical engineering honor society, Pi Tau Sigma, is committed to recognizing those of high achievement. The goal of the organization is to promote excellence in academic, professional, and social activities.

Sigma Gamma Tau. The aerospace engineering honor society, Sigma Gamma Tau, is committed to recognizing those of high achievement. The goal of the organization is to promote excellence in academic, professional, and social activities.
Society of Hispanic Professional Engineers (SHPE). SHPE is both a student and professional organization. The UCI SHPE chapter works to recruit, retain, and graduate Latino engineers by providing a comprehensive program which includes high school visitations, coordinated study sessions, and industry speakers and tours. At the professional level there are opportunities for career positions and scholarships for members who are enrolled in undergraduate and graduate engineering and computer science programs.

Society of Automotive Engineers (SAE). Members of the SAE chapter at UCI participate in technical expositions, mini-Baja buggy races, student competitions, and social activities.

Society of Women Engineers (SWE). SWE is a national service organization dedicated to the advancement of women in engineering. UCI’s student chapter encourages academic and social support, and membership is open to both men and women in technical majors interested in promoting camaraderie and in helping to make engineering study a positive experience.

Structural Engineers Association of Southern California (SEAOSC). The UCI student chapter of SEAOSC introduces students to the field of structural engineering through tours, speakers, and SEAOSC dinners with professional members of the organization.

Sustainable Energy Technology Club (SETC). With the common theme of energy, club members explore how science and technology can be used as a driving force behind making changes in society with respect to a cleaner environment and less wasteful lifestyles.

Tau Beta Pi. The national Engineering honor society, Tau Beta Pi acknowledges academic excellence in the wide variety of engineering disciplines. Tau Beta Pi at UCI sponsors community service activities, social events, and technical and nontechnical seminars.

Theta Tau. This is a national fraternity of men and women studying engineering. The goals are to promote the social and professional development of its members during and after their college years.

Triangle. This national social fraternity is open to men majoring in engineering, architecture, and the physical, mathematical, biological, and computer sciences. Its purpose is to develop balanced men who cultivate high moral character, foster lifelong friendships, and live their lives with integrity.

General Undergraduate Major in Engineering

305 Rockwell Engineering Center; 949-824-4334

The Henry Samueli School of Engineering offers a general undergraduate major in Engineering to upper-division students who wish to pursue broad multidisciplinary programs of study or who wish to focus on a special area not offered in the four departments. Examples of other areas that may be of interest are biochemical engineering, electromechanical engineering, project management, or hydrology. The program of study in any area, aside from the established specializations, is determined in consultation with a faculty advisor.

Faculty in the Departments of Biomedical Engineering, Chemical Engineering and Materials Science, Civil and Environmental Engineering, Electrical Engineering and Computer Science, and Mechanical and Aerospace Engineering also teach courses in the major in Engineering program.

Admissions

The general major in Engineering is only open to junior-standing students who have completed the required lower-division courses with a high level of achievement. Freshmen are not eligible to apply for this major. The sequential nature of the Engineering program and the fact that many courses are offered only once a year make it beneficial for students to begin their studies in the fall quarter.

Transfer Students: The general Engineering major is a specialized program for students who are seeking careers in areas other than traditional engineering disciplines and is open to upper-division students only. Preference will be given to junior-level applicants with the highest grades overall, and who have satisfactorily completed the following required courses: one year of approved calculus, one year of calculus-based physics with laboratories (mechanics, electricity and magnetism), one course in computational methods (e.g., C, C++), and one year of general chemistry (with laboratory).

Students are encouraged to complete as many of the lower-division degree requirements as possible prior to transfer. Students who enroll at UCI in need of completing lower-division coursework may find that it will take longer than two years to complete their degrees. For further information, contact The Henry Samueli School of Engineering at 949-824-4334.

Requirements for the B.S. in Engineering

Credit for at least 180 units, and no more than 196 units. All courses must be approved by a faculty advisor and the Associate Dean of Student Affairs prior to enrollment in the program.

All students must meet the University Requirements (p. 91).

All students must meet the School Requirements (p. 564).

Major Requirements

Mathematics and Basic Science Courses: MATH 2A-MATH 2B-MATH 2D, MATH 2E, MATH 3A, and MATH 3D. PHYSICS 7C, PHYSICS 7LC, PHYSICS 7D, and PHYSICS 7LD. With the approval of a faculty advisor and the Associate Dean, students select all additional Mathematics and Basic Science courses.
Engineering Topics Courses: ENGRMAE 10 or equivalent. With the approval of a faculty advisor and the Associate Dean, students select all additional Engineering Topics courses.

Design unit values are indicated at the end of each course description. The faculty advisors and the Student Affairs Office can provide necessary guidance for satisfying the design requirements.

Program of Study

Students should keep in mind that the program for the major in Engineering is based upon a rigid set of prerequisites, beginning with adequate preparation in high school mathematics, physics, and chemistry. Therefore, the course sequence should not be changed except for the most compelling reasons. Students must have their programs approved by an academic counselor in Engineering. A sample program of study is available in the Student Affairs Office.

Graduate Study

Fadi J. Kurdahi, Associate Dean for Graduate and Professional Studies
Graduate Student Affairs Office
204 Rockwell Engineering Center
949-824-8090

Admissions

For information on requirements for admission to graduate study at UCI, contact the appropriate Engineering department, concentration director, or the Graduate Student Affairs Office in The Henry Samueli School of Engineering. Additional information is available in the Catalogue’s Graduate Division section (p. 179). Admission to graduate standing in The Henry Samueli School of Engineering is generally accorded to those possessing a B.S. in engineering or an allied field obtained with an acceptable level of scholarship from an institution of recognized standing. Those seeking admission without the prerequisite scholarship record may, in some cases, undertake remedial work; if completed at the stipulated academic level, they will be considered for admission. Those admitted from an allied field may be required to take supplementary upper-division courses in basic engineering subjects. The Graduate Record Examination (GRE) General Test is required of all applicants.

Financial Support

Teaching assistantships and fellowships are available to qualified applicants. (Applicants should contact the Department or concentration director to which they are applying for information.) Research assistantships are available through individual faculty members. Although not required, it is beneficial for applicants to contact the faculty member directly to establish the potential for research support. Early applications have a stronger chance for financial support.

Part-Time Study

Those students who are employed may pursue the M.S. on a part-time basis, carrying fewer units per quarter. Since University residency requirements necessitate the successful completion of a minimum number of units in graduate or upper-division work in each of at least three regular University quarters, part-time students should seek the advice of a counselor in The Henry Samueli School of Engineering Graduate Student Affairs Office and the approval of the Graduate Advisor in their program. M.S. programs must be completed in four calendar years from the date of admission. Students taking courses in UCI Division of Continuing Education prior to enrollment in a graduate program should consult the following section on Transfer of Courses.

Transfer and Substitution of Courses

Upon petition, a limited number of upper-division undergraduate or graduate-level courses taken through UCI Division of Continuing Education, at another UC campus, or in another accredited university may be credited toward the M.S. after admission. The applicability of transfer or substitution courses must be approved by the student’s department, the School’s Associate Dean, and the Graduate Dean of the University, in accordance with Academic Senate regulations. Also in accordance with UC Academic Senate policy, transfer credit for the M.S. cannot be used to reduce the minimum requirement in strictly graduate (200 series) courses.

M.S. and Ph.D. in Engineering with a Concentration in Materials and Manufacturing Technology

204 Rockwell Engineering Center; 949-824-8090
Chin C. Lee, Director and Graduate Advisor

Materials and Manufacturing Technology (MMT) is concerned with the generation and application of knowledge relating the composition, structure, and processing of materials to their properties and applications, as well as the manufacturing technologies needed for production. During the past two decades, MMT has become an important component of modern engineering education, partly because of the increased level of sophistication required of engineering materials in a rapidly changing technological society, and partly because the selection of materials has increasingly become an integral part of almost every modern engineering design. In fact, further improvements in design are now viewed more and more as primarily materials and manufacturing issues. Both the development of new materials and the understanding of present-day materials demand a thorough knowledge of basic engineering and scientific principles including, for example, crystal structure, mechanics, mechanical behavior, electronic, optical and magnetic properties, thermodynamics, phase equilibria, heat transfer, diffusion, and the physics and chemistry of solids and chemical reactions.

The field of MMT ranks high on the list of top careers for scientists and engineers. The services of these engineers and scientists are required in a variety of engineering operations dealing, for example, with design of semiconductors and optoelectronic devices, development of new technologies based on composites and high-temperature materials, biomedical products, performance (quality, reliability, safety, energy efficiency) in automobile and aircraft components, improvement in nondestructive testing techniques, corrosion behavior in refineries, radiation damage in nuclear power plants, fabrication of steels, and construction of highways and bridges.

Subjects of interest in Materials and Manufacturing Technology cover a wide spectrum, ranging from metals, optical and electronic materials to superconductive materials, ceramics, advanced composites, and biomaterials. In addition, the emerging new research and technological areas in materials are in many cases interdisciplinary. Accordingly, the principal objective of the graduate curriculum is to integrate a student’s area of emphasis—whether it be chemical processing and production, electronic and photonic materials and devices, electronic manufacturing and packaging, or materials engineering—into the whole of materials and manufacturing technology. Such integration will increase familiarity with other disciplines and provide students with the breadth they need to face the challenges of current and future technology.

Students with a bachelor’s degree may pursue either the M.S. or Ph.D. in Engineering with a concentration in Materials and Manufacturing Technology (MMT). If students choose to enter the Ph.D. program directly, it is a requirement that they earn an M.S. along the way toward the completion of their Ph.D.

Faculty

Ozdal Boyraz (silicon photonics, nonlinear optics in silicon, cascaded cavity silicon Raman lasers)
Peter J. Burke (quantum electronics, high-speed semiconductor technology)
Zhongping Chen (optical sensor and imaging, MEMS and biophotonic system, and biomedical devices)
James C. Earthman (fatigue behavior and cyclic damage, automated materials testing, high-temperature fracture, biomaterials, cellular networks)
Franco De Flaviis (microwave materials and devices, MEMS devices and fabrication processes)
Michelle Khine (manufacturing and scalability of micro and nanotechnologies for in vitro diagnostics, in vivo applications, and wearable electronics)
John C. LaRue (fluid mechanics, micro-electrical-mechanical systems (MEMS), turbulence, heat transfer, instrumentation)
Abraham Lee (micro and nanofluidic chips, droplet-based reactors for bioassays and materials synthesis, cell and biomolecular based sensors, nanoparticles and vesicles for drug delivery and targeted therapeutics)
Chin C. Lee, Director (electronic packaging, fluxless bonding technology, thermal design and management, semiconductor devices, and microwaves)
Jaeho Lee (heat transfer in microdevices and nanomaterials, phonon transport modeling, electrothermal characterization, thermomechanical optimization, thermoelectrics, and phononics)
Henry P. Lee (optoelectronic materials, growth, and devices)
Guann Pyng Li (optoelectronic devices, integrated circuit fabrication and testing, high-speed semiconductor technology)
Michael McCarthy (computer-aided design, analysis and synthesis of mechanical movement, and cyber-physical systems)

Marc J. Madou (fundamental aspects of micro/nano-electro-mechanical systems [MEMS/NEMS], biosensors, nanofluidics, biomimetics)

Martha L. Mecartney (electron microscopy, ceramics, interfacial engineering)

Farghalli A. Mohamed (mechanical properties, creep, superplasticity, correlations between property and microstructure)

Ayman S. Mosallam (polymer composites, nano-composites, experimental mechanics, numerical Simulation, durability, composite joints, health monitoring, non-destructive testing, repair, and creep)

Daniel R. Mumm (thermo-mechanical behavior of materials, interfaces and microstructure, materials for power and propulsion, cellular materials, morphing structures, micro/nano-mechanics)

Regina Ragan (self-assembly, nanoelectronics, nanophotonics, chemical and biological sensors, organic/inorganic interfaces and nanofabrication)

Timothy J. Rupert (mechanical behavior, nanomaterials, structure-property relationships, structural evolution, grain boundaries and interfaces, electron microscopy)

Andrei M. Shkel (design, advanced control, diagnostics, and fabrication of integrated microelectromechanical systems [MEMS], applications in inertial, optical, and biomedical system)

Frank G. Shi (optoelectronics packaging, packaging materials, photonic glass and nanocomposites)

Lizhi Sun (CEE) (micromechanics and nanomechanics, dislocation dynamics, composites and thin films, multiscale modeling, elastography)

William Tang (wireless micro implants for neural prosthesis, platforms for micro- and nano-scale single-cell biomedical diagnosis, micro biomechanics on organisms, tissues, and cells, with emphases on cardiomyocytes, bone marrow stem cells, cancer cells, neurons, and malaria-infected red blood cells)

Chen S. Tsai (integrated optic devices and circuits, ferromagnetic materials; device and fabrication, ultrasonic nozzle technology for nanoparticles)

Lorenzo Valdevit (multifunctional sandwich structures, thermal protection systems, morphing structures, active materials, MEMS, electronic packaging, cell mechanics)

Yoonjin Won (multiphase heat transfer at the nanoscale with the development of innovative materials to address thermal challenges in modern electronics and energy application)

Albert Yee (nanofabrication of soft materials, physics of polymer thin films, nanomechanical properties of polymers, ultra-low k dielectrics, fracture and toughening of polymer nanocomposites)

**Recommended Background**

Given the nature of Materials and Manufacturing Technology as an interdisciplinary program, students having a background and suitable training in either Materials, Engineering (Biomedical, Civil, Chemical, Electrical, and Mechanical), or the Physical Sciences (Physics, Chemistry, Geology) are encouraged to participate. Recommended background courses include an introduction to materials, thermodynamics, mechanical properties, and electrical/optical/magnetic properties. A student with an insufficient background may be required to take remedial undergraduate courses following matriculation as a graduate student.

**Core Requirement**

Because of the interdepartmental nature of the concentration, it is important to establish a common foundation in Materials and Manufacturing Technology (MMT) for students from various backgrounds. This foundation is sufficiently covered in MMT courses that are listed below and that deal with the following topics: ENGRMSE 200 Crystalline Solids: Structure, Imperfections, and Properties; ENGRMAE 252 Fundamentals of Microfabrication or ENGR 265 Advanced Manufacturing; ENGRMAE 259 Mechanical Behavior of Solids - Atomistic Theories; BME 261 Biomedical Microdevices. Core courses must be completed with a grade of B (3.0) or better.

**Electives**

Electives are grouped into four areas of emphasis.

Milestones to be passed in the Ph.D. program include the following: acceptance into a research group by the faculty advisor during the student’s first year of study, successful completion of the Ph.D. preliminary examination during years one or two, development of a research proposal, passing the process involves immersion in a research atmosphere and culminates in the production of original research results presented in a dissertation.

Prior to working on doctoral studies, Ph.D. candidates work under the supervision of faculty advisors. The may be admitted into the Ph.D. program. However, these students will be required to complete the degree requirements above for the master's degree to take additional course work, to be decided in consultation with the graduate advisor and the program director. Students without a master's degree must hold the appropriate prerequisite degrees from recognized institutions of high standing. Students entering with a master's degree may be required to take additional course work, to be decided in consultation with the graduate advisor and two members appointed by the program director. Part-time study for the M.S. is available and encouraged for engineers working in local industries. Registration for part-time study must be approved in advance by the MMT program director, the School’s Associate Dean, and the Graduate advisor.

In the last quarter, an oral comprehensive examination on the contents of study will be given by a committee of three faculty members including the advisor and two members appointed by the program director. Part-time study for the M.S. is available and encouraged for engineers working in local industries. Registration for part-time study must be approved in advance by the MMT program director, the School’s Associate Dean, and the Graduate advisor.

In addition to fulfilling the course requirements outlined above, it is a University requirement for the Master of Science degree that students fulfill a minimum of 36 units of study.

**Concurrent Study in the Program in Law and Graduate Studies (PLGS)**

Students have the option to pursue a coordinated curriculum leading to a J.D. degree from the School of Law in conjunction with a Master's or Ph.D. in Engineering with a concentration in Materials and Manufacturing Technology. For students pursuing the M.S. thesis option, 8 units of research can be substituted for law electives, and comprehensive exam students can petition two course (non-course or area of emphasis courses) to be substituted by law electives.

**Doctor of Philosophy Degree**

The Ph.D. in Engineering with a concentration in Materials and Manufacturing Technology requires a commitment on the part of the student to dedicated study and collaboration with the faculty. Ph.D. students are selected on the basis of outstanding demonstrated potential and scholarship. Applicants must hold the appropriate prerequisite degrees from recognized institutions of high standing. Students entering with a master’s degree may be required to take additional course work, to be decided in consultation with the graduate advisor and the program director. Students without a master’s degree may be admitted into the Ph.D. program. However, these students will be required to complete the degree requirements above for the master’s degree prior to working on doctoral studies. After substantial academic preparation, Ph.D. candidates work under the supervision of faculty advisors. The process involves immersion in a research atmosphere and culminates in the production of original research results presented in a dissertation.

Milestones to be passed in the Ph.D. program include the following: acceptance into a research group by the faculty advisor during the student’s first year of study, successful completion of the Ph.D. preliminary examination during years one or two, development of a research proposal, passing the

It should be noted that specific course requirements within the area of emphasis are decided based on consultation with the Director of the MMT concentration.

**Master of Science Degree**

Two options are available for M.S. students: a thesis option and a comprehensive examination option. Both options require the completion of at least 12 courses of study.

**Plan I. Thesis Option**

For the thesis option, students are required to complete an original research project and write an M.S. thesis. A committee of three full-time faculty members is appointed to guide the development of the thesis. Students must also obtain approval for a complete program of study from the program director. At least seven courses (3-unit or 4-unit) must be taken from courses numbered 200–289, among which at least four courses (3-unit or 4-unit) are from MMT core courses and at least three courses (3-unit or 4-unit) are in the area of emphasis approved by the faculty advisor and the graduate advisor. Four units of BME 296, CBEMS 296, EECS 296, ENGR 296, ENGRCEE 296, or ENGRMAE 296 count as the equivalence of one course. Up to three courses equivalent of BME 296, CBEMS 296, EECS 296, ENGR 296, ENGRCEE 296, or ENGRMAE 296 and up to two courses (3-unit or 4-unit) of upper-division undergraduate elective courses taken as a graduate student at UCI can be applied toward the 12-course requirement.

**Plan II. Comprehensive Examination Option**

For the comprehensive examination option, students are required to complete minimally 12 courses (3-unit or 4-unit) of study. At least eight courses (3-unit or 4-unit) must be taken from courses numbered 200–289, among which at least four courses (3-unit or 4-unit) are from MMT core courses and at least four courses (3-unit or 4-unit) are in the area of emphasis approved by the faculty advisor and the graduate advisor. Four units of BME 299, CBEMS 299, EECS 299, ENGRCEE 299, or ENGRMAE 299 count as the equivalence of one course. One course equivalent of BME 299, CBEMS 299, EECS 299, ENGRCEE 299, or ENGRMAE 299 and up to two courses (3-unit or 4-unit) of upper-division undergraduate elective courses taken as a graduate student at UCI can be applied toward the 12-course requirement.

In the last quarter, an oral comprehensive examination on the contents of study will be given by a committee of three faculty members including the advisor and two members appointed by the program director. Part-time study for the M.S. is available and encouraged for engineers working in local industries. Registration for part-time study must be approved in advance by the MMT program director, the School’s Associate Dean, and the Graduate Dean.

In addition to fulfilling the course requirements outlined above, it is a University requirement for the Master of Science degree that students fulfill a minimum of 36 units of study.

**Concurrent Study in the Program in Law and Graduate Studies (PLGS)**

Students have the option to pursue a coordinated curriculum leading to a J.D. degree from the School of Law in conjunction with a Master's or Ph.D. in Engineering with a concentration in Materials and Manufacturing Technology. For students pursuing the M.S. thesis option, 8 units of research can be substituted for law electives, and comprehensive exam students can petition two course (non-course or area of emphasis courses) to be substituted by law electives.
qualifying examination during year three (second year for those who entered with a master’s degree), and the successful completion and defense of the
dissertation during the fourth or fifth year. There is no foreign language requirement.

The degree is granted upon the recommendation of the doctoral committee and the Dean of Graduate Division. The normative time for completion of the
Ph.D. is five years (four years for students who entered with a master’s degree). The maximum time permitted is seven years.

methods

The Master of Science in Engineering Management is a graduate degree jointly offered by The Paul Merage School of Business and The Henry Samueli
School of Engineering that will prepare engineers for leadership roles in technology, science, government, and engineering-based companies and
organizations. The curriculum includes courses in engineering from The Henry Samueli School of Engineering and courses in business administration
from The Paul Merage School of Business. Students will emerge as innovators by taking on the role of business and engineering project managers
tasked with solving complex engineering product development challenges through consulting projects, business plans, and exposure to current issues
within the engineering sector. Through this process, quantitative and qualitative skills along with business communication skills will be developed.

This competitive major teaches business from the engineering perspective and engineering from the business perspective, and students will learn to
think about their work through the lens of innovation and to develop a crucial view to enhance their careers.

Admissions

Applicants apply directly to The Samueli School for the M.S. in Engineering Management. Applicants must meet any applicable prerequisite
requirements for the specific engineering specialization they wish to pursue. Admission to graduate standing in The Samueli School of Engineering
is generally accorded to those possessing at least a B.S. in engineering or an allied field obtained with an acceptable level of scholarship from an
institution of recognized standing. Those seeking admission without the prerequisite scholarship record may, in some cases, undertake remedial
work; if completed at the stipulated academic level, they will be considered for admission. Those admitted from an allied field may be required to take
supplementary upper-division courses in basic engineering subjects.

The Samueli and Merage Schools will evaluate applicants on their prior academic record and their potential for management and leadership as
demonstrated in submitted application materials including work experience and in an interview. These materials will include university transcripts, GRE
test scores, letters of recommendation, and a Statement of Purpose. Competitive applicants will be interviewed by the Merage School.

Master of Science Degree: Plan II: Comprehensive Exam Option

The M.S. degree requires the completion of designated course work which corresponds to a minimum of 17 courses beyond the bachelor’s degree. As
part of the program, students must complete a two-week orientation and an intensive course in early to mid-September preceding the fall quarter which
presents fundamental concepts of management to initiate students into the concrete challenges that managers in high-performing organizations typically
confront.

Core Requirements

Due to the interdisciplinary nature of this degree, it is important to establish a common foundation in Engineering Management for students from various
backgrounds. This foundation is sufficiently covered in Engineering Management courses that are listed below and that deal with the following topics:
MGMTMBA 200  Responding to Dynamic Times: Thinking Strategically in Business
MGMTMBA 211  MBA Proseminar (3 quarters)
MGMTMBA 298  Merage Consulting Projects (or equivalent)

Plus, a departmental seminar based on specialization area, for example:

- BME 298  Seminars in Biomedical Engineering
- CBEMS 298  Seminars in Engineering
- EECS 294  Electrical Engineering and Computer Science Colloquium
- ENGRCEE 295  Seminars in Engineering
- ENGRMAE 298  Seminars in Mechanical and Aerospace Engineering

**Electives**

**Business.** In addition to the core courses listed above, at least five additional courses from The Merage School of Business are required. (Students will be recommended certain classes based on career tracks they plan to pursue.)

- Three Merage School M.B.A. core courses;
- Two additional courses from a selected group of either core or elective courses.

**M.B.A. Courses**

**Core:**

- MGMTMBA 201A  Statistics for Management
- MGMTMBA 201B  Management Science
- MGMTMBA 202  Organizational Behavior for Management
- MGMTMBA 203A  Financial Reporting for Management
- MGMTMBA 203B  Driving Profitability Through Management Accounting
- MGMTMBA 204A  Microeconomics for Management
- MGMTMBA 204B  Macroeconomics for Management
- MGMTMBA 205  Marketing Management
- MGMTMBA 206  Business and Government
- MGMTMBA 207  Competing with Digital: Technology, Analytics, Platforms
- MGMTMBA 208  Operations Management
- MGMTMBA 209A  Managerial Finance
- MGMTMBA 210  Strategic Management

**Electives:**

Refer to the Business School section of the Catalogue for a list of current M.B.A. electives.

**Engineering.** In addition to the core courses listed above, at least five courses from The Samueli School are required. (Students will be recommended certain classes based on career tracks they plan to pursue.)

- Three courses from a chosen primary specialization in Engineering: Biomedical Engineering, Chemical and Biochemical Engineering, Civil Engineering, Electrical and Computer Engineering, Materials Science and Engineering, or Mechanical and Aerospace Engineering;
- Two additional elective courses chosen from the primary specialization, from another specialization, or from other courses within or outside The Samueli School as approved by the Director or Director-Elect.

**Approved Specialization Courses**

**Biomedical Engineering:**

- BME 210  Molecular and Cellular Engineering
- BME 213  Systems Cell and Developmental Biology
- BME 220  Sensory Motor Systems
- BME 221  Organ Transport Systems
- BME 230A  Applied Engineering Mathematics I
- BME 230B  Applied Engineering Mathematics II
- BME 233  Dynamic Systems in Biology and Medicine
- BME 251  Engineering Medical Optics
- BME 260  Microfluids and Lab-On-A-Chip
- BME 261  Biomedical Microdevices

M.S. in Biotechnology Management

The M.S. in Biotechnology Management is a joint graduate degree that will prepare scientists for leadership roles in biotechnology, science, and engineering-based companies through a curriculum comprised of courses from the Department of Molecular Biology and Biochemistry (MB&B) in the School of Biological Sciences, the Department of Biomedical Engineering in The Henry Samuei School of Engineering, and The Paul Merage School of Business. Students will receive advanced training in biotechnology through course work, a teaching laboratory, and two quarters of independent research in a faculty laboratory of their choosing. They will also learn to think as a business manager by solving product development challenges through consulting projects, creating business plans, and by exposure to current issues within the biotechnology sector. Students will develop quantitative and qualitative skills along with business communication skills. Students will learn about business from the biotechnology perspective and biotechnology from the business perspective, and will be taught to think about their work through the lens of innovation, a crucial view for their careers.

Complete program information is available in the School of Biological Sciences section (p. 372) of the *Catalogue*.

Biomedical Engineering Courses

**BME 1. Introduction to Biomedical Engineering. 3 Units.**

Introduction to the central topics of biomedical engineering. Offers a perspective on bioengineering as a discipline in a seminar format. Principles of problem definition, team design, engineering inventiveness, information access, communication, ethics, and social responsibility are emphasized.

(Design units: 1)

Restriction: Biomedical Engineering Majors have first consideration for enrollment. Biomedical Engr: Premedical Majors have first consideration for enrollment.

**BME 50A. Cell and Molecular Engineering. 4 Units.**

Physiological function from a cellular, molecular, and biophysical perspective. Applications to bioengineering design.

(Design units: 2)

Corequisite: BME 1

Prerequisite: CHEM 1C

Restriction: Biomedical Engineering Majors have first consideration for enrollment. Chemical Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.
BME 50B. Cell and Molecular Engineering. 4 Units.
Physiological function from a cellular, molecular, and biophysical perspective. Applications to bioengineering design.

(Design units: 2)

Prerequisite: BME 50A and PHYSICS 7D

Restriction: Biomedical Engineering Majors have first consideration for enrollment. Biomedical Engr: Premedical Majors have first consideration for enrollment. Chemical Engineering Majors have first consideration for enrollment.

BME 60A. Engineering Analysis/Design: Data Acquisition. 4 Units.
Fundamentals of LabVIEW programming, basics of computer-based experimentation, establishing interface between computer and data acquisition instrumentation, signal conditioning basics. Materials fee.

(Design units: 2)

Corequisite: BME 1
Prerequisite: PHYSICS 7D

Restriction: Biomedical Engineering Majors have first consideration for enrollment. Biomedical Engr: Premedical Majors have first consideration for enrollment.

BME 60B. Engineering Analysis/Design: Data Analysis. 4 Units.
Overview of MATLAB; numeric, cell, and structure arrays; file management; plotting and model building; solving linear algebraic equations; differential equations; symbolic process. Materials fee.

(Design units: 1)

Prerequisite: BME 60A and MATH 3A

Overlaps with ENGRCEE 20.

Restriction: Biomedical Engineering Majors have first consideration for enrollment. Biomedical Engr: Premedical Majors have first consideration for enrollment.

BME 60C. Engineering Analysis/Design: Computer-Aided Design. 4 Units.
Introduction to SolidWorks and Computer-Aided Design software; design; analysis; rapid prototyping; visualization and presentation; planning and manufacturing. Materials fee.

(Design units: 2)

Prerequisite: BME 60B

Restriction: Biomedical Engineering Majors have first consideration for enrollment. Biomedical Engr: Premedical Majors have first consideration for enrollment.

BME 110A. Biomechanics I. 4 Units.
Introduction to statics. Rigid bodies, analysis of structures, forces in beams, moments of inertia.

(Design units: 1)

Prerequisite: PHYSICS 7D and PHYSICS 7LD and PHYSICS 7E and MATH 3A and MATH 3D

Restriction: Biomedical Engineering Majors have first consideration for enrollment. Biomedical Engr: Premedical Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.

BME 110B. Biomechanics II. 4 Units.
Introduction to dynamics. Kinematics of Particles, Newton's Second Law, System's of Particles, Kinematics of Rigid Bodies, Motion in three dimensions.

(Design units: 1)

Prerequisite: BME 110A

Restriction: Biomedical Engineering Majors have first consideration for enrollment. Biomedical Engr: Premedical Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.
BME 110C. Biomechanics III. 4 Units.
Applications of statics and dynamics to biomedical systems. Cellular biomechanics, hemodynamics, circulatory system, respiratory system, muscles and movement, skeletal biomechanics. Applications to bioengineering design.

(Design units: 1)
Prerequisite: BME 110B
Restriction: Biomedical Engineering Majors have first consideration for enrollment.

BME 111. Design of Biomaterials. 4 Units.

(Design units: 3)
Corequisite: BME 50B or BIO SCI 99.
Restriction: Biomedical Engineering Majors have first consideration for enrollment. Biomedical Engr: Premedical Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.

BME 114. Genetic Engineering and Synthetic Biology. 4 Units.
Exploring how biological function can be engineered and “synthesized” from the DNA level up.

(Design units: 0)
Prerequisite: CHEM 1C and MATH 3D and BME 50A and BME 50B
Restriction: Biomedical Engineering Majors have first consideration for enrollment.

BME 120. Sensory Motor Systems. 4 Units.
A quantitative and systems approach to understanding physiological systems. Systems covered include the nervous and musculoskeletal systems.

(Design units: 2)
Prerequisite: (BME 60B or EECS 10 or EECS 12 or ENGRCEE 20 or ENGRMAE 10) and MATH 3D and PHYSICS 7D
Restriction: Biomedical Engineering Majors have first consideration for enrollment. Biomedical Engr: Premedical Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.
Concurrent with BME 220.

BME 121. Quantitative Physiology: Organ Transport Systems. 4 Units.
A quantitative and systems approach to understanding physiological systems. Systems covered include the cardiopulmonary, circulatory, and renal systems.

(Design units: 1)
Prerequisite: (BME 60B or EECS 10 or EECS 12 or ENGRCEE 20 or ENGRMAE 10) and MATH 3A and MATH 3D
Restriction: Biomedical Engineering Majors have first consideration for enrollment. Biomedical Engr: Premedical Majors have first consideration for enrollment. Chemical Engineering Majors have first consideration for enrollment.

BME 130. Biomedical Signals and Systems. 4 Units.
Analysis of analog and digital biomedical signals; Fourier Series expansions; difference and differential equations; convolutions. System models: discrete-time and continuous-time linear time-invariant systems; Laplace and Fourier transforms. Analysis of signals and systems using computer programs.

(Design units: 1)
Corequisite: BME 60B
Prerequisite: MATH 3A and MATH 3D. Recommended: STATS 8.
Restriction: Biomedical Engineering Majors have first consideration for enrollment. Biomedical Engr: Premedical Majors have first consideration for enrollment.
BME 132. Introduction to Computational Biology. 4 Units.

Prerequisite: MATH 2D or MATH 3A or STATS 7 or STATS 8

Same as BIO SCI M123, COMPSCI 183.
Concurrent with MOL BIO 223 and BME 232.

BME 135. Photomedicine. 4 Units.
Studies the use of optical and engineering-based systems (laser-based) for diagnosis, treating diseases, manipulation of cells and cell function. Physical, optical, and electro-optical principles are explored regarding molecular, cellular, organ, and organism applications.

(Design units: 0)
Prerequisite: PHYSICS 3C or PHYSICS 7D

Same as BIO SCI D130.
Restriction: Biomedical Engineering Majors have first consideration for enrollment.

BME 136. Engineering Medical Optics. 4 Units.
Principles of optics and photonics, integration of optical components into systems and devices, and analysis of physiological signals obtained from Biophotonics measurements.

(Design units: 3)
Prerequisite: BME 130 and BME 135

Restriction: Biomedical Engineering Majors have first consideration for enrollment.
Concurrent with BME 251.

BME 137. Introduction to Biomedical Imaging. 4 Units.
Introduction to imaging modalities widely used in medicine and biology, including X-ray, computed tomography (CT), nuclear medicine (PET and SPET), ultrasonic imaging, magnetic resonance imaging (MRI), optical tomography, imaging contrast, imaging processing, and complementary nature of the imaging modalities.

(Design units: 1)
Prerequisite: BME 130 or EECS 50 or EECS 150
Restriction: Biomedical Engineering Majors have first consideration for enrollment.

BME 138. Spectroscopy and Imaging of Biological Systems. 4 Units.
Principles of spectroscopy; absorption; molecular orbitals; multiphoton transitions; Jablonski diagram; fluorescence anisotropy; fluorescence decay; quenching; FRET; excited state reactions; solvent relaxations; instruments; microscopy: wide field, LSM, TPE; fluorescent probes, fluctuations spectroscopy; optical resolution and super-resolution; CARS and SHG microscopy.

(Design units: 1)
Prerequisite: MATH 3A and MATH 3D. Recommended: STATS 8.
Restriction: Biomedical Engineering Majors only. Biomedical Engr: Premedical Majors only.
Concurrent with BME 238.

BME 140. Design of Biomedical Electronics. 4 Units.
Analog and digital circuits in bioinstrumentation. AC and DC circuit analysis, design and construction of filter and amplifiers using operational amplifier, digitization of signal and data acquisition, bioelectrical signal, design and construction of ECG instrument, bioelectrical signal measurement and analysis. Materials fee.

(Design units: 3)
Prerequisite: BME 60C and BME 130
Restriction: Biomedical Engineering Majors have first consideration for enrollment.
**BME 147. Microfluidics and Lab-on-a-Chip. 4 Units.**
Introduction to principles of microfluidics and state-of-the-art micro Total Analysis Systems (uTAS). Lab-on-a-Chip for bimolecular assays with device design principles for microscale sample preparation, flow transport, bimolecular manipulation, separation and detection, and the technologies for integrating these devices into microsystems.

(Design units: 1)

Prerequisite: BME 110C

Restriction: Biomedical Engineering Majors have first consideration for enrollment.

Concurrent with BME 260.

**BME 148. Microimplants. 4 Units.**
Essential concepts of biomedical implants at the micro scale. Design, fabrication, and applications of several microimplantable devices including cochlear, retinal, neural, and muscular implants.

(Design units: 1)

Prerequisite: BME 111

Restriction: Biomedical Engineering Majors have first consideration for enrollment.

Concurrent with BME 262.

**BME 149. Biomedical Microdevices . 4 Units.**
In-depth review of microfabricated devices designed for biological and medical applications. Studies of the design, implementation, manufacturing, and marketing of commercial and research bio-medical devices.

(Design units: 0)

Concurrent with BME 261.

**BME 150. Biotransport Phenomena. 4 Units.**
Fundamentals of heat and mass transfer, similarities in the respective rate equations. Emphasis on practical application of fundamental principles.

(Design units: 1)

Prerequisite: BME 60B and MATH 3A and MATH 3D

Overlaps with CBEMS 125C.

Restriction: Biomedical Engineering Majors have first consideration for enrollment. Biomedical Engr: Premedical Majors have first consideration for enrollment.

**BME 160. Tissue Engineering. 4 Units.**
Quantitative analysis of cell and tissue functions. Emerging developments in stem cell technology, biodegradable scaffolds, growth factors, and others important in developing clinical products. Applications of bioengineering.

(Design units: 2)

Prerequisite: (BME 50B or BIO SCI 99) and BME 111 and BME 121 and BME 150

Restriction: Biomedical Engineering Majors have first consideration for enrollment. Biomedical Engr: Premedical Majors have first consideration for enrollment.

**BME 170. Biomedical Engineering Laboratory. 4 Units.**
Measurement and analysis of biological systems using engineering tools and techniques. Laboratory experiments involve living systems with the emphasis on measuring physiological parameters. Labs: Introduction to Electroencephalography, Fiberoptic thermometry, Neurorehabilitation Engineering, Spectroscopy principles of the common pulse oximeter. Materials fee.

(Design units: 1)

Prerequisite: BME 111 and BME 120 and BME 121 and BME 130 and BME 140

Restriction: Biomedical Engineering Majors have first consideration for enrollment.
BME 171. Cell and Tissue Engineering Laboratory. 4 Units.
Techniques in molecular, cellular, and tissue engineering. Topics include bacterial and mammalian cell culture, DNA cloning and gene transfer, fabrication of biomaterial scaffolds, and immunassays and microscopy techniques for cell-based assays.

(Design units: 0)
Prerequisite: BME 160
Restriction: Biomedical Engineering Majors have first consideration for enrollment. Biomedical Engr: Premedical Majors have first consideration for enrollment.

BME 180A. Biomedical Engineering Design. 3 Units.
Design strategies, techniques, tools, and protocols commonly encountered in biomedical engineering; clinical experience at the UCI Medical Center and Beckman Laser Institute; industrial design experience in group projects with local biomedical companies; ethics, economic analysis, and FDA product approval. Materials fee.

(Design units: 3)
Prerequisite: BME 60C and BME 110C and BME 111 and BME 120 and BME 121 and BME 140. BME 180A, BME 180B, and BME 180C must be taken in the same academic year.

Grading Option: In progress only.
Restriction: Seniors only. Biomedical Engineering Majors only.

BME 180B. Biomedical Engineering Design. 3 Units.
Design strategies, techniques, tools, and protocols commonly encountered in biomedical engineering; clinical experience at the UCI Medical Center and Beckman Laser Institute; industrial design experience in group projects with local biomedical companies; ethics, economic analysis, and FDA product approval. Materials fee.

(Design units: 3)
Prerequisite: BME 180A. BME 180A, BME 180B, and BME 180C must be taken in the same academic year.

Grading Option: In progress only.
Restriction: Seniors only. Biomedical Engineering Majors only.

BME 180C. Biomedical Engineering Design. 3 Units.
Design strategies, techniques, tools, and protocols commonly encountered in biomedical engineering; clinical experience at the UCI Medical Center and Beckman Laser Institute; industrial design experience in group projects with local biomedical companies; ethics, economic analysis, marketing, and FDA product approval. Materials fee.

(Design units: 3)
Prerequisite: BME 180B. BME 180A, BME 180B, and BME 180C must be taken in the same academic year.

Restriction: Seniors only. Biomedical Engineering Majors only.

BME 195. Special Topics in Biomedical Engineering. 1-4 Units.
Studies in selected areas of Biomedical Engineering. Topics addressed vary each quarter.

(Design units: 1-4)
Prerequisite: Prerequisites vary.
Repeatability: Unlimited as topics vary.

BME 197. Seminars in Biomedical Engineering. 2 Units.
Presentation of advanced topics and reports of current research efforts in Biomedical Engineering.

(Design units: 1-2)
Restriction: Seniors only. Biomedical Engineering Majors have first consideration for enrollment.

Concurrent with BME 298.
BME 199. Individual Study. 1-4 Units.
Independent research conducted in the lab of a biomedical engineering core faculty member. A formal written report of the research conducted is required at the conclusion of the quarter.

(Design units: 1-4)

Prerequisite: BIO SCI 194S

Repeatability: May be taken for credit for 8 units.

BME 199P. Individual Study. 1-4 Units.
Supervised independent research, reading, research, or design for undergraduate Engineering majors. Students taking individual study for design credit are to submit a written paper to the instructor and to the Undergraduate Student Affairs Office in the School of Engineering.

(Design units: 1-4)

Grading Option: Pass/no pass only.

Repeatability: May be repeated for credit unlimited times.

BME 210. Molecular and Cellular Engineering. 4 Units.
Engineering of physiological function at the genetic, cellular, and tissue scales. Topics include cloning and genetic engineering, extracellular matrix biomaterials, principles of regenerative medicine and tissue engineering, and experimental design.

Restriction: Graduate students only.

BME 211. Microscale Tissue Engineering. 4 Units.
Engineering of physiological function at the scale of individual cells. Topics include cell micropatterning, microfluidic tissue culture, engineering the cellular microenvironment, and microphysiological systems.

Restriction: Graduate students only.

BME 212. Cardiovascular Mechanobiology. 4 Units.
Advanced topics in cellular engineering and mechanobiology, with focus on the cardiovascular system. Tools and techniques used to manipulate and measure mechanical forces at the molecular, cellular, tissue, and organ levels, and their applications in cardiovascular devices and tissue engineering.

Restriction: Graduate students only.

BME 213. Systems Cell and Developmental Biology. 4 Units.
Introduces concepts needed to understand cell and developmental biology at the systems level, i.e., how the parts (molecules) work together to create a complex output. Emphasis on using mathematical/computational modeling to expand/modify insights provided by intuition.

Same as DEV BIO 232.

Restriction: Graduate students only.

BME 215. Linking Modeling and Experiments in Bioengineering. 4 Units.
Overview of modeling based on experimental techniques in bioengineering. Construct and evaluate models of varying complexity and to relate them to experimental data.

Prerequisite: BME 220 and BME 221

Restriction: Graduate students only.

BME 218. Directed Evolution. 4 Units.
Directed evolution harnesses the processes of Darwinian evolution for biomolecular engineering goals. This class will begin with fundamental principles in evolutionary biology and move on to the experimental evolution techniques and their applications.

Restriction: Graduate students only.

BME 220. Sensory Motor Systems. 4 Units.
A quantitative and systems approach to understanding physiological systems. Systems covered include the nervous and musculoskeletal systems.

Restriction: Graduate students only.

Concurrent with BME 120.
BME 221. Organ Transport Systems. 4 Units.
A quantitative and systems approach to understanding physiological systems. Systems covered include the cardiopulmonary, circulatory, and renal systems.

Restriction: Graduate students only.

BME 222. Biofluid Mechanics. 4 Units.
Introduces principles of biofluid mechanics in a research oriented scheme and approaches a wide spectrum of biofluid related problems in human body and solutions that involves engineering concepts.

Restriction: Graduate students only.

BME 223. Critical Thinking in Cardiovascular Research. 2 Units.
Interpretation and critical assessment of current cardiovascular research in basic science, application of engineering tools, and clinical cardiology and cardiovascular surgery. Open only to graduate students engaged in research.

Restriction: Graduate students only.

BME 224. Molecular and Cellular Biophotonics. 4 Units.
Principles underlying the application of photonic technologies to biomolecular and cellular systems. Sample technologies Optical Tweezers, Linear and Nonlinear Optical Microscopy and Fluorescence Lifetime and Correlation Methods, and their use to investigate emergent problems in Molecular, Cellular, and Developmental Biology.

Same as CHEM 224.

Restriction: Graduate students only.

BME 225. Tissue and Organ Biophotonics. 4 Units.
Principles underlying the application of photonic technologies to tissues, organs, organisms. Sample technologies include Optical Coherence Tomography, Optical Speckle Imaging, Optoacoustic Imaging, Wide-Field Spectroscopic Imaging, Diffuse Optical Spectroscopy. Addressing the use of these technologies to detect/monitor disease and physiological processes.

BME 230A. Applied Engineering Mathematics I. 4 Units.
Analytical techniques applied to engineering problems in transport phenomena, process dynamics and control, and thermodynamics.

BME 230B. Applied Engineering Mathematics II. 4 Units.
Focuses on biomedical system identification. Includes fundamental techniques of model building and testing such as formulation, solution of governing equations, sensitivity theory, identifiability theory, and uncertainty analysis.

Restriction: Graduate students only.

BME 232. Introduction to Computational Biology. 4 Units.

Same as MOL BIO 223.

Restriction: Graduate students only.

Concurrent with BIO SCI M123 and COMPSCI 183 and BME 132.

BME 233. Dynamic Systems in Biology and Medicine. 4 Units.
Introduces principles of system theory to analyze biological, biochemical, physiological, and bioengineering systems. Analytical and computational tools are used to model and analyze dynamic systems such as population, neuronal and heart dynamics, biochemical and physiological systems, oxygen diffusion and similar.

Restriction: Graduate students only.

BME 234. Neuroimaging Data Analysis. 4 Units.
Knowledge and understanding of recent techniques for the analysis of healthy and pathological structure and function in neuroimaging data.

Restriction: Graduate students only.
BME 238. Spectroscopy and Imaging of Biological Systems. 4 Units.
Principles of spectroscopy; absorption; molecular orbitals; multiphoton transitions; Jablonski diagram; fluorescence anisotropy; fluorescence decay; quenching; FRET; excited state reactions; solvent relaxations; instruments; microscopy: wide field, LSM, TPE; fluorescent probes, fluctuations spectroscopy; optical resolution and super-resolution; CARS and SHG microscopy.

Restriction: Graduate students only.

Concurrent with BME 138.

BME 240. Introduction to Clinical Medicine for Biomedical Engineering. 4 Units.
An introduction to clinical medicine for graduate students in biomedical engineering. Lectures and rotations through nephrology, gastroenterology, pulmonary, and critical care cardiology.

Restriction: Graduate students only. Biomedical Engineering Majors only.

BME 250. Biospectroscopy. 4 Units.
Principles of optical spectroscopy for biomedical engineering. Will focus on optical spectroscopy of biological relevant molecules, spectroscopy in cells and tissue. Spectroscopy techniques based on fluorescence.

Restriction: Graduate students only.

BME 251. Engineering Medical Optics. 4 Units.
Principles of optics and photonics, integration of optical components into systems and devices, and analysis of physiologic signals obtained from Biophotonics measurements.

Restriction: Graduate students only.

Concurrent with BME 136.

BME 252. Critical Thinking in Biophotonics. 2 Units.
Critical thematic review of current research papers in the field of Biophotonics.

Repeatability: May be taken for credit 2 times.

Restriction: Graduate students only.

BME 260. Microfluids and Lab-On-A-Chip. 4 Units.
Introduction to microfluidics and state-of-the-art micro Total Analysis Systems (uTAS). Lab-on-a-Chip for biomolecular assays with design principles for microscale sample preparation, flow transport, biomolecular manipulation, separation and detection, and the technologies for integrating these devices into microsystems.

Restriction: Graduate students only.

Concurrent with BME 147.

BME 261. Biomedical Microdevices. 4 Units.
In-depth review of microfabricated devices designed for biological and medical applications. Studies of the design, implementation, manufacturing, and marketing of commercial and research bio-medical devices.

Restriction: Graduate students only.

Concurrent with BME 149.

BME 262. Microimplants. 4 Units.
Essential concepts of biomedical implants at the micro scale. Design, fabrication, and applications of several microimplantable devices including cochlear, retinal, neural, and muscular implants.

Restriction: Graduate students only.

Concurrent with BME 148.

BME 263. Nanomedicine. 4 Units.
Covers the use of inorganic nanocrystals and nanocarriers for molecular detection of human disease and targeted drug delivery. Techniques for synthesis and bioconjugation, molecular targeting, adhesion dynamics, and unique physical properties of nanomaterials.

Restriction: Graduate students only.
BME 264. Auditory Science and Technology. 2 Units.
Advanced topics in auditory science and technology from cochlear mechanics to cochlear implants.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

BME 290. Critical Thinking and Writing. 4 Units.
Critical thinking and writing are essential ingredients for success in scientific research. Examines examples from the scientific literature to extract principles of good scientific reasoning, experimental design, and writing.

Restriction: Graduate students only.

BME 295. Special Topics in Biomedical Engineering. 1-4 Units.
Studies in selected areas of Biomedical Engineering. Topics addressed vary each quarter.

Prerequisite: Prerequisites vary.

Repeatability: Unlimited as topics vary.

BME 296. Master of Science Thesis Research. 1-16 Units.
Individual research or investigation conducted in the pursuit of preparing and completing the thesis required for the M.S. in Engineering.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

BME 297. Doctor of Philosophy Dissertation Research. 1-16 Units.
Individual research or investigation conducted in the pursuit of preparing and completing the dissertation required for the Ph.D. in Engineering.

Repeatability: May be repeated for credit unlimited times.

BME 298. Seminars in Biomedical Engineering. 2 Units.
Presentation of advanced topics and reports of current research efforts in biomedical engineering. Designed for graduate students in the Biomedical Engineering program.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Concurrent with BME 197.

BME 299. Individual Research. 1-16 Units.
Individual research or investigation under the direction of an individual faculty.

Repeatability: May be repeated for credit unlimited times.

Chem Engr and Materials Sci Courses

Principles and concepts underlying the study of advanced materials including alloys, composites, ceramics, semiconductors, polymers, ferroelectrics, and magnetics. Crystal structure and defects, surface and interface properties, thermodynamics and kinetics of phase transformations, and material processing, related to fundamental material properties.

Restriction: Graduate students only.

ENGRMSE 205. Materials Physics. 4 Units.
Covers the electronic, optical, and dielectric properties of crystalline materials to provide a foundation of the underlying physical principles of governing the properties of existing and emerging electronic and photonic materials.

Restriction: Graduate students only.
ENGRMSE 254. Polymer Science and Engineering. 4 Units.
An introduction to physical aspects of polymers, including configuration and conformation of polymer chains and characterization techniques; crystallinity viscoelasticity, rheology and processing.

Restriction: Graduate students only.

Concurrent with CBEMS 154.

ENGRMSE 255A. Design with Ceramic Materials. 4 Units.

Prerequisite: ENGR 54

Restriction: Graduate students only.

ENGRMSE 256A. Mechanical Behavior of Engineering Materials. 4 Units.
Principles governing structure and mechanical behavior of materials, relationship relating microstructure and mechanical response with application to elasticity, plasticity, creep, and fatigue, study of rate-controlling mechanisms and failure modes, fracture of materials.

Restriction: Graduate students only.

ENGRMSE 259. Transmission Electron Microscopy. 4 Units.
The theory and operation of the transmission electron microscope (TEM), including the basic construction, electron optics, electron diffraction and reciprocal space, formation of image and electron diffraction information, microanalysis, and specimen preparation.

Prerequisite: ENGRMSE 200

Restriction: Graduate students only.

ENGRMSE 261. High Temperature Deformation of Engineering Materials. 4 Units.
Theoretical and practical aspects of creep and superplasticity in metallic and non-metallic systems are presented. Topics include: creep testing methods, diffusional creep, deformation mechanism maps, and superplasticity in non-metallics.

Restriction: Graduate students only.

ENGRMSE 264. Scanning Electron Microscopy. 4 Units.
The theory and operation of the scanning electron microscope (SEM) and X-ray microanalysis. Topics covered include the basic design and electron optics, electron beam - specimen interactions, image formation and interpretation, X-ray spectrometry, and other related topics and techniques.

Prerequisite: ENGRMSE 200

Restriction: Graduate students only.

ENGRMSE 265. Phase Transformations. 4 Units.
Advanced thermodynamics and kinetics of phase transformations and phase transitions.

Prerequisite: CBEMS 240

Restriction: Graduate students only.

ENGRMSE 273. Electroceramics & Solid State Electrochemical Systems. 4 Units.
Theory, underlying principles, experimental techniques, and applications of electroceramics and solid-state electrochemical systems. Links solid state physics, atomic structure, thermodynamics, defect chemistry, and transport processes to electrical properties of ceramics - spanning from insulators to fast-ion conductors and HT superconductors.

Prerequisite: ENGRMSE 200
Chemical Engr and Materials Sci Courses

CBEMS 45A. Chemical Processing and Materials Balances. 4 Units.
Introduction to chemical engineering and the industries where chemical engineers play vital roles. Problem-solving skills and techniques. Quantitative calculations and applications using mass and energy balances. Stoichiometric equations, multiple bypasses, and others in process industries.

(Design units: 0)
Prerequisite: MATH 2B and CHEM 1B and PHYSICS 7C
Restriction: Chemical Engineering Majors have first consideration for enrollment. Environmental Engineering Majors have first consideration for enrollment.

CBEMS 45B. Chemical Processing and Energy Balances. 3 Units.
Principles of thermodynamics: definitions, basic concepts, and laws; property relationships; construction of thermodynamic charts and tables; energy balances; phase and chemical equilibria; combined mass and energy balances.

(Design units: 0)
Prerequisite: (CBEMS 45A or PHYSICS 7E) and MATH 3A. CBEMS 45A with a grade of C- or better
Overlaps with ENGRMAE 91, CBEMS 65A.
Restriction: Chemical Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.

CBEMS 45C. Chemical Engineering Thermodynamics. 4 Units.
Elements of chemical engineering thermodynamics, including equilibrium and stability; equations of state; generalized correlations of properties of materials; properties of ideal and non-ideal mixtures; thermodynamics of real solutions; ideal and non-ideal phase equilibria; chemical equilibria for ideal and non-ideal solutions.

(Design units: 1)
Prerequisite: (EECS 10 or ENGRMAE 10) and MATH 2D and CBEMS 45B. CBEMS 45B with a grade of C- or better
Overlaps with ENGRMAE 115, CBEMS 65B.
Restriction: Chemical Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.

CBEMS 50L. Principles of Materials Science and Engineering. 2 Units.
Introduction to the experimental techniques to characterize the properties of engineering materials. Emphasis on understanding the influence of microstructure on elastic, plastic, and fracture behavior. Topics include microstructure characterization, heat treatment, grain size effect, precipitation hardening, and impact loading. Materials fee.

(Design units: 0)
Corequisite: ENGR 54
Restriction: Materials Science Engineering Majors have first consideration for enrollment.

CBEMS 65A. Thermodynamics of Materials. 4 Units.
Treatment of the laws of thermodynamics and their application in understanding properties and equilibrium states of engineering materials. Develops relationships pertaining to multiphase equilibrium and presents graphical constructions for interpretation of phase diagrams. Statistical thermodynamics in relation to materials phenomena.

(Design units: 0)
Prerequisite: (ENGR 1A or CHEM 1A) and PHYSICS 7C
Overlaps with CBEMS 45B, ENGRMAE 91.
Restriction: Materials Science Engineering Majors have first consideration for enrollment.
CBEMS 65B. Diffusion in Materials. 4 Units.

(Design units: 0)
Prerequisite: CBEMS 65A. CBEMS 65A with a grade of C- or better
Overlaps with CBEMS 45C, ENGRMAE 115.
Restriction: Materials Science Engineering Majors have first consideration for enrollment.

CBEMS 110. Reaction Kinetics and Reactor Design. 4 Units.
Introduction to quantitative analysis of chemical reactions and chemical reactor design. Reactor operations including batch, continuous stirred tank, and tubular reactor. Homogeneous and heterogeneous reactions.

(Design units: 2)
Prerequisite: CHEM 1C and MATH 3D and CBEMS 45B and CBEMS 45C. CBEMS 45B with a grade of C- or better. CBEMS 45C with a grade of C- or better
Restriction: Chemical Engineering Majors have first consideration for enrollment. Mechanical Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.

CBEMS 112. Introduction to Biochemical Engineering. 3 Units.
Application of engineering principles to biochemical processes. Topics include microbial pathways, energetics and control systems, enzyme and microbial kinetics and the design and analysis of biological reactors.

(Design units: 1)
Prerequisite: CBEMS 110 and CHEM 1C and MATH 3D
Restriction: Chemical Engineering Majors have first consideration for enrollment.

CBEMS 115. Kinetics of Biochemical Networks. 4 Units.
Principles from statistical mechanics, thermodynamics, and chemical kinetics applied to biochemical systems, from fundamental processes such as receptor-ligand binding and enzyme catalysis, to complex cellular functions including signal transduction and gene regulation.

(Design units: 0)
Restriction: Upper-division students only.
Concurrent with CBEMS 215.

CBEMS 119. Biomaterials: Structural Biology and Assembly. 4 Units.
Application of fundamental concepts in structural biology (proteins, DNA/RNA, carbohydrates, lipids), biomolecular thermodynamics, and molecular interactions to the design of novel biomaterials via self-assembly.

(Design units: 0)
Prerequisite: CBEMS 45C and CBEMS 110
Restriction: Chemical Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.
Concurrent with CBEMS 219.
CBEMS 125A. Momentum Transfer. 4 Units.
Fluid statics, surface tension, Newton's law of viscosity, non-Newtonian and complex flows, momentum equations, laminar and turbulent flow, velocity profiles, flow in pipes and around objects, piping systems design, pumps and mixing, and other applications to chemical and related industries.

(Design units: 0)
Prerequisite: (CBEMS 45C or CBEMS 65B) and MATH 3D. CBEMS 45C with a grade of C- or better. CBEMS 65B with a grade of C- or better
Overlaps with ENGRMAE 130A, ENGRCEE 170.
Restriction: Chemical Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.

CBEMS 125B. Heat Transfer. 3 Units.
Principles of conduction, radiation, and convection of heat; phenomenological rate laws, differential and macroscopic energy balances; heat transfer rates, steady state and unsteady state conduction, convection; applications to chemical and related industries.

(Design units: 1)
Prerequisite: CBEMS 125A. CBEMS 125A with a grade of C- or better
Overlaps with CBEMS 120B, ENGRMAE 120.
Restriction: Chemical Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.

CBEMS 125C. Mass Transfer. 3 Units.
Molecular and continuum approaches to diffusion and convection in multi-component mixtures; steady state, quasi-steady state and transient mass transfer; effect of reactions on mass transfer; convective mass transfer; simultaneous mass, heat and momentum transfer; applications to chemical and related industries.

(Design units: 1)
Prerequisite: CBEMS 125B
Overlaps with BME 150.
Restriction: Chemical Engineering Majors have first consideration for enrollment.

CBEMS 128. Introduction to Numerical Methods in Engineering. 3 Units.
An introduction to the fundamentals of numerical analysis and the computer algorithms in MATLAB for the solution of engineering problems, with emphasis on problems arising in chemical engineering thermodynamics, transport phenomena, and reaction engineering.

(Design units: 0)
Prerequisite: CBEMS 45C

CBEMS 130. Separation Processes. 4 Units.
Application of equilibria and mass and energy balances for design of separation processes. Use of equilibrium laws for design of distillation, absorption, stripping, and extraction equipment. Design of multicomponent separators.

(Design units: 3)
Prerequisite: (CBEMS 45B or CBEMS 65A or ENGRMAE 91) and (CBEMS 45C or CBEMS 65B or ENGRMAE 115). CBEMS 45B with a grade of C- or better. CBEMS 65A with a grade of C- or better. ENGRMAE 91 with a grade of C- or better. CBEMS 45C with a grade of C- or better. CBEMS 65B with a grade of C- or better. ENGRMAE 115 with a grade of C- or better
Restriction: Chemical Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.
CBEMS 133. Nuclear and Radiochemistry. 4 Units.
Advanced treatment of nuclear structure, nuclear reactions, and radioactive-decay processes. Introduction to nuclear activation analysis, isotope effects, radiation chemistry, hot-atom chemistry, nuclear age-dating methods, nuclear reactors, and nuclear power.

(Design units: 0)
Prerequisite: (CHEM M3C or CHEM 1C or CHEM H2C) and MATH 2D
Same as CHEM 133.
Overlaps with CHEM 170.
Restriction: Chemistry Majors have first consideration for enrollment. Chemical Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment. CHEM 133 and CHEM 170 cannot both be taken for credit.
Concurrent with CBEMS 233 and CHEM 233.

CBEMS 135. Chemical Process Control. 4 Units.
Dynamic responses and control of chemical process equipment, dynamic modeling of chemical processes, linear system analysis, analyses and design of feedback loops and advanced control systems.

(Design units: 1)
Prerequisite: CBEMS 110 and CBEMS 125B and CBEMS 125C
Restriction: Chemical Engineering Majors have first consideration for enrollment.

CBEMS 140A. Chemical Engineering Laboratory I. 4 Units.
Experimental study of thermodynamics, fluid mechanics, and heat and mass transfer. Operation and evaluation of process equipment, data analysis. Materials fee.

(Design units: 1)
Prerequisite: CBEMS 110 and (CBEMS 125C or BME 150)
Restriction: Chemical Engineering Majors have first consideration for enrollment.

CBEMS 140B. Chemical Engineering Laboratory II. 4 Units.
Continuation of the CBEMS 140A covering mass transfer operations such as distillation, absorption, extraction, etc. Rate and equilibria studies in simple chemical systems with and without reaction. Study of chemical process. Materials fee.

(Design units: 3)
Prerequisite: CBEMS 130 and CBEMS 135 and CBEMS 140A
Restriction: Chemical Engineering Majors have first consideration for enrollment.

CBEMS 141. Nano-Scale Materials and Applications. 4 Units.
Overview of the chemistry, physics, and applications of nanometer-scale materials. Explore the effects of composition, bonding, and confinement on physical properties of nanomaterials, their chemical syntheses, and their device physics in electronic, optoelectronic, and energy technologies.

(Design units: 1)
Prerequisite: (ENGR 1A or CHEM 1A) and MATH 2B and PHYSICS 7D
Concurrent with CBEMS 241.

CBEMS 143. Chemistry and Technology for the Nuclear Fuel Cycle. 4 Units.
Introduces basic concepts of nuclear chemistry and focuses on chemical engineering aspects of the nuclear power industry. A broad survey of the nuclear fuel cycle (uranium processing, reactor concepts, spent fuel treatment and repositories) will be given.

(Design units: 0)
Concurrent with CBEMS 243.
CBEMS 149A. Chemical Engineering Design I. 3 Units.
Introduction to process design; flow sheets for chemical processes; synthesis of multicomponent separation sequences and reaction paths; synthesis of heat exchange networks; computer-aided design and simulation of processes and components pacts.

(Design units: 2)
Prerequisite: CBEMS 110 and CBEMS 125C and CBEMS 130
Restriction: Chemical Engineering Majors only.

CBEMS 149B. Chemical Engineering Design II. 3 Units.
Application of chemical engineering basics to practical design problems; process economics; process safety; environmental impacts; a major team design project with progress reports, oral presentation, and technical report with engineering drawings and economics.

(Design units: 3)
Prerequisite: CBEMS 149A
Restriction: Chemical Engineering Majors only.

CBEMS 154. Polymer Science and Engineering. 4 Units.
An introduction to physical aspects of polymers, including configuration and conformation of polymer chains and characterization techniques; crystallinity, viscoelasticity, mechanical properties, polymer alloys, processing, and application.

(Design units: 1)
Prerequisite: ENGR 54 and (CBEMS 110 or CBEMS 165)
Restriction: Chemical Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.
Concurrent with ENGRMSE 254.

CBEMS 155. Mechanical Behavior and Design Principles. 4 Units.
Principles governing structure and mechanical behavior of materials, relationship relating microstructure and mechanical response with application to elasticity, plasticity, yielding, necking, creep, and fracture of materials. Introduction to experimental techniques to characterize the properties of materials. Design parameters.

(Design units: 2)
Prerequisite: ENGR 54
Same as ENGRMAE 156.
Restriction: Chemical Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment. Mechanical Engineering Majors have first consideration for enrollment.

CBEMS 155L. Mechanical Behavior Laboratory. 1 Unit.
Introduction to experimental techniques to characterize mechanical properties of materials. Emphasis on correlations between property and microstructure. Experiments include: plastic stability in tension, effect of grain size on flow stress, microstructural engineering. Materials fee.

(Design units: 0)
Corequisite: CBEMS 155
Prerequisite: ENGR 54
Restriction: Materials Science Engineering Majors have first consideration for enrollment.

CBEMS 158. Ceramic Materials. 3 Units.
A technical elective for students interested in the materials area. Topics covered include structure and properties of ceramics, and design with ceramics.

(Design units: 1)
Prerequisite: ENGR 54
Restriction: Chemical Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.
CBEMS 160. Advanced Lab in Synthesis of Materials. 4 Units.
Synthesis and characterization of organic and inorganic materials including polymers and oxides. Techniques include electron and scanning probe microscopy, gel permeation chromatography, X-ray diffraction, porosimetry, and thermal analysis. Materials fee.

(Design units: 0)
Prerequisite: ENGR 54 or (CHEM 131A and CHEM 131B)
Restriction: Materials Science Engineering Majors have first consideration for enrollment.

CBEMS 163. Computer Techniques in Experimental Research. 4 Units.
Principles and practical guidelines of automated materials testing. Computer fundamentals, programming languages, data acquisition and control hardware, interfacing techniques, programming strategies, data analysis, data storage, safeguard procedures.

(Design units: 1)
Restriction: Chemical Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.
Concurrent with ENGRMSE 263.

CBEMS 164. X-ray Diffraction, Electron Microscopy, and Microanalysis. 3 Units.
Material characterization using X-ray diffraction and scanning electron microscopy (SEM). Topics include X-ray diffraction and analysis; SEM imaging and microanalysis. Materials fee.

(Design units: 1)
Corequisite: CBEMS 164L
Prerequisite: ENGR 54
Restriction: Materials Science Engineering Majors have first consideration for enrollment.

CBEMS 164L. X-ray Diffraction, Electron Microscopy, and Microanalysis Lab. 2 Units.
Material characterization using X-ray diffraction and scanning electron microscopy (SEM). Topics include X-ray diffraction and analysis; SEM imaging and microanalysis.

(Design units: 1)
Corequisite: CBEMS 164
Prerequisite: ENGR 54
Restriction: Materials Science Engineering Majors have first consideration for enrollment.

CBEMS 165. Materials Kinetics and Phase Transformations. 3 Units.
Treatment of the kinetics of solid-state reactions and reactions at interfaces. Thermodynamics and kinetics of phase transformations, including solidification processes, diffusional and diffusionless phase transformations.

(Design units: 0)
Prerequisite: ENGR 54 and (ENGRMAE 91 or CBEMS 45C or CBEMS 65B). ENGRMAE 91 with a grade of C- or better. CBEMS 45C with a grade of C- or better. CBEMS 65B with a grade of C- or better
Restriction: Materials Science Engineering Majors have first consideration for enrollment.

CBEMS 169. Electronic and Optical Properties in Materials. 4 Units.
Covers the electronic, optical, and dielectric properties of crystalline and amorphous materials to provide a foundation of the underlying physical principles governing the properties of existing and emerging electronic and photonic materials.

(Design units: 1)
Prerequisite: PHYSICS 7D and PHYSICS 7E and MATH 3A and MATH 3D
Restriction: Materials Science Engineering Majors have first consideration for enrollment.
CBEMS 174. Semiconductor Device Packaging. 3 Units.
Introduction to the semiconductor device packaging and assembly process. Electrical, thermal, optical, and mechanical aspects of package design and reliability. Special topics on optoelectronics packaging will be covered.

(Design units: 1)
Prerequisite: CBEMS 45B
Restriction: Chemical Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.

CBEMS 175. Design Failure Investigation. 4 Units.
Survey of mechanisms by which devices fail, including overload, fatigue, corrosion, and wear. Use of fractography and other evidence to interpret failure modes and specify design/manufacturing changes. Students redesign failed parts or structures based on actual parts and/or case histories.

(Design units: 2)
Prerequisite: ENGR 54
Restriction: Chemical Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.

CBEMS 176. Surface and Adhesion Science. 4 Units.
Structure, thermodynamics of, kinetics, and reactions on surfaces. Surface electronic and mechanical properties and characterization of all classes of materials including metals, semiconductors, ceramics, polymers, and soft materials. Adhesion between different materials is also addressed.

Prerequisite: (CBEMS 110 or CBEMS 165) and (CBEMS 141 or CBEMS 169)
Restriction: Chemical Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.

Concurrent with ENGRMSE 276.

CBEMS 189A. Senior Design Project I. 3 Units.
Group supervised senior design projects that deal with materials selection in engineering design and that involve case studies in ethics, safety, design, failure modes, new products, and patents. Activities conclude with a presentation of the projects. Materials fee.

(Design units: 2)
Grading Option: In Progress (Letter Grade with P/NP).
Restriction: Seniors only. Materials Science Engineering Majors only. CBEMS 189A-CBEMS 189B-CBEMS 189C must be taken in the same academic year.

CBEMS 189B. Senior Design Project II. 3 Units.
Group supervised senior design projects that deal with materials selection in engineering design and that involve case studies in ethics, safety, design, failure modes, new products, and patents. Activities conclude with a presentation of the projects. Materials fee.

(Design units: 3)
Prerequisite: CBEMS 189A
Grading Option: In Progress (Letter Grade with P/NP).
Restriction: Seniors only. Materials Science Engineering Majors only. CBEMS 189A-CBEMS 189B-CBEMS 189C must be taken in the same academic year.

CBEMS 189C. Senior Design Project III. 3 Units.
Group supervised senior design projects that deal with materials selection in engineering design and that involve case studies in ethics, safety, design, failure modes, new products, and patents. Activities conclude with a presentation of the projects. Materials fee.

(Design units: 3)
Prerequisite: CBEMS 189B
Restriction: Seniors only. Materials Science Engineering Majors only. CBEMS 189A-CBEMS 189B-CBEMS 189C must be taken in the same academic year.
CBEMS 190. Materials Selection and Design. 4 Units.

(Design units: 3)

Restriction: Seniors only. Materials Science Engineering Majors have first consideration for enrollment.

CBEMS 191. Materials Outreach. 3 Units.
Demonstrates major concepts in Materials Science and Engineering. Concepts of materials engineering covered include deformation in crystalline solids, effects of heat treatment on mechanical properties, thermal barrier materials, composites design, mechanical behavior of polymers, superconductivity in ceramics.

(Design units: 1)

Prerequisite: ENGR 54

Repeatability: May be taken for credit 4 times.

Restriction: Chemical Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.

CBEMS 195. Special Topics in Chemical Engineering and Materials Science. 1-4 Units.
Studies in selected areas of Chemical Engineering and Materials Science. Topics addressed vary each quarter.

(Design units: 0)

Prerequisite: Prerequisites vary.

Repeatability: Unlimited as topics vary.

CBEMS 198. Group Study. 1-4 Units.
Group study of selected topics in engineering.

(Design units: 1-4)

Repeatability: May be repeated for credit unlimited times.

Restriction: Upper-division students only.

CBEMS 199. Individual Study. 1-4 Units.
For undergraduate engineering majors in supervised but independent readings, research, or design. Students taking individual study for design credit are to submit a written paper to the instructor and to the Undergraduate Student Affairs Office in the School of Engineering.

(Design units: 1-4)

Repeatability: May be taken for credit for 8 units.

Restriction: Chemical Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.

CBEMS 199P. Individual Study. 1-4 Units.
For undergraduate Engineering majors in supervised but independent reading, research, or design. Students taking individual study for design credit are to submit a written paper to the instructor and to the Undergraduate Student Affairs Office in The School of Engineering.

(Design units: 1-4)

Grading Option: Pass/no pass only.

Repeatability: May be repeated for credit unlimited times.

CBEMS 210. Reaction Engineering. 4 Units.
Advanced topics in reaction engineering, reactor stability analysis, diffusional effect in heterogeneous catalysis, energy balance, optimization of reactor operation, dispersed in phase reactors.

Restriction: Graduate students only.
CBEMS 215. Kinetics of Biochemical Networks . 4 Units.
Principles from statistical mechanics, thermodynamics, and chemical kinetics applied to biochemical systems, from fundamental processes such as receptor-ligand binding and enzyme catalysis, to complex cellular functions including signal transduction and gene regulation.

Restriction: Graduate students only.

Concurrent with CBEMS 115.

CBEMS 218. Bioengineering with Recombinant Microorganisms. 4 Units.
Engineering and biological principles important in recombinant cell technology. Host/vector selection; plasmid propagation; optimization of cloned gene expression; metabolic engineering; protein secretion; experimental techniques; modeling of recombinant cell systems.

Restriction: Graduate students only.

CBEMS 219. Biomaterials: Structural Biology and Assembly. 4 Units.
Application of fundamental concepts in structural biology (proteins, DNA/RNA, carbohydrates, lipids), biomolecular thermodynamics, and molecular interactions to the design of novel biomaterials via self-assembly.

Concurrent with CBEMS 119.

CBEMS 220. Transport Phenomena. 4 Units.
Heat, mass, and momentum transfer theory from the viewpoint of the basic transport equations. Steady and unsteady state; laminar and turbulent flow; boundary layer theory, mechanics of turbulent transport with specific application to complex chemical engineering situations.

Restriction: Graduate students only.

CBEMS 221. Drug Delivery. 4 Units.
Introduction to design of drug delivery systems. Includes physicochemical and pharmacokinetic considerations in drug formulations, types of therapeutics, routes of administration, biomaterials, and novel drug delivery systems.

CBEMS 228. Colloid Science and Engineering. 4 Units.
An introduction to the basic foundations of colloid science, interfacial phenomena, suspensions and complex fluids, and engineering and assembly of colloidal materials.

Restriction: Graduate students only.

Analytical techniques applied to engineering problems in transport phenomena, process dynamics and control, and thermodynamics.

Restriction: Graduate students only.

CBEMS 233. Nuclear and Radiochemistry. 4 Units.
Advanced treatment of nuclear structure, nuclear reactions, and radioactive-decay processes. Introduction to nuclear activation analysis, isotope effects, radiation chemistry, hot-atom chemistry, nuclear age-dating methods, nuclear reactors, and nuclear power.

Same as CHEM 233.

Restriction: Graduate students only.

Concurrent with CBEMS 133 and CHEM 133.

CBEMS 240. Advanced Engineering Thermodynamics. 4 Units.
Introduction to modern thermodynamics and applications, with a focus on aspects relevant to chemical and materials engineering. Mathematical tools; equilibrium and stability; microscope rigorous equations of state; molecular-level thermodynamics of real mixtures; and phase and chemical equilibrium.

Restriction: Graduate students only.

CBEMS 241. Nano-Scale Materials and Applications. 4 Units.
Overview of the chemistry, physics, and applications of nanometer-scale materials. Explore the effects of composition, bonding, and confinement on physical properties of nanomaterials, their chemical syntheses, and their device physics in electronic, optoelectronic, and energy technologies.

Restriction: Graduate students only.

Concurrent with CBEMS 141.
CBEMS 242A. Physical and Geometrical Optics. 4 Units.
Focuses on the practical aspects of optics and optical engineering, starting at the fundamentals. Topics include geometrical optics, ray tracing, polarization optics, interferometers, and diffractive optics.

Same as CHEM 242A.

Restriction: Graduate students only.

Concurrent with PHYSICS 134A.

CBEMS 243. Chemistry and Technology for the Nuclear Fuel Cycle. 4 Units.
Introduces basic concepts of nuclear chemistry and focuses on chemical engineering aspects of the nuclear power industry. A broad survey of the nuclear fuel cycle (uranium processing, reactor concepts, spent fuel treatment and repositories) will be given.

Restriction: Graduate students only.

Concurrent with CBEMS 143.

CBEMS 244. Detection and Measurement of Radiation. 4 Units.
Basic principles of detection and measurement of ionizing radiation; both theory and practical aspects of measurement techniques for alpha, beta, gamma, and neutron radiation, properties of different detector materials, electronics and data treatments, and analysis.

Prerequisite: CHEM 233 or CBEMS 233

Same as CHEM 244.

Restriction: Graduate students only.

CBEMS 249. Special Topics in Chemical Engineering and Materials Science. 1-4 Units.
Studies in selected areas of Chemical Engineering and Materials Science. Topics addressed vary each quarter.

Prerequisite: Prerequisites vary.

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.

CBEMS 268. Seminar in Systems Microbiology Research. 1 Unit.
A research and journal club seminar that covers topics on bacteria and phage using approaches and principles from biology, engineering, and physics.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Same as PHYSICS 268, MOL BIO 268.

Restriction: Upper-division students only. Graduate students only.

CBEMS 280. Optoelectronics Packaging. 4 Units.
Basic and current issues in the packaging of integrated circuits (IC) and fiber-optic devices are discussed.

Restriction: Graduate students only.

CBEMS 295. Seminars in Engineering. 1-4 Units.
Seminars scheduled each year by individual faculty in major field of interest.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.

CBEMS 296. Master of Science Thesis Research. 1-16 Units.
Individual research or investigation conducted in preparation for the thesis required for the M.S. degree.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.
CBEMS 297. Doctor of Philosophy Dissertation Research. 1-16 Units.
Individual research or investigation conducted in preparation for the dissertation required for the Ph.D. degree.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

CBEMS 298. Seminars in Engineering. 2 Units.
Presentation of advanced topics and reports of current research efforts in chemical engineering and materials science.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

CBEMS 299. Individual Research. 1-16 Units.
Individual research or investigation under the direction of an individual faculty member.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

Civil and Environmental Engr Courses

ENGRCEE 11. Methods II: Probability and Statistics. 4 Units.
Modeling and analysis of engineering problems under uncertainty. Engineering applications of probability and statistical concepts and methods.

(Design units: 0)

Prerequisite: (ENGRCEE 20 or EECS 10 or EECS 12 or ENGRMAE 10 or I&C SCI 31) and MATH 3A

Restriction: Civil Engineering Majors have first consideration for enrollment. Environmental Engineering Majors have first consideration for enrollment.

ENGRCEE 20. Introduction to Computational Problem Solving. 4 Units.
Introduction to computer programming within a numerical computing environment (MATLAB or similar) including types of data representation, graphical display of data, and development of modular programs with application to engineering analysis and problem solving. Course may be offered online.

(Design units: 1)

Corequisite: MATH 3A

Overlaps with BME 60B.

Restriction: Civil Engineering Majors have first consideration for enrollment. Environmental Engineering Majors have first consideration for enrollment.

ENGRCEE 21. Computational Problem Solving. 4 Units.
Engineering analysis and problem solving using MATLAB (or similar), including matrix algebra, solving systems of linear and nonlinear equations, numerical integration of ordinary differential equations (ODEs) and coupled ODEs, and analysis of numerical errors. Course may be offered online.

(Design units: 1)

Corequisite: MATH 3D

Prerequisite: ENGRCEE 20 and MATH 3A

Restriction: Civil Engineering Majors have first consideration for enrollment. Environmental Engineering Majors have first consideration for enrollment.
ENGRCEE 30. Statics. 4 Units.
Addition and resolution of forces, distributed forces, equivalent system of forces centroids, first moments, moments and products on inertia, equilibrium of rigid bodies, trusses, beams, cables. Course may be offered online.

(Design units: 0)

Corequisite: MATH 2D
Prerequisite: MATH 2D and PHYSICS 7C

Same as ENGR 30, ENGRMAE 30.

Restriction: School of Engineering students have first consideration for enrollment.

ENGRCEE 60. Contemporary and Emerging Environmental Challenges. 4 Units.
Introduces contemporary and emerging environmental challenges, illustrates links between human behavior, environmental policy, and engineering practices, examines policy options in the context of current institutions, and introduces tools and frameworks to reach sound economic, social, and environmental solutions. Course may be offered online.

(Design units: 0)

(III)

ENGRCEE 80. Dynamics. 4 Units.
Introduction to the kinematics and dynamics of particles and rigid bodies. The Newton-Euler, Work/Energy, and Impulse/Momentum methods are explored for ascertaining the dynamics of particles and rigid bodies. An engineering design problem using these fundamental principles is also undertaken.

(Design units: 0.5)

Prerequisite: MATH 2D and PHYSICS 7C

Same as ENGR 80, ENGRMAE 80.

Restriction: Mechanical Engineering Majors have first consideration for enrollment. Aerospace Engineering Majors have first consideration for enrollment. Civil Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment. Environmental Engineering Majors have first consideration for enrollment.

ENGRCEE 81A. Civil Engineering Practicum I. 3 Units.
Introduction to civil engineering through presentations on structural, environmental, water, and transportation systems. Introduction to graphics. Graphical visualization and communication using hand and computer sketching. Fundamentals of Computer Aided Design (CAD) using AutoCad. Laboratory sessions. Materials fee.

(Design units: 2)

Restriction: Civil Engineering Majors have first consideration for enrollment. Environmental Engineering Majors have first consideration for enrollment.

ENGRCEE 81B. Civil Engineering Practicum II. 3 Units.
Principles of surveying; fundamentals of Geographic Information Systems (GIS); introduction to the state-of-the-art and future areas of the profession, including applications of advanced technology and computers; Introduction to visualization and communication of design concepts; laboratory sessions. Course may be offered online. Materials fee.

(Design units: 1)

Restriction: Civil Engineering Majors have first consideration for enrollment. Environmental Engineering Majors have first consideration for enrollment.

ENGRCEE 110. Methods III: Modeling, Economics, and Management. 4 Units.
Analysis, modeling, and management of civil engineering systems. Statistics and system performance studies, probabilistic models and simulation, basic economics and capital investments, project elements and organization, managerial concepts and network technique, project scheduling. Emphasis on real-world examples. Laboratory sessions.

(Design units: 1)

Prerequisite: ENGRCEE 11

Restriction: Civil Engineering Majors have first consideration for enrollment. Environmental Engineering Majors have first consideration for enrollment.
ENGRCEE 111. Methods IV: Systems Analysis and Decision-Making. 4 Units.
Analysis and optimization for decision-making in civil and infrastructural systems. Topics include linear programming formulations and solution algorithms, network models, and logistical models. Emphasis is on project-level and managerial decision-making and selection from alternative designs.

(Design units: 1)
Prerequisite: MATH 3A and MATH 3D
Restriction: Civil Engineering Majors have first consideration for enrollment.

ENGRCEE 121. Transportation Systems I: Analysis and Design. 4 Units.
Introduction to analysis and design of fundamental transportation system components, basic elements of geometric and pavement design, vehicle flow and elementary traffic, basic foundations of transportation planning and forecasting. Laboratory sessions.

(Design units: 2)
Prerequisite: ENGRCEE 11 and ENGRCEE 81A
Restriction: Civil Engineering Majors have first consideration for enrollment.

ENGRCEE 122. Transportation Systems II: Operations & Control. 4 Units.
Introduction to fundamentals of urban traffic engineering, including data collection, analysis, and design. Traffic engineering studies, traffic flow theory, traffic control devices, traffic signals, capacity and level of service analysis of freeways and urban streets. Laboratory sessions.

(Design units: 2)
Prerequisite: ENGRCEE 11 and ENGRCEE 121
Restriction: Civil Engineering Majors have first consideration for enrollment.

ENGRCEE 123. Transportation Systems III: Planning and Forecasting. 4 Units.
Theoretical foundations of transportation planning, design, and analysis methods. Theory and application of aggregate and disaggregate models for land use development, trip generation, destination, mode, and route choice. Transportation network analysis. Planning, design, and evaluation of system alternatives.

(Design units: 2)
Corequisite: ENGRCEE 110
Prerequisite: ENGRCEE 121
Restriction: Civil Engineering Majors have first consideration for enrollment.
Concurrent with ENGRCEE 223.

ENGRCEE 124. Transportation Systems IV: Freeway Operations and Control. 4 Units.
Fundamentals of traffic on urban freeways, including data collection analysis, and design. Traffic engineering studies, traffic flow theory, freeway traffic control devices, capacity, and level of service analysis of freeways and highways. Laboratory sessions.

(Design units: 2)
Prerequisite: ENGRCEE 121
Restriction: Civil Engineering Majors have first consideration for enrollment.

ENGRCEE 130. Soil Mechanics. 4 Units.
Mechanics of soils, composition and classification of soils, compaction, compressibility and consolidation, shear strength, seepage, bearing capacity, lateral earth pressure, retaining walls, piles.

(Design units: 0)
Corequisite: ENGRCEE 130L
Prerequisite: ENGRCEE 150 and ENGRCEE 170
Restriction: Civil Engineering Majors have first consideration for enrollment. Environmental Engineering Majors have first consideration for enrollment.
ENGRCEE 130L. Soil Mechanics Laboratory. 1 Unit.
Laboratory procedures of soil testing for engineering problems. Materials fee.

(Design units: 0)
Corequisite: ENGRCEE 130
Restriction: Civil Engineering Majors have first consideration for enrollment. Environmental Engineering Majors have first consideration for enrollment.

ENGRCEE 149. Introduction to Earthquake Engineering. 4 Units.
Plate tectonics. Structural dynamics. Earthquake magnitude, intensity, and frequency. Seismic damage to structures. Earthquake load prediction including response spectra, normal mode, and direct integration techniques. The basis of building code earthquake load requirements for buildings.

(Design units: 2)
Prerequisite: ENGRCEE 11 and ENGRCEE 20 and ENGRCEE 151A
Restriction: Civil Engineering Majors have first consideration for enrollment.

ENGRCEE 150. Mechanics of Materials. 4 Units.
Stresses and strains, strain-stress diagrams, axial deformations, torsion, bending and shear stresses in beams, shear force and bending moment diagrams, combined stresses, principal stresses, Mohr's circle, deflection of beams, columns.

(Design units: 1)
Prerequisite: ENGRCEE 30
Overlaps with ENGR 150, ENGRMAE 150.
Restriction: Civil Engineering Majors have first consideration for enrollment. Environmental Engineering Majors have first consideration for enrollment.

ENGRCEE 150L. Mechanics of Materials Laboratory. 1 Unit.
Experimental methods and fundamentals for mechanics of materials analysis. Materials fee.

(Design units: 0)
Corequisite: ENGRCEE 150
Prerequisite: ENGRCEE 30
Overlaps with ENGRMAE 150L.
Restriction: Civil Engineering Majors have first consideration for enrollment. Environmental Engineering Majors have first consideration for enrollment.

ENGRCEE 151A. Structural Analysis. 4 Units.

(Design units: 0)
Prerequisite: ENGRCEE 150
Restriction: Civil Engineering Majors have first consideration for enrollment.

ENGRCEE 151B. Structural Timber Design. 4 Units.
Design of timber structures. Beams, columns, beam-columns, roof, and connections.

(Design units: 3)
Prerequisite: ENGRCEE 151A
Restriction: Civil Engineering Majors have first consideration for enrollment.
ENGRCEE 151C. Reinforced Concrete Design. 4 Units.

Prerequisite: ENGRCEE 151A
Restriction: Civil Engineering Majors have first consideration for enrollment.

ENGRCEE 152. Computer Methods in Structural Analysis and Design. 4 Units.
Matrix techniques for indeterminate framed structures. Computer implementation using the stiffness method. Software packages for design of reinforced concrete, steel, and/or timber structures.

Prerequisite: ENGRCEE 151C
Restriction: Civil Engineering Majors have first consideration for enrollment.

ENGRCEE 155. Structural Steel Design. 4 Units.
Design in steel of tension members, beams, columns, welded and bolted connections; eccentrically loaded and moment resistant joints; plate girders. Plastic design; load and resistance factor design. Composite construction; introduction to computer-aided design.

Prerequisite: ENGRCEE 151A
Restriction: Civil Engineering Majors have first consideration for enrollment.

ENGRCEE 156. Foundation Design. 4 Units.
Applications of soil mechanics principles to the analysis and design of shallow foundations, retaining walls, pile foundations, and braced cuts. Design criteria: bearing capacity, working loads and tolerable settlements, structural integrity of the foundation element. Damage from construction operations.

Prerequisite: ENGRCEE 130 and ENGRCEE 151C
Restriction: Civil Engineering Majors have first consideration for enrollment.

ENGRCEE 160. Environmental Processes. 4 Units.

Prerequisite: CHEM 1B and ENGRCEE 170
Restriction: Civil Engineering Majors have first consideration for enrollment. Environmental Engineering Majors have first consideration for enrollment.

ENGRCEE 162. Introduction to Environmental Chemistry. 4 Units.
Basic concepts from general, physical, and analytical chemistry as they relate to environmental engineering. Particular emphasis on the fundamentals of equilibrium and kinetics as they apply to acid-base chemistry, gas solubility, and redox reactions. Laboratory sessions. Materials fee.

Prerequisite: (ENGR 1A or CHEM 1A) and CHEM 1B and (CHEM 1LC or CHEM 1LE) and CHEM 51A
Restriction: Chemical Engineering Majors have first consideration for enrollment. Civil Engineering Majors have first consideration for enrollment. Environmental Engineering Majors have first consideration for enrollment. Mechanical Engineering Majors have first consideration for enrollment.
ENGRCEE 163. Wastewater Treatment Process Design. 4 Units.
Design of biological treatment processes. Topics include attached and suspended growth, aeration, anaerobic systems, process control, and economics. Design projects included. Materials fee.

(Design units: 4)

Prerequisite: ENGRCEE 160

Restriction: Civil Engineering Majors have first consideration for enrollment. Environmental Engineering Majors have first consideration for enrollment.

ENGRCEE 164. Carbon and Energy Footprint Analysis. 4 Units.
Process design for wastewater treatment. Mass- and energy-balance analysis applied to water and wastewater treatment systems. Case studies include analysis of water supply, treatment, reclamation, and reuse.

(Design units: 2)

Prerequisite: ENGRCEE 160

Restriction: Civil Engineering Majors have first consideration for enrollment. Environmental Engineering Majors have first consideration for enrollment.

Concurrent with ENGRCEE 264.

ENGRCEE 165. Physical-Chemical Treatment Processes. 4 Units.
Theory and dynamics of physical and chemical separation processes in water and wastewater treatment. Topics include coagulation, sedimentation, filtration, gas-transfer, membrane separations, and adsorption.

(Design units: 2)

Prerequisite: ENGRCEE 160 and (ENGRMAE 91 or CBEMS 45C)

Restriction: Civil Engineering Majors have first consideration for enrollment. Environmental Engineering Majors have first consideration for enrollment.

Concurrent with ENGRCEE 265.

ENGRCEE 169. Environmental Microbiology for Engineers. 4 Units.
Fundamental and applied principles of microbiology. Structures and functions of microorganisms, the microbiology of water, wastewater and soil used in environmental engineering, and the impact of microorganisms on human and environmental health.

(Design units: 0)

Prerequisite: ENGRCEE 160

Restriction: Civil Engineering Majors have first consideration for enrollment. Environmental Engineering Majors have first consideration for enrollment.

ENGRCEE 170. Introduction to Fluid Mechanics. 4 Units.
Thermodynamic and mechanical fluid properties; fluid statics; control volume and differential approaches for mass, momentum, and energy; dimensional analysis and similarity.

(Design units: 1)

Corequisite: MATH 2E and ENGRCEE 20

Prerequisite: PHYSICS 7C

Overlaps with ENGRMAE 130A, CBEMS 125A.

Restriction: Civil Engineering Majors have first consideration for enrollment. Environmental Engineering Majors have first consideration for enrollment.

ENGRCEE 171. Water Resources Engineering. 4 Units.
Principles governing the analysis and design of water resource systems including pressurized pipelines, pipe networks, channels, and ground water. Coverage of fluid mass, momentum and energy conservation, flow resistance, and related laboratory measurements in different systems. Materials fee.

(Design units: 2)

Prerequisite: ENGRCEE 170

Restriction: Chemical Engineering Majors have first consideration for enrollment. Civil Engineering Majors have first consideration for enrollment. Environmental Engineering Majors have first consideration for enrollment.
ENGRCEE 172. Groundwater Hydrology. 4 Units.
Topics include conservation of fluid mass, storage properties of porous media, matrix compressibility, boundary conditions, flow nets, well hydraulics, groundwater chemistry, and solute transport. Design projects and computer applications included.

(Design units: 2)

Prerequisite: ENGRCEE 170

Restriction: Chemical Engineering Majors have first consideration for enrollment. Civil Engineering Majors have first consideration for enrollment. Environmental Engineering Majors have first consideration for enrollment.

Concurrent with ENGRCEE 272.

ENGRCEE 173. Watershed Modeling. 4 Units.
Basic principles of hydrologic modeling are practiced. Concepts of watershed delineation, land use change impact, design studies, and GIS tools are discussed. Focus on the USACE (HEC) software tools (HEC-HMS, and HEC-RAS) along with their associated GIS interfaces.

(Design units: 1)

Prerequisite: ENGRCEE 170 and ENGRCEE 176

Restriction: Civil Engineering Majors have first consideration for enrollment. Environmental Engineering Majors have first consideration for enrollment. Mechanical Engineering Majors have first consideration for enrollment.

Concurrent with ENGRCEE 273.

ENGRCEE 176. Hydrology. 4 Units.
Elements of the hydrologic cycle including precipitation, infiltration, evapotranspiration, ground water, and runoff. Unit Hydrograph theory and routing methods. Introduction to precipitation/runoff relationship and watershed modeling. Statistical methods and flood frequency analysis.

(Design units: 2)

Prerequisite: ENGRCEE 170 or ENGRMAE 130A

Restriction: Civil Engineering Majors have first consideration for enrollment. Environmental Engineering Majors have first consideration for enrollment.

Concurrent with ENGRCEE 276.

ENGRCEE 178. Fluid Mechanics of Open Channels. 4 Units.
Fundamentals of fluid motion in open channels. Navier-Stokes equations and one-dimensional momentum and energy principles. Topics include rapidly varied flow, flow resistance and turbulence, gradually varied flow, unsteady flow, and computational methods for channel flow modeling.

(Design units: 1)

Prerequisite: (ENGRCEE 20 or ENGRMAE 10) and (ENGRCEE 170 or ENGRMAE 130A)

Restriction: Civil Engineering Majors have first consideration for enrollment. Environmental Engineering Majors have first consideration for enrollment.

Concurrent with ENGRCEE 278.

ENGRCEE 181A. Senior Design Practicum I. 2 Units.
Team designs land development project including infrastructural, environmental, circulation aspects. Focus on traffic impact studies, design of roads, geometry, signals, geotechnical and hydrological analysis, design of structural elements, economic analysis. Oral/Written interim and final design reports. Laboratory sessions.

(Design units: 1)

Prerequisite: ENGRCEE 81A and ENGRCEE 81B and ENGRCEE 110 and (ENGRCEE 121 or ENGRCEE 151C or ENGRCEE 162 or ENGRCEE 171). ENGRCEE 181A and ENGRCEE 181B and ENGRCEE 181C must be taken in the same academic year.

Restriction: Civil Engineering Majors only. Environmental Engineering Majors only.
ENGRCEE 181B. Senior Design Practicum II. 2 Units.
Team designs land development project including infrastructural, environmental, circulation aspects. Focus on traffic impact studies, design of roads, geometry, signals, geotechnical and hydrological analysis, design of structural elements, economic analysis. Oral/Written interim and final design reports. Laboratory sessions.

(Design units: 2)
Corequisite: ENGRCEE 130
Prerequisite: ENGRENGRCEE 181A. CEE 181A and ENGRCEE 181B and ENGRCEE 181C must be taken in the same academic year.
Grading Option: In Progress (Letter Grade with P/NP).
Restriction: Civil Engineering Majors only. Environmental Engineering Majors only.

ENGRCEE 181C. Senior Design Practicum III. 2 Units.
Team designs land development project including infrastructural, environmental, circulation aspects. Focus on traffic impact studies, design of roads, geometry, signals, geotechnical and hydrological analysis, design of structural elements, economic analysis. Oral/Written interim and final design reports. Laboratory sessions.

(Design units: 2)
Prerequisite: ENGRENGRCEE 181B. ENGRCEE 181A and CEE 181B and ENGRCEE 181C must be taken in the same academic year.
Restriction: Civil Engineering Majors only. Environmental Engineering Majors only.

ENGRCEE 195. Special Topics in Civil and Environmental Engineering. 1-4 Units.
Studies in selected areas of Civil and Environmental Engineering. Topics addressed vary each quarter.

(Design units: 1-4)
Prerequisite: Prerequisites vary.
Repeatable: Unlimited as topics vary.

ENGRCEE 198. Group Study. 1-4 Units.
Group study of selected topics in Civil and Environmental Engineering.

(Design units: 1-4)
Repeatable: May be repeated for credit unlimited times.
Restriction: Upper-division students only.

ENGRCEE 199. Individual Study. 1-4 Units.
For undergraduate Engineering majors in supervised but independent reading, research, or design. Students taking individual study for design credit are to submit a written paper to the instructor and to the Undergraduate Student Affairs Office in the School of Engineering.

(Design units: 1-4)
Repeatable: May be taken for credit for 8 units.

ENGRCEE 199P. Individual Study. 1-4 Units.
Supervised independent reading, research, or design for undergraduate Engineering majors. Students taking individual study for design credit are to submit a written paper to the instructor and to the Undergraduate Student Affairs Office in the School of Engineering.

(Design units: 1-4)
Grading Option: Pass/no pass only.
Repeatable: May be repeated for credit unlimited times.

ENGRCEE 220A. Travel Demand Analysis I. 4 Units.

Restriction: Graduate students only.
ENGRCEE 220B. Travel Demand Analysis II. 4 Units.
Methods of discrete choice analysis and their applications in the modeling of transportation systems. Emphasis on the development of a sound understanding of theoretical aspects of discrete choice modeling that are useful in many applications in travel demand analysis.
Prerequisite: ENGRCEE 220A
Restriction: Graduate students only.

ENGRCEE 220C. Travel Demand Analysis III: Activity-based Approaches. 4 Units.
The methodological underpinnings of activity-based travel demand modeling. Presents methodologies within the context of a generalization of discrete choice modeling approaches, emphasizing the distinctions that separate these two approaches and presenting appropriate mathematical and statistical tools to address these distinctions.
Prerequisite: ENGRCEE 220A
Restriction: Graduate students only.

ENGRCEE 221A. Transportation Systems Analysis I. 4 Units.
Introduction to mathematical methods and models to address logistics and urban transportation problems. Techniques include stochastic models, queueing theory, linear programming, and introductory non-linear optimization.
Restriction: Graduate students only.

ENGRCEE 221B. Transportation Systems Analysis II. 4 Units.
Advanced mathematical methods and models to address logistics and urban transportation problems. Topics include network flows, advanced optimization techniques, network models, and heuristic algorithms.
Prerequisite: ENGRCEE 221A
Restriction: Graduate students only.

ENGRCEE 222. Transit Systems Planning. 4 Units.
Planning methods for public transportation in urban areas. Technological and operating characteristics of vehicles, facilities, and systems. Short-range planning techniques: data collection and analysis, demand analysis, mode choice, operational strategies, financial analysis. Design of systems to improve performance.
Restriction: Graduate students only.

ENGRCEE 223. Transportation Systems III: Planning and Forecasting. 4 Units.
Theoretical foundations of transportation planning, design, and analysis methods. Theory and application of aggregate and disaggregate models for land use development, trip generation, destination, mode, and route choice. Transportation network analysis. Planning, design, and evaluation of system alternatives.
Restriction: Graduate students only.
Concurrent with ENGRCEE 123.

ENGRCEE 224A. Transportation Data Analysis I. 4 Units.
Statistical analysis of transportation data sources. Analysis of categorical and ordinal data. Regression and advanced multivariate analysis methods such as discriminant analysis, canonical correlation, and factor analysis. Sampling techniques, sample error and bias, survey instrument design.
Restriction: Graduate students only.

ENGRCEE 225B. Transportation Planning Models II. 4 Units.
Design and application of comprehensive transportation models. Network development, demand modeling, and equilibrium assignment. Model calibration, validation, prediction, and evaluation. Regional modeling, site impact analysis, and circulation studies. Design of transportation alternatives.
Prerequisite: ENGRCEE 223
Restriction: Graduate students only.

ENGRCEE 226A. Traffic Flow Theory I. 4 Units.
Restriction: Graduate students only.
**ENGRCEE 226B. Traffic Flow Theory II. 4 Units.**

Prerequisite: ENGRCEE 226A
Restriction: Graduate students only.

**ENGRCEE 228A. Urban Transportation Networks I. 4 Units.**
Analytical approaches and algorithms to the formulation and solution of the equilibrium assignment problem for transportation networks. Emphasis on user equilibrium (UE) comparison with system optimal, mathematical programming formulation, supply functions, estimation. Estimating origin-destination matrices, network design problems.

Prerequisite: ENGRCEE 220A
Restriction: Graduate students only.

**ENGRCEE 228B. Urban Transportation Networks II. 4 Units.**
Advanced analysis, optimization, and modeling of transportation networks. Topics include advanced static and dynamic traffic assignment algorithms, linear and nonlinear multi-commodity network flow optimization, network simplex, and network control problems.

Prerequisite: ENGRCEE 221A and ENGRCEE 228A
Restriction: Graduate students only.

**ENGRCEE 229A. Traffic Systems Operations and Control I. 4 Units.**
Introduction to operation, control and analysis of arterial and freeway traffic systems. Control concepts, traffic stream principles, detectors, local controllers, system masters, traffic signal and ramp metering timing principles, traffic measurement technologies, traffic delay principles.

Restriction: Graduate students only.

**ENGRCEE 229B. Traffic Systems Operations and Control II. 4 Units.**
Advanced topics related to operation, control, and analysis of arterial and freeway traffic systems. Control concepts, traffic stream principles, detectors, local controllers, system masters, traffic signal and ramp metering timing principles.

Prerequisite: ENGRCEE 229A
Restriction: Graduate students only.

**ENGRCEE 231. Foundation Engineering. 4 Units.**
Essentials for design and analysis of structural members that transmit superstructure loads to the ground. Topics include subsurface investigations, excavation, dewatering, bracing, footing, mat foundations, piles and pile foundations, caissons and cofferdams, other special foundations.

Restriction: Graduate students only.

**ENGRCEE 232. Geotech Earthquake Engineering. 4 Units.**
In-situ and laboratory determination of dynamic soil properties, liquefaction of soil, cyclic softening of clays, seismic compression and settlement analyses, ground improvement methods, seismic slope stability, introduction to soil structure interaction.

Restriction: Graduate students only.

**ENGRCEE 242. Advanced Strength of Materials. 4 Units.**

Restriction: Graduate students only.

**ENGRCEE 243. Mechanics of Composite Materials. 4 Units.**
Stress-strain relationship for orthotropic materials; invariant properties of an orthotropic lamina; biaxial strength theory for an orthotropic lamina; mechanics of materials approach to stiffness; elasticity approach to stiffness; classical lamination theory; strength of laminates; statistical theory of fatigue damage.

Restriction: Graduate students only.
ENGRCEE 247. Structural Dynamics. 4 Units.

Restriction: Graduate students only.

ENGRCEE 249. Earthquake Engineering. 4 Units.
Earthquake magnitude, intensity, and frequency. Seismic damage to structures. Earthquake load prediction including response spectra, normal mode, and direct integration techniques. The basis of building code earthquake load requirements for buildings. Seismic response of special structures. Lifeline engineering.

Restriction: Graduate students only.

ENGRCEE 250. Finite Element Method in Structural Engineering. 4 Units.
Finite element concepts in structural engineering including variational formulations, shape functions, elements assembly, convergence and computer programming. Stiffness of truss, beam, and frame members, two- and three-dimensional solids, plate and shell elements. Static, vibration, stability, and inelastic analysis.

Restriction: Graduate students only.

ENGRCEE 254. Advanced Reinforced Concrete Behavior and Design. 4 Units.

Restriction: Graduate students only.

ENGRCEE 255. Advanced Behavior and Design of Steel Structures. 4 Units.
Advanced principles of structural steel design. Analysis and design of beam-column members, braced and unbraced frames for buildings, and plate girders. Review of seismic design provisions. Design of connections.

Restriction: Graduate students only.

ENGRCEE 258. Earthquake Resistant Structural Design. 4 Units.

Restriction: Graduate students only.

ENGRCEE 260. Desalination. 4 Units.
Introduction of state of technology, costs and benefits, environmental issues, and implementation issues related to desalination. Emphasis on membrane processes and biofouling prevention.

Restriction: Graduate students only.

ENGRCEE 261. Applied Environmental Microbiology. 4 Units.
Microbes in the environment and their impact on human interactions. Microbiological application in solving environmental engineering problems.

Restriction: Graduate students only.

ENGRCEE 262. Environmental Chemistry II. 4 Units.
Advanced concepts from physical and organic chemistry as they relate to environmental engineering. Emphasis on equilibrium and kinetics as they apply to redox reactions, coordination, absorption, gas phase reactions, and ion exchange.

Restriction: Graduate students only.

ENGRCEE 263. Advanced Biological Treatment Processes. 4 Units.
Analysis of biological processes in natural and engineered systems. Biological treatment processes, both aerobic and anaerobic, with emphasis on suspended growth systems including design consideration. Containment degradation or control covered. Includes laboratory on molecular tools used in wastewater treatment.

Restriction: Graduate students only.
ENGRCEE 264. Carbon and Energy Footprint Analysis. 4 Units.
Process design for wastewater treatment. Mass- and energy- balance analysis applied to water and wastewater treatment systems. Case studies include analysis of water supply, treatment, reclamation, and reuse.

Restriction: Graduate students only.

Concurrent with ENGRCEE 164.

ENGRCEE 265. Physical-Chemical Treatment Processes. 4 Units.
Theory and dynamics of physical and chemical separation processes in water and wastewater treatment. Topics include coagulation, sedimentation, filtration, gas transfer, membrane separations, and absorption.

Restriction: Graduate students only.

Concurrent with ENGRCEE 165.

ENGRCEE 266. Drinking Water and Wastewater Biotechnology. 4 Units.
Water and wastewater microbiology. Engineering principles, molecular aspects, and overview of microorganisms of importance to public health. Topics include aerobic and anaerobic wastewater treatment and disinfection of pathogens in water, wastewaters, and biosolids.

Restriction: Graduate students only.

ENGRCEE 267. Energy, Climate Change, and Urban Air Quality. 4 Units.
An introduction to the connection between energy, climate change, and urban air quality. It will focus on air quality and climate implications of energy choices, bringing light to the most important and time-relevant issues.

Restriction: Graduate students only.

ENGRCEE 271. Flow in Unsaturated Porous Media. 4 Units.
Fluid flow in the unsaturated zone (zone of aeration) of the subsurface. Soil-water physics, flow in regional groundwater systems, miscible displacement, mathematical modeling techniques.

Restriction: Graduate students only.

ENGRCEE 272. Groundwater Hydrology. 4 Units.
Topics include conservation of fluid mass, storage properties or porous media, matrix compressibility, boundary conditions, flow nets, well hydraulics, groundwater chemistry, and solute transport. Includes introduction to advanced topics in porous media. Design projects and computer applications included.

Restriction: Graduate students only.

Concurrent with ENGRCEE 172.

ENGRCEE 273. Watershed Modeling. 4 Units.
Basic principles of hydrologic modeling are practiced. Concepts of watershed delineation, land use change impact, design studies, and GIS tools are discussed. Focus on the USACE (HEC) software tools (HEC-HMS and HEC-RAS) along with their associated GIS interfaces.

Restriction: Graduate students only.

Concurrent with ENGRCEE 173.

ENGRCEE 274. Climate Data Analysis. 4 Units.
Trend analysis; statistical indices for diagnosing and detecting changes in extremes; nonstationary processes; extreme value analysis; multivariate extreme value methods; tail dependence estimation; uncertainties in observed and projected changes in climate extremes.

ENGRCEE 275. Topics in Coastal Engineering. 4 Units.
Linear wave theory. Wave properties: particle kinematics, energy propagation, shoaling, refraction, reflection, diffraction, and breaking. Wave statistics and spectra. Selected topics from: design of coastal structures; harbor engineering; littoral transport and shoreline morphology; and hydrodynamics of estuaries.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.
ENGRCEE 276. Hydrology. 4 Units.
Elements of the hydrologic cycle including precipitation, infiltration, evapotranspiration, ground water, and runoff. Unit Hydrograph theory and routing methods. Introduction to precipitation/runoff relationship and watershed modeling. Statistical methods and flood frequency analysis. Discussion section covers advanced topics.

Restriction: Graduate students only.

Concurrent with ENGRCEE 176.

ENGRCEE 277. Hydrologic Transport Fundamentals. 4 Units.
Process description, mathematical and numerical modeling of transport processes in surface and ground water. Topics include advection, molecular diffusion, Taylor dispersion, mechanical dispersion in porous media, shear flow dispersion in channels, and turbulent jets and plumes.

Prerequisite: ENGRMAE 278

Restriction: Graduate students only.

ENGRCEE 278. Fluid Mechanics of Open Channels. 4 Units.
Fundamentals of fluid motion in open channels. Navier-Stokes equations and one-dimensional momentum and energy principles. Topics include rapidly varied flow, flow resistance and turbulence, gradually varied flow, unsteady flow, and computational methods for channel flow modeling.

Restriction: Graduate students only.

Concurrent with ENGRCEE 178.

ENGRCEE 279. Hydrologic Computational Modeling. 4 Units.
Computational modeling of multi-dimensional flow and scalar transport problems in surface and ground water. Topics include mathematical model formulation, numerical method selection, serial and parallel implementation, model verification and validation.

Prerequisite: ENGRCEE 272 and ENGRCEE 277 and ENGRCEE 278

Restriction: Graduate students only.

ENGRCEE 281. Structural Reliability. 4 Units.

Restriction: Graduate students only.

ENGRCEE 283. Mathematical Methods in Engineering Analysis. 4 Units.
Matrices; vector calculus; eigenvalue problems; Fourier analysis; partial differential equations; special functions; numerical analysis; finite difference method.

ENGRCEE 284. Engineering Decision and Risk Analysis. 4 Units.
Develops applications of statistical decision theory in engineering. Presents the fundamental tools used in engineering decision making and analysis of risk under conditions of uncertainty. All concepts are presented and illustrated thoroughly with engineering problems.

Restriction: Graduate students only.

ENGRCEE 289. Analysis of Hydrologic Systems. 4 Units.

ENGRCEE 290. Merging Models and Data. 4 Units.

Restriction: Graduate students only.
ENGRCEE 291. Hydrologic Remote Sensing. 4 Units.
Introduction to principles of remote sensing and application in hydrology. Review of sensor systems, thermal and multispectral image processing, and image classification. Examples from remote sensing of hydrologic processes such as precipitation, soil moisture, and vegetation are covered.
Prerequisite: ENGRCEE 276
Restriction: Graduate students only.

ENGRCEE 295. Seminars in Engineering. 1-4 Units.
Seminars scheduled each year by individual faculty in major field of interest.
Grading Option: Satisfactory/unsatisfactory only.
Repeatability: Unlimited as topics vary.
Restriction: Graduate students only.

ENGRCEE 296. Master of Science Thesis Research. 1-16 Units.
Individual research or investigation conducted in preparation of the thesis required for the M.S. degree in Engineering.
Grading Option: Satisfactory/unsatisfactory only.
Repeatability: May be repeated for credit unlimited times.
Restriction: Graduate students only.

ENGRCEE 297. Doctor of Philosophy Dissertation Research. 1-16 Units.
Individual research or investigation conducted in preparation for the dissertation required for the Ph.D. degree in Engineering.
Grading Option: Satisfactory/unsatisfactory only.
Repeatability: May be repeated for credit unlimited times.
Restriction: Graduate students only.

ENGRCEE 298. Special Topics in Civil Engineering. 1-4 Units.
Presentation of advanced topics and special research areas in civil engineering.
Repeatability: Unlimited as topics vary.
Restriction: Graduate students only.

ENGRCEE 299. Individual Research. 1-16 Units.
Individual research or investigation under the direction of an individual faculty member.
Grading Option: Satisfactory/unsatisfactory only.
Repeatability: May be repeated for credit unlimited times.
Restriction: Graduate students only.

Computer Sci and Engineering Courses

CSE 90. Systems Engineering and Technical Communications. 2 Units.
Introduces systems engineering concepts, including specifications and requirements, hardware and software design, integration, testing, and documentation. Emphasizes organization and writing of reports and effective presentations.
Restriction: Computer Science Engineering Majors have first consideration for enrollment.
CSE 112. Electronic Devices and Circuits. 4 Units.
A first course in the design of Very Large Scale Integrated (VLSI) systems. Introduction to CMOS technology; MOS transistors and CMOS circuits. Analysis and synthesis of CMOS gates. Layout design techniques for building blocks and systems. Introduction to CAD tools.
(Design units: 4)
Prerequisite: PHYSICS 7D and (CSE 70A or EECS 70A)
Overlaps with EECS 119, EECS 170D.
Restriction: Computer Science Engineering Majors have first consideration for enrollment.

CSE 199. Individual Study. 1-4 Units.
Supervised independent reading, research, or design for undergraduate Engineering majors. Students taking individual study for design credit are to submit a written paper to the instructor and to the Undergraduate Student Affairs Office in the School of Engineering.
(Design units: 1-4)
Repeatability: May be taken for credit for 8 units.

Electrical Engr and Comp Sci Courses

EECS 1. Introduction to Electrical Engineering and Computer Engineering. 1 Unit.
Introduction to the fields of Electrical Engineering and Computer Engineering, including possible careers in both traditional and new emerging areas. Background on both the Electrical Engineering and the Computer Engineering majors, curriculum requirements, specializations, and faculty research interests. Course may be offered online.
(Design units: 0)
Restriction: Electrical Engineering Majors have first consideration for enrollment. Computer Engineering Majors have first consideration for enrollment.

EECS 10. Computational Methods in Electrical and Computer Engineering. 4 Units.
(Design units: 0)
Corequisite: MATH 2A
Prerequisite: MATH 2A
Overlaps with EECS 12, I&C SCI 31.
Restriction: Electrical Engineering Majors have first consideration for enrollment. Chemical Engineering Majors have first consideration for enrollment.

EECS 12. Introduction to Programming. 4 Units.
(Design units: 0)
Corequisite: MATH 2A
Overlaps with EECS 10, I&C SCI 31.
Restriction: Computer Engineering Majors have first consideration for enrollment.

EECS 20. Computer Systems and C Programming. 4 Units.
Introduction to computing systems. Data representation and operations. Simple logic design. Basic computer organization. Instruction set architecture and assembly language programming. Introduction to C. Functions and recursion, data structures, pointers. Programming laboratory.
(Design units: 1)
Prerequisite: EECS 12
Restriction: Electrical Engineering Majors have first consideration for enrollment. Computer Engineering Majors have first consideration for enrollment.
EECS 22. Advanced C Programming. 3 Units.

(Design units: 1)
Prerequisite: EECS 10 or EECS 20
Restriction: Electrical Engineering Majors have first consideration for enrollment. Computer Engineering Majors have first consideration for enrollment.

EECS 22L. Software Engineering Project in C Language. 3 Units.
Hands-on experience with the ANSI-C programming language. Medium-sized programming projects, team work. Software specification, documentation, implementation, testing. Definition of data structures and application programming interface. Creation of program modules, linking with external libraries. Rule-based compilation, version control.

(Design units: 3)
Prerequisite: EECS 22
Restriction: Computer Engineering Majors have first consideration for enrollment.

EECS 31. Introduction to Digital Systems. 4 Units.
Digital representation of information. Specification, analysis, design and optimization or combinational and sequential logic, register-transfer components and register-transfer systems with datapaths and controllers. Introduction to high-level and algorithmic state-machines and custom processors.

(Design units: 2)
Prerequisite: I&C SCI 31 or EECS 10 or EECS 12 or ENGRMAE 10
Restriction: Computer Science Engineering Majors have first consideration for enrollment. Electrical Engineering Majors have first consideration for enrollment. Computer Engineering Majors have first consideration for enrollment.

EECS 31L. Introduction to Digital Logic Laboratory. 3 Units.
Introduction to common digital integrated circuits: gates, memory circuits, MSI components. Operating characteristics, specifications, applications. Design of simple combinational and sequential digital systems (arithmetic processors game-playing machines). Construction and debugging techniques using hardware description languages and CAD tools.

(Design units: 3)
Prerequisite: EECS 31 and (EECS 10 or EECS 12 or I&C SCI 32)
Restriction: Computer Science Engineering Majors have first consideration for enrollment. Electrical Engineering Majors have first consideration for enrollment. Computer Engineering Majors have first consideration for enrollment.

EECS 40. Object-Oriented Systems and Programming. 4 Units.

(Design units: 2)
Prerequisite: EECS 22L
Restriction: Computer Engineering Majors have first consideration for enrollment.

EECS 50. Discrete-Time Signals and Systems. 4 Units.
Analysis of discrete-time linear-time-invariant (DTLTI) systems in the time domain and using z-transforms. Introduction to techniques based on Discrete-Time, Discrete, and Fast Fourier Transforms. Examples of their application to digital signal processing and digital communications.

(Design units: 0)
Prerequisite: EECS 70A
Restriction: Computer Science Engineering Majors have first consideration for enrollment. Electrical Engineering Majors have first consideration for enrollment. Computer Engineering Majors have first consideration for enrollment.
EECS 55. Engineering Probability. 4 Units.
Sets and set operations; nature of probability, sample spaces, fields of events, probability measures; conditional probability, independence, random variables, distribution functions, density functions, conditional distributions and densities; moments, characteristic functions, random sequences, independent and Markov sequences.

(Design units: 0)
Prerequisite: MATH 2D
Restriction: Computer Engineering Majors have first consideration for enrollment. Electrical Engineering Majors have first consideration for enrollment.

EECS 70A. Network Analysis I. 4 Units.

(Design units: 1)
Corequisite: MATH 3D
Prerequisite: PHYSICS 7D and (EECS 10 or EECS 12 or ENGRMAE 10 or I&C SCI 31)
Overlaps with ENGRMAE 60.
Restriction: Computer Science Engineering Majors have first consideration for enrollment. Electrical Engineering Majors have first consideration for enrollment. Mechanical Engineering Majors have first consideration for enrollment. Aerospace Engineering Majors have first consideration for enrollment. Civil Engineering Majors have first consideration for enrollment. Computer Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment. Environmental Engineering Majors have first consideration for enrollment.

EECS 70B. Network Analysis II. 4 Units.

(Design units: 1)
Corequisite: EECS 70LB
Prerequisite: (BME 60B or EECS 10 or EECS 12 or I&C SCI 31 or ENGRCEE 20 or ENGRMAE 10) and EECS 70A
Restriction: Electrical Engineering Majors have first consideration for enrollment. Computer Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.

EECS 70LA. Network Analysis I Laboratory. 1 Unit.
Laboratory to accompany EECS 70A.

(Design units: 0)
Corequisite: EECS 70A
Prerequisite: PHYSICS 7D and EECS 10

EECS 70LB. Network Analysis II Laboratory. 1 Unit.
Laboratory to accompany EECS 70B. Materials fee.

(Design units: 1)
Corequisite: EECS 70B
Prerequisite: (BME 60B or EECS 10 or EECS 12 or I&C SCI 31 or ENGRCEE 20 or ENGRMAE 10) and EECS 70A
Restriction: Electrical Engineering Majors have first consideration for enrollment. Computer Engineering Majors have first consideration for enrollment.

EECS 101. Introduction to Machine Vision. 3 Units.
The use of digital computers for the analysis of visual scenes; image formation and sensing, color, segmentation, shape estimation, motion, stereo, pattern classification, computer architectures, applications. Computer experiments are used to illustrate fundamental principles.

(Design units: 2)
Prerequisite: EECS 150 or EECS 50
Restriction: Electrical Engineering Majors have first consideration for enrollment. Computer Engineering Majors have first consideration for enrollment.
EECS 111. System Software. 4 Units.
Multiprogramming, interrupt, processes, kernel, parallelism, critical sections, deadlocks, communication, multiprocessing, multilevel memory management, binding, name management, file systems, protection, resource allocation, scheduling. Experience with concurrent programming, synchronization mechanisms, interprocess communication.

(Design units: 2)
Prerequisite: EECS 112 and (I&C SCI 46 or EECS 114)

Overlaps with COMPSCI 143A.

Restriction: Computer Science Engineering Majors have first consideration for enrollment. Computer Engineering Majors have first consideration for enrollment.

EECS 112. Organization of Digital Computers. 4 Units.
Building blocks and organization of digital computers, the arithmetic, control, and memory units, and input/output devices and interfaces. Microprogramming and microprocessors.

(Design units: 4)
Prerequisite: EECS 31L

Overlaps with COMPSCI 152.

Restriction: Computer Science Engineering Majors have first consideration for enrollment. Electrical Engineering Majors have first consideration for enrollment. Computer Engineering Majors have first consideration for enrollment.

EECS 112L. Organization of Digital Computers Laboratory. 3 Units.
Specification and implementation of a processor-based system using a hardware description language such as VHDL. Hands-on experience with design tools including simulation, synthesis, and evaluation using testbenches.

(Design units: 3)
Prerequisite: EECS 112

Restriction: Computer Science Engineering Majors have first consideration for enrollment. Computer Engineering Majors have first consideration for enrollment.

EECS 113. Processor Hardware/Software Interfaces. 4 Units.
Hardware/software interfacing, including memory and bus interfaces, devices, I/O, and compiler code generation/instruction scheduling. Experience microcontroller programming and interfacing. Specific compiler code generation techniques including local variable and register allocations, instruction dependence and scheduling, and code optimization.

(Design units: 3)
Prerequisite: EECS 112

Restriction: Computer Engineering Majors have first consideration for enrollment.

EECS 114. Engineering Data Structures and Algorithms. 4 Units.
Introduces abstract behavior of classes data structures, alternative implementations, informal analysis of time and space efficiency. Also introduces classic algorithms and efficient algorithm design techniques (recursion, divide-and-conquer, branch-and-bound, dynamic programming).

(Design units: 2)
Prerequisite: EECS 40

Restriction: Computer Engineering Majors have first consideration for enrollment.
EECS 116. Introduction to Data Management. 4 Units.
Introduction to the design of databases and the use of database management systems (DBMS) for applications. Topics include entity-relationship modeling for design, relational data model, relational algebra, relational design theory, and Structured Query Language (SQL) programming.

(Design units: 1)
Prerequisite: I&C SCI 33 or CSE 43 or EECS 114. I&C SCI 33 with a grade of C or better. CSE 43 with a grade of C or better
Same as COMPSCI 122A.

Restriction: Computer Science Engineering Majors have first consideration for enrollment. School of Info & Computer Sci students have first consideration for enrollment.

EECS 117. Parallel Computer Systems. 4 Units.
Fundamentals of parallel computing with designing, analyzing, implementing parallel algorithms on HPC architectures. Parallel models: work-depth, I/O memory models. Parallel architectures: shared-memory machines, distributed-memory machines, vector processors. Parallel algorithms and programming models for each machine type are discussed.

(Design units: 1)
Prerequisite: EECS 20 and EECS 114 and EECS 112
Restriction: Computer Engineering Majors have first consideration for enrollment.

EECS 118. Introduction to Knowledge and Software Engineering. 4 Units.
Introduction of basic concepts in knowledge engineering and software engineering. Knowledge representation and reasoning, search planning, software life cycle, requirements engineering, software design languages, declarative programming, testing, database and web programming.

(Design units: 2)
Prerequisite: EECS 40
Restriction: Computer Engineering Majors have first consideration for enrollment.

EECS 119. VLSI. 4 Units.
Design techniques for Very Large Scale Integrated (VLSI) systems and chips. Review CMOS and related process technologies; primitives such as logic gates and larger design blocks; layout; floor planning; design hierarchy, component interfaces; use of associated CAD tools for design.

(Design units: 4)
Prerequisite: EECS 112 and EECS 170B
Overlaps with EECS 170D, CSE 112.
Restriction: Computer Engineering Majors have first consideration for enrollment.

EECS 141A. Communication Systems I. 3 Units.
Introduction to analog communication systems including effects of noise. Modulation-demodulation for AM, DSB-SC, SSB, VSB, QAM, FM, PM, and PCM with application to radio, television, and telephony. Signal processing as applied to communication systems.

(Design units: 1)
Prerequisite: EECS 55 and EECS 150
Restriction: Computer Engineering Majors have first consideration for enrollment. Electrical Engineering Majors have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment.

EECS 141B. Communication Systems II. 3 Units.

(Design units: 1)
Prerequisite: EECS 141A
Restriction: Computer Engineering Majors have first consideration for enrollment. Electrical Engineering Majors have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment.
EECS 144. Antenna Design for Wireless Communication Links. 4 Units.

(Design units: 0)
Prerequisite: EECS 180A

EECS 145. Electrical Engineering Analysis. 4 Units.
Vector calculus, complex functions and linear algebra with applications to electrical engineering problems.

(Design units: 0)
Prerequisite: MATH 3D
Restriction: Computer Engineering Majors have first consideration for enrollment. Electrical Engineering Majors have first consideration for enrollment.

EECS 148. Computer Networks. 4 Units.
Computer network architectures, protocols, and applications. Internet congestion control, addressing, and routing. Local area networks. Multimedia networking.

(Design units: 2)
Prerequisite: EECS 55 or STATS 67
Same as COMPSCI 132.
Restriction: Computer Engineering Majors have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment.

EECS 150. Continuous-Time Signals and Systems. 4 Units.
Characteristics and properties of continuous-time (analog) signals and systems. Analysis of linear time-invariant continuous-time systems using differential equation convolutional models. Analysis of these systems using Laplace transforms, Fourier series, and Fourier transforms. Examples from applications to telecommunications.

(Design units: 0)
Prerequisite: EECS 70A and EECS 145
Restriction: Electrical Engineering Majors have first consideration for enrollment. Computer Engineering Majors have first consideration for enrollment.

EECS 152A. Digital Signal Processing. 3 Units.
Nature of sampled data, sampling theorem, difference equations, data holds, z-transform, w-transform, digital filters, Butterworth and Chebychev filters, quantization effects.

(Design units: 2)
Prerequisite: EECS 50
Restriction: Computer Science Engineering Majors have first consideration for enrollment. Electrical Engineering Majors have first consideration for enrollment.

EECS 152B. Digital Signal Processing Design and Laboratory. 3 Units.
Design and implementation of algorithms on a DSP processor and using computer simulation. Applications in signal and image processing, communications, radar, etc.

(Design units: 3)
Prerequisite: (EECS 22 or I&C SCI 45C) and EECS 152A
Restriction: Computer Science Engineering Majors have first consideration for enrollment. Electrical Engineering Majors have first consideration for enrollment. Computer Engineering Majors have first consideration for enrollment.
EECS 159A. Senior Design Project I. 3 Units.
Teaches problem definition, detailed design, integration, and testability with teams of students specifying, designing, building, and testing complex systems. Lectures include engineering values, discussions, and ethical ramifications of engineering decisions.

(Design units: 3)
Prerequisite: EECS 113 or EECS 170C or COMPSCI 145
Restriction: Seniors only. Computer Science Engineering Majors only. Electrical Engineering Majors only. Computer Engineering Majors only.

EECS 159B. Senior Design Project II. 3 Units.
Teaches problem definition, detailed design, integration, and testability with teams of students specifying, designing, building, and testing complex systems. Lectures include engineering values, discussions, and ethical ramifications of engineering decisions.

(Design units: 3)
Prerequisite: EECS 159A
Restriction: Computer Science Engineering Majors only. Electrical Engineering Majors only. Computer Engineering Majors only.

EECS 160A. Introduction to Control Systems. 4 Units.
Modeling, stability, and specifications of feedback control systems. Root locus, Bode plots, Nyquist criteria, and state-space methods for dynamic analysis and design.

(Design units: 2)
Corequisite: EECS 160LA
Prerequisite: (EECS 10 or ENGRMAE 10) and EECS 150 and EECS 170B and EECS 170LB
Restriction: Electrical Engineering Majors have first consideration for enrollment.

EECS 160LA. Control Systems I Laboratory. 1 Unit.
Laboratory accompanying EECS 160A. Materials fee.

(Design units: 1)
Corequisite: EECS 160A
Restriction: Electrical Engineering Majors have first consideration for enrollment.

EECS 163. Power Systems. 4 Units.
Generation, transmission, and use of electrical energy. Fault calculation, protection, stability, and power flow.

(Design units: 1)
Corequisite: EECS 163L
Prerequisite: EECS 70B
Restriction: Electrical Engineering Majors have first consideration for enrollment.

EECS 163L. Power Systems Laboratory. 1 Unit.
Experiments and field trips relevant to studies in power systems. Materials fee.

(Design units: 0)
Corequisite: EECS 163
Restriction: Electrical Engineering Majors have first consideration for enrollment.

EECS 166A. Industrial and Power Electronics. 4 Units.
Power switching devices, pulse width modulation (PWM) methods, switching converter topologies, control, and magnetics. Materials fee.

(Design units: 2)
Prerequisite: EECS 170C and EECS 160A
Restriction: Electrical Engineering Majors have first consideration for enrollment.

Concurrent with EECS 267A.
EECS 170A. Electronics I. 4 Units.
The properties of semiconductors, electronic conduction in solids, the physics and operation principles of semiconductor devices such as diodes and transistors, transistor equivalent circuits, and transistor amplifiers.

(Design units: 1)
Corequisite: PHYSICS 7E
Prerequisite: PHYSICS 7D and EECS 70A
Restriction: Computer Engineering Majors have first consideration for enrollment. Electrical Engineering Majors have first consideration for enrollment.

EECS 170B. Electronics II. 4 Units.
Design and analysis of single-stage amplifiers, biasing circuits, inverters, logic gates, and memory elements based on CMOS transistors.

(Design units: 2)
Corequisite: EECS 170LB
Prerequisite: EECS 70B and EECS 170A and EECS 170LA
Restriction: Computer Engineering Majors have first consideration for enrollment. Electrical Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.

EECS 170C. Electronics III. 4 Units.
Principles of operation, design, and utilization of integrated circuit modules, including multi-stage amplifiers, operational amplifiers and logic circuits.

(Design units: 2)
Corequisite: EECS 170LC
Prerequisite: EECS 170B and EECS 170LB
Restriction: Electrical Engineering Majors have first consideration for enrollment.

EECS 170D. Integrated Electronic Circuit Design. 4 Units.
Design and fabrication of modern digital integrated circuits. Fabrication of CMOS process, transistor-level design simulation, functional characteristics of basic digital integrated circuits, and different logic families including the static and dynamic logic, layout, and extraction of digital circuits.

(Design units: 4)
Prerequisite: EECS 170C and EECS 170LC
Overlaps with EECS 119, CSE 112.
Restriction: Electrical Engineering Majors have first consideration for enrollment. Computer Engineering Majors have first consideration for enrollment.

EECS 170E. Analog and Communications IC Design. 4 Units.
Advanced topics in design of analog and communications integrated circuits. Topics include: implementation of passive components in integrated circuits; overview of frequency response of amplifiers, bandwidth estimation techniques, high-frequency amplifier design; design of radio-frequency oscillators.

(Design units: 3)
Prerequisite: EECS 170C

EECS 170LA. Electronics I Laboratory. 1 Unit.
Laboratory accompanying EECS 170A to perform experiments on semiconductor material properties, semiconductor device physics and operation principles, and transistor amplifiers to improve experimental skills and to enhance the understanding of lecture materials.

(Design units: 1)
Corequisite: EECS 170A and PHYSICS 7E
Prerequisite: PHYSICS 7D and EECS 70B
Restriction: Computer Engineering Majors have first consideration for enrollment. Electrical Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.
EECS 170LB. Electronics II Laboratory. 1 Unit.
Laboratory accompanying EECS 170B.

(Design units: 1)
Corequisite: EECS 170B
Prerequisite: EECS 170A and EECS 170LA

Restriction: Computer Engineering Majors have first consideration for enrollment. Electrical Engineering Majors have first consideration for enrollment.

EECS 170LC. Electronics III Laboratory. 1 Unit.
Laboratory accompanying EECS 170C to provide hands-on training in design of digital/analog circuits/subsystems. Materials fee.

(Design units: 1)
Corequisite: EECS 170C
Prerequisite: EECS 170B and EECS 170LB

Restriction: Electrical Engineering Majors have first consideration for enrollment.

EECS 174. Semiconductor Devices. 4 Units.
Metal-semiconductor junctions, diodes, bipolar junction transistors, MOS structures, MOSFETs, CMOS technology, LEDs, and laser diodes.

(Design units: 1)
Prerequisite: EECS 170A

Restriction: Electrical Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.

EECS 176. Fundamentals of Solid-State Electronics and Materials. 4 Units.
Physical properties of semiconductors and the roles materials play in device operation. Topics include: crystal structure, phonon vibrations, energy band, transport phenomenon, optical properties and quantum confinement effect essential to the understanding of electronic, optoelectronic and nanodevices.

(Design units: 1)
Prerequisite: EECS 170A

Restriction: Electrical Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.

EECS 179. Microelectromechanical Systems (MEMS). 4 Units.
Small-scale machines, small-scale phenomena, MEMS fabrication, MEMS CAD tools, MEMS devices and packaging, MEMS testing.

(Design units: 2)
Restriction: Upper-division students only. Electrical Engineering Majors have first consideration for enrollment. Biomedical Engineering Majors have first consideration for enrollment.

EECS 180A. Engineering Electromagnetics I. 4 Units.
Electrostatics, magnetostatics, and electromagnetic fields: solutions to problems in engineering applications; transmission lines, Maxwell's equations and phasors, plane wave propagation, reflection, and transmission. Formerly EECS 180.

(Design units: 1)
Corequisite: MATH 2D and MATH 3D
Prerequisite: PHYSICS 7E and EECS 145

Restriction: Biomedical Engineering Majors have first consideration for enrollment. Electrical Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.
EECS 180B. Engineering Electromagnetics II. 4 Units.
Time-varying electromagnetic fields, plane waves, polarization, guidance of waves like rectangular waveguides and microstrips, optical fibers resonant cavities, skin effects and losses, spherical waves, radiation and reception of waves, antenna basics. Formerly EECS 187.

(Design units: 1)
Prerequisite: EECS 180A
Restriction: Electrical Engineering Majors have first consideration for enrollment.

EECS 180C. Engineering Electromagnetics III. 4 Units.

(Design units: 0)
Prerequisite: EECS 180B
Restriction: Electrical Engineering Majors have first consideration for enrollment.

EECS 182. Monolithic Microwave Integrated Circuit (MMIC) Analysis and Design. 4 Units.
Design of microwave amplifiers including low-noise amplifiers, multiple stage amplifiers, power amplifiers, and introduction to broadband amplifiers. The goal is to provide the basic knowledge for the design of microwave amplifiers ranging from wireless system to radar system.

(Design units: 3)
Prerequisite: EECS 180A

EECS 188. Optical Electronics. 4 Units.
Photodiodes and optical detection, photometry and radiometry, geometric optics, lens theory, imaging system, EM wave propagation, optical waveguides and fibers, heterojunction structures, laser theory, semiconductor lasers, and optical transmission system.

(Design units: 1)
Prerequisite: EECS 180A
Restriction: Electrical Engineering Majors have first consideration for enrollment.

EECS 195. Special Topics in Electrical and Computer Engineering. 1-4 Units.
Studies special topics in selected areas of Electrical and Computer Engineering. Topics addressed vary each quarter.

(Design units: 1-4)
Prerequisite: Prerequisites vary.
Repeatability: Unlimited as topics vary.

EECS 198. Group Study. 1-4 Units.
Group study of selected topics in Electrical and Computer Engineering.

(Design units: 1-4)
Repeatability: May be repeated for credit unlimited times.
Restriction: Upper-division students only.

EECS 199. Individual Study. 1-4 Units.
For undergraduate Engineering majors in supervised but independent reading, research, or design. Students taking Individual study for design credit are to submit a written paper to the instructor and to the Undergraduate Student Affairs Office in the School of Engineering.

(Design units: 1-4)
Repeatability: May be taken for credit for 8 units.
EECS 199P. Individual Study. 1-4 Units.
For undergraduate Engineering majors in supervised but independent reading, research, or design. Students taking individual study for design credit are to submit a written paper to the instructor and to the Student Affairs Office in the School of Engineering.

(Design units: 1-4)

Grading Option: Pass/no pass only.

Repeatability: May be repeated for credit unlimited times.

EECS 202A. Principles of Imaging. 4 Units.
Linear systems, probability and random processes, image processing, projecting imaging, tomographic imaging.

Same as PHYSICS 233A.

Restriction: Graduate students only.

Concurrent with PHYSICS 147A.

EECS 202B. Techniques in Medical Imaging I: X-ray, Nuclear, and NMR Imaging. 4 Units.
Ionizing radiation, planar and tomographic radiographic and nuclear imaging, magnetism, NMR, MRI imaging.

Prerequisite: EECS 202A

Same as PHYSICS 233B.

Restriction: Graduate students only.

Concurrent with PHYSICS 147B.

EECS 202C. Techniques in Medical Imaging II: Ultrasound, Electrophysiological, Optical. 4 Units.
Sound and ultrasound, ultrasonic imaging, physiological electromagnetism, EEG, MEG, ECG, MCG, optical properties of tissues, fluorescence and bioluminescence, MR impedance imaging, MR spectroscopy, electron spin resonance and ESR imaging.

Prerequisite: EECS 202B

Same as PHYSICS 233C.

Restriction: Graduate students only.

Concurrent with PHYSICS 147C.

EECS 203A. Digital Image Processing. 4 Units.
Pixel-level digital image representation and elementary operations; Fourier and other unitary transforms; compression, enhancement, filtering, and restoration; laboratory experience is provided.

Restriction: Graduate students only.

EECS 211. Advanced System Software. 4 Units.
Study of operating systems including interprocess communication, scheduling, resource management, concurrency, reliability, validation, protection and security, and distributed computing support. System software design languages and modeling analysis.

Restriction: Graduate students only.

EECS 213. Computer Architecture. 4 Units.
Problems in hardware, firmware (microprogram), and software. Computer architecture for resource sharing, real-time applications, parallelism, microprogramming, and fault tolerance. Various architectures based on cost/performance and current technology.

Restriction: Graduate students only.

EECS 215. Design and Analysis of Algorithms. 4 Units.
Computer algorithms from a practical standpoint. Algorithms for symbolic and numeric problems such as sorting, searching, graphs, and network flow. Analysis includes algorithm time and space complexity.
EECS 217. VLSI System Design. 4 Units.
Overview of integrated fabrication, circuit simulation, basic device physics, device layout, timing; MOS logic design; layout generation, module generation, techniques for very large scale integrated circuit design.

Restriction: Graduate students only.

EECS 219. Distributed Software Architecture and Design. 4 Units.
Practical issues for reducing the software complexity, lowering cost, and designing and implementing distributed software applications. Topics include the distributed object model distributed environment, platform-independent software agents and components, the middleware architecture for distributed real-time and secure services.

Prerequisite: EECS 211

Restriction: Graduate students only.

EECS 220. Advanced Digital Signal Processing Architecture. 4 Units.
Study the latest DSP architectures for applications in communication (wired and wireless) and multimedia processing. Emphasis given to understanding the current design techniques and to evaluate the performance, power, and application domain of the latest DSP processors.

Prerequisite: EECS 213

Restriction: Graduate students only.

EECS 221. Topics in Computer Engineering. 4 Units.
New research results in computer engineering.

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.

EECS 222. Embedded System Modeling. 4 Units.
Computational models for embedded systems. System-level specification and description languages. Concepts, requirements, examples. Embedded system models at different levels of abstraction. Modeling of test benches, design under test, IP components. Discrete event simulation, semantics, and algorithms. Formerly EECS 222A.

Restriction: Graduate students only.

EECS 223. Real-Time Computer Systems. 4 Units.
Time bases, clock synchronization, real-time communication protocols, specification of requirements, task scheduling. Validation of timelines, real-time configuration management.

Prerequisite: EECS 211 and EECS 213

Restriction: Graduate students only.

EECS 224. High-Performance Computing. 4 Units.
Fundamentals of high-performance computing, covering both theory and practice. Topics include performance analysis and tuning, design of parallel and I/O efficient algorithms, basics of parallel machine architectures, and current/emerging programming models (shared memory, distributed memory, and accelerators).

Prerequisite: EECS 215 or COMPSCI 260

Restriction: Graduate students only.

EECS 225. Embedded Systems Design. 4 Units.
Embedded systems design flow and methodology. Design space exploration. Co-design of hardware and software, embedded architecture and network exploration and synthesis. System software/hardware interface generation. Real-time constraints, specification-to-architecture mapping, design tools and methodologies. Formerly EECS 222B.

Restriction: Graduate students only.

EECS 226. Embedded System Software. 4 Units.
Embedded system software concepts, requirements, examples, for engineering applications such as multi-media and automotive. Software generation methodology. Algorithmic specification, design constraints. Embedded operating systems. Static, dynamic, real-time scheduling. Input/output, interrupt handling. Code generation, compilation, instruction set simulation. Formerly EECS 222C.

Restriction: Graduate students only.
EECS 227. Cyber-Physical System Design. 4 Units.
Model-based design of cyber-physical systems including, e.g., plant, sensing, control, actuation, embedded hardware/software, communication, real-time analysis, various levels of simulation (MILS, SILS, HILS), tools and methodologies for automatic synthesis, and application from various interdisciplinary domains.

Restriction: Graduate students only.

EECS 228. Program Analysis. 4 Units.
Advance study of programming languages, compilers, and interpreters. Static and dynamic program analysis and its use in compilation, optimization, garbage collection, bug finding, and parallelization.

Prerequisite: EECS 215 or COMPSCI 260

Restriction: Graduate students only.

EECS 229. Low Power SoC Design. 4 Units.
From an inverter to server centers, low-power design theory and practice in modern systems-on-chip (SoC), energy efficient design time and runtime methods are surveyed at circuit, RTL, and architecture levels. Lab assignments will help students quantify tradeoffs and design practices.

Prerequisite: EECS 217

Restriction: Graduate students only.

EECS 230. Energy Efficiency. 4 Units.
Green energy sources for production, transmission, storage, and utilization of electricity, with a special focus on solar, wind, and nuclear energy production. Study of newly developed renewable sources of energy including capital cost, product cost, environmental issues, and technical feasibility.

EECS 240. Random Processes. 4 Units.

Restriction: Graduate students only.

EECS 241A. Digital Communications I. 4 Units.
Concepts and applications of digital communication systems. Baseband digital transmission of binary, multi-amplitude, and multidimensional signals. Introduction to and performance analysis of different modulation schemes.

EECS 241B. Digital Communications II. 4 Units.
Concepts and applications of equalization, multi-carrier modulation, spread spectrum and CDMA. Digital communications through fading memory channels.

Prerequisite: EECS 241A

Restriction: Graduate students only.

EECS 242. Information Theory. 4 Units.
Fundamental capabilities and limitations of information sources and information transmission systems. Analytical framework for modeling and evaluating communication systems: entropy, mutual information asymptotic equipartition property, entropy rates of a stochastic process, data compression, channel capacity, differential entropy, the Gaussian channel.

Prerequisite: EECS 240

EECS 243. Error Correcting Codes. 4 Units.
Different techniques for error correcting codes and analyzing their performance. Linear block codes; cyclic codes; convolutional codes. Minimum distance; optimal decoding; Viterbi decoding; bit error probability. Coding gain; trellis coded modulation.

Prerequisite: EECS 240

Restriction: Graduate students only.
EECS 244. Wireless Communications. 4 Units.
Prerequisite: EECS 241B
Restriction: Graduate students only.

EECS 245. Space-Time Coding. 4 Units.
A fundamental study of: Capacity of MIMO Channels, space-time code design criteria, space-time block codes, space-time trellis codes, differential detection for multiple antennas, spatial multiplexing, BLAST.
Prerequisite: EECS 242
Restriction: Graduate students only.

EECS 247. Information Storage. 4 Units.
Storage architecture, storage network and networking algorithms in data centers, principle of storage devices and non-volatile memory, data consistency, data availability and integrity, power management.
Restriction: Graduate students only.

EECS 248A. Computer and Communication Networks. 4 Units.
Prerequisite: EECS 148 or COMPSCI 132
Same as COMPSCI 232, NET SYS 201.
Restriction: Graduate students only.

EECS 250. Digital Signal Processing I. 4 Units.
Fundamental principles of digital signal processing, sampling, decimation and interpolation, discrete Fourier transforms and FFT algorithms, transversal and recursive filters, discrete random processes, and finite-word effects in digital filters.
Restriction: Graduate students only.

EECS 251A. Detection, Estimation, and Demodulation Theory. 4 Units.
Prerequisite: EECS 240

EECS 251B. Detection, Estimation, and Demodulation Theory. 4 Units.
Prerequisite: EECS 240

EECS 260A. Linear Systems I. 4 Units.
State-space representation of continuous-time and discrete-time linear systems. Controllability, observability, stability. Realization of rational transfer functions.
Restriction: Graduate students only.

EECS 261A. Linear Optimization Methods. 4 Units.
Restriction: Graduate students only.
EECS 267A. Industrial and Power Electronics. 4 Units.
Power switching devices, pulse width modulation (PWM) methods, switching converter topologies, control, and magnetics. Materials fee.

Restriction: Graduate students only.

Concurrent with EECS 166A.

EECS 267B. Topics in Industrial and Power Electronics. 4 Units.
Practical design of switching converters, electromagnetic compatibility, thermal management, and/or control methods.

Prerequisite: EECS 267A

Restriction: Graduate students only.

EECS 270A. Advanced Analog Integrated Circuit Design I. 4 Units.
Basic transistor configurations; differential pairs; active load/current sources; supply/temperature-independent biasing; op-amp gain and output stages; amplifier frequency response and stability compensation; nonidealities in op-amps; noise and dynamic range in analog circuits.

Restriction: Graduate students only.

EECS 270B. Advanced Analog Integrated Circuit Design II. 4 Units.
Advanced transistor modeling issues; discrete-time and continuous-time analog Integrated Circuit (IC) filters; phase-locked loops; design of ICs operating at radio frequencies; low-voltage/low-power design techniques; A/D and D/A converters; AGC circuits.

Prerequisite: EECS 270A

Restriction: Graduate students only.

EECS 270C. Design of Integrated Circuits for Broadband Applications. 4 Units.
Topics include: broadband standards and protocols; high-frequency circuit design techniques; PLL theory and design; design of transceivers; electrical/optical interfaces.

Prerequisite: EECS 270A

Restriction: Graduate students only.

EECS 270D. Radio-Frequency Integrated Circuit Design. 4 Units.
Topics include: RF component modeling; matching network design; transmission line theory/modeling; Smith chart and S-parameters; noise modeling of active and passive components; high-frequency amplifier design; low-noise amplifier (LNA) design; mixer design; RF power amplifier.

Prerequisite: EECS 270A

Restriction: Graduate students only.

EECS 272. Topics in Electrical Engineering. 4 Units.
New research results in electronic system design.

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.

EECS 275A. Very Large Scale Integration (VLSI) Project. 4 Units.
Students create VLSI design projects from conception through architecture, floor planning, detailed design, simulation, verification, and submission for project fabrication. Emphasis on practical experience in robust VLSI design techniques. (Successful students are expected to take EECS 275B.)

Restriction: Graduate students only.

EECS 275B. Very Large Scale Integration (VLSI) Project Testing. 4 Units.
Test and document student-created Complementary Metal Oxide Semiconductor (CMOS) Very Large Scale Integration (VLSI) projects designed in EECS 275A. Emphasis on practical laboratory experience in VLSI testing techniques. Materials fee.

Prerequisite: EECS 275A

Restriction: Graduate students only.
EECS 277A. Advanced Semiconductor Devices I. 4 Units.
Advanced complementary metal-oxide-semiconductor field-effect transistors (CMOSFET), device scaling, device modeling and fabrication, equivalent circuits, and their applications for digital, analog, RF.
Restriction: Graduate students only.

EECS 277B. Advanced Semiconductor Devices II. 4 Units.
Metal-semiconductor field-effect transistors (MESFET), heterojunction bipolar transistors (HBT), microwave semiconductor devices, equivalent circuits, device modeling and fabrication, microwave amplifiers, transmitters, and receivers.
Restriction: Graduate students only.

EECS 277C. Nanotechnology. 4 Units.
Restriction: Graduate students only.

EECS 278. Micro-System Design. 4 Units.
Covers the fundamentals of the many disciplines needed for design of Micro-Electro-Mechanical Systems (MEMS): microfabrication technology, structural mechanics on micro-scale, electrostatics, circuit interface, control, computer-aided design, and system integration.
Same as ENGRMAE 247.
Restriction: Graduate students only.

EECS 279. Micro-Sensors and Actuators. 4 Units.
Introduction to the technology of Micro-Electro-Mechanical Systems (MEMS). Fundamental principles and applications of important microsensors, actuation principles on microscale. Introduction to the elements of signal processing; processing of materials for micro sensor/actuator fabrication; smart sensors and microsensor/microactuator array devices.
Same as ENGRMAE 249.
Restriction: Graduate students only.

EECS 280A. Advanced Engineering Electromagnetics I. 4 Units.
Stationary electromagnetic fields, Maxwell's equations, circuits and transmission lines, plane waves, guided waves, and radiation.
Restriction: Graduate students only.

EECS 280B. Advanced Engineering Electromagnetics II. 4 Units.
Two- and three-dimensional boundary value problems, dielectric waveguides and other special waveguides, microwave networks and antenna arrays, electromagnetic properties of materials, and electromagnetic optics.
Prerequisite: EECS 280A
Restriction: Graduate students only.

EECS 282. Monolithic Microwave Integrated Circuit (MMIC) Analysis and Design II. 4 Units.
Design of microwave amplifiers using computer-aided design tools. Covers low-noise amplifiers, multiple stage amplifiers, broadband amplifiers, and power amplifiers. Hybrid circuit design techniques including filters and baluns. Theory and design rules for microwave oscillator design.
Restriction: Graduate students only.

EECS 285A. Optical Communications. 4 Units.
Introduction to fiber optic communication systems, optical and electro-optic materials, and high-speed optical modulation and switching devices.
Restriction: Graduate students only.

EECS 285B. Lasers and Photonics. 4 Units.
Covers the fundamentals of lasers and applications, including Gaussian beam propagation, interaction of optical radiation with matters, and concepts of optical gain and feedback. Applications are drawn from diverse fields of optical communication, signal processing, and material diagnosis.
Prerequisite: Undergraduate course work in electromagnetic theory and atomic physics.
EECS 285C. Nano Imaging. 4 Units.
Theory and practice of modern nanoscale imaging techniques and applications. Traces the development of microscopy from ancient times to modern day techniques used for visualizing the nano-world from atoms to molecules including hands-on experience in the laboratory.

Restriction: Graduate students only.

EECS 286. Biomedical and Wearable Microdevices. 4 Units.
Preliminary details on prototyping and fabrication techniques for biomedical and wearable microdevices. Behavior and properties of modern microdevice materials such as hydrogel, PDMS, biopolymer, smart materials, and their uses. Basic biosensing modalities and practical implementations in modern devices.

Prerequisite: Knowledge of undergraduate-level basic physics is required.

Restriction: Graduate students only.

EECS 280. Curricular Practical Training. 1 Unit.
Curricular practical training. Students will go through practical training under an industry mentor in a technical field corresponding to their concentration area.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

EECS 292. Preparation for M.S. Comprehensive Examination. 1-8 Units.
Individual reading and preparation for the M.S. comprehensive examination.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

EECS 293. Preparation for Ph.D. Preliminary Examination. 1-8 Units.
Individual reading and preparation for the Ph.D. preliminary examination.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

EECS 294. Electrical Engineering and Computer Science Colloquium. 1 Unit.
Invited speakers discuss their latest research results in electrical engineering and computer science.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

EECS 295. Seminars in Engineering. 1-4 Units.
Scheduled each year by individual faculty in major field of interest.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.

EECS 296. Master of Science Thesis Research. 1-16 Units.
Individual research or investigation conducted in the pursuit of preparing and completing the thesis required for the M.S. degree in Engineering.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.
EECS 297. Doctor of Philosophy Dissertation Research. 1-16 Units.
Individual research or investigation conducted in preparing and completing the dissertation required for the Ph.D. degree in Engineering.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

EECS 298. Topics in Electrical Engineering and Computer Science. 4 Units.
Study of Electrical and Computer Engineering concepts.

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.

EECS 299. Individual Research. 1-16 Units.
Individual research or investigation under the direction of an individual faculty member.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

Engineering Courses

ENGR 1A. General Chemistry for Engineers. 4 Units.
Emphasis on solid-state chemistry. Quantum theory, atomic structure, periodic trends, chemical bonding, molecular orbitals, electronic band structure, gases, liquids, intermolecular forces, unit cells, crystal lattices, phase transformations, and electrochemistry.

(Design units: 0)

Prerequisite: A score of 2 or 3 on the AP Chemistry exam, or a score of 550 or higher on the SAT Chemistry Subject exam, or Engineering Chemistry Placement Exam (fee required).

Overlaps with CHEM 1A.

Restriction: School of Engineering students only.

(II)

ENGR 7A. Introduction to Engineering I. 2 Units.
Introduction to engineering disciplines and the design process. Materials fee.

(Design units: 1)

Grading Option: In Progress (Letter Grade with P/NP).

Restriction: Lower-division students only.

ENGR 7B. Introduction to Engineering II. 2 Units.
Introduction to engineering disciplines and the design process. Course may be offered online. Materials fee.

(Design units: 2)

Prerequisite: ENGR 7A

Restriction: Lower-division students only.

ENGR 30. Statics. 4 Units.
Addition and resolution of forces, distributed forces, equivalent system of forces centroids, first moments, moments and products on inertia, equilibrium of rigid bodies, trusses, beams, cables. Course may be offered online.

(Design units: 0)

Corequisite: MATH 2D
Prerequisite: MATH 2D and PHYSICS 7C

Same as ENGRCEE 30, ENGRMAE 30.

Restriction: School of Engineering students have first consideration for enrollment.
ENGR 54. Principles of Materials Science and Engineering. 4 Units.
Superconductors to biodegradable polymers. Structure and properties of materials, including metal, ceramics, polymers, semiconductors, composites, traditional materials. Atomic structure, bonding, defects, phase equilibria, mechanical properties, electrical, optical and magnetic properties. Introduction to materials processing and synthesis. Course may be offered online. Materials fee.

(Design units: 0)
Prerequisite: (ENGR 1A or CHEM 1A) and PHYSICS 7C
Restriction: School of Engineering students have first consideration for enrollment.

ENGR 80. Dynamics. 4 Units.
Introduction to the kinematics and dynamics of particles and rigid bodies. The Newton-Euler, Work/Energy, and Impulse/Momentum methods are explored for ascertaining the dynamics of particles and rigid bodies. An engineering design problem using these fundamental principles is also undertaken.

(Design units: 0.5)
Prerequisite: MATH 2D and PHYSICS 7C
Same as ENGRCEE 80, ENGRMAE 80.
Restriction: Mechanical Engineering Majors have first consideration for enrollment. Aerospace Engineering Majors have first consideration for enrollment. Civil Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.

ENGR 92. Engineering and Computer Educational Laboratory. 1-4 Workload Units.
Comprehensive academic support designed primarily for underrepresented or underprepared students in Engineering, ICS, or selected areas of the physical sciences. Typical program activities: tutoring, study skills, career planning, self-esteem enhancement, library research techniques.

(Design units: 0)
Grading Option: Workload Credit P/NP Only.
Repeatability: May be taken for credit for 12 units.

ENGR 93. Public and Professional Service in Engineering. 1-2 Workload Units.
Student participation in public and professional service activities related to engineering.

(Design units: 0)
Grading Option: Workload Credit P/NP Only.
Repeatability: May be repeated for credit unlimited times.

ENGR 98. Group Study. 1-4 Units.
Group study of selected topics in engineering.

(Design units: 1-4)
Repeatability: Unlimited as topics vary.

ENGR 100. Special Topics in Fabrication Safety. 1 Workload Unit.
Hands on training in the safe use of item fabrication: metalworking, woodworking, electronics fabrication, composites, welding, adhesives, water disposal, and others. Safety certification will be granted from this course and is required for access to Engineering School fabrication facilities.

(Design units: 0)
Grading Option: Workload Credit Letter Grade with P/NP.
Repeatability: Unlimited as topics vary.
Restriction: School of Engineering students have first consideration for enrollment.
ENGR 150. Mechanics of Structures. 4 Units.

(Design units: 2)
Prerequisite: (ENGRCEE 30 or ENGR 30 or ENGRMAE 30) and MATH 3A
Same as ENGRMAE 150.
Overlaps with ENGRCEE 150.
Restriction: Aerospace Engineering Majors have first consideration for enrollment. Biomedical Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment. Mechanical Engineering Majors have first consideration for enrollment.

ENGR 165. Advanced Manufacturing. 4 Units.
Principles in manufacturing processes. All machining requires energy: mechanical (cutting and shaping), heat energy (laser cutting), photochemical (photolithography), chemical energy (electro chemical machining and chemical vapor deposition). These methods and their fundamentals are examined.
Materials fee.

(Design units: 2)
Restriction: Seniors only. School of Engineering students only.
Concurrent with ENGR 265.

ENGR 180. Entrepreneurship for Scientists and Engineers. 4 Units.
Real-world introduction to the theory and practice of entrepreneurship. Explore organizational, strategic, and financial challenges; start-up strategies; business idea evaluation; and business plan writing. Presentations by prestigious entrepreneurs and industry leaders.

(Design units: 0)
Restriction: Upper-division students only. School of Engineering students have first consideration for enrollment.
Concurrent with ENGR 280.

ENGR 189. Senior Project - Topics Vary. 1-4 Units.
Multidisciplinary group senior project of theoretical or applied nature involving design.

(Design units: 1-4)
Repeatability: May be taken for credit for 12 units as topics vary.
Restriction: Seniors only.

ENGR 190W. Communications in the Professional World. 4 Units.
Upper-division technical writing course including the development of presentation skills. Effective communication with a range of audiences. Recognition of ethical and professional responsibilities for engineers.

(Design units: 0)
Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.
Restriction: School of Engineering students only.

ENGR 195. Special Topics in Engineering. 1-4 Units.
Studies in selected areas of Engineering. Topics addressed vary each quarter.

(Design units: 1-4)
Prerequisite: Prerequisites vary.
Repeatability: Unlimited as topics vary.
ENGR 196W. Engineering Thesis. 4 Units.
Preparation of final presentation and paper describing individual research in Engineering completed in one or more quarters of individual study (i.e., ENGR 199).

(Design units: 0)
Prerequisite: Completion of at least 4 units of Individual Research in Engineering. Satisfactory completion of the Lower-Division Writing requirement.

(Ad)

ENGR H196W. Honors Thesis. 4 Units.
Preparation of final presentation and paper describing individual research in Engineering. For participants in the Campuswide Honors Program.

(Design units: 1-4)
Prerequisite: ENGR H199. Satisfactory completion of the Lower-Division Writing requirement.
Restriction: Campuswide Honors Program students only.

(Ad)

ENGR 197A. Educational Strategies for Tutoring and Teacher Aiding. 4 Units.
Placement in a public elementary or secondary school to gain experience as a tutor or teacher aide. Emphasis on cognitive learning and the development of instructional strategies and resources which can be used in effective cross-age and cross-cultural experiences.

Grading Option: Pass/no pass only.

Repeatability: May be taken for credit 3 times.

Same as EDUC 100.

Restriction: Pass/not-pass option only

ENGR 199. Individual Study. 1-4 Units.
Supervised independent reading, research, or design for undergraduate Engineering majors. Students taking individual study for design credit are to submit a written paper to the instructor and to the Undergraduate Student Affairs Office in the School of Engineering.

(Design units: 1-4)

Repeatability: May be taken for credit for 8 units.

Restriction: School of Engineering students only.

ENGR 199P. Individual Study. 1-4 Units.
Supervised independent reading, research, or design for undergraduate Engineering majors. Students taking individual study for design credit are to submit a written paper to the instructor and to the Undergraduate Student Affairs Office in the School of Engineering.

(Design units: 1-4)

Grading Option: Pass/no pass only.

Repeatability: May be repeated for credit unlimited times.

ENGR H199. Individual Study for Honors Students. 1-5 Units.
Supervised research in Engineering for participants in the Campuswide Honors Program. Students taking individual study for design credit are to submit a written paper to the instructor and to the Undergraduate Student Affairs Office in the School of Engineering.

(Design units: 1-5)

Repeatability: May be repeated for credit unlimited times.

Restriction: Campuswide Honors Program students only.
ENGR 265. Advanced Manufacturing. 4 Units.
Principles in manufacturing processes. All machining requires energy: mechanical (cutting and shaping), heat energy (laser cutting), photochemical (photolithography), chemical energy (electrochemical machining and chemical vapor deposition). These methods and their fundamentals are examined. Materials fee.

Restriction: Graduate students only. School of Engineering students only.
Concurrent with ENGR 165.

ENGR 280. Entrepreneurship for Scientists and Engineers. 4 Units.
Real-world introduction to the theory and practice of entrepreneurship. Explore organizational, strategic, and financial challenges; start-up strategies; business idea evaluation; and business plan writing. Presentations by prestigious entrepreneurs and industry leaders.

Restriction: School of Engineering students have first consideration for enrollment. Graduate students only.
Concurrent with ENGR 180.

ENGR 295. Special Topics in Engineering. 1-4 Units.
Studies in selected areas of Engineering. Topics addressed vary each quarter.

Prerequisite: Prerequisites vary.
Repeatability: Unlimited as topics vary.
Restriction: Graduate students only.

ENGR 296. Master of Science Thesis Research. 1-16 Units.
Individual research or investigation conducted in the pursuit of preparing and completing the thesis required for the M.S. in Engineering.

Repeatability: May be repeated for credit unlimited times.

ENGR 297. Doctor of Philosophy Dissertation Research. 1-16 Units.
Individual research or investigation conducted in the pursuit of preparing and completing the dissertation required for the Ph.D. in Engineering.

Repeatability: May be repeated for credit unlimited times.

ENGR 299. Individual Research. 1-16 Units.
Individual research or investigation under the direction of an individual faculty.

Repeatability: May be repeated for credit unlimited times.

ENGR 399. University Teaching. 4 Units.
University teaching with Engineering faculty.

Grading Option: Satisfactory/unsatisfactory only.
Repeatability: May be repeated for credit unlimited times.
Restriction: Teaching assistants only.

Mechanical and Aerospace Engr Courses
ENGRMAE 10. Introduction to Engineering Computations. 4 Units.
Introduction to the solution of engineering problems through the use of the computer. Elementary programming in FORTRAN and Matlab is taught. No previous knowledge of computer programming is assumed.

(Design units: 1)
Corequisite: MATH 2A
Prerequisite: MATH 2A
Overlaps with EECS 10, EECS 12, BME 60B.
Restriction: School of Engineering students have first consideration for enrollment.
ENGRMAE 30. Statics. 4 Units.
Addition and resolution of forces, distributed forces, equivalent system of forces centroids, first moments, moments and products on inertia, equilibrium of rigid bodies, trusses, beams, cables. Course may be offered online.

(Design units: 0)
Corequisite: MATH 2D
Prerequisite: MATH 2D and PHYSICS 7C
Same as ENGRCEE 30, ENGR 30.
Restriction: School of Engineering students have first consideration for enrollment.

ENGRMAE 52. Computer-Aided Design. 4 Units.
Develops skills for interpretation and presentation of mechanical design drawings and the use of CAD in engineering design. An integrated approach to drafting based on sketching, manual drawing, and three-dimensional CAD techniques is presented.

(Design units: 0.5)
Restriction: Mechanical Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.

ENGRMAE 57. Manufacturing Processes in Engineering. 2 Units.

(Design units: 0)
Grading Option: Pass/no pass only.
Restriction: School of Engineering students have first consideration for enrollment.

ENGRMAE 60. Electric Circuits. 4 Units.
Design and analysis of analog circuits based on lumped circuit elements with emphasis on the use of operational amplifiers. Sinusoidal and transient response. Constructional and laboratory testing of analog circuits, and introduction to data acquisition. Materials fee.

(Design units: 2)
Corequisite: MATH 3D
Prerequisite: PHYSICS 7D and PHYSICS 7LD
Overlaps with EECS 70A.
Restriction: Mechanical Engineering Majors have first consideration for enrollment. Aerospace Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.

ENGRMAE 80. Dynamics. 4 Units.
Introduction to the kinematics and dynamics of particles and rigid bodies. The Newton-Euler, Work/Energy, and Impulse/Momentum methods are explored for ascertaining the dynamics of particles and rigid bodies. An engineering design problem using these fundamental principles is also undertaken.

(Design units: 0.5)
Prerequisite: MATH 2D and PHYSICS 7C
Same as ENGRCEE 80, ENGR 80.
Restriction: Mechanical Engineering Majors have first consideration for enrollment. Aerospace Engineering Majors have first consideration for enrollment. Civil Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment. Environmental Engineering Majors have first consideration for enrollment.
ENGRMAE 91. Introduction to Thermodynamics. 4 Units.
Thermodynamic principles; open and closed systems representative of engineering problems. First and second law of thermodynamics with applications to engineering systems and design.

(Design units: 0.5)
Prerequisite: PHYSICS 7C and MATH 2D

Overlaps with CBEMS 45B, CBEMS 65A.

Restriction: Mechanical Engineering Majors have first consideration for enrollment. Aerospace Engineering Majors have first consideration for enrollment. Civil Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment. Environmental Engineering Majors have first consideration for enrollment.

ENGRMAE 93. Topics in Design Project . 1-2 Units.
Early-stage design/hands-on experience for lower-division students, and allows them to participate along side seniors in the design project.

(Design units: 1)
Repeatability: Unlimited as topics vary.

Restriction: Mechanical Engineering Majors have first consideration for enrollment. Aerospace Engineering Majors have first consideration for enrollment.

ENGRMAE 106. Mechanical Systems Laboratory. 4 Units.
Experiments in linear systems, including op-amp circuits, vibrations, and control systems. Emphasis on demonstrating that mathematical models can be useful tools for the analysis and design of electro-mechanical systems. Materials fee.

(Design units: 2)
Prerequisite: ENGRMAE 60 or EECS 70A

Restriction: Mechanical Engineering Majors have first consideration for enrollment. Aerospace Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.

ENGRMAE 107. Fluid Thermal Science Laboratory. 4 Units.
Fluid and thermal engineering laboratory. Experimental analysis of fluid flow, heat transfer, and thermodynamic systems. Probability, statistics, and uncertainly analysis. Report writing is emphasized and a design project is required. Materials fee.

(Design units: 1)
Corequisite: ENGRMAE 120

Restriction: Mechanical Engineering Majors have first consideration for enrollment.

ENGRMAE 108. Aerospace Laboratory. 4 Units.
Analytical and experimental investigation in aerodynamics, fluid dynamics, and heat transfer. Emphasis on study of flow over objects and lift and drag on airfoils. Introduction to basic diagnostic techniques. Report writing is emphasized. Design project is required. Materials fee.

(Design units: 2)
Prerequisite: ENGRMAE 130B

Restriction: Aerospace Engineering Majors have first consideration for enrollment. Mechanical Engineering Majors have first consideration for enrollment.

ENGRMAE 110. Combustion and Fuel Cell Systems. 4 Units.
Fundamentals of gaseous, liquid, and coal-fired combustion and fuel cell systems. Fuels, fuel-air mixing, aerodynamics, and combustion and fuel cell thermodynamics. Operating and design aspects of practical systems including engines, power generators, boilers, furnaces, and incinerators.

(Design units: 2)
Prerequisite: ENGRMAE 115

Restriction: Chemical Engineering Majors have first consideration for enrollment. Environmental Engineering Majors have first consideration for enrollment. Mechanical Engineering Majors have first consideration for enrollment.
ENGRMAE 112. Propulsion. 4 Units.
Application of thermodynamics and fluid mechanics to basic flow processes and cycle performance in propulsion systems: gas turbines, ramjets, scramjets, and rockets.

(Design units: 1)
Prerequisite: ENGRMAE 130B
Restriction: Aerospace Engineering Majors have first consideration for enrollment. Mechanical Engineering Majors have first consideration for enrollment.

ENGRMAE 113. Electric Propulsion. 4 Units.
Space propulsion requirements and maneuvers, stressing those best suited to electric propulsion. An introduction to plasma physics. Electrothermal, electromagnetic and electrostatic accelerators, with emphasis in technologies (ion engines, Hall thrusters and colloidal thrusters) belonging to the latter family.

(Design units: 1)
Prerequisite: ENGRMAE 112
Concurrent with ENGRMAE 213.

ENGRMAE 114. Fuel Cell Fundamentals and Technology. 4 Units.
Introduction to electrochemistry and electrocatalysis; nature of fuel-cell electrodes and electrolytes; charge transfer reactions at interfaces; charge transport and mass transport processes; fuel processing reactions; determination of fuel cell efficiency, fuel flexibility, emissions and other characteristics.

(Design units: 0)
Prerequisite: ENGRMAE 115
Restriction: Seniors only. Mechanical Engineering Majors have first consideration for enrollment. Aerospace Engineering Majors have first consideration for enrollment.
Concurrent with ENGRMAE 214A.

ENGRMAE 115. Applied Engineering Thermodynamics. 4 Units.
Application of thermodynamic principles to compressible and incompressible processes representative of practical engineering problems; power cycles, refrigeration cycles, multicomponent mixtures, air conditioning systems, combustion, and compressible flow. Design of a thermodynamic process.

(Design units: 2)
Prerequisite: ENGRMAE 91
Overlaps with CBEMS 45C, CBEMS 65B.
Restriction: Mechanical Engineering Majors have first consideration for enrollment. Chemical Engineering Majors have first consideration for enrollment. Environmental Engineering Majors have first consideration for enrollment.

ENGRMAE 117. Solar and Renewable Energy Systems. 4 Units.
Basic principles, design, and operation of solar and other renewable energy systems including solar photo-voltaic, solar thermal, wind, and PEM fuel cell. Includes power generation and storage, and renewable fuels for transportation and stationary power generation.

(Design units: 1)
Prerequisite: ENGRMAE 91
Restriction: Mechanical Engineering Majors have first consideration for enrollment.
ENGRMAE 118. Sustainable Energy Systems. 4 Units.
Basic principles, design, and operation of sustainable energy systems including wind, solar photo-voltaic and thermal, hydroelectric, geothermal, oceanic, biomass combustion, advanced coal, and next generation nuclear. Includes power generation, storage, and transmission for stationary power generation.

(Design units: 1)

Prerequisite: ENGRMAE 115

Concurrent with ENGRMAE 218.

ENGRMAE 120. Heat and Mass Transfer. 4 Units.
Fundamentals of heat and mass transfer. Conduction, heat and mass transfer by convection in laminar and turbulent flows, radiation heat transfer, and combined modes of heat and mass transfer. Practical engineering applications.

(Design units: 0)

Prerequisite: ENGRMAE 130B

Overlaps with CBEMS 125B.

Restriction: Aerospace Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment. Mechanical Engineering Majors have first consideration for enrollment.

ENGRMAE 130A. Introduction to Fluid Mechanics. 4 Units.
Fundamental concepts; fluid statics; fluid dynamics; Bernoulli's equation; control-volume analysis; basic flow equations of conservation of mass, momentum, and energy; differential analysis; potential flow; viscous incompressible flow.

(Design units: 0)

Prerequisite: PHYSICS 7C and MATH 2D and MATH 2E and MATH 3D and (ENGRMAE 30 or ENGRCEE 30 or ENGR 30) and (ENGRMAE 80 or ENGRCEE 80 or ENGR 80) and ENGRMAE 91. PHYSICS 7C with a grade of C- or better. MATH 2D with a grade of C- or better. MATH 2E with a grade of C- or better. MATH 3D with a grade of C- or better. ENGRMAE 30 with a grade of C- or better. ENGRCEE 30 with a grade of C- or better. ENGR 30 with a grade of C- or better. ENGRMAE 80 with a grade of C- or better. ENGRCEE 80 with a grade of C- or better. ENGR 80 with a grade of C- or better. ENGRMAE 91 with a grade of C- or better.

Overlaps with CBEMS 125A, ENGRCEE 170.

Restriction: Mechanical Engineering Majors have first consideration for enrollment. Aerospace Engineering Majors have first consideration for enrollment.

ENGRMAE 130B. Introduction to Viscous and Compressible Flows. 4 Units.
Introduction to the analysis of viscous flows including fully developed laminar and turbulent flow in a pipe, viscous flow over immersed bodies, evaluation of boundary layer characteristics, lift and drag, compressible flow in a duct and normal shock waves.

(Design units: 1)

Prerequisite: ENGRMAE 130A

Restriction: Mechanical Engineering Majors have first consideration for enrollment. Aerospace Engineering Majors have first consideration for enrollment.

ENGRMAE 132. Computational Fluid Dynamics. 4 Units.
Introduction to computational fluid dynamics in simple engineering devices. The numerical simulations will be performed via the widely-used software ANSYS-Fluent. While Fluent is the choice of software, all major CFD packages are based on a similar numerical method.

(Design units: 0)

Prerequisite: ENGRMAE 130B. ENGRMAE 130B with a grade of C- or better

Restriction: Aerospace Engineering Majors only. Mechanical Engineering Majors only.
ENGRMAE 135. Compressible Flow. 4 Units.
Compressibility effects in fluid mechanics. One-dimensional flow with area variation, friction, heat transfer, and shocks. Design of gas supply systems. Two-dimensional flow with oblique shocks and isentropic waves. Supersonic airfoil theory and design, wind tunnel design. Basic diagnostics.

(Design units: 1)
Prerequisite: ENGRMAE 130B
Restriction: Aerospace Engineering Majors have first consideration for enrollment. Mechanical Engineering Majors have first consideration for enrollment.

ENGRMAE 136. Aerodynamics. 4 Units.
Analysis of flow over aircraft wings and airfoils, prediction of lift, moment, and drag. Topics: fluid dynamics equations; flow similitude; viscous effects; vorticity, circulation, Kelvin's theorem, potential flow; superposition principle, Kutta-Joukowski theorem; thin airfoil theory; finite wing theory; compressibility.

(Design units: 1)
Prerequisite: ENGRMAE 130B
Restriction: Aerospace Engineering Majors have first consideration for enrollment. Mechanical Engineering Majors have first consideration for enrollment.

ENGRMAE 145. Theory of Machines and Mechanisms. 4 Units.
 Presents the basic mathematical theory of machines. Focuses on the principles of cam design, gearing and gear train analysis, and the kinematic and dynamic analysis of linkages, together with an introduction to robotics.

(Design units: 2)
Prerequisite: ENGRMAE 52 and ENGRMAE 80 and MATH 3A
Restriction: Mechanical Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.

ENGRMAE 146. Astronautics. 4 Units.
Motion in gravitational force fields, orbit transfers, rocketry, interplanetary trajectories, attitude dynamics and stabilization, navigation, reentry, the space environment.

(Design units: 1)
Prerequisite: ENGRMAE 80
Restriction: Aerospace Engineering Majors have first consideration for enrollment.

ENGRMAE 147. Vibrations. 4 Units.
Analysis of structural vibrations of mechanical systems. Modeling for lumped and distributed parameter systems. Topics include single and multi-degree of freedom systems, free and forced vibrations, Fourier series, convolution integral, mass/stiffness matrices, and normal modes with design project.

(Design units: 1)
Prerequisite: (ENGR 80 or ENGRCEE 80 or ENGRMAE 80) and MATH 2E and MATH 3D
Restriction: Mechanical Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.

ENGRMAE 150. Mechanics of Structures. 4 Units.

(Design units: 2)
Prerequisite: (ENGRCEE 30 or ENGR 30 or ENGRMAE 30) and MATH 3A
Same as ENGR 150.
Overlaps with ENGRCEE 150.
Restriction: Aerospace Engineering Majors have first consideration for enrollment. Biomedical Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment. Mechanical Engineering Majors have first consideration for enrollment.
ENGRMAE 150L. Mechanics of Structures Laboratory. 1 Unit.

(Design units: 0)
Corequisite: ENGRMAE 150
Prerequisite: ENGRMAE 30 or ENGR 30 or ENGRCEE 30
Overlaps with ENGRCEE 150L.
Restriction: Mechanical Engineering Majors have first consideration for enrollment. Aerospace Engineering Majors have first consideration for enrollment.

ENGRMAE 151. Mechanical Engineering Design. 4 Units.
A comprehensive group design project experience that involves identifying customer needs, idea generation, reverse engineering, preliminary design, standards, prototype development, testing, analysis, and redesign of a product involving fluid, thermal, and mechanical components. Introduces design for manufacturing and the environment. Materials fee.

(Design units: 3)
Corequisite: ENGRMAE 170
Prerequisite: ENGRMAE 120 and ENGRMAE 145
Restriction: Seniors only. Mechanical Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.

ENGRMAE 152. Introduction to Computer-Aided Engineering. 4 Units.
Elements and principles of computer-aided engineering with modern hardware and software are presented with a design focus. Case studies are used to assist in finite-element method techniques. Not offered every year.

(Design units: 2)
Prerequisite: (ENGRMAE 150 or ENGR 150) and ENGRMAE 120
Restriction: Materials Science Engineering Majors have first consideration for enrollment.

ENGRMAE 153. Advanced BIOMEMS Manufacturing Techniques. 4 Units.
Introduction to BIOMEMS. Advanced biotechnology/biomedicine equipment based on MEMS and NEMS. Fundamentals of MEMS/NEMS sensing techniques and the biological and physics principles involved and the preferred MEMS and NEMS manufacturing techniques.

(Design units: 0)
Concurrent with ENGRMAE 253.

ENGRMAE 155. Composite Materials and Structures. 4 Units.
Motivation for composite materials. Different classifications according to the nature of the matrix (PMC, MMC, CMC) and the reinforcement topology (fibers, whiskers, particulates). Mechanical properties. Failure mechanisms. Designing with composite materials. Advantages and limitations of homogenization techniques for numerical modeling.

(Design units: 0)
Prerequisite: ENGR 54 and (ENGRMAE 150 or ENGRCEE 150 or ENGR 150)
Restriction: Chemical Engineering Majors have first consideration for enrollment. Civil Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment. Mechanical Engineering Majors have first consideration for enrollment.
Concurrent with ENGRMAE 255.
ENGRMAE 156. Mechanical Behavior and Design Principles. 4 Units.
Principles governing structure and mechanical behavior of materials, relationship relating microstructure and mechanical response with application to elasticity, plasticity, yielding, necking, creep, and fracture of materials. Introduction to experimental techniques to characterize the properties of materials. Design parameters.
(Design units: 2)
Prerequisite: ENGR 54
Same as CBEEMS 155.
Restriction: Chemical Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment. Mechanical Engineering Majors have first consideration for enrollment.

ENGRMAE 157. Lightweight Structures. 4 Units.
(Design units: 2)
Prerequisite: ENGR 150 or ENGRCEE 150 or ENGRMAE 150
Restriction: Aerospace Engineering Majors only. Civil Engineering Majors only. Materials Science Engineering Majors only. Mechanical Engineering Majors only.

ENGRMAE 158. Aircraft Performance. 4 Units.
Flight theory applied to subsonic propeller and jet aircraft. Nature of aerodynamic forces, drag and lift of wing and fuselage, high-lift devices, level-flight performance, climb and glide performance, range, endurance, take-off and landing distances, static and dynamic stability and control.
(Design units: 2)
Prerequisite: ENGRMAE 130A
Restriction: Aerospace Engineering Majors have first consideration for enrollment. Mechanical Engineering Majors have first consideration for enrollment.

ENGRMAE 159. Aircraft Design. 4 Units.
Preliminary design of subsonic general aviation and transport aircraft with emphasis on layout, aerodynamic design, propulsion, and performance. Estimation of total weight and weight distribution, design of wings, fuselage, and tail, selection and location of engines, prediction of overall performance.
(Design units: 4)
Prerequisite: ENGRMAE 112 and ENGRMAE 136 and ENGRMAE 158
Restriction: Aerospace Engineering Majors have first consideration for enrollment. Mechanical Engineering Majors have first consideration for enrollment.

ENGRMAE 164. Air Pollution and Control. 4 Units.
Sources, dispersion, and effects of air pollutants. Topics include emission factors, emission inventory, air pollution, meteorology, air chemistry, air quality modeling, impact assessment, source and ambient monitoring, regional control strategies.
(Design units: 2)
Prerequisite: ENGRMAE 91 and (ENGRMAE 130A or ENGRCEE 170)
Restriction: Chemical Engineering Majors have first consideration for enrollment. Environmental Engineering Majors have first consideration for enrollment. Mechanical Engineering Majors have first consideration for enrollment.

ENGRMAE 170. Introduction to Control Systems. 4 Units.
(Design units: 2)
Prerequisite: (ENGRMAE 80 or ENGRCEE 80 or ENGR 80) and ENGRMAE 106
Restriction: Mechanical Engineering Majors have first consideration for enrollment. Aerospace Engineering Majors have first consideration for enrollment. Civil Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.
ENGRMAE 171. Digital Control Systems. 4 Units.
(Design units: 2)
Prerequisite: ENGRMAE 170
Restriction: Civil Engineering Majors have first consideration for enrollment. Mechanical Engineering Majors have first consideration for enrollment.

ENGRMAE 172. Design of Computer-Controlled Robots. 4 Units.
Students design a small robotic device and program it to exhibit sentient behaviors. The basic aspects of mechatronic design are covered, including motor and sensor selection, control strategies, and microcomputer programming for the implementation of control paradigms.
(Design units: 3)
Corequisite: ENGRMAE 60
Prerequisite: ENGRMAE 170
Restriction: Mechanical Engineering Majors have first consideration for enrollment.
Concurrent with ENGRMAE 280.

ENGRMAE 175. Dynamics and Control of Aerospace Vehicles. 4 Units.
(Design units: 3)
Prerequisite: ENGRMAE 106
Restriction: Aerospace Engineering Majors have first consideration for enrollment. Mechanical Engineering Majors have first consideration for enrollment.

ENGRMAE 183. Computer-Aided Mechanism Design. 4 Units.
Focuses on design of planar, spherical, and spatial mechanisms using computer algebra and graphics. Topics include exact and approximate analytical design techniques. Students are required to use existing software (or develop new algorithms) to design various mechanisms for new applications.
(Design units: 4)
Prerequisite: MATH 3A
Restriction: Mechanical Engineering Majors have first consideration for enrollment.

ENGRMAE 184. Fundamentals of Experimental Design. 4 Units.
Review of statistics as applied to experimental research. Fundamentals and principles of statistical experimental design and analysis with emphasis on understanding and use of designed experiments, response surfaces, linear regression modeling, and process optimization.
(Design units: 1)
Restriction: Mechanical Engineering Majors have first consideration for enrollment. Aerospace Engineering Majors have first consideration for enrollment.
Concurrent with ENGRMAE 284.

ENGRMAE 185. Numerical Analysis in Mechanical Engineering. 4 Units.
(Design units: 2)
Prerequisite: ENGRMAE 10 and MATH 3D and MATH 2E
Overlaps with MATH 105A.
Restriction: Civil Engineering Majors have first consideration for enrollment. Mechanical Engineering Majors have first consideration for enrollment.
ENGRMAE 188. Engineering Design in Industry. 4 Units.
Principles of engineering design in the context of an industrial application. Local manufacturing firms define an engineering design project to be completed in 10 weeks. Projects include initial brainstorming to final design, with a formal presentation.

(Design units: 4)
Repeatability: May be taken for credit 3 times.
Restriction: Mechanical Engineering Majors have first consideration for enrollment.

ENGRMAE 189. Senior Project - Special Topics. 1-4 Units.
Group or individual senior project of theoretical or applied nature involving design. Materials fee.

(Design units: 1-4)
Repeatability: May be taken for credit for 12 units as topics vary.
Restriction: Seniors only. Mechanical Engineering Majors only.

ENGRMAE 193. Topics in MAE Design. 1-4 Units.
Provides early-stage design/hands-on experience for upper-division students, and allows them to participate in senior design projects course ENGRMAE 189.

(Design units: 1)
Repeatability: May be taken for credit for 12 units as topics vary.
Restriction: Aerospace Engineering Majors have first consideration for enrollment. Mechanical Engineering Majors have first consideration for enrollment.

ENGRMAE 195. Seminars in Engineering. 1-4 Units.
Seminars by individual faculty in major fields of interest. Materials fee.

(Design units: 1-4)
Repeatability: Unlimited as topics vary.

ENGRMAE 198. Group Study. 1-4 Units.
Group study of selected topics in Aerospace and Mechanical Engineering.

(Design units: 1-4)
Repeatability: May be repeated for credit unlimited times.
Restriction: Upper-division students only.

ENGRMAE 199. Individual Study. 1-4 Units.
For undergraduate Engineering majors in supervised but independent reading, research, or design. Students taking individual study for design credit are to submit a written paper to the instructor and to the Undergraduate Student Affairs Office in the School of Engineering.

(Design units: 1-4)
Repeatability: May be taken for credit for 8 units.

ENGRMAE 199P. Individual Study. 1-4 Units.
For undergraduate Engineering majors in supervised but independent reading, research, or design. Students taking individual study for design are to submit a written paper to the instructor and to the Undergraduate Student Affairs Office in the School of Engineering.

(Design units: 1-4)
Grading Option: Pass/no pass only.
Repeatability: May be repeated for credit unlimited times.
ENGRMAE 200A. Engineering Analysis I. 4 Units.
Linear algebra, including vector spaces, matrices, linear systems of equations, least squares, and the eigenvalue problem. Ordinary differential equations, including analytical and numerical solution methods, stability, and phase portraits.
Restriction: Graduate students only.

ENGRMAE 200B. Engineering Analysis II. 4 Units.
Review of ordinary differential equations, including Bessel and Legendre functions. Partial differential equations, including the diffusion equation, Laplace's equation, and the wave equation. Fourier series, Fourier and Laplace transforms and their applications.
Restriction: Graduate students only.

ENGRMAE 205. Perturbation Methods in Engineering. 4 Units.
Prerequisite: ENGRMAE 200A and ENGRMAE 200B. Knowledge of linear differential equations.
Restriction: Graduate students only.

ENGRMAE 206. Nonlinear Optimization Methods. 4 Units.
Prerequisite: ENGRMAE 200A
Restriction: Graduate students only.

ENGRMAE 207. Methods of Computer Modeling in Engineering and the Sciences. 4 Units.
Unified introduction to finite volume, finite element, field-boundary element, meshless, primal, dual, and mixed methods. Nonlinear problems posed by ordinary as well as partial differential equations. Computer implementations and comparisons of accuracy and convergence.
Restriction: Graduate students only.

ENGRMAE 210. Advanced Fundamentals of Combustion. 4 Units.
Premixed, nonpremixed, and heterogeneous reactions, with emphasis on kinetics, thermal ignition, turbulent flame propagation, detonations, explosions, flammability limits, diffusion flame, quenching, flame stabilization, and particle and spray combustion. Not offered every year.
Prerequisite: ENGRMAE 224 or ENGRMAE 230B
Restriction: Graduate students only.

ENGRMAE 212. Engineering Electrochemistry: Fundamentals and Applications. 4 Units.
Introduction to engineering electrochemistry fundamentals and applications. Examine thermodynamics and transport principles in typical electrochemical systems. Electrochemical sensors, batteries, fuel cells, and supercapacitors. Manufacturing aspects will also be covered.
Restriction: Graduate students only.

ENGRMAE 213. Electric Propulsion. 4 Units.
Space propulsion requirements and maneuvers, stressing those best suited to electric propulsion. An introduction to plasma physics. Electrothermal, electromagnetic and electrostatic accelerators, with emphasis in technologies (ion engines, Hall thrusters and colloidal thrusters) belonging to the latter family.
Restriction: Graduate students only.

Concurrent with ENGRMAE 113.

ENGRMAE 214A. Fuel Cell Fundamentals and Technology. 4 Units.
Introduction to electrochemistry and electrocatalysis; nature of fuel-cell electrodes and electrolytes; charge transfer reactions at interfaces; charge transport and mass transport processes; fuel processing reactions; determination of fuel cell efficiency, fuel flexibility, emissions and other characteristics.
Restriction: Graduate students only.

Concurrent with ENGRMAE 114.
ENGRMAE 214B. Fuel Cell Systems and Degradation. 4 Units.
Fuel cell systems design; impacts of operating conditions; experimental and theoretical analysis methods for fuel cells systems; introduction to degradation mechanisms and mitigation techniques; provides broad insight into fuel-cell science, technology, system design and operation. Offered every other year.

Prerequisite: ENGRMAE 214A

Restriction: Graduate students only.

ENGRMAE 214C. PEM Fuel Cells . 4 Units.
An in-depth introduction to the fundamentals of PEM fuel cells, including thermodynamics, kinetics, and transport in electrochemical systems. Topics of specific interest to mechanical engineers will include water/heat management and dynamic responses.

Prerequisite: ENGRMAE 214A

Restriction: Graduate students only.

ENGRMAE 215. Advanced Combustion Technology. 4 Units.
Pollutant formation and experimental methods. Formation of gaseous pollutants and soot; transformation and emission of fuel contaminants in gas, liquid, and solid fuel combustion; methods employed to measure velocity, turbulence intensity, temperature, composition, particle size; methods to visualize reacting flows.

Prerequisite: ENGRMAE 200A and (ENGRMAE 230A or ENGRMAE 270A)

Restriction: Graduate students only.

ENGRMAE 216. Statistical Thermodynamics. 4 Units.
Statistics of independent particles, development of quantum mechanical description of atoms and molecules, application of quantum mechanics, evaluation of thermodynamics properties for solids, liquids, and gases, statistical mechanics of dependent particles (ensembles).

Restriction: Graduate students only.

ENGRMAE 217. Generalized Thermodynamics. 4 Units.
Generalized thermodynamics develops the laws of continuum thermodynamics from a set of plausible and intuitive postulates. The postulates are motivated qualitatively by a statistical description of matter and are justified by a posterior success for the resulting theory.

Restriction: Graduate students only.

ENGRMAE 218. Sustainable Energy Systems. 4 Units.
Basic principles, design and operation of sustainable energy systems including wind, solar photo-voltaic and thermal, hydroelectric, geothermal, oceanic, biomass combustion, advanced coal and next generation nuclear. Includes power generation, storage, and transmission for stationary power generation.

Restriction: Graduate students only.

Concurrent with ENGRMAE 118.

ENGRMAE 220. Conduction Heat Transfer. 4 Units.
Steady state and transient conduction heat transfer in one- and multi-dimensional geometries. Analytical methods, exact and approximate. Numerical techniques are also included.

Restriction: Graduate students only.

ENGRMAE 221. Convective Heat and Mass Transfer. 4 Units.

Prerequisite: ENGRMAE 230B

Restriction: Graduate students only.

ENGRMAE 222. Radiative Heat Transfer. 4 Units.

Restriction: Graduate students only.
ENGRMAE 223A. Numerical Methods in Heat, Mass, and Momentum Transport (Laminar Flows) I. 4 Units.
Introduction to the discretization of various types of partial differential equations (parabolic, elliptic, hyperbolic). Finite-volume discretization for one- and two-dimensional flows. Use of a two-dimensional elliptic procedure to predict sample laminar flows.

Prerequisite or corequisite: ENGRMAE 230A

Restriction: Graduate students only.

ENGRMAE 223B. Numerical Methods in Heat, Mass, and Momentum II. 4 Units.

Prerequisite: ENGRMAE 223A

Restriction: Graduate students only.

ENGRMAE 224. Advanced Transport Phenomena. 4 Units.

Restriction: Graduate students only.

ENGRMAE 226. Special Topics in Fluid and Thermal Sciences. 1-4 Units.
Special topics of current interest in fluid mechanics, heat and mass transfer, multiphase flows, or combustion. Emphasis could be placed on theory, computational methods, or experimental techniques.

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.

ENGRMAE 227. Thermal Resistance Analysis in Microdevices and Nanomaterials. 4 Units.
Heat transfer and thermal resistance analysis relevant for microdevices and nanomaterials. Overview of recent progress in nanotechnology and materials science. Thermal modeling strategies for novel electronic devices and energy conversion systems.

Restriction: Graduate students only.

ENGRMAE 228. Nanoscale Phase Change Transport Physics. 4 Units.
Discusses a wide range of phase change processes (i.e., evaporation, boiling, condensation, and freezing) through the use of novel thermal metamaterials with the aim of enhancing phase change performances.

Prerequisite: Undergraduate-level heat transfer is recommended.

Restriction: Graduate students only.

ENGRMAE 230A. Inviscid Incompressible Fluid Mechanics I. 4 Units.

Restriction: Graduate students only.

ENGRMAE 230B. Viscous Incompressible Fluid Mechanics II. 4 Units.

Restriction: Graduate students only.

ENGRMAE 230C. Compressible Fluid Dynamics. 4 Units.

Prerequisite: ENGRMAE 230A or ENGRMAE 230B

Restriction: Graduate students only.
ENGRMAE 230D. Theoretical Foundations of Fluid Mechanics. 4 Units.
Prerequisite: ENGRMAE 230A and ENGRMAE 230B
Restriction: Graduate students only.

ENGRMAE 231. Fundamentals of Turbulence. 4 Units.
Prerequisite: ENGRMAE 230A and ENGRMAE 230B
Restriction: Graduate students only.

ENGRMAE 233. Turbulent Free Shear Flows. 4 Units.
Prerequisite: ENGRMAE 200B and ENGRMAE 230A and ENGRMAE 230B
Restriction: Graduate students only.

ENGRMAE 236. Nonequilibrium Gas Dynamics. 4 Units.
Prerequisite: ENGRMAE 230C
Restriction: Graduate students only.

ENGRMAE 237. Computational Fluid Dynamics. 4 Units.
Mathematical, physical, and computational fundamentals of computational fluid dynamics, numerical methods for solving the Euler and Navier-Stokes equations. Topics include: finite-difference and finite-volume discretization, time marching methods, von Neumann analysis, upwinding, flux splitting, TVD, and other high-resolution shock-capturing schemes.
Prerequisite: ENGRMAE 230C
Restriction: Graduate students only.

ENGRMAE 238. Experimental Fluid Dynamics. 4 Units.
Prerequisite: ENGRMAE 230A and ENGRMAE 230B
Restriction: Graduate students only.

ENGRMAE 239. Dynamics of Unsteady Flows. 4 Units.
Prerequisite: ENGRMAE 230A is recommended.
Restriction: Graduate students only.

ENGRMAE 241. Dynamics. 4 Units.
Kinematics and dynamics of three-dimensional motions. Lagrange's equations, Newton-Euler equations. Applications include robot systems and spinning satellites.
Restriction: Graduate students only.
ENGRMAE 242. Robotics. 4 Units.

Restriction: Graduate students only.

ENGRMAE 244. Theoretical Kinematics. 4 Units.
Spatial rigid body kinematics is presented with applications to robotics. Orthogonal Matrices, Rodrigues’ formula, Quaternions, Plucker coordinates, screw theory, and dual numbers are studied using modern projective geometry and multi-linear algebra. Applications include trajectory planning, inverse kinematics, and workspace analysis.

Restriction: Graduate students only.

ENGRMAE 245. Spatial Mechanism Design. 4 Units.
Fundamental kinematic theory required for planar, spherical, and spatial mechanism design. The focus is on algebraic methods for the exact solution of constraint equations. Not offered every year.

Restriction: Graduate students only.

ENGRMAE 247. Micro-System Design. 4 Units.
Covers the fundamentals of the many disciplines needed for design of Micro-Electro-Mechanical Systems (MEMS): microfabrication technology, structural mechanics on micro-scale, electrostatics, circuit interface, control, computer-aided design, and system integration.

Same as EECS 278.

Restriction: Graduate students only.

ENGRMAE 249. Micro-Sensors and Actuators. 4 Units.
Introduction to the technology of Micro-Electro-Mechanical Systems (MEMS). Fundamental principles and applications of important microsensors, actuation principles on microscale. Introduction to the elements of signal processing; processing of materials for micro sensor/actuator fabrication; smart sensors and microsensor/microactuator array devices.

Same as EECS 279.

Restriction: Graduate students only.

ENGRMAE 250. Biomechanics. 4 Units.
Sensors, actuators, and neural circuits for biological movement control from an engineering perspective. Current approaches to robotic and mechatronic devices that support and enhance human movement in health and following neurologic injuries like stroke and spinal cord injury.

Restriction: Graduate students only.

ENGRMAE 254. Mechanics of Solids and Structures. 4 Units.
Finite deformation kinematics; stress and strain measures; invariance in solid mechanics; objective rates; constitutive theory of elastic and inelastic solids; rate formulations; computational approaches; theories of plates and shells; applications to aerospace vehicles.

Restriction: Graduate students only.
ENGRMAE 255. Composite Materials and Structures. 4 Units.
Motivation for composite materials. Different classifications according to the nature of the matrix (PMC, MMC, CMC) and the reinforcement topology (fibers, whiskers, particulates). Mechanical properties. Failure mechanisms. Designing with composite materials. Advantages and limitations of homogenization techniques for numerical modeling.

Restriction: Graduate students only.
Concurrent with ENGRMAE 155.

ENGRMAE 256. Nanomechanics. 4 Units.
Nanoscale materials and the experimental and computational techniques used to measure their properties. Mechanical behavior is the main focus, but other material properties such as diffusion and electron transport are discussed.

Restriction: Graduate students only.

ENGRMAE 258. Mechanical Behavior of Solids - Continuum Theories. 4 Units.
Presents a continuum, macroscopic view of deformation and failure of solids. Covers elasticity, plasticity, visco-elasticity, visco-plasticity, fracture and fatigue. Topics include discussions of physical behavior, mathematical formalism and measurement techniques.

Prerequisite: ENGRMAE 254
Restriction: Graduate students only.

ENGRMAE 259. Mechanical Behavior of Solids - Atomistic Theories. 4 Units.
Presents atomistic mechanisms that control mechanical behavior of materials. Covers plasticity, dislocation theory, strengthening mechanisms, high-temperature diffusion and gain boundary sliding, shear localization, void formation, ductile rupture, brittle fracture and fatigue.

Restriction: Graduate students only.

ENGRMAE 260. Current Issues Related to Tropospheric and Stratospheric Processes. 4 Units.
Examination of current issues related to the atmosphere, including energy usage; toxicology; effects on humans, forests, plants, and ecosystems; particulate matter (PM10); combustion; modeling and meteorology; airborne toxic chemicals and risk assessment; application of science to development of public policies.

Prerequisite: ENGRMAE 261 or CHEM 245 or EARTHSS 240
Same as CHEM 241.
Restriction: Graduate students only.

ENGRMAE 270A. Linear Systems I. 4 Units.
Input-output and state-space representations of continuous-time linear systems. State transition matrices, Controllability and observability. Irreducible realizations. State feedback and observer design.

Restriction: Graduate students only.

ENGRMAE 270B. Linear Systems II. 4 Units.

Prerequisite: ENGRMAE 270A
Restriction: Graduate students only.

ENGRMAE 272. Robust Control Theory. 4 Units.

Prerequisite: ENGRMAE 270A
Restriction: Graduate students only.
ENGRMAE 274. Optimal Control. 4 Units.
Principles and methods of optimal control. Topics include objectives and issues in controlling nonlinear systems; linear variational and adjoint equations; optimality conditions via variational calculus, maximum principle, and dynamic programming; solution methods; applications to control robots and aerospace vehicles.

Prerequisite: ENGRMAE 200A and ENGRMAE 270A
Restriction: Graduate students only.

ENGRMAE 275. Nonlinear Feedback Systems. 4 Units.
Advanced tools for feedback control system analysis and synthesis. Norms, operators, Lp spaces, contraction mapping theorem, Lyapunov techniques along with their extensions. Circle criterion positivity and passivity. Applications to nonlinear control methods, such as sliding mode or adaptive techniques.

Prerequisite: ENGRMAE 270B
Restriction: Graduate students only.

ENGRMAE 276. Geometric Nonlinear Control. 4 Units.
Using the mathematics of differential geometry, a number of the concepts and results of linear systems theory have been extended to nonlinear systems. Describes these extensions and illustrate their use in nonlinear system analysis and design. Not offered every year.

Prerequisite: ENGRMAE 200A and ENGRMAE 270A
Restriction: Graduate students only.

ENGRMAE 277. Learning Control Systems. 4 Units.

Restriction: Graduate students only.

ENGRMAE 278. Parameter and State Estimation. 4 Units.

Prerequisite: ENGRMAE 200A and ENGRMAE 270A
Restriction: Graduate students only.

ENGRMAE 279. Special Topics in Mechanical Systems. 4 Units.
Selected topics of current interest in mechanical systems. Topics include robotics, kinematics, control, dynamics, and geometric modeling.

Prerequisite: ENGRMAE 270A and ENGRMAE 241
Repeatability: Unlimited as topics vary.
Restriction: Graduate students only.

ENGRMAE 280. Design of Computer-Controlled Robots. 4 Units.
The basic aspects of mechatronic design are covered, including motor and sensor selection, control strategies, finite state machines, inertial measurement units, and implementation of advanced feedback control laws. Students work in groups to create their own mechatronic device.

Restriction: Graduate students only.
Concurrent with ENGRMAE 172.

ENGRMAE 284. Fundamentals of Experimental Design. 4 Units.
Fundamentals and principles of statistical experimental design and analysis. Emphasis addresses understanding and use of designed experiments, response surfaces, linear regression modeling, process optimization, and development of links between empirical and theoretical models.

Restriction: Graduate students only.
Concurrent with ENGRMAE 184.
ENGRMAE 294. Master of Science Thesis Project. 4 Units.
Tutorial in which masters-level students taking the comprehensive examination option undertake a masters-level research project.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

ENGRMAE 295. Special Topics in Mechanical and Aerospace Engineering. 1-4 Units.
Special topics by individual faculty in major fields of interest.

Repeatability: Unlimited as topics vary.

ENGRMAE 296. Master of Science Thesis Research. 1-16 Units.
Individual research or investigation conducted in the pursuit of preparing and completing the thesis required for the M.S. in Engineering.

Repeatability: May be repeated for credit unlimited times.

ENGRMAE 297. Doctor of Philosophy Dissertation Research. 1-16 Units.
Individual research or investigation conducted in the pursuit of preparing and completing the dissertation required for the Ph.D. in Engineering.

Repeatability: May be repeated for credit unlimited times.

ENGRMAE 298. Seminars in Mechanical and Aerospace Engineering. 1 Unit.
Presentation of advanced topics and reports of current research efforts in mechanical engineering. Required of all graduate students in mechanical engineering.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

ENGRMAE 299. Individual Research. 1-16 Units.
Individual research or investigation under the direction of an individual faculty member.

Repeatability: May be repeated for credit unlimited times.

Restriction: Consent of instructor to enroll

Overview
Biomedical engineering combines engineering expertise with medical needs for the enhancement of health care. It is a branch of engineering in which knowledge and skills are developed and applied to define and solve problems in biology and medicine. Students choose the biomedical engineering field to be of service to people, for the excitement of working with living systems, and to apply advanced technology to the complex problems of medical care. Biomedical engineers may be called upon to design instruments and devices, to bring together knowledge from many sources to develop new procedures, or to carry out research to acquire knowledge needed to solve new problems.

During the last 20 years, we have witnessed unprecedented advances in engineering, medical care, and the life sciences. The combination of exploding knowledge and technology in biology, medicine, the physical sciences, and engineering, coupled with the changes in the way health care will be delivered in the next century, provide a fertile ground for biomedical engineering. Biomedical engineering, at the confluence of these fields, has played a vital role in this progress. Traditionally, engineers have been concerned with inanimate materials, devices, and systems, while life scientists have investigated biological structure and function. Biomedical engineers integrate these disciplines in a unique way, combining the methodologies of the physical sciences and engineering with the study of biological and medical problems. The collaboration between engineers, physicians, biologists, and physical scientists is an integral part of this endeavor and has produced many important discoveries in the areas of artificial organs, artificial implants, and diagnostic equipment.

The Department offers a B.S. in Biomedical Engineering (BME), a four-year engineering curriculum accredited by the Engineering Accreditation Commission of ABET (http://www.abet.org). This program prepares students for a wide variety of careers in Biomedical Engineering in industry, hospitals, and research laboratories or for further education in graduate school.

The Department also offers a B.S. in Biomedical Engineering: Premedical (BMEP), a four-year engineering curriculum taken with required premedical courses. It is one of many majors that can serve as preparation for further training in medical, veterinary, or allied health professions. It is also suitable
for students interested in pursuing graduate work in Biomedical Engineering and other biomedical areas such as physiology, neurosciences, and bioinformatics. The curriculum has less engineering content but more biological sciences and chemistry course work than the Biomedical Engineering major. The undergraduate major in Biomedical Engineering: Premedical is not designed to be accredited, therefore is not accredited by ABET.

Areas of graduate study and research include biophotonics, biomedical nanoscale systems, biomedical computational technologies, and tissue engineering.

On This Page:

- Biomedical Engineering (p. 653)
- Biomedical Engineering: Premedical (p. 655)

**Undergraduate Major in Biomedical Engineering**

**Program Educational Objectives:** Graduates of the Biomedical Engineering program will (1) promote continuous improvement in the field of biomedical engineering; (2) communicate effectively the relevant biomedical engineering problem to be solved across the engineering, life science, and medical disciplines; (3) apply critical reasoning as well as quantitative and design skills to identify and solve problems in biomedical engineering; and (4) lead and manage biomedical engineering projects in industry, government, or academia that involve multidisciplinary team members. (Program educational objectives are those aspects of engineering that help shape the curriculum; achievement of these objectives is a shared responsibility between the student and UCI.)

Biomedical Engineering students learn engineering and principles of biology, physiology, chemistry, and physics. They may go on to design devices to diagnose and treat disease, engineer tissues to repair wounds, develop cutting-edge genetic treatments, or create computer programs to understand how the human body works.

The curriculum emphasizes education in the fundamentals of engineering sciences that form the common basis of all engineering sub-specialties. Education with this focus is intended to provide students with a solid engineering foundation for a career in which engineering practice may change rapidly. In addition, elements of bioengineering design are incorporated at every level in the curriculum. This is accomplished by integration of laboratory experimentation, computer applications, and exposure to real bioengineering problems throughout the program. Students also work as teams in senior design project courses to solve multidisciplinary problems suggested by industrial and clinical experience.

NOTE: Students may complete only one of the following programs: the major in Biomedical Engineering, the major in Biomedical Engineering: Premedical, or the minor in Biomedical Engineering.

**Admissions**

**High School Students:** See School admissions (p. 564) information.

**Transfer Students:** Preference will be given to junior-level applicants with the highest grades overall, and who have satisfactorily completed the following **required** courses: two years of approved calculus, one year of calculus-based physics with laboratories (mechanics, electricity and magnetism), completion of lower-division writing, one year of general chemistry (with laboratory), and one course in introductory programming. For course equivalency specific to each college, visit assist.org (http://catalogue.uci.edu/thehenrysamuelischoolofengineering/departmentofbiomedicalengineering/assist.org).

Students are encouraged to complete as many of the lower-division degree requirements as possible prior to transfer. Students who enroll at UCI in need of completing lower-division coursework may find that it will take longer than two years to complete their degrees. For further information, contact The Henry Samueli School of Engineering at 949-824-4334.

**Requirements for the B.S. in Biomedical Engineering**

*All students must meet the University Requirements (p. 91).*

*All students must meet the School Requirements (p. 564).*

**Major Requirements**

**Mathematics and Basic Science Courses:**

Students must complete a minimum of 48 units of mathematics and basic sciences including:

<table>
<thead>
<tr>

</tr>
</tbody>
</table>
These courses will also satisfy the Engineering Electives requirement.

Planning a Program of Study

The sample program of study chart shown is typical for the major in Biomedical Engineering. Students should keep in mind that this program is based upon a sequence of prerequisites, beginning with adequate preparation in high school mathematics, physics, and chemistry. Students who are not adequately prepared, or who wish to make changes in the sequence for other reasons, must have their program approved by their faculty advisor. Biomedical Engineering majors must consult at least once every year with the academic counselors in the Student Affairs Office and with their faculty advisors.

Undergraduate Major in Biomedical Engineering: Premedical

Program Educational Objectives: Graduates of the Biomedical Engineering: Premedical program will: (1) demonstrate a broad knowledge in the field of biomedical engineering; (2) demonstrate critical reasoning as well as quantitative skills to identify, formulate, analyze and solve biomedical problems; (3) qualify to pursue entry into a medical college, or medical research in biomedical engineering, or other professional heal programs. (Program educational objectives are those aspects of engineering that help shape the curriculum; achievement of these objectives is a shared responsibility between the student and UCI.) The major program objective is to prepare students for medical school. The curriculum is designed to meet the requirements for admission to medical schools, but is also suitable for those planning to enter graduate school in biomedical engineering, physiology, biology, neurosciences, or related fields. It has less engineering content and more biological sciences than the accompanying Biomedical Engineering major. It is one of many majors that can serve as preparation for further training in medical, veterinary, or allied health professions.

The Biomedical Engineering: Premedical curriculum provides future physicians with a quantitative background in biomechanics, physiology, and biotransport. Such a background is increasingly important because of the heavy utilization of biomedical technology in modern medical practice. The curriculum includes courses in the sciences that satisfy the requirements of most medical schools.

Admissions

High School Students: See School admissions (p. 564) information.

Transfer Students: Preference will be given to junior-level applicants with the highest grades overall, and who have satisfactorily completed the following required courses: two years of approved calculus, one year of calculus-based physics with laboratories (mechanics, electricity and magnetism), completion of lower-division writing, one year of general chemistry (with laboratory), one year of organic chemistry (with laboratory), and one course in introductory programming. For course equivalency specific to each college, see assist.org (http://catalogue.ucl.edu/thehenrysamuelischoolofengineering/departmentofbiomedicalengineering/assist.org).
Students are encouraged to complete as many of the lower-division degree requirements as possible prior to transfer. Students who enroll at UCI in need of completing lower-division coursework may find that it will take longer than two years to complete their degrees. For further information, contact The Henry Samueli School of Engineering at 949-824-4334.

Requirements for the B.S. in Biomedical Engineering: Premedical

All students must meet the University Requirements (p. 91).
All students must meet the School Requirements (p. 564).

Major Requirements

Mathematics and Basic Science Courses:
Students must complete a minimum of 48 units of mathematics and basic sciences including:

<table>
<thead>

Minor in Biomedical Engineering

The minor in Biomedical Engineering requires a total of nine courses—two advanced mathematics courses, five core Biomedical Engineering courses, and two Biomedical Engineering electives. Some of these courses may include prerequisites that may or may not be part of a student’s course requirements for their major. Private biomedical industry has indicated a keen interest in engineers that have a more traditional engineering degree (i.e., electrical engineering), but also possess some in-depth knowledge of biomedical systems. Hence, the minor in Biomedical Engineering is designed to provide a student with the introductory skills necessary to perform as an engineer in the biomedical arena.

Admissions. Students interested in the minor in Biomedical Engineering must have a UCI cumulative GPA of 2.5 or higher.

NOTE: Students may not receive both a minor in Biomedical Engineering and a specialization in Biochemical Engineering within the Chemical Engineering major.

Graduate Study in Biomedical Engineering

The Biomedical Engineering faculty have special interest and expertise in four thrust areas: Biophotonics, Biomedical Micro/Nanoscale Systems, Bioimaging & Computation, and Molecular & Cellular Engineering. Biophotonics faculty are interested in photomedicine, laser microscopy, optical coherence tomography, medical imaging, and phototherapy. Biomedical Micro/Nanoscale Systems faculty are interested in molecular engineering, polymer chemistry, molecular motors, design and fabrication of microelectromechanical systems (MEMS), integrated microsystems to study intercellular signaling, and single molecule studies of protein dynamics. Biomedical Computation faculty are interested in computational biology, biomedical signal and image processing, medical imaging, computational methods in protein engineering, and data mining.

The Department offers the M.S. and Ph.D. in Biomedical Engineering.

Required Background

Because of its interdisciplinary nature, biomedical engineering attracts students with a variety of backgrounds. Thus, the requirements for admission are tailored to students who have a bachelor’s degree in an engineering, physical science, or biological science discipline, with a grade point average of 3.20 or higher in their upper-division course work. The minimum course work requirements for admission are six quarters of calculus through linear algebra and ordinary differential equations, three quarters of calculus-based physics, three quarters of chemistry, and two quarters of biology. Students without a physics, chemistry, or engineering undergraduate degree may be required to take additional relevant undergraduate engineering courses during their first year in the program; any such requirements will be specifically determined by the BME Graduate Committee on a case-by-case basis and will be made known to the applicant at the time of acceptance to the program.

The recommended minimum combined verbal and quantitative portion of the GRE is 310, or a minimum combined MCAT score in Verbal Reasoning, Physical Sciences, and Biological Sciences problems of 30. A minimum score of 94 on the Test of English as a Foreign Language (TOEFL iBT) is recommended of all international students whose native language is not English. In addition, all applicants must submit three letters of recommendation.

Exceptionally promising UCI undergraduates may apply for admission through The Henry Samueli School of Engineering’s accelerated M.S. and M.S./Ph.D. program, however, these students must satisfy the course work and letters of recommendation requirements described above.

Core Requirement

Both the M.S. and Ph.D. require the students to complete 42 course units. These units include six core courses, the BME 298 seminar series, two elective courses, and four units of independent research.

A. Complete the following core courses:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>BME 210</td>
<td>Molecular and Cellular Engineering</td>
</tr>
<tr>
<td>BME 220</td>
<td>Sensory Motor Systems</td>
</tr>
<tr>
<td>BME 221</td>
<td>Organ Transport Systems</td>
</tr>
<tr>
<td>BME 230A</td>
<td>Applied Engineering Mathematics I</td>
</tr>
<tr>
<td>BME 230B</td>
<td>Applied Engineering Mathematics II</td>
</tr>
<tr>
<td>BME 240</td>
<td>Introduction to Clinical Medicine for Biomedical Engineering</td>
</tr>
</tbody>
</table>
B. Complete:
BME 298 Seminars in Biomedical Engineering (three quarters)
C. Complete two electives
D. Complete four units of independent research

The core courses cover the basics of cells, tissues, and physiology at the microscopic and macroscopic scale, engineering mathematics, and clinical theory. Core requirements can be waived for students entering the Ph.D. program with an M.S. degree in Biomedical Engineering.

**Elective Requirement**

The two elective courses required to fulfill the course requirements for the M.S. and Ph.D. are offered within The Henry Samueli School of Engineering and the Schools of Biological Sciences, Physical Sciences, and Medicine. The electives must provide breadth in biomedical engineering, but also provide specific skills necessary to the specific research the student may undertake as part of the degree requirements. The selection of these courses should be based upon approval of the student’s faculty advisor. Upper-division undergraduate courses and courses outside of the HSSoE may be selected upon approval of the BME Graduate Advisor. Elective requirements can be waived for students entering the Ph.D. program with an M.S. in Biomedical Engineering.

**Areas of Emphasis**

Although a student is not required to formally choose a specific research focus area, four research thrust areas have been identified for the program: Biophotonics, Biomedical Micro/Nanoscale Systems, Bioimaging & Computation, and Molecular & Cellular Engineering. These areas capitalize on existing strengths within The Henry Samueli School of Engineering and UCI as a whole, interact in a synergistic fashion, and will train biomedical engineers who are in demand in both private industry and academia.

**Biophotonics.** This research area includes the use of light to probe individual cells and tissues and whole organs for diagnostic and therapeutic purposes. The research areas include both fundamental investigation on the basic mechanisms of light interaction with biological systems and the clinical application of light to treat and diagnose disease. Current and future foci of the faculty are (1) microscope-based optical techniques to manipulate and study cells and organelles; (2) development of optically based technologies for the non-invasive diagnosis of cells and tissues using techniques that include fiber-optic-based sensors, delivery systems, and imaging systems; and (3) development of optically based devices for minimally invasive surgery.

**Biomedical Micro/Nanoscale Systems.** This class of research areas encompasses the understanding, use and design of biomedical devices and systems that are at the micron or submicron level. Current strengths within The Henry Samueli School of Engineering and the UCI faculty as a whole include biomaterials, micro-electromechanical systems (MEMS), and the design of new biomedical molecules. The focus of biomedical engineering research in this area is the integration of micro and nano-scale systems with the needs of clinical medicine. Projected areas of growth include (1) micro/nano-electromechanical systems (M/NEMS) for biomedical devices, biofluid assay and micro implantable prosthesis (2) programmable DNA/molecular microchip for sequencing and diagnostics; (3) cellular, tissue, and organ constructs on-a-chip; and (4) biomaterials and self-assembled nanostructures for biosensors and drug delivery.

**Biomedical Imaging & Computation.** Biomedical computational technologies include both advanced computational techniques, as well as advanced biomedical database systems and knowledge-base systems. Computational technologies that will be developed in this research area include (1) methods for biomedical analysis and diagnosis such as physical modeling of light-tissue interactions, atomic-level interactions, image processing, pattern recognition, and machine-learning algorithms; (2) language instruction and platform standardization; and (3) machine-patient interfaces. Areas of research related to biomedical database systems include the development of new technologies which can capture the rich semantics of biomedical information for intelligent reasoning.

**Molecular & Cellular Engineering.** Rapid developments in genetics, molecular biology, and cellular biology have extended the reach of engineering into the subcellular, cellular, and tissue size scales. As a result, several new fields including genetic engineering, cell-based therapy, and tissue engineering have emerged and matured in the past decades with the broad goal of extracting and applying engineering design principles to the most fundamental levels of biological organization.

**Master of Science Degree**

**Program details**

Students must successfully complete a minimum of 42 units of course work, as listed under “Core Requirement” and “Elective Requirement” above. A maximum of eight M.S. research units (i.e., BME 296) may be applied toward the 42-unit requirement.

In addition, the M.S. requires conducting a focused research project. Students must select a thesis advisor and complete an original research investigation including a written thesis, and obtain approval of the thesis by a thesis committee. During their research project, students are expected to enroll in at least 12 units of independent research per quarter.

The degree will be granted upon the recommendation of the Chair of the Department of Biomedical Engineering and The Henry Samueli School of Engineering Associate Dean for Student Affairs. The maximum time permitted is three years.
NOTE: Students who entered prior to fall of 2012 should follow the course requirements outlined within the Catalogue of the year they entered. The changes in number of units per course is not intended to change the course requirements for the degree nor to have any impact in the number of courses students are taking.

Doctor of Philosophy Degree

Program Details
The Ph.D. requires the achievement of an original and significant body of research that advances the discipline. Students with a B.S. may enter the Ph.D. program directly, provided they meet the background requirements described above. The Graduate Committee will handle applicants on a case-by-case basis, and any specific additional courses required by the student will be made explicit at the time of admission.

Each student will match with a faculty advisor, and an individual program of study is designed by the student and their faculty advisor. Two depth courses are required beyond that of the M.S. degree in preparation for the qualifying examination. Six milestones are required: (1) successful completion of 42 units of course work beyond the bachelor’s degree, as listed under “Core Requirement” and “Elective Requirement” above; (2) successful completion of a preliminary examination; (3) establishing an area of specialization by taking two depth courses and three quarters of BME 298 during the second year; (4) formal advancement to candidacy by successfully passing the qualifying examination; (5) students in their third or fourth year must present results of their current research in the BME seminar series; and (6) completion of a significant body of original research and the submission of an acceptable written dissertation and its successful oral defense. During their research project, students are expected to enroll in at least 12 units of independent research per quarter. Students entering the Ph.D. program with an M.S. in Biomedical Engineering cannot receive another M.S. in Biomedical Engineering from UCI. Therefore, the requirements for milestone (1) can be waived, and the award of the Ph.D. is based on achieving milestones (2)–(6).

The preliminary examination will normally be taken at the end of the first year (May). A student must take it within two years of matriculating in the program, and must either have passed all of the core courses or have an M.S. in Biomedical Engineering prior to taking the examination. The Preliminary Examination Committee prepares the examination and sets the minimum competency level for continuing on in the Ph.D. program. Students who fail may retake the examination the following year. Students who fail the second attempt will not be allowed to continue in the program. However, they may be eligible to receive a Master’s degree upon completion of an original research investigation including a written thesis (refer to Master of Science Degree requirements). In the event a Ph.D. student decides not to continue in the program, the thesis-only option for the M.S. will still be enforced. After passing the preliminary examination at the Ph.D. competency level, students will match with a BME faculty advisor and design an individual program of study with their advisor.

Advancement to candidacy must be completed by the end of the summer of the second year following the passing of the preliminary examination. (Special exceptions can be made, but a formal request with justification must be supplied in writing to the BME Graduate Advisor.) The qualifying examination follows campus and The Henry Samueli School of Engineering guidelines and consists of an oral and written presentation of original work completed thus far, and a coherent plan for completing a body of original research. The qualifying examination is presented to the student’s graduate advisory committee, which is selected by the student and faculty advisor and must have a minimum of five faculty (including the faculty advisor). Of these five faculty, three must be BME faculty. In addition, one faculty member must have his/her primary appointment outside the Department of Biomedical Engineering. The fifth member must have his/her primary appointment outside of The Henry Samueli School of Engineering.

The Ph.D. is awarded upon submission of an acceptable written dissertation and its successful oral defense. The degree is granted upon the recommendation of the graduate advisory committee and the Dean of Graduate Division. The normative time for completion of the Ph.D. is five years (four years for students who entered with a master’s degree). The maximum time permitted is seven years.

Requirements listed here pertain to students enrolled in academic year 2012-13 or later. Students enrolled before this date may refer to a previous version of this Catalogue.

Program in Law and Graduate Studies (J.D./M.S.-BME; J.D./Ph.D.-BME)

Highly-qualified students interested in combining the study of law with graduate qualifications in the BME program are invited to undertake concurrent degree study under the auspices of UC Irvine’s Program in Law and Graduate Studies (PLGS). Students in this program pursue a coordinated curriculum leading to a J.D. from the School of Law in conjunction with a Master’s or Ph.D. in the BME program. Additional information is available from the PLGS Program Director’s Office, 949-824-4158, or by email to plgs@law.uci.edu. A full description of the program, with links to all relevant application information, can be found at the School of Law Concurrent Degree Programs website (http://www.law.uci.edu/academics/interdisciplinary-studies/concurrent-degrees.html) and in the Law School section of the Catalogue.

Graduate Program in Mathematical, Computational, and Systems Biology

The graduate program in Mathematical, Computational, and Systems Biology (MCSB) is designed to meet the interdisciplinary training challenges of modern biology and function in concert with selected department programs, including the Ph.D. in Biomedical Engineering. Detailed information is available at the Mathematical, Computational, and Systems Biology website (http://mcsb.uci.edu) and in the Interdisciplinary Studies section (p. 1143) of the Catalogue.
Faculty

Michael W. Berns, Ph.D. Cornell University, Arnold and Mabel Beckman Chair in Laser Biomedicine and Professor of Surgery; Biomedical Engineering; Developmental and Cell Biology (photomedicine, laser microscopy, biomedical devices)

Elliot L. Botvinick, Ph.D. University of California, San Diego, Associate Professor of Surgery; Biomedical Engineering; Chemical Engineering and Materials Science (laser microbeams, cellular mechanotransduction, mechanobiology)

James P. Brody, Ph.D. Princeton University, Associate Professor of Biomedical Engineering (bioinformatics, micro-nanoscale systems)

Zhongping Chen, Ph.D. Cornell University, Professor of Biomedical Engineering; Electrical Engineering and Computer Science; Otolaryngology; Surgery (biomedical optics, optical coherence tomography, bioMEMS, biomedical devices)

Bernard H. Choi, Ph.D. University of Texas at Austin, Associate Professor of Surgery; Biomedical Engineering (biomedical optics, in vivo optical imaging, microvasculature, light-based therapeutics)

Michelle Digman, Ph.D. University of Illinois at Chicago, Assistant Professor of Biomedical Engineering; Chemical Engineering and Materials Science; Developmental and Cell Biology (quantitative imaging techniques to study spatial-temporal dynamics of signaling protein networks in live cells and tissues)

Timothy L. Downing, Ph.D. University of California, Berkeley, Assistant Professor of Biomedical Engineering (stem cells and tissue engineering)

Enrico Gratton, Ph.D. University of Rome, Professor of Biomedical Engineering; Developmental and Cell Biology; Physics and Astronomy (design of new fluorescence instruments, protein dynamics, single molecule, fluorescence microscopy, photon migration in tissues)

Anna Grosberg, Ph.D. California Institute of Technology, Assistant Professor of Biomedical Engineering; Chemical Engineering and Materials Science (computational modeling of biological systems, biomechanics, cardiac tissue engineering)

Jered Haun, Ph.D. University of Pennsylvania, Assistant Professor of Biomedical Engineering; Chemical Engineering and Materials Science (nanotechnology, molecular engineering, computational simulations, targeted drug delivery, clinical cancer detection)

Elliot E. Hui, Ph.D. University of California, Berkeley, Associate Professor of Biomedical Engineering (microscale tissue engineering, bioMEMS, cell-cell interactions, global health diagnostics)

Tibor Juhasz, Ph.D. Attila József University, Professor of Ophthalmology; Biomedical Engineering (laser-tissue interactions, high-precision microsurgery with lasers, laser applications in ophthalmology, corneal biomechanics)

Arash Kheradvar, Ph.D. California Institute of Technology, Associate Professor of Biomedical Engineering; Mechanical and Aerospace Engineering (cardiac mechanics, cardiovascular devices, cardiac imaging)

Michelle Khine, Ph.D. University of California, Berkeley, Professor of Biomedical Engineering; Chemical Engineering and Materials Science (development of novel nano- and micro-fabrication technologies and systems for single cell analysis, stem cell research, in-vitro diagnostics)

Fritjof Krugel, M.D. Ludwig Maximilian University of Munich, Professor of Biomedical Engineering; Electrical Engineering and Computer Science (biomedical signal and image processing, anatomical and functional neuroimaging in humans, structure-function relationship in the human brain)

Abraham P. Lee, Ph.D. University of California, Berkeley, William J. Link Chair in Biomedical Engineering and Department Chair and Professor of Biomedical Engineering; Mechanical and Aerospace Engineering (Lab-on-a-Chip health monitoring instruments, drug delivery micro/nanoparticles, integrated cell sorting microdevices, lipid vesicles as carriers for cells and biomolecules, high throughput droplet biosassys, microfluidic tactile sensors)

Chang C. Liu, Ph.D. Scripps Research Institute, Assistant Professor of Biomedical Engineering; Chemistry; Molecular Biology and Biochemistry (genetic engineering, directed evolution, synthetic biology, chemical biology)

Wendy F. Liu, Ph.D. Johns Hopkins University, Assistant Professor of Biomedical Engineering; Chemical Engineering and Materials Science (biomaterials, microdevices in cardiovascular engineering, cell-cell and cell-micro-environment interactions, cell functions and controls)

Beth A. Lopour, Ph.D. University of California, Berkeley, Assistant Professor of Biomedical Engineering; Mechanical and Aerospace Engineering (computational neuroscience, signal processing, mathematical modeling, epilepsy, translational research)

Zoran Nenadic, Ph.D. Washington University, Associate Professor of Biomedical Engineering; Electrical Engineering and Computer Science (adaptive biomedical signal processing, control algorithms for biomedical devices, brain-machine interfaces, modeling and analysis of biological neural networks)

William C. Tang, Ph.D. University of California, Berkeley, Professor of Biomedical Engineering; Chemical Engineering and Materials Science; Electrical Engineering and Computer Science (micro-electro-mechanical systems (MEMS) nanoscale engineering for biomedical applications, microsystems integration, microimplants, microbiomechanics, microfluidics)
Bruce Tromberg, Ph.D. University of Tennessee, Director of Beckman Laser Institute and Professor of Surgery; Biomedical Engineering; Physiology and Biophysics (photon migration, diffuse optical imaging, non-linear optical microscopy, photodynamic therapy)

Affiliate Faculty

Alpesh N. Amin, M.D. Northwestern University, Thomas and Mary Cesario Endowed Chair in Medicine and Professor of Medicine; Biomedical Engineering; Paul Merage School of Business; Program in Public Health (hospital medicine, quality/safety, new technologies in healthcare)

Pierre F. Baldi, Ph.D. California Institute of Technology, UCI Chancellor's Professor of Computer Science; Biological Chemistry; Biomedical Engineering; Developmental and Cell Biology; Mathematics (bioinformatics, computational biology)

Bruce Blumberg, Ph.D. University of California, Los Angeles, Professor of Developmental and Cell Biology; Biomedical Engineering; Environmental Health Sciences; Pharmaceutical Sciences (gene regulation by nuclear hormone receptors in vertebrate development physiology, endocrine disruption)

Peter J. Burke, Ph.D. Yale University, Professor of Electrical Engineering and Computer Science; Biomedical Engineering; Chemical Engineering and Materials Science (nano-electronics, bio-nanotechnology)

Robert Corn, Ph.D. University of California, Berkeley, Professor of Chemistry; Biomedical Engineering (analytical, chemical biology, physical chemistry and chemical physics, polymer, materials, nanoscience)

Carl W. Cotman, Ph.D. Indiana University, Professor of Neurology; Biomedical Engineering; Neurobiology and Behavior

Nancy A. Da Silva, Ph.D. California Institute of Technology, Professor of Chemical Engineering and Materials Science; Biomedical Engineering (molecular biotechnology)

Hamid Djalilian, M.D. University of Minnesota, Associate Professor of Otolaryngology; Biomedical Engineering (medical devices, hearing loss, tinnitus, dizziness/imbalance, clinical research)

James Earthman, Ph.D. Stanford University, Professor of Chemical Engineering and Materials Science; Biomedical Engineering (biomaterials, dental and orthopaedic implants, green materials, nanocrystalline alloys, deformation and damage processes)

Aaron P. Esser-Kahn, Ph.D. University of California, Berkeley, Associate Professor of Chemistry; Biomedical Engineering; Chemical Engineering and Materials Science (chemical biology, organic and synthetic, polymer, materials, nanoscience)

Gregory R. Evans, M.D. University of Southern California, Professor of Surgery; Biomedical Engineering (aesthetic surgery, breast augmentation, cosmetic plastic surgery, craniomaxillofacial, hand surgery, head and neck reconstruction, liposuction, oncology, pelvic bone reconstruction, peripheral nerve regeneration, reconstructive microsurgery, replantation, tissue engineering)

Lisa Flanagan-Monuki, Ph.D. University of California, San Diego, Assistant Professor of Neurology; Biomedical Engineering (stem cells, neural, embryonic, neuron)

Ron D. Frostig, Ph.D. University of California, Los Angeles, Professor of Neurobiology and Behavior; Biomedical Engineering

John P. Fruehauf, M.D. Rush University, Professor of Medicine; Biomedical Engineering; Pharmaceutical Sciences (in-vitro cancer models using 3-D tissue systems to predict drug response)

Steven P. Gross, Ph.D. University of Texas at Austin, Professor of Developmental and Cell Biology; Biomedical Engineering; Physics and Astronomy (force generation by molecular motors in living cells)

Zhibin Guan, Ph.D. University of North Carolina at Chapel Hill, Professor of Chemistry; Biomedical Engineering; Chemical Engineering and Materials Science (chemical biology, organic and synthetic, polymer, materials, nanoscience)

Gultekin Gulsun, Ph.D. Bogazici University, Associate Professor of Radiological Sciences; Biomedical Engineering; Electrical Engineering and Computer Science; Physics and Astronomy (in vivo molecular imaging, diffuse optical tomography, fluorescence tomography, photo-magnetic imaging, multi-modality imaging)

Ranjan Gupta, M.D. Albany Medical College, Professor of Orthopaedic Surgery; Anatomy and Neurobiology; Biomedical Engineering (hand and upper extremity surgery)

Frank P. Hsu, M.D. University of Maryland, College Park, Department Chair and Professor of Neurological Surgery; Biomedical Engineering; Otolaryngology (biomechanics of cerebral aneurysms, functional neurosurgery, epilepsy)

Christopher C. Hughes, Ph.D. University of London, Interim Director of Edwards Lifesciences Center for Advanced Cardiovascular Technology and Professor of Molecular Biology and Biochemistry; Biomedical Engineering (tissue engineering, growth and patterning of blood vessels)

John P. Fruehauf, M.D. Rush University, Professor of Medicine; Biomedical Engineering; Pharmaceutical Sciences (in-vitro cancer models using 3-D tissue systems to predict drug response)

Steven P. Gross, Ph.D. University of Texas at Austin, Professor of Developmental and Cell Biology; Biomedical Engineering; Physics and Astronomy (force generation by molecular motors in living cells)

Zhibin Guan, Ph.D. University of North Carolina at Chapel Hill, Professor of Chemistry; Biomedical Engineering; Chemical Engineering and Materials Science (chemical biology, organic and synthetic, polymer, materials, nanoscience)

Gultekin Gulsun, Ph.D. Bogazici University, Associate Professor of Radiological Sciences; Biomedical Engineering; Electrical Engineering and Computer Science; Physics and Astronomy (in vivo molecular imaging, diffuse optical tomography, fluorescence tomography, photo-magnetic imaging, multi-modality imaging)

Ranjan Gupta, M.D. Albany Medical College, Professor of Orthopaedic Surgery; Anatomy and Neurobiology; Biomedical Engineering (hand and upper extremity surgery)

Frank P. Hsu, M.D. University of Maryland, College Park, Department Chair and Professor of Neurological Surgery; Biomedical Engineering; Otolaryngology (biomechanics of cerebral aneurysms, functional neurosurgery, epilepsy)

Christopher C. Hughes, Ph.D. University of London, Interim Director of Edwards Lifesciences Center for Advanced Cardiovascular Technology and Professor of Molecular Biology and Biochemistry; Biomedical Engineering (tissue engineering, growth and patterning of blood vessels)
James V. Jester, Ph.D. University of Southern California, Jack H. Skirball Endowed Chair and Professor of Ophthalmology; Biomedical Engineering (mechanics of wound healing and the inter-relationship of mechanical force, cell-matrix interaction, and gene expression, cellular basis of corneal transparency and the role of water-soluble proteins in isolated cell light scattering, three-dimensional and temporal imaging of cells in intact living tissue)

Joyce H. Keyak, Ph.D. University of California, San Francisco, Professor in Residence of Radiological Sciences; Biomedical Engineering; Mechanical and Aerospace Engineering (bone mechanics, finite element modeling, quantitative computed tomography, prosthetic implants, osteoporosis, metastatic tumors in bone, radiation therapy)

Baruch D. Kuppermann, M.D. University of Miami, Professor of Ophthalmology; Biomedical Engineering (ocular manifestations of AIDS, risk factors for the development of retinopathy of prematurity post partum, photodynamic therapy for the treatment of choroidal melanomas)

Young Jik Kwon, Ph.D. University of Southern California, Professor of Pharmaceutical Sciences; Biomedical Engineering; Chemical Engineering and Materials Science; Molecular Biology and Biochemistry (gene therapy, drug delivery, cancer-targeted therapeutics, combined molecular imaging and therapy, cancer vaccine)

Jonathan Lakey, Ph.D. University of Alberta, Associate Professor of Surgery; Biomedical Engineering (islet transplantation for patients with diabetes, improving methods of islet isolation, characterization and developing novel methods of islet transplantation, biopolymer and encapsulation technologies)

Arthur D. Lander, Ph.D. University of California, San Francisco, Donald Bren Professor and Professor of Developmental and Cell Biology; Biomedical Engineering; Logic and Philosophy of Science; Pharmacology (systems biology of development, pattern formation, growth control)

Thay Q. Lee, Ph.D. Gothenburg School of Business, Economics and Law, Professor in Residence of Orthopaedic Surgery; Biomedical Engineering; Physical Medicine and Rehabilitation (research biomechanics)

Guan-Pyng Li, Ph.D. University of California, Los Angeles, Director of the UCI Division of the California Institute for Telecommunications and Information Technology (Calit2), Director of the Integrated Nanosystems Research Facility and Professor of Electrical Engineering and Computer Science; Biomedical Engineering; Chemical Engineering and Materials Science (high-speed semiconductor technology, optoelectronic devices, integrated circuit fabrication and testing)

John S. Lowengrub, Ph.D. Courant Institute of Mathematical Sciences, UCI Chancellor's Professor of Mathematics; Biomedical Engineering; Chemical Engineering and Materials Science (applied and computational mathematics, mathematical and computational biology)

Ray Luo, Ph.D. University of Maryland, College Park, Professor of Molecular Biology and Biochemistry; Biomedical Engineering; Chemical Engineering and Materials Science (protein structure, noncovalent associations involving proteins)

Marc J. Madou, Ph.D. Ghent University, UCI Chancellor's Professor of Mechanical and Aerospace Engineering; Biomedical Engineering; Chemical Engineering and Materials Science (fundamental aspects of micro/nano-electro-mechanical systems (MEMS/NEMS), biosensors, nanofluidics, biomimetics)

John Middlebrooks, Ph.D. University of California, San Francisco, Professor of Otolaryngology; Biomedical Engineering; Cognitive Sciences; Linguistics; Neurobiology and Behavior (hearing research, neurophysiology, psychophysics, auditory prosthesis, computational neuroscience)

Sabee Y. Molloi, Ph.D. University of Wisconsin-Madison, Professor of Radiological Sciences; Biomedical Engineering; Electrical Engineering and Computer Science (quantitative aspects of medical x-ray imaging and its applications to cardiac and breast imaging)

Jogeshwar Mukherjee, Ph.D. Jodhpur National University, Professor in Residence of Radiological Sciences; Biomedical Engineering; Physiology and Biophysics (preclinical imaging, radiopharmaceutical design and development, PET imaging and quantitation, neuroscience)

J. Stuart Nelson, Ph.D. University of California, Irvine, Professor of Surgery; Biomedical Engineering (laser surgery, port wine stains, hemangiomas, vascular birthmarks)

Qing Nie, Ph.D. Ohio State University, Director of Center for Mathematical and Computational Biology and UCI Chancellor's Professor of Mathematics; Biomedical Engineering (computational mathematics, systems biology, cell signaling, stem cell)

Pranav Patel, M.D. Saint Louis University, Chief, Division of Cardiology; Director of Cardiac Catheterization Laboratory and Cardiac Care Unit (CCU) and Health Sciences Associate Clinical Professor of Medicine; Biomedical Engineering (intravascular imaging (OCT and IVUS), interventional cardiology research-coronary artery disease and peripheral vascular disease, medical quality and outcomes research, cardiac hemodynamics: fractional flow reserve and coronary flow reserve, preventive cardiology research)

David J. Reinkensmeyer, Ph.D. University of California, Berkeley, Professor of Anatomy and Neurobiology; Biomedical Engineering; Mechanical and Aerospace Engineering; Physical Medicine and Rehabilitation (robotics, mechatronics, biomedical engineering, rehabilitation, biomechanics, neural control of movement)

Phillip C-Y Sheu, Ph.D. University of California, Berkeley, Professor of Electrical Engineering and Computer Science; Biomedical Engineering; Computer Science (database systems, interactive multimedia systems)
Andrei M. Shkel, Ph.D. University of Wisconsin-Madison, Professor of Mechanical and Aerospace Engineering; Biomedical Engineering; Electrical Engineering and Computer Science (design and advanced control of micro-electro-mechanical systems (MEMS), precision micro-sensors and actuators for telecommunication and information technologies, MEMS-based health monitoring systems, disposable diagnostic devices, prosthetic implants)

Zuzanna S. Siwy, Ph.D. Silesian University of Technology, Professor of Physics and Astronomy; Biomedical Engineering; Chemistry (biosensing, nanotechnology, condensed matter physics)

Ramesh Srinivasan, Ph.D. Tulane University, Department Chair and Professor of Cognitive Sciences; Biomedical Engineering (cognitive neuroscience, brain development, consciousness, perception, EEG, brain dynamics)

Roger F. Steinert, M.D. Harvard University, Irving H. Leopold Chair in Ophthalmology and Professor of Ophthalmology; Biomedical Engineering (cataract surgical technique and management of complications, refractive surgery, corneal transplantation)

Vasan Venugopalan, ScD Massachusetts Institute of Technology, Department Chair and Professor of Chemical Engineering and Materials Science; Biomedical Engineering; Mechanical and Aerospace Engineering; Surgery (laser-induced thermal, mechanical and radiative transport processes for application in medical diagnostics, therapeutics, biotechnology, micro-electro-mechanical systems (MEMS))

Szu-Wen Wang, Ph.D. Stanford University, Professor of Chemical Engineering and Materials Science; Biomedical Engineering (combining principles of self-assembly with nature-inspired macromolecular systems to engineer new materials and therapeutic strategies)

H. Kumar Wickramasinghe, Ph.D. University of London, Henry Samueli Endowed Chair in Engineering and Department Chair and Professor of Electrical Engineering and Computer Science; Biomedical Engineering; Chemical Engineering and Materials Science (nanoscale measurements and characterization, scanning probe microscopy, storage technology, nano-bio measurement technology)

Brian Wong, M.D. Johns Hopkins University, Professor of Otolaryngology; Biomedical Engineering (biomedical optics, tissue engineering, development of surgical instrumentation)

Xiangmin Xu, Ph.D. Vanderbilt University, Associate Professor of Anatomy and Neurobiology; Biomedical Engineering; Electrical Engineering and Computer Science (local cortical circuits)

Albert Fan Yee, Ph.D. University of California, Berkeley, Professor of Chemical Engineering and Materials Science; Biomedical Engineering; Chemistry (materials science aspects of polymers and soft materials, particularly on how they are used to impact nanotechnology)

Fan-Gang Zeng, Ph.D. Syracuse University, Professor of Otolaryngology; Anatomy and Neurobiology; Biomedical Engineering; Cognitive Sciences (cochlear implants and auditory neuroscience)

Weian Zhao, Ph.D. McMaster University, Associate Professor of Pharmaceutical Sciences; Biomedical Engineering (stem cell therapy, diagnostics, biosensors, nano- and microtechnology, aptamers)

Courses

BME 1. Introduction to Biomedical Engineering. 3 Units.
Introduction to the central topics of biomedical engineering. Offers a perspective on bioengineering as a discipline in a seminar format. Principles of problem definition, team design, engineering inventiveness, information access, communication, ethics, and social responsibility are emphasized.

(Design units: 1)

Restriction: Biomedical Engineering Majors have first consideration for enrollment. Biomedical Engr: Premedical Majors have first consideration for enrollment.

BME 50A. Cell and Molecular Engineering. 4 Units.
Physiological function from a cellular, molecular, and biophysical perspective. Applications to bioengineering design.

(Design units: 2)

Corequisite: BME 1
Prerequisite: CHEM 1C

Restriction: Biomedical Engineering Majors have first consideration for enrollment. Chemical Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.
BME 50B. Cell and Molecular Engineering. 4 Units.
Physiological function from a cellular, molecular, and biophysical perspective. Applications to bioengineering design.

(Design units: 2)
Prerequisite: BME 50A and PHYSICS 7D
Restriction: Biomedical Engineering Majors have first consideration for enrollment. Biomedical Engr: Premedical Majors have first consideration for enrollment.

BME 60A. Engineering Analysis/Design: Data Acquisition. 4 Units.
Fundamentals of LabVIEW programming, basics of computer-based experimentation, establishing interface between computer and data acquisition instrumentation, signal conditioning basics. Materials fee.

(Design units: 2)
Corequisite: BME 1
Prerequisite: PHYSICS 7D
Restriction: Biomedical Engineering Majors have first consideration for enrollment. Biomedical Engr: Premedical Majors have first consideration for enrollment.

BME 60B. Engineering Analysis/Design: Data Analysis. 4 Units.
Overview of MATLAB; numeric, cell, and structure arrays; file management; plotting and model building; solving linear algebraic equations; differential equations; symbolic process. Materials fee.

(Design units: 1)
Prerequisite: BME 60A and MATH 3A
Overlaps with ENGRCEE 20.
Restriction: Biomedical Engineering Majors have first consideration for enrollment. Biomedical Engr: Premedical Majors have first consideration for enrollment.

BME 60C. Engineering Analysis/Design: Computer-Aided Design. 4 Units.
Introduction to SolidWorks and Computer-Aided Design software; design; analysis; rapid prototyping; visualization and presentation; planning and manufacturing. Materials fee.

(Design units: 2)
Prerequisite: BME 60B
Restriction: Biomedical Engineering Majors have first consideration for enrollment. Biomedical Engr: Premedical Majors have first consideration for enrollment.

BME 110A. Biomechanics I. 4 Units.
Introduction to statics. Rigid bodies, analysis of structures, forces in beams, moments of inertia.

(Design units: 1)
Prerequisite: PHYSICS 7D and PHYSICS 7LD and PHYSICS 7E and MATH 3A and MATH 3D
Restriction: Biomedical Engineering Majors have first consideration for enrollment. Biomedical Engr: Premedical Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.

BME 110B. Biomechanics II. 4 Units.
Introduction to dynamics. Kinematics of Particles, Newton's Second Law, System's of Particles, Kinematics of Rigid Bodies, Motion in three dimensions.

(Design units: 1)
Prerequisite: BME 110A
Restriction: Biomedical Engineering Majors have first consideration for enrollment. Biomedical Engr: Premedical Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.
BME 110C. Biomechanics III. 4 Units.
Applications of statics and dynamics to biomedical systems. Cellular biomechanics, hemodynamics, circulatory system, respiratory system, muscles and movement, skeletal biomechanics. Applications to bioengineering design.
(Design units: 1)
Prerequisite: BME 110B
Restriction: Biomedical Engineering Majors have first consideration for enrollment.

BME 111. Design of Biomaterials. 4 Units.
(Design units: 3)
Corequisite: BME 50B or BIO SCI 99.
Restriction: Biomedical Engineering Majors have first consideration for enrollment. Biomedical Engr: Premedical Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.

BME 114. Genetic Engineering and Synthetic Biology. 4 Units.
Exploring how biological function can be engineered and “synthesized” from the DNA level up.
(Design units: 0)
Prerequisite: CHEM 1C and MATH 3D and BME 50A and BME 50B
Restriction: Biomedical Engineering Majors have first consideration for enrollment.

BME 120. Sensory Motor Systems. 4 Units.
A quantitative and systems approach to understanding physiological systems. Systems covered include the nervous and musculoskeletal systems.
(Design units: 2)
Prerequisite: (BME 60B or EECS 10 or EECS 12 or ENGRCEE 20 or ENGRMAE 10) and MATH 3D and PHYSICS 7D
Restriction: Biomedical Engineering Majors have first consideration for enrollment. Biomedical Engr: Premedical Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.
Concurrent with BME 220.

BME 121. Quantitative Physiology: Organ Transport Systems. 4 Units.
A quantitative and systems approach to understanding physiological systems. Systems covered include the cardiopulmonary, circulatory, and renal systems.
(Design units: 1)
Prerequisite: (BME 60B or EECS 10 or EECS 12 or ENGRCEE 20 or ENGRMAE 10) and MATH 3A and MATH 3D
Restriction: Biomedical Engineering Majors have first consideration for enrollment. Biomedical Engr: Premedical Majors have first consideration for enrollment. Chemical Engineering Majors have first consideration for enrollment.

BME 130. Biomedical Signals and Systems. 4 Units.
Analysis of analog and digital biomedical signals; Fourier Series expansions; difference and differential equations; convolutions. System models: discrete-time and continuous-time linear time-invariant systems; Laplace and Fourier transforms. Analysis of signals and systems using computer programs.
(Design units: 1)
Corequisite: BME 60B
Prerequisite: MATH 3A and MATH 3D. Recommended: STATS 8.
Restriction: Biomedical Engineering Majors have first consideration for enrollment. Biomedical Engr: Premedical Majors have first consideration for enrollment.
BME 132. Introduction to Computational Biology. 4 Units.

Prerequisite: MATH 2D or MATH 3A or STATS 7 or STATS 8
Same as BIO SCI M123, COMPSCI 183.
Concurrent with MOL BIO 223 and BME 232.

BME 135. Photomedicine. 4 Units.
Studies the use of optical and engineering-based systems (laser-based) for diagnosis, treating diseases, manipulation of cells and cell function. Physical, optical, and electro-optical principles are explored regarding molecular, cellular, organ, and organism applications.

(Design units: 0)
Prerequisite: PHYSICS 3C or PHYSICS 7D
Same as BIO SCI D130.
Restriction: Biomedical Engineering Majors have first consideration for enrollment.

BME 136. Engineering Medical Optics. 4 Units.
Principles of optics and photonics, integration of optical components into systems and devices, and analysis of physiological signals obtained from Biophotonics measurements.

(Design units: 3)
Prerequisite: BME 130 and BME 135
Restriction: Biomedical Engineering Majors have first consideration for enrollment.
Concurrent with BME 251.

BME 137. Introduction to Biomedical Imaging. 4 Units.
Introduction to imaging modalities widely used in medicine and biology, including X-ray, computed tomography (CT), nuclear medicine (PET and SPET), ultrasonic imaging, magnetic resonance imaging (MRI), optical tomography, imaging contrast, imaging processing, and complementary nature of the imaging modalities.

(Design units: 1)
Prerequisite: BME 130 or EECS 50 or EECS 150
Restriction: Biomedical Engineering Majors have first consideration for enrollment.

BME 138. Spectroscopy and Imaging of Biological Systems. 4 Units.
Principles of spectroscopy; absorption; molecular orbitals; multiphoton transitions; Jablonski diagram; fluorescence anisotropy; fluorescence decay; quenching; FRET; excited state reactions; solvent relaxations; instruments; microscopy: wide field, LSM, TPE; fluorescent probes, fluctuations spectroscopy; optical resolution and super-resolution; CARS and SHG microscopy.

(Design units: 1)
Prerequisite: MATH 3A and MATH 3D. Recommended: STATS 8.
Restriction: Biomedical Engineering Majors only. Biomedical Engr: Premedical Majors only.
Concurrent with BME 238.

BME 140. Design of Biomedical Electronics. 4 Units.
Analog and digital circuits in bioinstrumentation. AC and DC circuit analysis, design and construction of filter and amplifiers using operational amplifier, digitization of signal and data acquisition, bioelectrical signal, design and construction of ECG instrument, bioelectrical signal measurement and analysis. Materials fee.

(Design units: 3)
Prerequisite: BME 60C and BME 130
Restriction: Biomedical Engineering Majors have first consideration for enrollment.
BME 147. Microfluidics and Lab-on-a-Chip. 4 Units.
Introduction to principles of microfluidics and state-of-the-art micro Total Analysis Systems (uTAS). Lab-on-a-Chip for bimolecular assays with device design principles for microscale sample preparation, flow transport, bimolecular manipulation, separation and detection, and the technologies for integrating these devices into microsystems.

(Design units: 1)
Prerequisite: BME 110C
Restriction: Biomedical Engineering Majors have first consideration for enrollment.
Concurrent with BME 260.

BME 148. Microimplants. 4 Units.
Essential concepts of biomedical implants at the micro scale. Design, fabrication, and applications of several microimplantable devices including cochlear, retinal, neural, and muscular implants.

(Design units: 1)
Prerequisite: BME 111
Restriction: Biomedical Engineering Majors have first consideration for enrollment.
Concurrent with BME 262.

BME 149. Biomedical Microdevices. 4 Units.
In-depth review of microfabricated devices designed for biological and medical applications. Studies of the design, implementation, manufacturing, and marketing of commercial and research bio-medical devices.

(Design units: 0)
Concurrent with BME 261.

BME 150. Biotransport Phenomena. 4 Units.
Fundamentals of heat and mass transfer, similarities in the respective rate equations. Emphasis on practical application of fundamental principles.

(Design units: 1)
Prerequisite: BME 60B and MATH 3A and MATH 3D
Overlaps with CBEMS 125C.
Restriction: Biomedical Engineering Majors have first consideration for enrollment. Biomedical Engr: Premedical Majors have first consideration for enrollment.

BME 160. Tissue Engineering. 4 Units.
Quantitative analysis of cell and tissue functions. Emerging developments in stem cell technology, biodegradable scaffolds, growth factors, and others important in developing clinical products. Applications of bioengineering.

(Design units: 2)
Prerequisite: (BME 50B or BIO SCI 99) and BME 111 and BME 121 and BME 150
Restriction: Biomedical Engineering Majors have first consideration for enrollment. Biomedical Engr: Premedical Majors have first consideration for enrollment.

BME 170. Biomedical Engineering Laboratory. 4 Units.
Measurement and analysis of biological systems using engineering tools and techniques. Laboratory experiments involve living systems with the emphasis on measuring physiological parameters. Labs: Introduction to Electroencephalography, Fiberoptic thermometry, Neurorehabilitation Engineering, Spectroscopy principles of the common pulse oximeter. Materials fee.

(Design units: 1)
Prerequisite: BME 111 and BME 120 and BME 121 and BME 130 and BME 140
Restriction: Biomedical Engineering Majors have first consideration for enrollment.
BME 171. Cell and Tissue Engineering Laboratory. 4 Units.
Techniques in molecular, cellular, and tissue engineering. Topics include bacterial and mammalian cell culture, DNA cloning and gene transfer, fabrication of biomaterial scaffolds, and immunassays and microscopy techniques for cell-based assays.

(Design units: 0)
Prerequisite: BME 160
Restriction: Biomedical Engineering Majors have first consideration for enrollment. Biomedical Engr: Premedical Majors have first consideration for enrollment.

BME 180A. Biomedical Engineering Design. 3 Units.
Design strategies, techniques, tools, and protocols commonly encountered in biomedical engineering; clinical experience at the UCI Medical Center and Beckman Laser Institute; industrial design experience in group projects with local biomedical companies; ethics, economic analysis, and FDA product approval. Materials fee.

(Design units: 3)
Prerequisite: BME 60C and BME 110C and BME 111 and BME 120 and BME 121 and BME 140. BME 180A, BME 180B, and BME 180C must be taken in the same academic year.
Grading Option: In progress only.
Restriction: Seniors only. Biomedical Engineering Majors only.

BME 180B. Biomedical Engineering Design. 3 Units.
Design strategies, techniques, tools, and protocols commonly encountered in biomedical engineering; clinical experience at the UCI Medical Center and Beckman Laser Institute; industrial design experience in group projects with local biomedical companies; ethics, economic analysis, and FDA product approval. Materials fee.

(Design units: 3)
Prerequisite: BME 180A. BME 180A, BME 180B, and BME 180C must be taken in the same academic year.
Grading Option: In progress only.
Restriction: Seniors only. Biomedical Engineering Majors only.

BME 180C. Biomedical Engineering Design. 3 Units.
Design strategies, techniques, tools, and protocols commonly encountered in biomedical engineering; clinical experience at the UCI Medical Center and Beckman Laser Institute; industrial design experience in group projects with local biomedical companies; ethics, economic analysis, marketing, and FDA product approval. Materials fee.

(Design units: 3)
Prerequisite: BME 180B. BME 180A, BME 180B, and BME 180C must be taken in the same academic year.
Restriction: Seniors only. Biomedical Engineering Majors only.

BME 195. Special Topics in Biomedical Engineering. 1-4 Units.
Studies in selected areas of Biomedical Engineering. Topics addressed vary each quarter.

(Design units: 1-4)
Prerequisite: Prerequisites vary.
Repeatability: Unlimited as topics vary.

BME 197. Seminars in Biomedical Engineering. 2 Units.
Presentation of advanced topics and reports of current research efforts in Biomedical Engineering.

(Design units: 1-2)
Restriction: Seniors only. Biomedical Engineering Majors have first consideration for enrollment.
Concurrent with BME 298.
BME 199. Individual Study. 1-4 Units.
Independent research conducted in the lab of a biomedical engineering core faculty member. A formal written report of the research conducted is required at the conclusion of the quarter.

(Design units: 1-4)

Prerequisite: BIO SCI 194S

Repeatability: May be taken for credit for 8 units.

BME 199P. Individual Study. 1-4 Units.
Supervised independent reading, research, or design for undergraduate Engineering majors. Students taking individual study for design credit are to submit a written paper to the instructor and to the Undergraduate Student Affairs Office in the School of Engineering.

(Design units: 1-4)

Grading Option: Pass/no pass only.

Repeatability: May be repeated for credit unlimited times.

BME 210. Molecular and Cellular Engineering. 4 Units.
Engineering of physiological function at the genetic, cellular, and tissue scales. Topics include cloning and genetic engineering, extracellular matrix biomaterials, principles of regenerative medicine and tissue engineering, and experimental design.

Restriction: Graduate students only.

BME 211. Microscale Tissue Engineering. 4 Units.
Engineering of physiological function at the scale of individual cells. Topics include cell micropatterning, microfluidic tissue culture, engineering the cellular microenvironment, and microphysiological systems.

Restriction: Graduate students only.

BME 212. Cardiovascular Mechanobiology. 4 Units.
Advanced topics in cellular engineering and mechanobiology, with focus on the cardiovascular system. Tools and techniques used to manipulate and measure mechanical forces at the molecular, cellular, tissue, and organ levels, and their applications in cardiovascular devices and tissue engineering.

Restriction: Graduate students only.

BME 213. Systems Cell and Developmental Biology. 4 Units.
Introduces concepts needed to understand cell and developmental biology at the systems level, i.e., how the parts (molecules) work together to create a complex output. Emphasis on using mathematical/computational modeling to expand/modify insights provided by intuition.

Same as DEV BIO 232.

Restriction: Graduate students only.

BME 215. Linking Modeling and Experiments in Bioengineering. 4 Units.
Overview of modeling based on experimental techniques in bioengineering. Construct and evaluate models of varying complexity and to relate them to experimental data.

Prerequisite: BME 220 and BME 221

Restriction: Graduate students only.

BME 218. Directed Evolution. 4 Units.
Directed evolution harnesses the processes of Darwinian evolution for biomolecular engineering goals. This class will begin with fundamental principles in evolutionary biology and move on to the experimental evolution techniques and their applications.

Restriction: Graduate students only.

BME 220. Sensory Motor Systems. 4 Units.
A quantitative and systems approach to understanding physiological systems. Systems covered include the nervous and musculoskeletal systems.

Restriction: Graduate students only.

Concurrent with BME 120.
BME 221. Organ Transport Systems. 4 Units.
A quantitative and systems approach to understanding physiological systems. Systems covered include the cardiopulmonary, circulatory, and renal systems.

Restriction: Graduate students only.

BME 222. Biofluid Mechanics . 4 Units.
Introduces principles of biofluid mechanics in a research oriented scheme and approaches a wide spectrum of biofluid related problems in human body and solutions that involves engineering concepts.

Restriction: Graduate students only.

BME 223. Critical Thinking in Cardiovascular Research. 2 Units.
Interpretation and critical assessment of current cardiovascular research in basic science, application of engineering tools, and clinical cardiology and cardiovascular surgery. Open only to graduate students engaged in research.

Restriction: Graduate students only.

BME 224. Molecular and Cellular Biophotonics. 4 Units.
Principles underlying the application of photonic technologies to biomolecular and cellular systems. Sample technologies Optical Tweezers, Linear and Nonlinear Optical Microscopy and Fluorescence Lifetime and Correlation Methods, and their use to investigate emergent problems in Molecular, Cellular, and Developmental Biology.

Same as CHEM 224.

Restriction: Graduate students only.

BME 225. Tissue and Organ Biophotonics. 4 Units.
Principles underlying the application of photonic technologies to tissues, organs, organisms. Sample technologies include Optical Coherence Tomography, Optical Speckle Imaging, Optoacoustic Imaging, Wide-Field Spectroscopic Imaging, Diffuse Optical Spectroscopy. Addressing the use of these technologies to detect/monitor disease and physiological processes.

BME 230A. Applied Engineering Mathematics I. 4 Units.
Analytical techniques applied to engineering problems in transport phenomena, process dynamics and control, and thermodynamics.

BME 230B. Applied Engineering Mathematics II. 4 Units.
Focuses on biomedical system identification. Includes fundamental techniques of model building and testing such as formulation, solution of governing equations, sensitivity theory, identifiability theory, and uncertainty analysis.

Restriction: Graduate students only.

BME 232. Introduction to Computational Biology. 4 Units.

Same as MOL BIO 223.

Restriction: Graduate students only.

BME 233. Dynamic Systems in Biology and Medicine. 4 Units.
Introduces principles of system theory to analyze biological, biochemical, physiological, and bioengineering systems. Analytical and computational tools are used to model and analyze dynamic systems such as population, neuronal and heart dynamics, biochemical and physiological systems, oxygen diffusion and similar.

Restriction: Graduate students only.

BME 234. Neuroimaging Data Analysis. 4 Units.
Knowledge and understanding of recent techniques for the analysis of healthy and pathological structure and function in neuroimaging data.

Restriction: Graduate students only.
BME 238. Spectroscopy and Imaging of Biological Systems. 4 Units.
Principles of spectroscopy; absorption; molecular orbitals; multiphoton transitions; Jablonski diagram; fluorescence anisotropy; fluorescence decay; quenching; FRET; excited state reactions; solvent relaxations; instruments; microscopy: wide field, LSM, TPE; fluorescent probes, fluctuations spectroscopy; optical resolution and super-resolution; CARS and SHG microscopy.

Restriction: Graduate students only.

Concurrent with BME 138.

BME 240. Introduction to Clinical Medicine for Biomedical Engineering. 4 Units.
An introduction to clinical medicine for graduate students in biomedical engineering. Lectures and rotations through nephology, gastroenterology, pulmonary, and critical care cardiology.

Restriction: Graduate students only. Biomedical Engineering Majors only.

BME 250. Biospectroscopy . 4 Units.
Principles of optical spectroscopy for biomedical engineering. Will focus on optical spectroscopy of biological relevant molecules, spectroscopy in cells and tissue. Spectroscopy techniques based on fluorescence.

Restriction: Graduate students only.

BME 251. Engineering Medical Optics. 4 Units.
Principles of optics and photonics, integration of optical components into systems and devices, and analysis of physiologic signals obtained from Biophotonics measurements.

Restriction: Graduate students only.

Concurrent with BME 136.

BME 252. Critical Thinking in Biophotonics. 2 Units.
Critical thematic review of current research papers in the field of Biophotonics.

Repeatability: May be taken for credit 2 times.

Restriction: Graduate students only.

BME 260. Microfluids and Lab-On-A-Chip. 4 Units.
Introduction to microfluidics and state-of-the-art micro Total Analysis Systems (uTAS). Lab-on-a-Chip for biomolecular assays with device design principles for microscale sample preparation, flow transport, biolmolecular manipulation, separation and detection, and the technologies for integrating these devices into microsystems.

Restriction: Graduate students only.

Concurrent with BME 147.

BME 261. Biomedical Microdevices. 4 Units.
In-depth review of microfabricated devices designed for biological and medical applications. Studies of the design, implementation, manufacturing, and marketing of commercial and research bio-medical devices.

Restriction: Graduate students only.

Concurrent with BME 149.

BME 262. Microimplants. 4 Units.
Essential concepts of biomedical implants at the micro scale. Design, fabrication, and applications of several microimplantable devices including cochlear, retinal, neural, and muscular implants.

Restriction: Graduate students only.

Concurrent with BME 148.

BME 263. Nanomedicine . 4 Units.
Covers the use of inorganic nanocrystals and nanocarriers for molecular detection of human disease and targeted drug delivery. Techniques for synthesis and bioconjugation, molecular targeting, adhesion dynamics, and unique physical properties of nanomaterials.

Restriction: Graduate students only.
BME 264. Auditory Science and Technology. 2 Units.
Advanced topics in auditory science and technology from cochlear mechanics to cochlear implants.
Repeatability: May be repeated for credit unlimited times.
Restriction: Graduate students only.

BME 290. Critical Thinking and Writing. 4 Units.
Critical thinking and writing are essential ingredients for success in scientific research. Examines examples from the scientific literature to extract principles of good scientific reasoning, experimental design, and writing.
Restriction: Graduate students only.

BME 295. Special Topics in Biomedical Engineering. 1-4 Units.
Studies in selected areas of Biomedical Engineering. Topics addressed vary each quarter.
Prerequisite: Prerequisites vary.
Repeatability: Unlimited as topics vary.

BME 296. Master of Science Thesis Research. 1-16 Units.
Individual research or investigation conducted in the pursuit of preparing and completing the thesis required for the M.S. in Engineering.
Repeatability: May be repeated for credit unlimited times.
Restriction: Graduate students only.

BME 297. Doctor of Philosophy Dissertation Research. 1-16 Units.
Individual research or investigation conducted in the pursuit of preparing and completing the dissertation required for the Ph.D. in Engineering.
Repeatability: May be repeated for credit unlimited times.

BME 298. Seminars in Biomedical Engineering. 2 Units.
Presentation of advanced topics and reports of current research efforts in biomedical engineering. Designed for graduate students in the Biomedical Engineering program.
Grading Option: Satisfactory/unsatisfactory only.
Repeatability: May be repeated for credit unlimited times.
Concurrent with BME 197.

BME 299. Individual Research. 1-16 Units.
Individual research or investigation under the direction of an individual faculty.
Repeatability: May be repeated for credit unlimited times.

Department of Chemical Engineering and Materials Science

Vasan Venugopalan, Department Chair
916 Engineering Tower
949-824-5802
http://www.eng.uci.edu/dept/chems

Overview
The Department of Chemical Engineering and Materials Science offers the B.S. in Chemical Engineering, the B.S. in Materials Science Engineering, the M.S. and Ph.D. in Chemical and Biochemical Engineering, and the M.S. and Ph.D. in Materials Science and Engineering.

On This Page:
- Chemical Engineering (p. 674)
- Materials Science Engineering (p. 677)
Undergraduate Major in Chemical Engineering

Program Educational Objectives: Graduates of the Chemical Engineering program will (1) demonstrate achievement by applying a broad knowledge of chemical engineering; (2) apply critical reasoning and quantitative skills to identify and solve problems in chemical engineering; (3) implement skills for effective communication and teamwork; (4) demonstrate the potential to effectively lead chemical engineering projects in industry, government, or academia; and (5) exhibit a commitment to lifelong learning.

(Program educational objectives are those aspects of engineering that help shape the curriculum; achievement of these objectives is a shared responsibility between the student and UCI.)

Chemical Engineering uses knowledge of chemistry, mathematics, physics, biology, and humanities to solve societal problems in areas such as energy, health, the environment, food, clothing, shelter, and materials and serves a variety of processing industries whose vast array of products include chemicals, petroleum products, plastics, pharmaceuticals, foods, textiles, fuels, consumer products, and electronic and cryogenic materials. Chemical engineers also serve society in improving the environment by reducing and eliminating pollution.

The undergraduate curriculum in Chemical Engineering builds on basic courses in chemical engineering, other branches of engineering, and electives which provide a strong background in humanities and human behavior. Elective programs developed by the student with a faculty advisor may include such areas as applied chemistry, biochemical engineering, chemical reaction engineering, chemical processing, environmental engineering, materials science, process control systems engineering, and biomedical engineering.

Admissions

High School Students: See School Admissions (p. 564) information.

Transfer Students: Preference will be given to junior-level applicants with the highest grades overall, and who have satisfactorily completed the following required courses: two years of approved calculus, one year of calculus-based physics with laboratories (mechanics, electricity and magnetism), completion of lower-division writing, one year of general chemistry (with laboratory), one year of organic chemistry (with laboratory), and one course in introductory programming. For course equivalency specific to each college, visit assist.org (http://catalogue.uci.edu/thehenrysamuelischoolofengineering/departmentofchemicalengineeringandmaterialsscience/assist.org).

Students are encouraged to complete as many of the lower-division degree requirements as possible prior to transfer. Students who enroll at UCI in need of completing lower-division coursework may find that it will take longer than two years to complete their degrees. For further information, contact The Henry Samueli School of Engineering at 949-824-4334.

Requirements for the B.S. in Chemical Engineering

All students are required to meet the University Requirements (p. 91).

All students are required to meet the School Requirements (p. 564).

Major Requirements

Mathematics and Basic Science Courses:

<table>
<thead>
<tr>
<th>CHEM 1A- 1B- 1C- 1LC- 1LD</th>
<th>General Chemistry and General Chemistry and General Chemistry Laboratory and General Chemistry Laboratory</th>
</tr>
</thead>
<tbody>

<td>Classical Physics and Classical Physics Laboratory</td>
</tr>
</tbody>
</table>

**Engineering Topics Courses:**

Students must complete a minimum of 18 units of engineering design.

- CBEMS 45A-45B-45C: Chemical Processing and Materials Balances and Chemical Processing and Energy Balances and Chemical Engineering Thermodynamics
- CBEMS 110: Reaction Kinetics and Reactor Design
- CBEMS 125A-125B-125C: Momentum Transfer and Heat Transfer and Mass Transfer
- CBEMS 128: Introduction to Numerical Methods in Engineering
- CBEMS 130: Separation Processes
- CBEMS 135: Chemical Process Control
- CBEMS 140A-140B: Chemical Engineering Laboratory I and Chemical Engineering Laboratory II
- CBEMS 149A-149B: Chemical Engineering Design I and Chemical Engineering Design II
- ENGR 54: Principles of Materials Science and Engineering
- ENGRMAE 10 or EECS 10: Introduction to Engineering Computations
  - or Computational Methods in Electrical and Computer Engineering

Students select, with the approval of a faculty advisor, any additional engineering topics courses needed to satisfy school and department requirements.

**Technical Elective Courses:**

Students select, with the approval of a faculty advisor, a minimum of 19 units of technical electives. Students may select an area of specialization and complete the associated requirements, as shown below.

(The nominal Chemical Engineering program will require 192 units of courses to satisfy all university and major requirements. Students typically need at least 17 units of engineering topics from technical electives to meet school requirements. Because each student comes to UCI with a different level of preparation, the actual number of units will vary.)

**Engineering Professional Topics Course:**

- ENGR 190W: Communications in the Professional World

**Specialization in Biomolecular Engineering:**

Requires:

- CBEMS 112: Introduction to Biochemical Engineering
- and a minimum of 8 units from the following:
  - BIO SCI 98: Biochemistry
  - BIO SCI 99: Molecular Biology
  - BME 50A: Cell and Molecular Engineering
  - BME 50B: Cell and Molecular Engineering
  - BME 121: Quantitative Physiology: Organ Transport Systems
  - BME 160: Tissue Engineering
  - CBEMS 115: Kinetics of Biochemical Networks
  - CBEMS 119: Biomaterials: Structural Biology and Assembly
  - CBEMS 199: Individual Study (up to 4 units; or CBEMS H199, up to 4 units)

**Specialization in Energy and the Environment:**

Requires a minimum of 11 units including at least one course from the following:

- CBEMS 133: Nuclear and Radiochemistry
- CBEMS 141: Nano-Scale Materials and Applications
- CBEMS 143: Chemistry and Technology for the Nuclear Fuel Cycle
- CBEMS 199: Individual Study (up to 4 units; or CBEMS H199, up to 4 units)
and select the remaining units from the following:

<td>Composite Materials and Structures</td>
</tr>
</tbody>
</table>

1 Requires ENGR 30, not included in total.

**Planning a Program of Study**

The sample program of study chart shown is typical for the major in Chemical Engineering. Students should keep in mind that this program is based upon a sequence of prerequisites, beginning with adequate preparation in high school mathematics, physics, and chemistry. Students who are not adequately prepared, or who wish to make changes in the sequence for other reasons, must have their program approved by their faculty advisor. Chemical Engineering majors must consult at least once every year with the academic counselors in the Student Affairs Office and with their faculty advisors.

Undergraduate Major in Materials Science Engineering

Program Educational Objectives: Graduates of the Materials Science Engineering program will (1) establish a productive Materials Science and Engineering career in industry, government or academia; (2) apply critical reasoning and the requisite analytical/quantitative skills in seeking solutions to materials science and engineering problems; (3) promote innovation in materials development and design through effective leadership, skilled communications, and multidisciplinary teamwork; (4) exhibit a commitment to engineering ethics, environmental stewardship, continued learning, and professional development.

(Program educational objectives are those aspects of engineering that help shape the curriculum; achievement of these objectives is a shared responsibility between the student and UCI.)

Since the beginning of history, materials have played a crucial role in the growth, prosperity, security, and quality of human life. In fact, materials have been so intimately related to the emergence of human culture and civilization that anthropologists and historians have identified early cultures by the name of the significant materials dominating those cultures. These include the stone, bronze, and iron ages of the past. At the present time, the scope of materials science and engineering has become very diverse; it is no longer confined to topics related to metals and alloys but includes those relevant to ceramics, composites, polymers, biomaterials, nanostructures, intelligent materials, and electronic devices. In addition, present activities in materials science and engineering cover not only areas whose utility can be identified today, but also areas whose utility may be unforeseen. The services of materials scientists and engineers are required in a variety of engineering operations dealing, for example, with emerging energy systems, design of semiconductors and optoelectronic and nano devices, development of new technologies based on composites and high-temperature superconductivity, biomedical products, performance (e.g., quality, reliability, safety, energy efficiency) in automobile and aircraft components, improvement in nondestructive testing techniques, corrosion behavior in refineries, radiation damage in nuclear power plants, and fabrication of advanced materials.

The undergraduate major in Material Science Engineering (MSE) provides students with a thorough knowledge of basic engineering and scientific principles. The undergraduate curriculum in MSE includes (a) a core of Chemistry, Physics, and Mathematics; (b) basic Engineering courses; (c) Materials and Engineering core; and (d) technical courses in Materials Science, Engineering, and Sciences.

Because of the interdisciplinary nature of MSE and its intimate relations with other Engineering disciplines (Aerospace, Biomedical, Chemical, Civil, Computer, Electrical, Environmental, and Mechanical Engineering), qualified students will be able to satisfy in a straightforward manner the degree requirements of their Engineering major and the MSE major.

Admissions

High School Students: See School Admissions (p. 564) information.

Transfer Students: Preference will be given to junior-level applicants with the highest grades overall, and who have satisfactorily completed the following required courses: two years of approved calculus, one year of calculus-based physics with laboratories (mechanics, electricity and magnetism), completion of lower-division writing, one year of general chemistry (with laboratory), statics, Materials Science Engineering, and one course in introductory programming. For course equivalency specific to each college, visit assist.org (http://catalogue.uci.edu/thehenrysamuelischoolofengineering/departamentofchemicalengineeringandmaterialsscience/assist.org).

Students are encouraged to complete as many of the lower-division degree requirements as possible prior to transfer. Students who enroll at UCI in need of completing lower-division coursework may find that it will take longer than two years to complete their degrees. For further information, contact The Henry Samueli School of Engineering at 949-824-4334.

</tr>
</tbody>
</table>
### Engineering Professional Topics Course:

**ENGR 190W**  
Communications in the Professional World

(The nominal Materials Science Engineering program will require 183 units of courses to satisfy all university and major requirements. Because each student comes to UCI with a different level of preparation, the actual number of units will vary. Dual engineering majors are reminded that they are required to satisfy all requirements of both majors individually. Students should not assume that courses for one, such as senior design, will satisfy the requirements of the other, without prior approval.)

---

1. ENGR 7A-ENGR 7B is available only to lower-division students. Both ENGR 7A-ENGR 7B must be taken to be counted as a Basic Engineering or Science Elective course.

Students majoring in MSE may elect, with approval of their faculty advisor, to use available engineering electives to complete one of the following specializations.

### Specialization in Biomaterials:

Requires a minimum of 14 units from:

<table>
<thead>
<tr>

Minor in Materials Science Engineering

The interdisciplinary field of materials science and engineering has become critical to many emerging areas of advanced technology and their applications. As a result, there are needs and opportunities for engineers and scientists with education and training in materials science and engineering. The goal of the minor in Materials Science Engineering (MSE) is to provide students at UCI with such education and training that will enable them, upon graduation, to not only participate in projects or programs of an interdisciplinary nature but also address challenging societal needs and complex technological advances.
Admission

Admission in the MSE minor requires a minimum 2.5 overall UCI GPA. Students are required to complete all prerequisites for required courses and selected electives. In particular, students need to complete the following courses before applying:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>CHEM 1A</td>
<td>General Chemistry</td>
</tr>
<tr>
<td>CHEM 1LE</td>
<td>Accelerated General Chemistry Lab</td>

For students who plan to pursue a graduate degree in MSE, it is highly recommended that they take CBEMS 165 in addition to two of the following courses: CBEMS 169, CBEMS 175, or CBEMS 199.
On This Page:

- Chemical and Biochemical Engineering (p. 682)
- Materials Science and Engineering (p. )

**Graduate Study in Chemical and Biochemical Engineering**

Chemical engineering uses the knowledge of chemistry, mathematics, physics, biology, and social sciences to solve societal problems such as energy, health, environment, food, clothing, shelter, and transportation. It serves a variety of processing industries whose vast array of products include chemicals, petroleum products, plastics, pharmaceuticals, foods, semiconductors, textiles, fuels, consumer products, and electronic and cryogenic materials. It also serves society to improve the environment by reducing and eliminating pollution. Chemical engineering is an engineering discipline that has its strongest ties with the molecular sciences. This is an important asset since sciences such as chemistry, molecular biology, biomedicine, and solid-state physics are providing the seeds for future technologies. Chemical engineering has a bright future as the discipline which will bridge science with engineering in multidisciplinary environments.

Biochemical Engineering is concerned with the processing of biological materials and processes that use biological agents such as living cells, enzymes, or antibodies. Biochemical Engineering, with integrated knowledge of the principles of biology and chemical engineering, plays a major engineering role in the rapidly developing area of biotechnology. Career opportunities in Biochemical Engineering are available in a variety of industries such as biotechnology, chemical, environmental, food, petrochemical, and pharmaceutical industries.

The principal objectives of the graduate curriculum in Chemical and Biochemical Engineering are to develop and expand students’ abilities to solve new and more challenging engineering problems and to promote their skills in independent thinking and learning in preparation for careers in manufacturing, research, or teaching. These objectives are reached through a program of course work and research designed by each student with the assistance, advice, and approval of a primary faculty advisor and a faculty advisory committee. Programs of study leading to the M.S. and Ph.D. in Chemical and Biochemical Engineering are offered.

**Recommended Background**

It is strongly recommended that students have background and training in core Chemical Engineering topics (transport phenomena, thermodynamics, and reaction kinetics) as well as a strong background in mathematics, chemistry, and physics. A student who enters the program without undergraduate preparation in chemical engineering is required to take three to five additional prerequisite courses (MATH 3A and MATH 3D, and CBEMS 45B-CBEMS 45C, CBEMS 110, CBEMS 112, and CBEMS 125A).

**Required Courses**

Students are required to take the following courses for the M.S. and as a basis for the Ph.D. preliminary examination.

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>CBEMS 210</td>

<td>Applied Engineering Mathematics I</td>
</tr>
<tr>
<td>CBEMS 240</td>
<td>Advanced Engineering Thermodynamics</td>
</tr>
</tbody>
</table>

**Electives**

Graduate advisors should be consulted on the selection of elective courses. All graduate courses offered in CBEMS are potential electives. Graduate-level courses offered in other Engineering departments and relevant graduate courses from other schools may also be taken as electives.

**Additional Information**

Students are required to consult the graduate student handbook for more specific details regarding the course, exam, and unit requirements.

**Master of Science Degree**

Two plans are available for the M.S. degree: a thesis option and a comprehensive examination option. Opportunities are available for part-time study toward the M.S.

**Plan I: Thesis Option**

For the M.S. thesis option, students are required to complete a research study of great depth and originality and obtain approval for a complete program of study. A minimum of 36 units is required for the M.S. The following are required: four required core courses, three quarters of CBEMS 298 (Department Seminar), five additional graduate elective courses numbered 200–289 (or 200–295 if offered by other departments), related to their field of graduate studies, and approved by the graduate advisor. Up to two of these elective courses can be substituted by up to eight units of CBEMS 296 (M.S. Thesis Research), and one of the elective courses may be substituted by an upper-division undergraduate elective course approved by the CBE graduate advisor.

Full-time graduate students must enroll in the departmental seminar each quarter during their first year unless exempt by petition.
Plan II: Comprehensive Examination Option
For the comprehensive examination option, students are required to complete 36 units of study and a comprehensive examination. The following are required: four required core courses, three quarters of CBEMS 298 (Department Seminar), five additional graduate elective courses numbered 200–289 (or 200–295 if offered by other departments), related to their field of graduate studies, and approved by the graduate advisor. One of the elective courses may be substituted by an upper-division undergraduate elective course approved by the CBE graduate advisor. Research units (CBEMS 296/CBEMS 299) do not count towards the degree requirements of the Comprehensive Exam Option.

Full-time graduate students must enroll in the departmental seminar each quarter during their first year unless exempt by petition.
In addition to fulfilling the course requirements outlined above, it is a University requirement for the Master of Science degree that students fulfill a minimum of 36 units of study.

Doctor of Philosophy Degree
The Ph.D. in Chemical and Biochemical Engineering requires a commitment on the part or the student to dedicated study and collaboration with the faculty. Ph.D. students are selected on the basis of outstanding demonstrated potential and scholarship. Applicants must hold the appropriate prerequisite degrees from recognized institutions of high standing. After substantial preparation, Ph.D. candidates work under the supervision of faculty advisors. The process involves extended immersion in a research atmosphere and culminates in the production of original research results presented in a dissertation.

Milestones to be passed in the Ph.D. program in order to remain in good standing include the following: acceptance into a research group by the faculty advisor at the end of the student’s first year of study; successful completion of the Ph.D. preliminary examination by the end of the second year; preparation for pursuing research and the development of a research proposal culminating in passing the Qualifying Examination by the end of the third year of the Ph.D. program. The Qualifying Examination includes faculty evaluation of a written research dossier and an oral presentation. Students must advance to candidacy in their third year (second year for students who entered with a master’s degree).

The core course requirements for the Ph.D. are the same as for the M.S. Students must enroll in the departmental seminar each quarter during their first year unless exempt by petition. Ph.D. students must take two additional elective courses beyond the M.S. requirements. These courses are to be taken after the first year of graduate work, should be relevant to the Ph.D. dissertation topic, and must be selected in consultation with the research advisor and approved by the CBE graduate advisor. The preliminary examination is based on the four core courses and the ability of the student to comprehend and present a research paper. M.S. students who have completed a CBE M.S. degree elsewhere must have a written approval by the graduate advisor to waive required CBE core courses, if they have taken the equivalent courses elsewhere.

Final examination involves the oral presentation and defense of an acceptable dissertation in a seminar attended by students and faculty. The Ph.D. is granted upon the recommendation of the Doctoral Committee and the Dean of the Graduate Division. The normative time for completion of the Ph.D. is five years (four years for students who entered with a master’s degree). The maximum time permitted is seven years.

Relationship of M.S. and Ph.D. Programs
Students applying with the objective of a Ph.D. are admitted to the M.S./Ph.D. program only if they are likely to successfully complete a Ph.D. program. These students do not formally re-apply to the Ph.D. program after completing the M.S. Students who apply to the M.S.-only program must petition for the Ph.D. program if they desire to continue on for the Ph.D. Financial support is usually reserved for those students who plan to complete the Ph.D. The normative time to complete M.S. and Ph.D. degrees is two and five years, respectively.

Graduate Study in Materials Science and Engineering
Materials Science and Engineering focuses on the development of new materials and new applications for materials in engineering. Current research programs include nanomaterials, nanostructures, nanoelectronics, nanodevices, nanocharacterization, device/system packaging materials, materials for fuel cells and related alternative energy systems, biocompatible materials, soft materials such as biological materials and polymeric materials, electronic and photonic materials, hybrid materials, interfacial engineering of materials, and multifunctional materials. Faculty with relevant research are affiliated with the Integrated Nanofabrication Research Facility (INRF), the National Fuel Cell Research Center (NFCRC), the California Institute for Telecommunications and Information Technology (Calit2), the Advanced Power and Energy Program (APEG), and the Laboratory for Electron and X-ray Instrumentation (LEXI), among others.

The MSE graduate degree program is hosted by the Department of Chemical Engineering and Materials Science (ChEMS). Faculty who may serve as advisors are listed as affiliated with the ChEMS Department and include faculty with strong materials science and engineering research programs from other departments. The formal degree that is awarded upon successful completion of the program is either the M.S. or Ph.D. in Materials Science and Engineering.

Recommended Background
Given the nature of Materials Science and Engineering as a cross-disciplinary program, students having a background, and suitable training, in Materials, Engineering (Mechanical, Electrical, Civil, Chemical, Aerospace), and the Physical Sciences (Physics, Chemistry, Geology) are encouraged to participate. A student with an insufficient background may be required to take remedial undergraduate courses. Recommended background courses include an introduction to materials, thermodynamics, mechanical behavior, and electrical/optical/magnetic behavior.
Specific Fields of Emphasis
The Materials faculty at UCI have special interest and expertise in all areas of modern materials and technologies, including biomaterials, energy materials, advanced ceramics, polymers and nanocomposite materials, structural and nanostructured metallic materials, micro/nano-device materials, device/system packaging materials, and multifunctional materials.

Required Courses
Students are required to take one course from each area for the M.S. and as a basis for the Ph.D. preliminary examination.

Electives
Faculty advisors should be consulted on the selection of elective courses. All graduate courses offered in CBEMS are potential electives. Graduate-level courses offered in other Engineering departments and relevant graduate courses from other schools may also be taken as electives.

Master of Science Degree
The M.S. reflects achievement of an advanced level of competence for professional practice of materials science and engineering. Two options are available: a thesis option and a comprehensive examination option.

Plan I: Thesis Option
For the M.S. thesis option, students are required to complete a research study of great depth and originality and obtain approval for a complete program of study. A committee of three full-time faculty members is appointed to guide development of the thesis. A minimum of 36 units is required for the M.S.

For the thesis option, the following are required: four required core courses; three quarters of CBEMS 298 (Department Seminar), five additional graduate elective courses numbered 200–289 (or 200-295 if offered by other departments), related to their field of graduate studies, and approved by the graduate advisor. Up to two of these elective courses can be substituted by up to eight units of CBEMS 296 (M.S. Thesis Research), and one of these elective courses may be substituted by an upper-division undergraduate elective course approved by the MSE graduate advisor.

Full-time graduate students must enroll in the departmental seminar each quarter during their first year unless exempt by petition.

Plan II: Comprehensive Examination Option
For the comprehensive examination option, students are required to complete 36 units of study and a comprehensive examination.

The following are required: four required core courses; three quarters of CBEMS 298 (Department Seminar), and a minimum of five additional graduate elective courses numbered 200–289 (or 200-295 if offered by other departments), related to their field of graduate studies, and approved by the graduate advisor. One of the elective courses may be substituted by an upper-division undergraduate elective course approved by the MSE graduate advisor.

Research units (CBEMS 296/CBEMS 299) do not count towards the degree requirements of the Comprehensive Exam Option. Full-time graduate students must enroll in the departmental seminar each quarter during their first year unless exempt by petition.

In addition to fulfilling the course requirements outlined above, it is a University requirement for the Master of Science degree that students fulfill a minimum of 36 units of study.

Doctor of Philosophy Degree
The Ph.D. in Materials Science and Engineering requires a commitment on the part of the student to dedicated study and collaboration with the faculty. Ph.D. students are selected on the basis of outstanding demonstrated potential and scholarship. Faculty

Nancy A. Da Silva, Ph.D. California Institute of Technology, Professor of Chemical Engineering and Materials Science; Biomedical Engineering (molecular biotechnology)

James Earthman, Ph.D. Stanford University, Professor of Chemical Engineering and Materials Science; Biomedical Engineering (biomaterials, dental and orthopaedic implants, green materials, nanocrystalline alloys, deformation and damage processes)

Alon A. Gorodetsky, Ph.D. California Institute of Technology, Assistant Professor of Chemical Engineering and Materials Science; Chemistry (organic photovoltaics, electrical biosensors, nanotechnology, DNA, materials chemistry)

Allon I. Hochbaum, Ph.D. University of California, Berkeley, Assistant Professor of Chemical Engineering and Materials Science; Chemistry (nanoscale materials and hybrid bio-inorganic devices for applications in clean energy)

Juan Hong, Ph.D. Purdue University, Professor Emeritus of Chemical Engineering and Materials Science

Enrique Lavernia, Ph.D. Massachusetts Institute of Technology, UCI Provost and Distinguished Professor of Chemical Engineering and Materials Science (nanostructured materials, additive manufacturing, powder metallurgy, mechanical behavior)

Han Li, Ph.D. University of California, Los Angeles, Assistant Professor of Chemical Engineering and Materials Science (synthetic biology, microbiology, protein engineering, fermentation and microbial production processes)

Henry C. Lim, Ph.D. Northwestern University, Professor Emeritus of Chemical Engineering and Materials Science

Martha L. Mecartney, Ph.D. Stanford University, Professor of Chemical Engineering and Materials Science (ceramics for energy applications and for use in extreme environments, interfacial design for enhanced physical properties, transmission electron microscopy)

Farghali A. Mohamed, Ph.D. University of California, Berkeley, Professor Emeritus of Chemical Engineering and Materials Science (mechanical behavior of engineering materials such as metals, composites and ceramics, the correlation between behavior and microstructure, creep and superplasticity, mechanisms responsible for strengthening and fracture)

Ali Mohraz, Ph.D. University of Michigan, Associate Professor of Chemical Engineering and Materials Science (understand and exploit colloidal interactions, chemistry, assembly, and response to external fields to design microstructured materials with enhanced functionality for composites, biomimetic applications, alternative energy, environmental remediation)

Daniel R. Mumm, Ph.D. Northwestern University, Associate Professor of Chemical Engineering and Materials Science (development of materials for power generation systems, propulsion, integrated sensing, advanced vehicle concepts and platform protection)

Mikael Nilsson, Ph.D. Chalmers University of Technology, Associate Professor of Chemical Engineering and Materials Science; Chemistry (actinide chemistry, solvent extraction fundamental chemistry and process development, extraction and detection equipment development, radiolysis and phase composition of organic solvent)

Xiaqing Pan, Ph.D. Saarlandes University, Henry Samueli Endowed Chair and Professor of Chemical Engineering and Materials Science; Physics and Astronomy (transmission electron microscopy and materials science)

Regina Ragan, Ph.D. California Institute of Technology, Endowed Chair for the Center for Diversity in Engineering Education and Associate Professor of Chemical Engineering and Materials Science (exploration and development of novel material systems for nanoscale electronic and optoelectronic devices)
Elizabeth L. Read, Ph.D. University of California, Berkeley, Assistant Professor of Chemical Engineering and Materials Science; Molecular Biology and Biochemistry (dynamics of complex biochemical systems, regulation of immune responses)

Julie Schoenung, Ph.D. Massachusetts Institute of Technology, Professor of Chemical Engineering and Materials Science (materials selection, green engineering, materials processing and characterization, nanostructured materials, structure-property relationships)

Frank G. Shi, Ph.D. California Institute of Technology, Professor of Chemical Engineering and Materials Science (optoelectronic devices and materials, optoelectronic device packaging materials, optoelectronic medical devices and packaging, white LED technologies, high power LED packaging)

Vasan Venugopalan, ScD Massachusetts Institute of Technology, Department Chair and Professor of Chemical Engineering and Materials Science; Biomedical Engineering; Mechanical and Aerospace Engineering; Surgery (laser-induced thermal, mechanical and radiative transport processes for application in medical diagnostics, therapeutics, biotechnology, micro-electro-mechanical systems (MEMS))

Szu-Wen Wang, Ph.D. Stanford University, Professor of Chemical Engineering and Materials Science; Biomedical Engineering (combining principles of self-assembly with nature-inspired macromolecular systems to engineer new materials and therapeutic strategies)

Albert Fan Yee, Ph.D. University of California, Berkeley, Professor of Chemical Engineering and Materials Science; Biomedical Engineering; Chemistry (materials science aspects of polymers and soft materials, particularly on how they are used to impact nanotechnology)

**Affiliate Faculty**

Shane Ardo, Ph.D. Johns Hopkins University, Assistant Professor of Chemistry; Chemical Engineering and Materials Science (inorganic and organometallic, physical chemistry and chemical physics, polymer, materials, nanoscience)

Elliott L. Botvinick, Ph.D. University of California, San Diego, Associate Professor of Surgery; Biomedical Engineering; Chemical Engineering and Materials Science (laser microbeams, cellular mechanotransduction, mechanobiology)

Peter J. Burke, Ph.D. Yale University, Professor of Electrical Engineering and Computer Science; Biomedical Engineering; Chemical Engineering and Materials Science (nano-electronics, bio-nanotechnology)

Michelle Digman, Ph.D. University of Illinois at Chicago, Assistant Professor of Biomedical Engineering; Chemical Engineering and Materials Science; Developmental and Cell Biology (quantitative imaging techniques to study spatial-temporal dynamics of signaling protein networks in live cells and tissues)

Aaron P. Esser-Kahn, Ph.D. University of California, Berkeley, Associate Professor of Chemistry; Biomedical Engineering; Chemical Engineering and Materials Science (chemical biology, organic and synthetic, polymer, materials, nanoscience)

Stanley B. Grant, Ph.D. California Institute of Technology, Professor of Civil and Environmental Engineering; Chemical Engineering and Materials Science (environmental engineering, inland and coastal water quality, coagulation and filtration of colloidal contaminants, environmental microbiology)

Anna Grosberg, Ph.D. California Institute of Technology, Assistant Professor of Biomedical Engineering; Chemical Engineering and Materials Science (computational modeling of biological systems, biomechanics, cardiac tissue engineering)

Zhibin Guan, Ph.D. University of North Carolina at Chapel Hill, Professor of Chemistry; Biomedical Engineering; Chemical Engineering and Materials Science (chemical biology, organic and synthetic, polymer, materials, nanoscience)

Jered Haun, Ph.D. University of Pennsylvania, Assistant Professor of Biomedical Engineering; Chemical Engineering and Materials Science (nanotechnology, molecular engineering, computational simulations, targeted drug delivery, clinical cancer detection)

Michelle Khine, Ph.D. University of California, Berkeley, Professor of Biomedical Engineering; Chemical Engineering and Materials Science (development of novel nano- and micro-fabrication technologies and systems for single cell analysis, stem cell research, in-vitro diagnostics)

Young Jik Kwon, Ph.D. University of Southern California, Professor of Pharmaceutical Sciences; Biomedical Engineering; Chemical Engineering and Materials Science; Molecular Biology and Biochemistry (gene therapy, drug delivery, cancer-targeted therapeutics, combined molecular imaging and therapy, cancer vaccine)

Matthew Law, Ph.D. University of California, Berkeley, Associate Professor of Chemistry; Chemical Engineering and Materials Science (inorganic and organometallic, physical chemistry and chemical physics, polymer, materials, nanoscience)

Jae Ho Lee, Ph.D. Stanford University, Assistant Professor of Mechanical and Aerospace Engineering; Chemical Engineering and Materials Science (nanofabrication and thermoelectric energy conversion)

Guann-Pyng Li, Ph.D. University of California, Los Angeles, Director of the UCI Division of the California Institute for Telecommunications and Information Technology (Calit2), Director of the Integrated Nanosystems Research Facility and Professor of Electrical Engineering and Computer Science; Biomedical Engineering; Chemical Engineering and Materials Science (high-speed semiconductor technology, optoelectronic devices, integrated circuit fabrication and testing)
Enrollment. Materials Science Engineering Majors have first consideration for enrollment. Restriction: Chemical Engineering Majors have first consideration for enrollment. Environmental Engineering Majors have first consideration for enrollment.

Introduction to chemical engineering and the industries where chemical engineers play vital roles. Problem-solving skills and techniques. Quantitative calculations and applications using mass and energy balances. Stoichiometric equations, multiple bypasses, and others in process industries.

Prerequisite: MATH 2B and CHEM 1B and PHYSICS 7C

(CBEMS 45A. Chemical Processing and Materials Balances. 4 Units.

Introduction to chemical engineering and the industries where chemical engineers play vital roles. Problem-solving skills and techniques. Quantitative calculations and applications using mass and energy balances. Stoichiometric equations, multiple bypasses, and others in process industries.

(Design units: 0)

Prerequisite: MATH 2B and CHEM 1B and PHYSICS 7C

Restriction: Chemical Engineering Majors have first consideration for enrollment. Environmental Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.

Chemical Engr and Materials Sci Courses

CBEMS 45A. Chemical Processing and Materials Balances. 4 Units.

Introduction to chemical engineering and the industries where chemical engineers play vital roles. Problem-solving skills and techniques. Quantitative calculations and applications using mass and energy balances. Stoichiometric equations, multiple bypasses, and others in process industries.

(Design units: 0)

Prerequisite: MATH 2B and CHEM 1B and PHYSICS 7C

Restriction: Chemical Engineering Majors have first consideration for enrollment. Environmental Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.
CBEMS 45B. Chemical Processing and Energy Balances. 3 Units.
Principles of thermodynamics: definitions, basic concepts, and laws; property relationships; construction of thermodynamic charts and tables; energy balances; phase and chemical equilibria; combined mass and energy balances.

(Design units: 0)
Prerequisite: (CBEMS 45A or PHYSICS 7E) and MATH 3A. CBEMS 45A with a grade of C- or better
Overlaps with ENGRMAE 91, CBEMS 65A.
Restriction: Chemical Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.

CBEMS 45C. Chemical Engineering Thermodynamics. 4 Units.
Elements of chemical engineering thermodynamics, including equilibrium and stability; equations of state; generalized correlations of properties of materials; properties of ideal and non-ideal mixtures; thermodynamics of real solutions; ideal and non-ideal phase equilibria; chemical equilibria for ideal and non-ideal solutions.

(Design units: 1)
Prerequisite: (EECS 10 or ENGRMAE 10) and MATH 2D and CBEMS 45B. CBEMS 45B with a grade of C- or better
Overlaps with ENGRMAE 115, CBEMS 65B.
Restriction: Chemical Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.

CBEMS 50L. Principles of Materials Science and Engineering. 2 Units.
Introduction to the experimental techniques to characterize the properties of engineering materials. Emphasis on understanding the influence of microstructure on elastic, plastic, and fracture behavior. Topics include microstructure characterization, heat treatment, grain size effect, precipitation hardening, and impact loading. Materials fee.

(Design units: 0)
Corequisite: ENGR 54
Restriction: Materials Science Engineering Majors have first consideration for enrollment.

CBEMS 65A. Thermodynamics of Materials. 4 Units.
Treatment of the laws of thermodynamics and their application in understanding properties and equilibrium states of engineering materials. Develops relationships pertaining to multiphase equilibrium and presents graphical constructions for interpretation of phase diagrams. Statistical thermodynamics in relation to materials phenomena.

(Design units: 0)
Prerequisite: (ENGR 1A or CHEM 1A) and PHYSICS 7C
Overlaps with CBEMS 45B, ENGRMAE 91.
Restriction: Materials Science Engineering Majors have first consideration for enrollment.

CBEMS 65B. Diffusion in Materials. 4 Units.

(Design units: 0)
Prerequisite: CBEMS 65A. CBEMS 65A with a grade of C- or better
Overlaps with CBEMS 45C, ENGRMAE 115.
Restriction: Materials Science Engineering Majors have first consideration for enrollment.
CBEMS 110. Reaction Kinetics and Reactor Design. 4 Units.
Introduction to quantitative analysis of chemical reactions and chemical reactor design. Reactor operations including batch, continuous stirred tank, and tubular reactor. Homogeneous and heterogeneous reactions.

(Design units: 2)
Prerequisite: CHEM 1C and MATH 3D and CBEMS 45B and CBEMS 45C. CBEMS 45B with a grade of C- or better. CBEMS 45C with a grade of C- or better

Restriction: Chemical Engineering Majors have first consideration for enrollment. Mechanical Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.

CBEMS 112. Introduction to Biochemical Engineering. 3 Units.
Application of engineering principles to biochemical processes. Topics include microbial pathways, energetics and control systems, enzyme and microbial kinetics and the design and analysis of biological reactors.

(Design units: 1)
Prerequisite: CBEMS 110 and CHEM 1C and MATH 3D

Restriction: Chemical Engineering Majors have first consideration for enrollment.

CBEMS 115. Kinetics of Biochemical Networks. 4 Units.
Principles from statistical mechanics, thermodynamics, and chemical kinetics applied to biochemical systems, from fundamental processes such as receptor-ligand binding and enzyme catalysis, to complex cellular functions including signal transduction and gene regulation.

(Design units: 0)
Restriction: Upper-division students only.

Concurrent with CBEMS 215.

CBEMS 119. Biomaterials: Structural Biology and Assembly. 4 Units.
Application of fundamental concepts in structural biology (proteins, DNA/RNA, carbohydrates, lipids), biomolecular thermodynamics, and molecular interactions to the design of novel biomaterials via self-assembly.

(Design units: 0)
Prerequisite: CBEMS 45C and CBEMS 110

Restriction: Chemical Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.

Concurrent with CBEMS 219.

CBEMS 125A. Momentum Transfer. 4 Units.
Fluid statics, surface tension, Newton's law of viscosity, non-Newtonian and complex flows, momentum equations, laminar and turbulent flow, velocity profiles, flow in pipes and around objects, piping systems design, pumps and mixing, and other applications to chemical and related industries.

(Design units: 0)
Prerequisite: (CBEMS 45C or CBEMS 65B) and MATH 3D. CBEMS 45C with a grade of C- or better. CBEMS 65B with a grade of C- or better

Overlaps with ENGRMAE 130A, ENGRCEE 170.

Restriction: Chemical Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.
CBEMS 125B. Heat Transfer. 3 Units.
Principles of conduction, radiation, and convection of heat; phenomenological rate laws, differential and macroscopic energy balances; heat transfer rates, steady state and unsteady state conduction, convection; applications to chemical and related industries.

(Design units: 1)
Prerequisite: CBEMS 125A. CBEMS 125A with a grade of C- or better
Overlaps with CBEMS 120B, ENGRMAE 120.
Restriction: Chemical Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.

CBEMS 125C. Mass Transfer. 3 Units.
Molecular and continuum approaches to diffusion and convection in multi-component mixtures; steady state, quasi-steady state and transient mass transfer; effect of reactions on mass transfer; convective mass transfer; simultaneous mass, heat and momentum transfer; applications to chemical and related industries.

(Design units: 1)
Prerequisite: CBEMS 125B
Overlaps with BME 150.
Restriction: Chemical Engineering Majors have first consideration for enrollment.

CBEMS 128. Introduction to Numerical Methods in Engineering. 3 Units.
An introduction to the fundamentals of numerical analysis and the computer algorithms in MATLAB for the solution of engineering problems, with emphasis on problems arising in chemical engineering thermodynamics, transport phenomena, and reaction engineering.

(Design units: 0)
Prerequisite: CBEMS 45C

CBEMS 130. Separation Processes. 4 Units.
Application of equilibria and mass and energy balances for design of separation processes. Use of equilibrium laws for design of distillation, absorption, stripping, and extraction equipment. Design of multicomponent separators.

(Design units: 3)
Prerequisite: (CBEMS 45B or CBEMS 65A or ENGRMAE 91) and (CBEMS 45C or CBEMS 65B or ENGRMAE 115). CBEMS 45B with a grade of C- or better. CBEMS 65A with a grade of C- or better. ENGRMAE 91 with a grade of C- or better. CBEMS 45C with a grade of C- or better. CBEMS 65B with a grade of C- or better. ENGRMAE 115 with a grade of C- or better.
Restriction: Chemical Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.

CBEMS 133. Nuclear and Radiochemistry. 4 Units.
Advanced treatment of nuclear structure, nuclear reactions, and radioactive-decay processes. Introduction to nuclear activation analysis, isotope effects, radiation chemistry, hot-atom chemistry, nuclear age-dating methods, nuclear reactors, and nuclear power.

(Design units: 0)
Prerequisite: (CHEM M3C or CHEM 1C or CHEM H2C) and MATH 2D
Same as CHEM 133.
Overlaps with CHEM 170.
Restriction: Chemistry Majors have first consideration for enrollment. Chemical Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment. CHEM 133 and CHEM 170 cannot both be taken for credit.

Concurrent with CBEMS 233 and CHEM 233.
CBEMS 135. Chemical Process Control. 4 Units.
Dynamic responses and control of chemical process equipment, dynamic modeling of chemical processes, linear system analysis, analyses and design of feedback loops and advanced control systems.

(Design units: 1)
Prerequisite: CBEMS 110 and CBEMS 125B and CBEMS 125C
Restriction: Chemical Engineering Majors have first consideration for enrollment.

CBEMS 140A. Chemical Engineering Laboratory I. 4 Units.
Experimental study of thermodynamics, fluid mechanics, and heat and mass transfer. Operation and evaluation of process equipment, data analysis. Materials fee.

(Design units: 1)
Prerequisite: CBEMS 110 and (CBEMS 125C or BME 150)
Restriction: Chemical Engineering Majors have first consideration for enrollment.

CBEMS 140B. Chemical Engineering Laboratory II. 4 Units.
Continuation of the CBEMS 140A covering mass transfer operations such as distillation, absorption, extraction, etc. Rate and equilibria studies in simple chemical systems with and without reaction. Study of chemical process. Materials fee.

(Design units: 3)
Prerequisite: CBEMS 130 and CBEMS 135 and CBEMS 140A
Restriction: Chemical Engineering Majors have first consideration for enrollment.

CBEMS 141. Nano-Scale Materials and Applications. 4 Units.
Overview of the chemistry, physics, and applications of nanometer-scale materials. Explore the effects of composition, bonding, and confinement on physical properties of nanomaterials, their chemical syntheses, and their device physics in electronic, optoelectronic, and energy technologies.

(Design units: 1)
Prerequisite: (ENGR 1A or CHEM 1A) and MATH 2B and PHYSICS 7D
Concurrent with CBEMS 241.

CBEMS 143. Chemistry and Technology for the Nuclear Fuel Cycle. 4 Units.
Introduces basic concepts of nuclear chemistry and focuses on chemical engineering aspects of the nuclear power industry. A broad survey of the nuclear fuel cycle (uranium processing, reactor concepts, spent fuel treatment and repositories) will be given.

(Design units: 0)
Concurrent with CBEMS 243.

CBEMS 149A. Chemical Engineering Design I. 3 Units.
Introduction to process design; flow sheets for chemical processes; synthesis of multicomponent separation sequences and reaction paths; synthesis of heat exchange networks; computer-aided design and simulation of processes and components pacts.

(Design units: 2)
Prerequisite: CBEMS 110 and CBEMS 125C and CBEMS 130
Restriction: Chemical Engineering Majors only.

CBEMS 149B. Chemical Engineering Design II. 3 Units.
Application of chemical engineering basics to practical design problems; process economics; process safety; environmental impacts; a major team design project with progress reports, oral presentation, and technical report with engineering drawings and economics.

(Design units: 3)
Prerequisite: CBEMS 149A
Restriction: Chemical Engineering Majors only.
CBEMS 154. Polymer Science and Engineering. 4 Units.
An introduction to physical aspects of polymers, including configuration and conformation of polymer chains and characterization techniques; crystallinity, viscoelasticity, mechanical properties, polymer alloys, processing, and application.

(Design units: 1)
Prerequisite: ENGR 54 and (CBEMS 110 or CBEMS 165)
Restriction: Chemical Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.
Concurrent with ENGRMSE 254.

CBEMS 155. Mechanical Behavior and Design Principles. 4 Units.
Principles governing structure and mechanical behavior of materials, relationship relating microstructure and mechanical response with application to elasticity, plasticity, yielding, necking, creep, and fracture of materials. Introduction to experimental techniques to characterize the properties of materials. Design parameters.

(Design units: 2)
Prerequisite: ENGR 54
Same as ENGRMAE 156.
Restriction: Chemical Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment. Mechanical Engineering Majors have first consideration for enrollment.

CBEMS 155L. Mechanical Behavior Laboratory. 1 Unit.
Introduction to experimental techniques to characterize mechanical properties of materials. Emphasis on correlations between property and microstructure. Experiments include: plastic stability in tension, effect of grain size on flow stress, microstructural engineering. Materials fee.

(Design units: 0)
Corequisite: CBEMS 155
Prerequisite: ENGR 54
Restriction: Materials Science Engineering Majors have first consideration for enrollment.

CBEMS 158. Ceramic Materials. 3 Units.
A technical elective for students interested in the materials area. Topics covered include structure and properties of ceramics, and design with ceramics.

(Design units: 1)
Prerequisite: ENGR 54
Restriction: Chemical Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.

CBEMS 160. Advanced Lab in Synthesis of Materials. 4 Units.
Synthesis and characterization of organic and inorganic materials including polymers and oxides. Techniques include electron and scanning probe microscopy, gel permeation chromatography, X-ray diffraction, porosimetry, and thermal analysis. Materials fee.

(Design units: 0)
Prerequisite: ENGR 54 or (CHEM 131A and CHEM 131B)
Restriction: Materials Science Engineering Majors have first consideration for enrollment.

CBEMS 163. Computer Techniques in Experimental Research. 4 Units.
Principles and practical guidelines of automated materials testing. Computer fundamentals, programming languages, data acquisition and control hardware, interfacing techniques, programming strategies, data analysis, data storage, safeguard procedures.

(Design units: 1)
Restriction: Chemical Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.
Concurrent with ENGRMSE 263.
CBEMS 164. X-ray Diffraction, Electron Microscopy, and Microanalysis. 3 Units.
Material characterization using X-ray diffraction and scanning electron microscopy (SEM). Topics include X-ray diffraction and analysis; SEM imaging and microanalysis. Materials fee.

(Design units: 1)
Corequisite: CBEMS 164L
Prerequisite: ENGR 54

Restriction: Materials Science Engineering Majors have first consideration for enrollment.

CBEMS 164L. X-ray Diffraction, Electron Microscopy, and Microanalysis Lab. 2 Units.
Material characterization using X-ray diffraction and scanning electron microscopy (SEM). Topics include X-ray diffraction and analysis; SEM imaging and microanalysis.

(Design units: 1)
Corequisite: CBEMS 164
Prerequisite: ENGR 54

Restriction: Materials Science Engineering Majors have first consideration for enrollment.

CBEMS 165. Materials Kinetics and Phase Transformations. 3 Units.
Treatment of the kinetics of solid-state reactions and reactions at interfaces. Thermodynamics and kinetics of phase transformations, including solidification processes, diffusional and diffusionless phase transformations.

(Design units: 0)
Prerequisite: ENGR 54 and (ENGRAE 91 or CBEMS 45C or CBEMS 65B). ENGRMAE 91 with a grade of C- or better. CBEMS 45C with a grade of C- or better. CBEMS 65B with a grade of C- or better

Restriction: Materials Science Engineering Majors have first consideration for enrollment.

CBEMS 169. Electronic and Optical Properties in Materials. 4 Units.
Covers the electronic, optical, and dielectric properties of crystalline and amorphous materials to provide a foundation of the underlying physical principles governing the properties of existing and emerging electronic and photonic materials.

(Design units: 1)
Prerequisite: PHYSICS 7D and PHYSICS 7E and MATH 3A and MATH 3D

Restriction: Materials Science Engineering Majors have first consideration for enrollment.

CBEMS 174. Semiconductor Device Packaging. 3 Units.
Introduction to the semiconductor device packaging and assembly process. Electrical, thermal, optical, and mechanical aspects of package design and reliability. Special topics on optoelectronics packaging will be covered.

(Design units: 1)
Prerequisite: CBEMS 45B

Restriction: Chemical Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.

CBEMS 175. Design Failure Investigation. 4 Units.
Survey of mechanisms by which devices fail, including overload, fatigue, corrosion, and wear. Use of fractography and other evidence to interpret failure modes and specify design/manufacturing changes. Students redesign failed parts or structures based on actual parts and/or case histories.

(Design units: 2)
Prerequisite: ENGR 54

Restriction: Chemical Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.
CBEMS 176. Surface and Adhesion Science. 4 Units.
Structure, thermodynamics of, kinetics, and reactions on surfaces. Surface electronic and mechanical properties and characterization of all classes of materials including metals, semiconductors, ceramics, polymers, and soft materials. Adhesion between different materials is also addressed.
Prerequisite: (CBEMS 110 or CBEMS 165) and (CBEMS 141 or CBEMS 169)
Restriction: Chemical Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.
Concurrent with ENGRMSE 276.

CBEMS 189A. Senior Design Project I. 3 Units.
Group supervised senior design projects that deal with materials selection in engineering design and that involve case studies in ethics, safety, design, failure modes, new products, and patents. Activities conclude with a presentation of the projects. Materials fee.

(Design units: 2)
Grading Option: In Progress (Letter Grade with P/NP).
Restriction: Seniors only. Materials Science Engineering Majors only. CBEMS 189A-CBEMS 189B-CBEMS 189C must be taken in the same academic year.

CBEMS 189B. Senior Design Project II. 3 Units.
Group supervised senior design projects that deal with materials selection in engineering design and that involve case studies in ethics, safety, design, failure modes, new products, and patents. Activities conclude with a presentation of the projects. Materials fee.

(Design units: 3)
Prerequisite: CBEMS 189A
Grading Option: In Progress (Letter Grade with P/NP).
Restriction: Seniors only. Materials Science Engineering Majors only. CBEMS 189A-CBEMS 189B-CBEMS 189C must be taken in the same academic year.

CBEMS 189C. Senior Design Project III. 3 Units.
Group supervised senior design projects that deal with materials selection in engineering design and that involve case studies in ethics, safety, design, failure modes, new products, and patents. Activities conclude with a presentation of the projects. Materials fee.

(Design units: 3)
Prerequisite: CBEMS 189B
Restriction: Seniors only. Materials Science Engineering Majors only. CBEMS 189A-CBEMS 189B-CBEMS 189C must be taken in the same academic year.

CBEMS 190. Materials Selection and Design. 4 Units.

(Design units: 3)
Restriction: Seniors only. Materials Science Engineering Majors have first consideration for enrollment.

CBEMS 191. Materials Outreach. 3 Units.
Demonstrates major concepts in Materials Science and Engineering. Concepts of materials engineering covered include deformation in crystalline solids, effects of heat treatment on mechanical properties, thermal barrier materials, composites design, mechanical behavior of polymers, superconductivity in ceramics.

(Design units: 1)
Prerequisite: ENGR 54
Repeatability: May be taken for credit 4 times.
Restriction: Chemical Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.
CBEMS 195. Special Topics in Chemical Engineering and Materials Science. 1-4 Units.
Studies in selected areas of Chemical Engineering and Materials Science. Topics addressed vary each quarter.

(Design units: 0)
Prerequisite: Prerequisites vary.
Repeatability: Unlimited as topics vary.

CBEMS 198. Group Study. 1-4 Units.
Group study of selected topics in engineering.

(Design units: 1-4)
Repeatability: May be repeated for credit unlimited times.
Restriction: Upper-division students only.

CBEMS 199. Individual Study. 1-4 Units.
For undergraduate engineering majors in supervised but independent readings, research, or design. Students taking individual study for design credit are to submit a written paper to the instructor and to the Undergraduate Student Affairs Office in the School of Engineering.

(Design units: 1-4)
Repeatability: May be taken for credit for 8 units.
Restriction: Chemical Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.

CBEMS 199P. Individual Study. 1-4 Units.
For undergraduate Engineering majors in supervised but independent reading, research, or design. Students taking individual study for design credit are to submit a written paper to the instructor and to the Undergraduate Student Affairs Office in The School of Engineering.

(Design units: 1-4)
Grading Option: Pass/no pass only.
Repeatability: May be repeated for credit unlimited times.

CBEMS 210. Reaction Engineering. 4 Units.
Advanced topics in reaction engineering, reactor stability analysis, diffusional effect in heterogeneous catalysis, energy balance, optimization of reactor operation, dispersed in phase reactors.

Restriction: Graduate students only.

CBEMS 215. Kinetics of Biochemical Networks. 4 Units.
Principles from statistical mechanics, thermodynamics, and chemical kinetics applied to biochemical systems, from fundamental processes such as receptor-ligand binding and enzyme catalysis, to complex cellular functions including signal transduction and gene regulation.

Restriction: Graduate students only.
Concurrent with CBEMS 115.

CBEMS 218. Bioengineering with Recombinant Microorganisms. 4 Units.
Engineering and biological principles important in recombinant cell technology. Host/vector selection; plasmid propagation; optimization of cloned gene expression; metabolic engineering; protein secretion; experimental techniques; modeling of recombinant cell systems.

Restriction: Graduate students only.

CBEMS 219. Biomaterials: Structural Biology and Assembly. 4 Units.
Application of fundamental concepts in structural biology (proteins, DNA/RNA, carbohydrates, lipids), biomolecular thermodynamics, and molecular interactions to the design of novel biomaterials via self-assembly.

Concurrent with CBEMS 119.
CBEMS 220. Transport Phenomena. 4 Units.
Heat, mass, and momentum transfer theory from the viewpoint of the basic transport equations. Steady and unsteady state; laminar and turbulent flow; boundary layer theory, mechanics of turbulent transport with specific application to complex chemical engineering situations.

Restriction: Graduate students only.

CBEMS 221. Drug Delivery. 4 Units.
Introduction to design of drug delivery systems. Includes physicochemical and pharmacokinetic considerations in drug formulations, types of therapeutics, routes of administration, biomaterials, and novel drug delivery systems.

CBEMS 228. Colloid Science and Engineering. 4 Units.
An introduction to the basic foundations of colloid science, interfacial phenomena, suspensions and complex fluids, and engineering and assembly of colloidal materials.

Restriction: Graduate students only.

Analytical techniques applied to engineering problems in transport phenomena, process dynamics and control, and thermodynamics.

Restriction: Graduate students only.

CBEMS 233. Nuclear and Radiochemistry. 4 Units.
Advanced treatment of nuclear structure, nuclear reactions, and radioactive-decay processes. Introduction to nuclear activation analysis, isotope effects, radiation chemistry, hot-atom chemistry, nuclear age-dating methods, nuclear reactors, and nuclear power.

Same as CHEM 233.

Restriction: Graduate students only.

Concurrent with CBEMS 133 and CHEM 133.

CBEMS 240. Advanced Engineering Thermodynamics. 4 Units.
Introduction to modern thermodynamics and applications, with a focus on aspects relevant to chemical and materials engineering. Mathematical tools; equilibrium and stability; microscopic rigorous equations of state; molecular-level thermodynamics of real mixtures; and phase and chemical equilibrium.

Restriction: Graduate students only.

CBEMS 241. Nano-Scale Materials and Applications. 4 Units.
Overview of the chemistry, physics, and applications of nanometer-scale materials. Explore the effects of composition, bonding, and confinement on physical properties of nanomaterials, their chemical syntheses, and their device physics in electronic, optoelectronic, and energy technologies.

Restriction: Graduate students only.

Concurrent with CBEMS 141.

CBEMS 242A. Physical and Geometrical Optics. 4 Units.
Focuses on the practical aspects of optics and optical engineering, starting at the fundamentals. Topics include geometrical optics, ray tracing, polarization optics, interferometers, and diffractive optics.

Same as CHEM 242A.

Restriction: Graduate students only.

Concurrent with PHYSICS 134A.

CBEMS 243. Chemistry and Technology for the Nuclear Fuel Cycle. 4 Units.
Introduces basic concepts of nuclear chemistry and focuses on chemical engineering aspects of the nuclear power industry. A broad survey of the nuclear fuel cycle (uranium processing, reactor concepts, spent fuel treatment and repositories) will be given.

Restriction: Graduate students only.

Concurrent with CBEMS 143.
CBEMS 244. Detection and Measurement of Radiation. 4 Units.
Basic principles of detection and measurement of ionizing radiation; both theory and practical aspects of measurement techniques for alpha, beta, gamma, and neutron radiation, properties of different detector materials, electronics and data treatments, and analysis.
Prerequisite: CHEM 233 or CBEMS 233
Same as CHEM 244.
Restriction: Graduate students only.

CBEMS 249. Special Topics in Chemical Engineering and Materials Science. 1-4 Units.
Studies in selected areas of Chemical Engineering and Materials Science. Topics addressed vary each quarter.
Prerequisite: Prerequisites vary.
Repeatability: Unlimited as topics vary.
Restriction: Graduate students only.

CBEMS 268. Seminar in Systems Microbiology Research. 1 Unit.
A research and journal club seminar that covers topics on bacteria and phage using approaches and principles from biology, engineering, and physics.
Grading Option: Satisfactory/unsatisfactory only.
Repeatability: May be repeated for credit unlimited times.
Same as PHYSICS 268, MOL BIO 268.
Restriction: Upper-division students only. Graduate students only.

CBEMS 280. Optoelectronics Packaging. 4 Units.
Basic and current issues in the packaging of integrated circuits (IC) and fiber-optic devices are discussed.
Restriction: Graduate students only.

CBEMS 295. Seminars in Engineering. 1-4 Units.
Seminars scheduled each year by individual faculty in major field of interest.
Grading Option: Satisfactory/unsatisfactory only.
Repeatability: Unlimited as topics vary.
Restriction: Graduate students only.

CBEMS 296. Master of Science Thesis Research. 1-16 Units.
Individual research or investigation conducted in preparation for the thesis required for the M.S. degree.
Repeatability: May be repeated for credit unlimited times.
Restriction: Graduate students only.

CBEMS 297. Doctor of Philosophy Dissertation Research. 1-16 Units.
Individual research or investigation conducted in preparation for the dissertation required for the Ph.D. degree.
Repeatability: May be repeated for credit unlimited times.
Restriction: Graduate students only.

CBEMS 298. Seminars in Engineering. 2 Units.
Presentation of advanced topics and reports of current research efforts in chemical engineering and materials science.
Grading Option: Satisfactory/unsatisfactory only.
Repeatability: May be repeated for credit unlimited times.
Restriction: Graduate students only.
CBEMS 299. Individual Research. 1-16 Units.
Individual research or investigation under the direction of an individual faculty member.

Grading Option: Satisfactory/unsatisfactory only.
Repeatability: May be repeated for credit unlimited times.
Restriction: Graduate students only.

**Chem Engr and Materials Sci Courses**

**ENGRMSE 200. Crystalline Solids: Structure, Imperfections, and Properties. 4 Units.**
Principles and concepts underlying the study of advanced materials including alloys, composites, ceramics, semiconductors, polymers, ferroelectrics, and magnetics. Crystal structure and defects, surface and interface properties, thermodynamics and kinetics of phase transformations, and material processing, related to fundamental material properties.

Restriction: Graduate students only.

**ENGRMSE 205. Materials Physics. 4 Units.**
Covers the electronic, optical, and dielectric properties of crystalline materials to provide a foundation of the underlying physical principles of governing the properties of existing and emerging electronic and photonic materials.

Restriction: Graduate students only.

**ENGRMSE 254. Polymer Science and Engineering. 4 Units.**
An introduction to physical aspects of polymers, including configuration and conformation of polymer chains and characterization techniques; crystallinity, viscoelasticity, rheology and processing.

Restriction: Graduate students only.

Concurrent with CBEMS 154.

**ENGRMSE 255A. Design with Ceramic Materials. 4 Units.**

Prerequisite: ENGR 54
Restriction: Graduate students only.

**ENGRMSE 256A. Mechanical Behavior of Engineering Materials. 4 Units.**
Principles governing structure and mechanical behavior of materials, relationship relating microstructure and mechanical response with application to elasticity, plasticity, creep, and fatigue, study of rate-controlling mechanisms and failure modes, fracture of materials.

Restriction: Graduate students only.

**ENGRMSE 259. Transmission Electron Microscopy. 4 Units.**
The theory and operation of the transmission electron microscope (TEM), including the basic construction, electron optics, electron diffraction and reciprocal space, formation of image and electron diffraction information, microanalysis, and specimen preparation.

Prerequisite: ENGRMSE 200
Restriction: Graduate students only.

**ENGRMSE 261. High Temperature Deformation of Engineering Materials. 4 Units.**
Theoretical and practical aspects of creep and superplasticity in metallic and non-metallic systems are presented. Topics include: creep testing methods, diffusional creep, deformation mechanism maps, and superplasticity in non-metallics.

Restriction: Graduate students only.

**ENGRMSE 264. Scanning Electron Microscopy. 4 Units.**
The theory and operation of the scanning electron microscope (SEM) and X-ray microanalysis. Topics covered include the basic design and electron optics, electron beam - specimen interactions, image formation and interpretation, X-ray spectrometry, and other related topics and techniques.

Prerequisite: ENGRMSE 200
Restriction: Graduate students only.
ENGRMSE 265. Phase Transformations. 4 Units.
Advanced thermodynamics and kinetics of phase transformations and phase transitions.
Prerequisite: CBEMS 240
Restriction: Graduate students only.

ENGRMSE 273. Electroceramics & Solid State Electrochemical Systems. 4 Units.
Theory, underlying principles, experimental techniques, and applications of electroceramics and solid-state electrochemical systems. Links solid state physics, atomic structure, thermodynamics, defect chemistry, and transport processes to electrical properties of ceramics - spanning from insulators to fast-ion conductors and HT superconductors.
Prerequisite: ENGRMSE 200

Department of Civil and Environmental Engineering

C. Sunny Jiang, Department Chair
E4130 Engineering Gateway
949-824-5333

Overview
Civil Engineering is described as the art of sustainably harnessing the natural environment to meet human needs. The success of this endeavor is evident all around us. The arid plain which greeted the early settlers in Southern California has been transformed into a thriving regional community largely by the application of civil engineering.

The goal of the Civil Engineering curriculum is to prepare graduates for a career in practice, research, or teaching. At the undergraduate level a common core of fundamental subjects is provided, and students are required to specialize in their senior year. Specializations are offered in General Civil Engineering, Environmental Hydrology and Water Resource Engineering, Structural Engineering, and Transportation Systems Engineering. Graduate opportunities are in three major thrust areas: structural analysis, design, and reliability; transportation systems engineering; and water resources and environmental engineering.

The career opportunities in civil engineering are varied. Graduates may look forward to long-term careers in major corporations, public bodies, the military, private consulting firms, or to being self-employed in private practice. History has shown a civil engineering education to be a good ground for many administrative and managerial positions.

Environmental Engineering involves designing environmental protection or remediation strategies for multiple resources—water, air, and soil, often with combinations of physical, chemical, and biological treatment methods in the context of a complex regulatory framework.

The goal of the Environmental Engineering curriculum is to prepare graduates with a strong basic science background, particularly in chemistry and biology, and to provide students with a broad exposure to several environmental engineering science disciplines. Courses relating to transport processes, water quality control, air quality control, and process design are included in the core.

Career opportunities in environmental engineering are diverse. Graduates generally find careers related to pollution control and the remediation of air, water, and soil environments.

On This Page:
- Civil Engineering (p. 699)
- Environmental Engineering (p. 703)

Undergraduate Major in Civil Engineering

Program Educational Objectives: Graduates of the Civil Engineering program will (1) establish a Civil Engineering career in industry, government, or academia and achieve professional licensure as appropriate; (2) demonstrate excellence and innovation in engineering problem solving and design in a global and societal context; (3) commit to lifelong learning and professional development to stay current in technology and contemporary issues; and (4) take on increasing levels of responsibility and leadership in technical and/or managerial roles. (Program educational objectives are those aspects of engineering that help shape the curriculum; achievement of these objectives is a shared responsibility between the student and UCI.)

The curriculum provides the opportunity to obtain a firm foundation in engineering science and to develop the techniques of analysis and design, which are basic for the successful practitioner. Emphasis is placed on developing problem-solving skills.
Admissions

High School Students: See School Admissions (p. 564) information.

Transfer Students: Preference will be given to junior-level applicants with the highest grades overall, and who have satisfactorily completed the following required courses: two years of approved calculus, one year of calculus-based physics with laboratories (mechanics, electricity and magnetism), completion of lower-division writing, one year of general chemistry (with laboratory), one course in introductory programming, statics, and engineering graphics. For course equivalency specific to each college, see assist.org (http://catalogue.uci.edu/thehenrysamuelischoolofengineering/departmentofcivilandenvironmentalengineering/assist.org).

Students are encouraged to complete as many of the lower-division degree requirements as possible prior to transfer. Students who enroll at UCI in need of completing lower-division coursework may find that it will take longer than two years to complete their degrees. For further information, contact The Henry Samueli School of Engineering at 949-824-4334.

Requirements for the B.S. in Civil Engineering
All students must meet the University Requirements (p. 91).
All students must meet the School Requirements (p. 564).

**Engineering Professional Topics Courses:**

- ECON 20A-20B: Basic Economics I and Basic Economics II
- ENGR 190W: Communications in the Professional World
- ENGRCEE 60: Contemporary and Emerging Environmental Challenges or SOCECOL E8: Introduction to Environmental Analysis and Design

**Specialization Electives:**

Students must select one of the areas of specialization and complete the associated requirements, as shown below. Students select, with the approval of a faculty advisor, any additional engineering topics courses needed to satisfy school and departmental requirements.

**Specialization in General Civil Engineering:**

Requires four courses, at least one course each from three of the following four options:

1. Select one:
   - ENGRCEE 122: Transportation Systems II: Operations & Control
   - ENGRCEE 123: Transportation Systems III: Planning and Forecasting

2. Select one:
   - ENGRCEE 152: Computer Methods in Structural Analysis and Design
   - ENGRCEE 155: Structural Steel Design
   - ENGRCEE 156: Foundation Design

3. Select one:
   - ENGRCEE 163: Wastewater Treatment Process Design
   - ENGRCEE 165: Physical-Chemical Treatment Processes
   - ENGRCEE 169: Environmental Microbiology for Engineers

4. Select one:
   - ENGRCEE 172: Groundwater Hydrology
   - ENGRCEE 173: Watershed Modeling
   - ENGRCEE 176: Hydrology
   - ENGRCEE 178: Fluid Mechanics of Open Channels

**Specialization in Environmental Hydrology and Water Resources:**

Select four of the following:

- ENGRCEE 163: Wastewater Treatment Process Design
- ENGRCEE 164: Carbon and Energy Footprint Analysis
- ENGRCEE 165: Physical-Chemical Treatment Processes
- ENGRCEE 172: Groundwater Hydrology
- ENGRCEE 173: Watershed Modeling
- ENGRCEE 176: Hydrology
- ENGRCEE 178: Fluid Mechanics of Open Channels

or courses from an approved list

**Specialization in Structural Engineering:**
ENGRCEE 155
Select three of the following:

- ENGRCEE 149: Introduction to Earthquake Engineering
- ENGRCEE 151B: Structural Timber Design
- ENGRCEE 152: Computer Methods in Structural Analysis and Design
- ENGRCEE 156: Foundation Design
- ENGRMAE 155: Composite Materials and Structures
- ENGRMAE 157: Lightweight Structures

or courses from an approved list

Specialization in Transportation Systems Engineering:

ENGRCEE 122: Transportation Systems II: Operations & Control
ENGRCEE 123: Transportation Systems III: Planning and Forecasting

Select two of the following:

- EECS 70A: Network Analysis I
(EECS 70A may not be used in this Specialization if used for a Lower-Division Technical Elective.)
- ENGRCEE 124: Transportation Systems IV: Freeway Operations and Control
- ENGRMAE 170: Introduction to Control Systems
- ENGRMAE 171: Digital Control Systems

or courses from an approved list

* ENGR 7A-ENGR 7B is available only to first year students in Fall and Winter quarters. Both ENGR 7A-ENGR 7B must be taken to be counted as one Lower-Division Technical Elective.

In addition, students must aggregate a minimum of 22 design units. Design unit values are indicated at the end of each course description. The faculty advisors and the Student Affairs Office can provide necessary guidance for satisfying the design requirements.

(The nominal Civil Engineering program will require 185 units of courses depending on specialization to satisfy all university and major requirements. Because each student comes to UCI with a different level of preparation, the actual number of units will vary.)

At most an aggregate total of 6 units of 199 or H199 courses may be used to satisfy degree requirements.

Students must obtain approval for their program of study and must see their faculty advisor at least once each year.

The sample program of study chart shown is typical for the accredited major in Civil Engineering. Students should keep in mind that this program is based upon a rigid set of prerequisites, beginning with adequate preparation in high school mathematics, physics, and chemistry. Therefore, the course sequence should not be changed except for the most compelling reasons. (Students who select the Environmental Engineering specialization within the Civil Engineering major should follow the Civil Engineering sample program.) Students must have their programs approved by their faculty advisor. Civil Engineering majors must consult at least once every year with the academic counselors in the Student Affairs Office and with their faculty advisors.

Undergraduate Major in Environmental Engineering

Program Educational Objectives: Graduates of the Environmental Engineering program will (1) establish an Environmental Engineering career in industry, government, or academia and achieve professional licensure as appropriate; (2) demonstrate excellence and innovation in engineering problem solving and design in a global and societal context; (3) commit to lifelong learning and professional development to stay current in technology and contemporary issues; and (4) take on increasing levels of responsibility and leadership in technical and/or managerial roles. (Program educational objectives are those aspects of engineering that help shape the curriculum; achievement of these objectives is a shared responsibility between the student and UCI.)

The curriculum includes a core of mathematics, physics, chemistry, and biology, as well as engineering mechanics and methods courses. Students may select from a variety of environmental engineering courses to fulfill the remaining portion of the program and to focus their environmental engineering training in one or more of the following areas: water supply and resources, waste water management, or atmospheric systems and air pollution control. Design experiences are integrated into environmental engineering courses, and seniors enroll in a capstone design course.

Admissions

High School Students: See School Admissions (p. 564) information.

Transfer Students: Preference will be given to junior-level applicants with the highest grades overall, and who have satisfactorily completed the following required courses: two years of approved calculus, one year of calculus-based physics with laboratories (mechanics, electricity and magnetism), completion of lower-division writing, one year of general chemistry (with laboratory), one course in introductory programming, statics, and
Students are encouraged to complete as many of the lower-division degree requirements as possible prior to transfer. Students who enroll at UCI in need of completing lower-division coursework may find that it will take longer than two years to complete their degrees. For further information, contact The Henry Samueli School of Engineering at 949-824-4334.

On This Page:

- Civil Engineering (p. 706)
- Concentration in Environmental Engineering (p. 708)

Graduate Study in Civil Engineering

Civil Engineering addresses the technology of constructed environments and, as such, embraces a wide range of intellectual endeavors. The Department of Civil and Environmental Engineering focuses its graduate study and research program on three areas: Structural Engineering, including engineering mechanics, advanced composites, structural dynamics, earthquake engineering, and reliability and risk assessment; Transportation Systems Engineering, including traffic operations and management, advanced information technology applications, travel behavior, and transportation systems analysis; Hydrology and Water Resources Engineering, including hydrology, water resources, and remote sensing.

The Department offers the M.S. and Ph.D. in Civil Engineering.

At the point of application a student is required to identify a thrust area. Specifically, the three thrust areas that have been identified for the Civil Engineering Graduate program are: Structural Engineering, Transportation Systems Engineering, and Hydrology and Water Resources Engineering. Once admitted, an advisor will be assigned according to the thrust area a student has chosen. Financial support through research or teaching assistantships and a variety of fellowships and scholarships is available to qualified students.

Structural Engineering

The Structural Engineering area emphasizes the application of analytical, numerical, and experimental approaches to the investigation of constructed facilities and systems that support or resist various loads. The objective of the program is to prepare graduates for leadership positions in industry and academic institutions by providing an opportunity to learn state-of-the-art methodologies applied to significant structural engineering problems. Specific interests include sensors and structural health monitoring, composites for infrastructure applications, reliability and risk assessment of civil engineering systems, structural control, system identification and damage detection, performance-based earthquake engineering, soil-structure interaction, smart materials and structures, multi-scale mechanistic analysis, and sustainable green materials and infrastructural systems.

Transportation Systems Engineering

Among leading centers for transportation research, the Department of Civil and Environmental Engineering offers a graduate research area that is distinguished by its interdisciplinary approach to the study of current and emerging urban transportation issues and by its unique relationship with the UC Irvine Institute of Transportation Studies. The research area focuses on the planning, design, operation, and management of complex transportation systems. Emphasis is on the development of fundamental knowledge in engineering, systems analysis, modeling, and planning, combined with advanced computational techniques and information technologies, to address transportation problems affecting urban travel and goods movement.
Hydrology and Water Resources Engineering

This area focuses on the distribution and transport of water among and between land, atmosphere, and oceans, the supply of water for municipal, agricultural, and environmental uses, and water-related hazards such as flooding and drought. Mathematical and computational modeling is germane to research activity in this area as well as professional practice, so course work is designed to develop theory-based mathematical modeling skill, on the one hand, as well as computational modeling skill on the other. Course work emphasizes important fundamentals such as mass, energy and momentum conservation principles, applied to hydrologic systems, and also increasingly important remote sensing and information technologies. Interdisciplinary study is an important dimension to hydrology and water resources, particularly in the areas of water quality, ecology, infrastructure systems, technology, and policy. Consequently, students are encouraged to take courses in these areas.

Master of Science Degree

The M.S. reflects achievement of an advanced level of competence for the professional practice of civil engineering. Two plans are available to those working toward the M.S.: a thesis option and a course work option. Opportunities are available for part-time study toward the M.S. The Plan of Study for both options must be developed in consultation with a Faculty Advisor and approved by the Program Graduate Advisor.

Plan I: Thesis Option

The thesis option requires completion of 48 units of study (a maximum of ten of which can be taken for study in conjunction with the thesis research topic); the completion of an original research project; the writing of the thesis describing it; and review by a thesis committee. Of the 48 units, a minimum of 28 units must be in nonresearch, graduate-level approved engineering or related courses (numbered 200–289) with at least 16 of 28 units from the CEE Department. The remaining units may be earned as graduate-level course work, individual research, or upper-division undergraduate units (maximum ten units).

Plan II: Course Work Option

The course work option requires the completion of 48 units of study, at least 40 of which must be in nonresearch graduate-level approved engineering or related courses (numbered 200–289) with at least 28 of 40 units from the CEE Department. The remaining eight units may be earned as graduate-level course work, individual research, or upper-division undergraduate units.

NOTE: Students who entered prior to fall of 2012 should follow the course requirements outlined within the Catalogue of the year they entered. The change in number of units per course is not intended to change the course requirements for the degree nor to have any impact in the number of courses students are taking. As such, students will need to continue to meet the same high standards and plan of study requirements as previously required. Students will work with their advisor to create a plan of study encompassing the equivalent topical requirements, as well as the equivalent number of courses to the previous 36-unit requirement.

Concurrent Master's Degree Program with Planning, Policy, and Design

The Department of Civil and Environmental Engineering (CEE) and the Department of Planning, Policy, and Design (PPD) in the School of Social Ecology offer a concurrent degree program that allows students to earn both a master's in Civil Engineering (M.S.) and a master's in Urban and Regional Planning (M.U.R.P.) in two years (instead of more than three years if these degrees were pursued sequentially).

Requirements

The concurrent degree program requires 84 units of study and is organized around two tracks: (1) transportation systems, and (2) environmental hydrology and water resources. The program core comprises 15 graduate courses for the transportation systems track, and 13 graduate and two undergraduate courses for the environmental hydrology and water resources track.

Students choose between a thesis option and a comprehensive examination option. The thesis option requires completion of 48 units of study (a maximum of ten of which may be taken in conjunction with the thesis research); completion of an original research project and the writing of a thesis to describe it; completion of required core courses; and completion of enough units of approved electives to meet the total requirement of 48 units. The comprehensive examination option also requires completion of 48 units of study as well as a professional report, which represents a substantial piece of planning practice, as the capstone event. These units of study include core courses and enough units of approved electives to meet the total requirement of 48 units, with no redundancy of core courses in either CEE or PPD. Electives may include as many as ten units of independent study or approved undergraduate courses.

Undergraduates seeking admission to the concurrent master’s degree program should have a strong record of course work in disciplines related to civil engineering and urban planning, and they must meet the requirements for admission in both departments. Visit the Civil and Environmental Engineering Admissions Requirements (http://www.eng.uci.edu/dept/cee) and Planning, Policy and Design Admissions website (http://ppd.socceco.uci.edu/pages/admissions) for more information about these requirements.

Doctor of Philosophy Degree

The Ph.D. indicates attainment of an original and significant research contribution to the state-of-the-art in the candidate’s field, and an ability to communicate advanced engineering concepts. The doctoral program is tailored to the individual needs and background of the student. The detailed program of study for each Ph.D. student is formulated in consultation with a faculty advisor who takes into consideration the objectives and preparation of the candidate. The program of study must be approved by the faculty advisor and the Graduate Advisor of the Department.
There are no specific course requirements. Within this flexible framework, the School maintains specific guidelines that outline the milestones of a typical doctoral program. All doctoral students should consult the Civil Engineering program’s guidelines for details, but there are several milestones to be passed: admission to the Ph.D. program by the faculty; early assessment of the student’s research potential (this includes a preliminary examination), research preparation, formal advancement to candidacy by passing the qualifying examination in the third year (second year for students who entered with a master’s degree), completion of a significant research investigation, and the submission and oral defense of an acceptable dissertation. There is no foreign language requirement. Ph.D. students have to meet departmental research requirements as a research assistant or equivalent, with or without salary. The degree is granted upon the recommendation of the Doctoral Committee and the Dean of Graduate Studies. The normative time for completion of the Ph.D. is five years (four years for students who entered with a master’s degree). The maximum time permitted is seven years.

The Institute of Transportation Studies
The Institute of Transportation Studies at Irvine (ITS) is part of a multicampus research unit of the University of California. ITS Irvine consists of faculty, staff, and graduate and undergraduate students engaged at the forefront of knowledge in interdisciplinary transportation research and education. Currently, the Institute involves faculty and students from The Henry Samueli School of Engineering, the School of Social Sciences, the School of Social Ecology, The Paul Merage School of Business, and the Donald Bren School of Information and Computer Sciences. Collaborations with colleagues from outside the University are common. The mission of the Institute is to create and disseminate significant new knowledge to help solve society’s pressing transportation problems, both in California and globally. It achieves this through cutting-edge activities in research, education, and professional outreach. A characteristic of ITS Irvine transportation research is a systems approach, focusing on the areas of planning, policy, economics (including pricing and finance), operations (including traffic, transit, logistics and freight, and safety), energy and the environment, and information technologies. The Institute has close ties to the University’s Transportation Science interdisciplinary graduate degree program. Students choosing to focus their studies in transportation will find strong interdisciplinary opportunities between the Department and ITS. See the Office of Research section (p. 154) of the Catalogue for additional information.

The Urban Water Research Center
The Urban Water Research Center focuses on five integrating water issues in urban areas: (1) supply, demand, and distribution; (2) water quality; (3) urban ecology; (4) water reuse; and (5) institutions and public policy. In each of these areas the Center enables the issues to be addressed in an integrated way from the points of view of biology, earth systems, economics, engineering public policy, and public health. The Center is the collaborative effort of the Department of Civil and Environmental Engineering, the Department of Earth System Science, and the School of Social Ecology.

Graduate Concentration in Environmental Engineering
Russel Detwiler, Director and Graduate Advisor
844C Engineering Tower
949-824-7152

Students may pursue either the M.S. or Ph.D. in Engineering with a concentration in Environmental Engineering.

Environmental Engineering is an interdisciplinary program engaging faculty from departments in both Civil & Environmental Engineering and Mechanical & Aerospace Engineering. Environmental Engineering addresses the development of strategies to control anthropogenic emissions of pollutants to the environment; the generation of sustainable water and energy in response to climate change and population growth; and the enhancement of science and engineering understanding, which can be translated into management strategies to face the challenge of water, energy shortage, and global climate variability.

Environmental Engineering requires a curriculum that provides students with an understanding of fundamentals in Water, Energy, Air Quality, and Climate.

Faculty
Amir AghaKouchak: Hydrology, climatology, remote sensing of environment, climate extremes, water-energy nexus, climate change, stochastic modeling, water resources management
Jacob Brouwer: High-temperature electrochemical dynamics, fuel cells, renewable and sustainable energy
William J. Cooper: Environmental chemistry, advanced oxidation processes for water treatment, aquatic photochemistry of carbon cycling
Donald Dabdub: Mathematical modeling of urban and global air pollution, dynamics of atmospheric aerosols, secondary organic aerosols, impact of energy generation on air quality, chemical reactions at gas-liquid interfaces
Kristen Davis: Coastal oceanography, fluid mechanics, and turbulent flows
Russell L. Detwiler: Groundwater hydrology, contaminant fate and transport, subsurface process modeling, groundwater/surface-water interaction
Derek Dunn-Rankin: Combustion, optical particle sizing, particle aero-dynamics, laser diagnostics and spectroscopy
Efi Foufoula-Georgiou: Hydrology and geomorphology with emphasis on modeling the interactions between the atmosphere, land, and the terrestrial environment at plot to large-watershed scale

Stanley B. Grant: Environmental engineering, inland and coastal water quality, coagulation and filtration of colloidal contaminants, environmental microbiology

Kuolin Hsu: Remote sensing of precipitation, hydrologic systems modeling, stochastic hydrology, water resources systems planning

C. Sunny Jiang: Water pollution microbiology, environmental biotechnology, aquatic microbial ecology

Betty H. Olson: Molecular applications for optimizing biological processes in wastewater treatment, environmental health, drinking water microbiology

Diego Rosso: Environmental process engineering, mass transfer, wastewater treatment, carbon- and energy-footprint analysis

G. Scott Samuelsen: Energy, fuel cells, hydrogen economy, propulsion, combustion and environmental conflict; turbulent transport in complex flows, spray physics, NOx and soot formation, laser diagnostics and experimental methods; application of engineering science to practical propulsion and stationary systems; environmental ethics

Brett F. Sanders: Environmental and computational fluid dynamics, water resources engineering

Jean-Daniel M. Saphores: Transportation economics, planning and policy, environmental and natural resource economics and policy, quantitative methods

Soroosh Sorooshian: Hydrology, hydrometeorology and hydroclimate modeling, remote sensing, water sources management

Jasper A. Vrugt: Artificial intelligence, computational science, hydrology, surface, unsaturated zone, groundwater, geophysics, ecology, statistics, systems theory, numerical modeling stochastic analysis, earth systems, agriculture, soils, geomorphology, hydrogeophysics

**Required Background**

The program core curriculum builds on environmental engineering fundamentals such as fluid mechanics, environmental chemistry, microbial processes, thermodynamics, hydrological and climate science, and reactor theory and design. The interdisciplinary nature of the program allows students with a variety of science and engineering backgrounds to undertake studies in this field. Students admitted to the program lacking one or more fundamental courses can earn credit toward the M.S. by completing these courses at UC Irvine. Students entering the program are expected to have had exposure to engineering-level math that includes linear algebra, differential equations and statistics.

The degree to which each student meets the program’s background requirement is determined by a faculty committee at the time of admission. Students with an insufficient background who are offered admission will be required to take a set of appropriate prerequisite undergraduate courses before entering the program or at the beginning of the program.

The list below is a general checklist for the required background and a list of undergraduate courses that may be used to fulfill the background requirements.

**Required Background and Sample UCI Undergraduate Courses**

**Engineering Level Math:**

<table>
<thead>
<tr>
<th>Calculus, linear algebra, differential equations, probability and statistics</th>
</tr>
</thead>
<tbody>
<tr>
<td>MATH 2D</td>
</tr>
<tr>
<td>MATH 3D</td>
</tr>
</tbody>
</table>

**Environmental Chemistry/Microbiology (two of the following):**

<table>

</tbody>
</table>

### Areas of Emphasis

Water, Energy, Air Quality and Climate are areas of emphasis in the Environmental Engineering Concentration. To achieve the interdisciplinary objectives of the Concentration, students entering the program without an M.S. degree are required to complete three core courses and three quarters of the Environmental Engineering seminar. Students can take additional elective courses in all areas or only one area. A limited number of courses (less than 4) outside of The Henry Samueli School of Engineering (i.e., Schools of Physical Sciences, Biological Sciences, Social Ecology, and the Program in Public Health) can be used toward elective credits with the approval of the faculty advisor and the graduate director.

### Core Requirement

Students entering the program without an M.S. must complete the following core requirements before petitioning for an M.S.

#### Advanced Mathematics: Select one of the courses listed below:

<table>
<thead>
<tr>
<th>Course</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>CBEMS 230</td>
<td>Applied Engineering Mathematics I</td>
</tr>
<tr>
<td>ENGRCEE 283</td>
<td>Mathematical Methods in Engineering Analysis</td>
</tr>
<tr>
<td>ENGRMAE 200A</td>
<td>Engineering Analysis I</td>
</tr>
<tr>
<td>ENGRMAE 200B</td>

### Seminars in Environmental Engineering: Three courses of:

Elective Courses
Additional course requirements can be fulfilled using any of the courses listed above in the areas of emphasis. Other courses can be included with the approval of the faculty advisor and graduate director.

Master of Science Degree
Two options are available for M.S. students: a thesis option and a comprehensive examination option. Both options require the completion of at least 48 units of study.

Plan I. Thesis Option
A thesis option is available to students who prefer to conduct a focused research project. Students selecting this option must complete an original research investigation and a thesis, and obtain approval of the thesis by a thesis committee. Of the 48 required units, at least 28 units must be nonresearch, graduate-level courses including six core courses. A maximum of 16 M.S. research units and up to ten units of upper-division undergraduate elective courses may be applied to the degree with the prior approval of the Graduate Advisor.

Plan II. Comprehensive Examination Option
Alternatively, students may select a course work option in which they must successfully complete 48 units of study and pass a comprehensive examination. At least 36 units must be nonresearch, graduate-level courses, including six core courses. A maximum of eight research units and up to ten units of upper-division undergraduate elective courses may be applied to the degree with the prior approval of the Graduate Advisor.

Doctor of Philosophy Degree
The Ph.D. concentration in Environmental Engineering requires the achievement of original and significant research that advances the discipline. Doctoral students are selected on the basis of an outstanding record of scholarship and potential for research excellence.

Each student will match with a faculty advisor, and an individual program of study is designed by the student and their faculty advisor. Students entering with a master’s degree are not required to fulfill the core requirements. However, in preparation for a successful preliminary examination, additional courses may be required in consultation with the graduate advisor and the program director. Students without a master’s degree may be admitted into the Ph.D. program. However, these students will be required to complete the course work option requirements for the master’s degree before registering for the preliminary exam. Within this flexible framework, the School maintains specific guidelines that outline the milestones of a typical doctoral program. There are several milestones to be passed: admission to the Ph.D. program by the faculty, passage within the first two years of a preliminary examination, formal advancement to candidacy by passing a qualifying examination in the third year (or second year for students who entered with a master’s degree), completion of a significant research investigation, and the submission and oral defense of an acceptable dissertation. During their research project, students are expected to enroll in at least 12 units of Individual Research or Dissertation Research per quarter.

The preliminary examination committee is comprised of three core examiners from different areas of Environmental Engineering. Students who fail the preliminary examination in the first year may retake the examination the following year. Students who fail the second attempt will not be allowed to continue in the program. Committees for Ph.D. qualifying examinations must have five members. Three members of this committee must be core faculty in the Environmental Engineering program. One member must be a UC faculty member from outside the Environmental Engineering program. The student's faculty advisor serves as the technical chair of the committee. The qualifying examination follows campus and The Henry Samueli School of Engineering guidelines and consists of an oral and written presentation of original work completed thus far, and a coherent plan for completing a body of original research. The student's dissertation topic must be approved by the student's doctoral committee. The degree is granted upon the recommendation of the doctoral committee and the Dean of Graduate Division. The normative time for completion of the Ph.D. is five years (four years for students who entered with a master's degree). The maximum time permitted is seven years.

Faculty
Mohammad Javad Abdolhosseini Qomi, Ph.D. Massachusetts Institute of Technology, Assistant Professor of Civil and Environmental Engineering (mechanics and physics of materials at nano- and meso-scales)
Amir AghaKouchak, Ph.D. University of Stuttgart, Associate Professor of Civil and Environmental Engineering (hydrology, hydroclimatology, data assimilation, remote sensing of critical global water resource issues)
Alfredo H.-S. Ang, Ph.D. University of Illinois at Urbana-Champaign, Professor Emeritus of Civil and Environmental Engineering
William J. Cooper, Ph.D. University of Miami, Professor of Civil and Environmental Engineering; Urban Planning and Public Policy (environmental chemistry, advanced oxidation processes for water treatment, aquatic photochemistry of carbon cycling)
Kristen A. Davis, Ph.D. Stanford University, Assistant Professor of Civil and Environmental Engineering; Earth System Science (coastal oceanography, fluid mechanics, turbulent flows)
Russell L. Detwiler, Ph.D. University of Colorado Boulder, Associate Professor of Civil and Environmental Engineering (groundwater hydrology, contaminant fate and transport, subsurface process modeling, groundwater/surface-water interaction)
Efi Foufoula-Georgiou, Ph.D. University of Florida, Associate Dean for Research and Innovation and Distinguished Professor of Civil and Environmental Engineering (hydrology and geomorphology with emphasis on modeling the interactions between the atmosphere, land, and the terrestrial environment at plot to large-watershed scale)

Stanley B. Grant, Ph.D. California Institute of Technology, Professor of Civil and Environmental Engineering; Chemical Engineering and Materials Science (environmental engineering, inland and coastal water quality, coagulation and filtration of colloidal contaminants, environmental microbiology)

Gary L. Guymon, Ph.D. University of California, Davis, Professor Emeritus of Civil and Environmental Engineering

Kuo-Lin Hsu, Ph.D. University of Arizona, Professor in Residence of Civil and Environmental Engineering (remote sensing of precipitation, hydrologic systems modeling, stochastic hydrology, water resources systems planning)

R. (Jay) Jayakrishnan, Ph.D. University of Texas at Austin, Professor of Civil and Environmental Engineering (transportation systems analysis)

C. Sunny Jiang, Ph.D. University of South Florida, Department Chair and Professor of Civil and Environmental Engineering; Environmental Health Sciences (water pollution microbiology, environmental biotechnology, aquatic microbial ecology)

Wenlong Jin, Ph.D. University of California, Davis, Associate Professor of Civil and Environmental Engineering (intelligent transportation systems, traffic flow theory, transportation network analysis)

Anne Lemnitzer, Ph.D. University of California, Los Angeles, Assistant Professor of Civil and Environmental Engineering (geotechnical and earthquake engineering, soil structure interaction, RC design, seismic monitoring)

Mo Li, Ph.D. University of Michigan, Assistant Professor of Civil and Environmental Engineering; Chemical Engineering and Materials Science (responsive materials, multifunctional materials and structures, fracture mechanics, infrastructure sustainability)

Michael G. McNally, Ph.D. University of California, Irvine, Professor of Civil and Environmental Engineering; Urban Planning and Public Policy (travel behavior, transportation systems analysis)

Ayman S. Mosallam, Ph.D. Catholic University of America, Professor of Civil and Environmental Engineering (advanced composites and hybrid systems, seismic repair and rehabilitation of structures, blast mitigation and diagnostic/prognostic techniques for infrastructure security)

Betty H. Olson, Ph.D. University of California, Berkeley, Professor of Civil and Environmental Engineering (molecular applications for optimizing biological processes in wastewater treatment, environmental health, drinking water microbiology)

Gerard C. Pardoen, Ph.D. Stanford University, Professor Emeritus of Civil and Environmental Engineering

Wilfred W. Recker, Ph.D. Carnegie Mellon University, Professor of Civil and Environmental Engineering (transportation systems modeling, traffic control, and urban systems analysis)

Stephen G. Ritchie, Ph.D. Cornell University, Director of the Institute of Transportation Studies and Professor of Civil and Environmental Engineering (transportation engineering, advanced traffic management and control systems, development and application of emerging technologies in transportation)

Diego Rosso, Ph.D. University of California, Los Angeles, Director of the UCI Water-Energy Nexus Center (WEX) and Associate Professor of Civil and Environmental Engineering; Chemical Engineering and Materials Science (environmental process engineering, mass transfer, wastewater treatment, carbon- and energy-footprint analysis)

Brett F. Sanders, Ph.D. University of Michigan, Professor of Civil and Environmental Engineering; Urban Planning and Public Policy (environmental hydrodynamics, computational fluid dynamics, coastal water quality)

Jean-Daniel M. Saphores, Ph.D. Cornell University, Professor of Civil and Environmental Engineering; Economics; Urban Planning and Public Policy (transportation economics, planning and policy, environmental and natural resource economics and policy, quantitative methods)

Jan W. Scherfig, Ph.D. University of California, Berkeley, Professor Emeritus of Civil and Environmental Engineering

Robin Shepherd, Ph.D. University of Canterbury, Professor Emeritus of Civil and Environmental Engineering

Masanobu Shinozuka, Ph.D. Columbia University, Professor Emeritus of Civil and Environmental Engineering

Soroosh Sorooshian, Ph.D. University of California, Los Angeles, Director of the Center for Hydrometeorology and Remote Sensing (CHRS) and UCI Distinguished Professor of Civil and Environmental Engineering; Earth System Science (hydrology, hydrometeorology and hydroclimate modeling, remote sensing, water sources management)

Lizhi Sun, Ph.D. University of California, Los Angeles, Professor of Civil and Environmental Engineering; Chemical Engineering and Materials Science (micro- and nano-mechanics, composites and nanocomposites, smart materials and structures, multiscale modeling, elastography)

Roberto Villaverde, Ph.D. University of Illinois at Urbana-Champaign, Professor Emeritus of Civil and Environmental Engineering
Jasper A. Vrugt, Ph.D. University of Amsterdam, Associate Professor of Civil and Environmental Engineering; Earth System Science (complex systems, modeling, statistics, hydrology, geophysics, ecology, data, optimization, hydropower, data assimilation)

Jann N. Yang, DSc Columbia University, Professor Emeritus of Civil and Environmental Engineering

Farzin Zareian, Ph.D. Stanford University, Associate Professor of Civil and Environmental Engineering (structural engineering, performance-based earthquake engineering, structural reliability, structural control)

Affiliate Faculty

Jacob Brouwer, Ph.D. Massachusetts Institute of Technology, Associate Professor of Mechanical and Aerospace Engineering; Civil and Environmental Engineering (high-temperature electrochemical dynamics, fuel cells, renewable and sustainable energy)

Donald Dabdub, Ph.D. California Institute of Technology, Professor of Mechanical and Aerospace Engineering; Civil and Environmental Engineering (mathematical modeling of urban and global air pollution, dynamics of atmospheric aerosols, secondary organic aerosols, impact of energy generation on air quality, chemical reactions at gas-liquid interfaces)

Derek Dunn-Rankin, Ph.D. University of California, Berkeley, Department Chair and Professor of Mechanical and Aerospace Engineering; Civil and Environmental Engineering; Environmental Health Sciences (combustion, optical particle sizing, particle aero-dynamics, laser diagnostics and spectroscopy)

Farzad Naeim, Ph.D. University of Southern California, Civil and Environmental Engineering (theory and practice of structural engineering, earthquake engineering and earthquake resistant design, applied performance-based analysis and design of structures, design of seismic protective systems)

Phu Dinh Nguyen, Ph.D. University of California, Irvine, Civil and Environmental Engineering (hydrology, water resources, satellite precipitation estimation, flood modeling, and forecasting)

Amelia C. Regan, Ph.D. University of Texas at Austin, Professor of Computer Science; Civil and Environmental Engineering

G. Scott Samuelsen, Ph.D. University of California, Berkeley, Director of Advanced Power and Energy Program, Research Professor and Professor Emeritus of Mechanical and Aerospace Engineering; Civil and Environmental Engineering (energy, fuel cells, hydrogen economy, propulsion, combustion and environmental conflict, turbulent transport in complex flows, spray physics, NOx and soot formation, laser diagnostics and experimental methods, application of engineering science to practical propulsion and stationary systems, environmental ethics)

Courses

ENGRCEE 11. Methods II: Probability and Statistics. 4 Units.
Modeling and analysis of engineering problems under uncertainty. Engineering applications of probability and statistical concepts and methods.

(Design units: 0)

Prerequisite: (ENGRCEE 20 or EECS 10 or EECS 12 or ENGRMAE 10 or I&C SCI 31) and MATH 3A

Restriction: Civil Engineering Majors have first consideration for enrollment. Environmental Engineering Majors have first consideration for enrollment.

ENGRCEE 20. Introduction to Computational Problem Solving. 4 Units.
Introduction to computer programming within a numerical computing environment (MATLAB or similar) including types of data representation, graphical display of data, and development of modular programs with application to engineering analysis and problem solving. Course may be offered online.

(Design units: 1)

Corequisite: MATH 3A

Overlaps with BME 60B.

Restriction: Civil Engineering Majors have first consideration for enrollment. Environmental Engineering Majors have first consideration for enrollment.

ENGRCEE 21. Computational Problem Solving. 4 Units.
Engineering analysis and problem solving using MATLAB (or similar), including matrix algebra, solving systems of linear and nonlinear equations, numerical integration of ordinary differential equations (ODEs) and coupled ODEs, and analysis of numerical errors. Course may be offered online.

(Design units: 1)

Corequisite: MATH 3D

Prerequisite: ENGRCEE 20 and MATH 3A

Restriction: Civil Engineering Majors have first consideration for enrollment. Environmental Engineering Majors have first consideration for enrollment.
ENGRCEE 30. Statics. 4 Units.
Addition and resolution of forces, distributed forces, equivalent system of forces centroids, first moments, moments and products on inertia, equilibrium of rigid bodies, trusses, beams, cables. Course may be offered online.

(Design units: 0)
Corequisite: MATH 2D
Prerequisite: MATH 2D and PHYSICS 7C
Same as ENGR 30, ENGRMAE 30.
Restriction: School of Engineering students have first consideration for enrollment.

ENGRCEE 60. Contemporary and Emerging Environmental Challenges. 4 Units.
Introduces contemporary and emerging environmental challenges, illustrates links between human behavior, environmental policy, and engineering practices, examines policy options in the context of current institutions, and introduces tools and frameworks to reach sound economic, social, and environmental solutions. Course may be offered online.

(Design units: 0)

ENGRCEE 80. Dynamics. 4 Units.
Introduction to the kinematics and dynamics of particles and rigid bodies. The Newton-Euler, Work/Energy, and Impulse/Momentum methods are explored for ascertaining the dynamics of particles and rigid bodies. An engineering design problem using these fundamental principles is also undertaken.

(Design units: 0.5)
Prerequisite: MATH 2D and PHYSICS 7C
Same as ENGR 80, ENGRMAE 80.
Restriction: Mechanical Engineering Majors have first consideration for enrollment. Aerospace Engineering Majors have first consideration for enrollment. Civil Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment. Environmental Engineering Majors have first consideration for enrollment.

ENGRCEE 81A. Civil Engineering Practicum I. 3 Units.
Introduction to civil engineering through presentations on structural, environmental, water, and transportation systems. Introduction to graphics. Graphical visualization and communication using hand and computer sketching. Fundamentals of Computer Aided Design (CAD) using AutoCad. Laboratory sessions. Materials fee.

(Design units: 2)
Restriction: Civil Engineering Majors have first consideration for enrollment. Environmental Engineering Majors have first consideration for enrollment.

ENGRCEE 81B. Civil Engineering Practicum II. 3 Units.
Principles of surveying; fundamentals of Geographic Information Systems (GIS); introduction to the state-of-the-art and future areas of the profession, including applications of advanced technology and computers; Introduction to visualization and communication of design concepts; laboratory sessions. Course may be offered online. Materials fee.

(Design units: 1)
Restriction: Civil Engineering Majors have first consideration for enrollment. Environmental Engineering Majors have first consideration for enrollment.

ENGRCEE 110. Methods III: Modeling, Economics, and Management. 4 Units.
Analysis, modeling, and management of civil engineering systems. Statistics and system performance studies, probabilistic models and simulation, basic economics and capital investments, project elements and organization, managerial concepts and network technique, project scheduling. Emphasis on real-world examples. Laboratory sessions.

(Design units: 1)
Prerequisite: ENGRCEE 11
Restriction: Civil Engineering Majors have first consideration for enrollment. Environmental Engineering Majors have first consideration for enrollment.
ENGRCEE 111. Methods IV: Systems Analysis and Decision-Making. 4 Units.
Analysis and optimization for decision-making in civil and infrastructural systems. Topics include linear programming formulations and solution algorithms, network models, and logistical models. Emphasis is on project-level and managerial decision-making and selection from alternative designs.

(Design units: 1)
Prerequisite: MATH 3A and MATH 3D
Restriction: Civil Engineering Majors have first consideration for enrollment.

ENGRCEE 121. Transportation Systems I: Analysis and Design. 4 Units.
Introduction to analysis and design of fundamental transportation system components, basic elements of geometric and pavement design, vehicle flow and elementary traffic, basic foundations of transportation planning and forecasting. Laboratory sessions.

(Design units: 2)
Prerequisite: ENGRCEE 11 and ENGRCEE 81A
Restriction: Civil Engineering Majors have first consideration for enrollment.

ENGRCEE 122. Transportation Systems II: Operations & Control. 4 Units.
Introduction to fundamentals of urban traffic engineering, including data collection, analysis, and design. Traffic engineering studies, traffic flow theory, traffic control devices, traffic signals, capacity and level of service analysis of freeways and urban streets. Laboratory sessions.

(Design units: 2)
Prerequisite: ENGRCEE 11 and ENGRCEE 121
Restriction: Civil Engineering Majors have first consideration for enrollment.

ENGRCEE 123. Transportation Systems III: Planning and Forecasting. 4 Units.
Theoretical foundations of transportation planning, design, and analysis methods. Theory and application of aggregate and disaggregate models for land use development, trip generation, destination, mode, and route choice. Transportation network analysis. Planning, design, and evaluation of system alternatives.

(Design units: 2)
Corequisite: ENGRCEE 110
Prerequisite: ENGRCEE 121
Restriction: Civil Engineering Majors have first consideration for enrollment.
Concurrent with ENGRCEE 223.

ENGRCEE 124. Transportation Systems IV: Freeway Operations and Control. 4 Units.
Fundamentals of traffic on urban freeways, including data collection analysis, and design. Traffic engineering studies, traffic flow theory, freeway traffic control devices, capacity, and level of service analysis of freeways and highways. Laboratory sessions.

(Design units: 2)
Prerequisite: ENGRCEE 121
Restriction: Civil Engineering Majors have first consideration for enrollment.

ENGRCEE 130. Soil Mechanics. 4 Units.
Mechanics of soils, composition and classification of soils, compaction, compressibility and consolidation, shear strength, seepage, bearing capacity, lateral earth pressure, retaining walls, piles.

(Design units: 0)
Corequisite: ENGRCEE 130L
Prerequisite: ENGRCEE 150 and ENGRCEE 170
Restriction: Civil Engineering Majors have first consideration for enrollment. Environmental Engineering Majors have first consideration for enrollment.
ENGRCEE 130L. Soil Mechanics Laboratory. 1 Unit.
Laboratory procedures of soil testing for engineering problems. Materials fee.

(Design units: 0)
Corequisite: ENGRCEE 130
Restriction: Civil Engineering Majors have first consideration for enrollment. Environmental Engineering Majors have first consideration for enrollment.

ENGRCEE 149. Introduction to Earthquake Engineering. 4 Units.
Plate tectonics. Structural dynamics. Earthquake magnitude, intensity, and frequency. Seismic damage to structures. Earthquake load prediction including response spectra, normal mode, and direct integration techniques. The basis of building code earthquake load requirements for buildings.

(Design units: 2)
Prerequisite: ENGRCEE 11 and ENGRCEE 20 and ENGRCEE 151A
Restriction: Civil Engineering Majors have first consideration for enrollment.

ENGRCEE 150. Mechanics of Materials. 4 Units.
Stresses and strains, strain-stress diagrams, axial deformations, torsion, bending and shear stresses in beams, shear force and bending moment diagrams, combined stresses, principal stresses, Mohr's circle, deflection of beams, columns.

(Design units: 1)
Prerequisite: ENGRCEE 30
Overlaps with ENGR 150, ENGRMAE 150.
Restriction: Civil Engineering Majors have first consideration for enrollment. Environmental Engineering Majors have first consideration for enrollment.

ENGRCEE 150L. Mechanics of Materials Laboratory. 1 Unit.
Experimental methods and fundamentals for mechanics of materials analysis. Materials fee.

(Design units: 0)
Corequisite: ENGRCEE 150
Prerequisite: ENGRCEE 30
Overlaps with ENGRMAE 150L.
Restriction: Civil Engineering Majors have first consideration for enrollment. Environmental Engineering Majors have first consideration for enrollment.

ENGRCEE 151A. Structural Analysis. 4 Units.

(Design units: 0)
Prerequisite: ENGRCEE 150
Restriction: Civil Engineering Majors have first consideration for enrollment.

ENGRCEE 151B. Structural Timber Design. 4 Units.
Design of timber structures. Beams, columns, beam-columns, roof, and connections.

(Design units: 3)
Prerequisite: ENGRCEE 151A
Restriction: Civil Engineering Majors have first consideration for enrollment.
ENGRCEE 151C. Reinforced Concrete Design. 4 Units.

(Design units: 3)

Prerequisite: ENGRCEE 151A

Restriction: Civil Engineering Majors have first consideration for enrollment.

ENGRCEE 152. Computer Methods in Structural Analysis and Design. 4 Units.
Matrix techniques for indeterminate framed structures. Computer implementation using the stiffness method. Software packages for design of reinforced concrete, steel, and/or timber structures.

(Design units: 2)

Prerequisite: ENGRCEE 151C

Restriction: Civil Engineering Majors have first consideration for enrollment.

ENGRCEE 155. Structural Steel Design. 4 Units.
Design in steel of tension members, beams, columns, welded and bolted connections; eccentrically loaded and moment resistant joints; plate girders. Plastic design; load and resistance factor design. Composite construction; introduction to computer-aided design.

(Design units: 4)

Prerequisite: ENGRCEE 151A

Restriction: Civil Engineering Majors have first consideration for enrollment.

ENGRCEE 156. Foundation Design. 4 Units.
Applications of soil mechanics principles to the analysis and design of shallow foundations, retaining walls, pile foundations, and braced cuts. Design criteria: bearing capacity, working loads and tolerable settlements, structural integrity of the foundation element. Damage from construction operations.

(Design units: 3)

Prerequisite: ENGRCEE 130 and ENGRCEE 151C

Restriction: Civil Engineering Majors have first consideration for enrollment.

ENGRCEE 160. Environmental Processes. 4 Units.

(Design units: 1)

Prerequisite: CHEM 1B and ENGRCEE 170

Restriction: Civil Engineering Majors have first consideration for enrollment. Environmental Engineering Majors have first consideration for enrollment.

ENGRCEE 162. Introduction to Environmental Chemistry. 4 Units.
Basic concepts from general, physical, and analytical chemistry as they relate to environmental engineering. Particular emphasis on the fundamentals of equilibrium and kinetics as they apply to acid-base chemistry, gas solubility, and redox reactions. Laboratory sessions. Materials fee.

(Design units: 0)

Prerequisite: (ENGR 1A or CHEM 1A) and CHEM 1B and (CHEM 1LC or CHEM 1LE) and CHEM 51A

Restriction: Chemical Engineering Majors have first consideration for enrollment. Civil Engineering Majors have first consideration for enrollment. Environmental Engineering Majors have first consideration for enrollment. Mechanical Engineering Majors have first consideration for enrollment.
ENGRCEE 163. Wastewater Treatment Process Design. 4 Units.
Design of biological treatment processes. Topics include attached and suspended growth, aeration, anaerobic systems, process control, and economics. Design projects included. Materials fee.

(Design units: 4)

Prerequisite: ENGRCEE 160

Restriction: Civil Engineering Majors have first consideration for enrollment. Environmental Engineering Majors have first consideration for enrollment.

ENGRCEE 164. Carbon and Energy Footprint Analysis. 4 Units.
Process design for wastewater treatment. Mass- and energy-balance analysis applied to water and wastewater treatment systems. Case studies include analysis of water supply, treatment, reclamation, and reuse.

(Design units: 2)

Prerequisite: ENGRCEE 160

Restriction: Civil Engineering Majors have first consideration for enrollment. Environmental Engineering Majors have first consideration for enrollment.

Concurrent with ENGRCEE 264.

ENGRCEE 165. Physical-Chemical Treatment Processes. 4 Units.
Theory and dynamics of physical and chemical separation processes in water and wastewater treatment. Topics include coagulation, sedimentation, filtration, gas-transfer, membrane separations, and adsorption.

(Design units: 2)

Prerequisite: ENGRCEE 160 and (ENGRMAE 91 or CBEMS 45C)

Restriction: Civil Engineering Majors have first consideration for enrollment. Environmental Engineering Majors have first consideration for enrollment.

Concurrent with ENGRCEE 265.

ENGRCEE 169. Environmental Microbiology for Engineers. 4 Units.
Fundamental and applied principles of microbiology. Structures and functions of microorganisms, the microbiology of water, wastewater and soil used in environmental engineering, and the impact of microorganisms on human and environmental health.

(Design units: 0)

Prerequisite: ENGRCEE 160

Restriction: Civil Engineering Majors have first consideration for enrollment. Environmental Engineering Majors have first consideration for enrollment.

ENGRCEE 170. Introduction to Fluid Mechanics. 4 Units.
Thermodynamic and mechanical fluid properties; fluid statics; control volume and differential approaches for mass, momentum, and energy; dimensional analysis and similarity.

(Design units: 1)

Corequisite: MATH 2E and ENGRCEE 20
Prerequisite: PHYSICS 7C

Overlaps with ENGRMAE 130A, CBEMS 125A.

Restriction: Civil Engineering Majors have first consideration for enrollment. Environmental Engineering Majors have first consideration for enrollment.

ENGRCEE 171. Water Resources Engineering. 4 Units.
Principles governing the analysis and design of water resource systems including pressurized pipelines, pipe networks, channels, and ground water. Coverage of fluid mass, momentum and energy conservation, flow resistance, and related laboratory measurements in different systems. Materials fee.

(Design units: 2)

Prerequisite: ENGRCEE 170

Restriction: Chemical Engineering Majors have first consideration for enrollment. Civil Engineering Majors have first consideration for enrollment. Environmental Engineering Majors have first consideration for enrollment.
ENGRCEE 172. Groundwater Hydrology. 4 Units.
Topics include conservation of fluid mass, storage properties of porous media, matrix compressibility, boundary conditions, flow nets, well hydraulics, groundwater chemistry, and solute transport. Design projects and computer applications included.

(Design units: 2)
Prerequisite: ENGRCEE 170
Restriciton: Chemical Engineering Majors have first consideration for enrollment. Civil Engineering Majors have first consideration for enrollment. Environmental Engineering Majors have first consideration for enrollment.
Concurrent with ENGRCEE 272.

ENGRCEE 173. Watershed Modeling. 4 Units.
Basic principles of hydrologic modeling are practiced. Concepts of watershed delineation, land use change impact, design studies, and GIS tools are discussed. Focus on the USACE (HEC) software tools (HEC-HMS, and HEC-RAS) along with their associated GIS interfaces.

(Design units: 1)
Prerequisite: ENGRCEE 170 and ENGRCEE 176
Restriciton: Civil Engineering Majors have first consideration for enrollment. Environmental Engineering Majors have first consideration for enrollment. Mechanical Engineering Majors have first consideration for enrollment.
Concurrent with ENGRCEE 273.

ENGRCEE 176. Hydrology. 4 Units.
Elements of the hydrologic cycle including precipitation, infiltration, evapotranspiration, ground water, and runoff. Unit Hydrograph theory and routing methods. Introduction to precipitation/runoff relationship and watershed modeling. Statistical methods and flood frequency analysis.

(Design units: 2)
Prerequisite: ENGRCEE 170 or ENGRMAE 130A
Restriciton: Civil Engineering Majors have first consideration for enrollment. Environmental Engineering Majors have first consideration for enrollment.
Concurrent with ENGRCEE 276.

ENGRCEE 178. Fluid Mechanics of Open Channels. 4 Units.
Fundamentals of fluid motion in open channels. Navier-Stokes equations and one-dimensional momentum and energy principles. Topics include rapidly varied flow, flow resistance and turbulence, gradually varied flow, unsteady flow, and computational methods for channel flow modeling.

(Design units: 1)
Prerequisite: (ENGRCEE 20 or ENGRMAE 10) and (ENGRCEE 170 or ENGRMAE 130A)
Restriciton: Civil Engineering Majors have first consideration for enrollment. Environmental Engineering Majors have first consideration for enrollment.
Concurrent with ENGRCEE 278.

ENGRCEE 181A. Senior Design Practicum I. 2 Units.
Team designs land development project including infrastructural, environmental, circulation aspects. Focus on traffic impact studies, design of roads, geometry, signals, geotechnical and hydrological analysis, design of structural elements, economic analysis. Oral/Written interim and final design reports. Laboratory sessions.

(Design units: 1)
Prerequisite: ENGRCEE 81A and ENGRCEE 81B and ENGRCEE 110 and (ENGRCEE 121 or ENGRCEE 151C or ENGRCEE 162 or ENGRCEE 171). ENGRCEE 181A and ENGRCEE 181B and ENGRCEE 181C must be taken in the same academic year.
Restriciton: Civil Engineering Majors only. Environmental Engineering Majors only.
ENGRCEE 181B. Senior Design Practicum II. 2 Units.
Team designs land development project including infrastructural, environmental, circulation aspects. Focus on traffic impact studies, design of roads, geometry, signals, geotechnical and hydrological analysis, design of structural elements, economic analysis. Oral/Written interim and final design reports. Laboratory sessions.

(Design units: 2)

Corequisite: ENGRCEE 130
Prerequisite: ENGRENGRCEE 181A. CEE 181A and ENGRCEE 181B and ENGRCEE 181C must be taken in the same academic year.

Grading Option: In Progress (Letter Grade with P/NP).
Restriction: Civil Engineering Majors only. Environmental Engineering Majors only.

ENGRCEE 181C. Senior Design Practicum III. 2 Units.
Team designs land development project including infrastructural, environmental, circulation aspects. Focus on traffic impact studies, design of roads, geometry, signals, geotechnical and hydrological analysis, design of structural elements, economic analysis. Oral/Written interim and final design reports. Laboratory sessions.

(Design units: 2)

Prerequisite: ENGRENGRCEE 181B. ENGRCEE 181A and CEE 181B and ENGRCEE 181C must be taken in the same academic year.
Restriction: Civil Engineering Majors only. Environmental Engineering Majors only.

ENGRCEE 195. Special Topics in Civil and Environmental Engineering. 1-4 Units.
Studies in selected areas of Civil and Environmental Engineering. Topics addressed vary each quarter.

(Design units: 1-4)

Prerequisite: Prerequisites vary.

Repeatability: Unlimited as topics vary.

ENGRCEE 198. Group Study. 1-4 Units.
Group study of selected topics in Civil and Environmental Engineering.

(Design units: 1-4)

Repeatability: May be repeated for credit unlimited times.
Restriction: Upper-division students only.

ENGRCEE 199. Individual Study. 1-4 Units.
For undergraduate Engineering majors in supervised but independent reading, research, or design. Students taking individual study for design credit are to submit a written paper to the instructor and to the Undergraduate Student Affairs Office in the School of Engineering.

(Design units: 1-4)

Repeatability: May be taken for credit for 8 units.

ENGRCEE 199P. Individual Study. 1-4 Units.
Supervised independent reading, research, or design for undergraduate Engineering majors. Students taking individual study for design credit are to submit a written paper to the instructor and to the Undergraduate Student Affairs Office in the School of Engineering.

(Design units: 1-4)

Grading Option: Pass/no pass only.
Repeatability: May be repeated for credit unlimited times.

ENGRCEE 220A. Travel Demand Analysis I. 4 Units.

Restriction: Graduate students only.
ENGRCEE 220B. Travel Demand Analysis II. 4 Units.
Methods of discrete choice analysis and their applications in the modeling of transportation systems. Emphasis on the development of a sound understanding of theoretical aspects of discrete choice modeling that are useful in many applications in travel demand analysis.

Prerequisite: ENGRCEE 220A

Restriction: Graduate students only.

ENGRCEE 220C. Travel Demand Analysis III: Activity-based Approaches. 4 Units.
The methodological underpinnings of activity-based travel demand modeling. Presents methodologies within the context of a generalization of discrete choice modeling approaches, emphasizing the distinctions that separate these two approaches and presenting appropriate mathematical and statistical tools to address these distinctions.

Prerequisite: ENGRCEE 220A

Restriction: Graduate students only.

ENGRCEE 221A. Transportation Systems Analysis I. 4 Units.
Introduction to mathematical methods and models to address logistics and urban transportation problems. Techniques include stochastic models, queueing theory, linear programming, and introductory non-linear optimization.

Restriction: Graduate students only.

ENGRCEE 221B. Transportation Systems Analysis II. 4 Units.
Advanced mathematical methods and models to address logistics and urban transportation problems. Topics include network flows, advanced optimization techniques, network models, and heuristic algorithms.

Prerequisite: ENGRCEE 221A

Restriction: Graduate students only.

ENGRCEE 222. Transit Systems Planning. 4 Units.
Planning methods for public transportation in urban areas. Technological and operating characteristics of vehicles, facilities, and systems. Short-range planning techniques: data collection and analysis, demand analysis, mode choice, operational strategies, financial analysis. Design of systems to improve performance.

Restriction: Graduate students only.

ENGRCEE 223. Transportation Systems III: Planning and Forecasting. 4 Units.
Theoretical foundations of transportation planning, design, and analysis methods. Theory and application of aggregate and disaggregate models for land use development, trip generation, destination, mode, and route choice. Transportation network analysis. Planning, design, and evaluation of system alternatives.

Restriction: Graduate students only.

Concurrent with ENGRCEE 123.

ENGRCEE 224A. Transportation Data Analysis I. 4 Units.
Statistical analysis of transportation data sources. Analysis of categorical and ordinal data. Regression and advanced multivariate analysis methods such as discriminant analysis, canonical correlation, and factor analysis. Sampling techniques, sample error and bias, survey instrument design.

Restriction: Graduate students only.

ENGRCEE 225B. Transportation Planning Models II. 4 Units.
Design and application of comprehensive transportation models. Network development, demand modeling, and equilibrium assignment. Model calibration, validation, prediction, and evaluation. Regional modeling, site impact analysis, and circulation studies. Design of transportation alternatives.

Prerequisite: ENGRCEE 223

Restriction: Graduate students only.

ENGRCEE 226A. Traffic Flow Theory I. 4 Units.

Restriction: Graduate students only.
ENGRCEE 226B. Traffic Flow Theory II. 4 Units.

Prerequisite: ENGRCEE 226A

Restriction: Graduate students only.

ENGRCEE 228A. Urban Transportation Networks I. 4 Units.
Analytical approaches and algorithms to the formulation and solution of the equilibrium assignment problem for transportation networks. Emphasis on user equilibrium (UE) comparison with system optimal, mathematical programming formulation, supply functions, estimation. Estimating origin-destination matrices, network design problems.

Prerequisite: ENGRCEE 220A

Restriction: Graduate students only.

ENGRCEE 228B. Urban Transportation Networks II. 4 Units.
Advanced analysis, optimization, and modeling of transportation networks. Topics include advanced static and dynamic traffic assignment algorithms, linear and nonlinear multi-commodity network flow optimization, network simplex, and network control problems.

Prerequisite: ENGRCEE 221A and ENGRCEE 228A

Restriction: Graduate students only.

ENGRCEE 229A. Traffic Systems Operations and Control I. 4 Units.
Introduction to operation, control and analysis of arterial and freeway traffic systems. Control concepts, traffic stream principles, detectors, local controllers, system masters, traffic signal and ramp metering timing principles, traffic measurement technologies, traffic delay principles.

Restriction: Graduate students only.

ENGRCEE 229B. Traffic Systems Operations and Control II. 4 Units.
Advanced topics related to operation, control, and analysis of arterial and freeway traffic systems. Control concepts, traffic stream principles, detectors, local controllers, system masters, traffic signal and ramp metering timing principles.

Prerequisite: ENGRCEE 229A

Restriction: Graduate students only.

ENGRCEE 231. Foundation Engineering. 4 Units.
Essentials for design and analysis of structural members that transmit superstructure loads to the ground. Topics include subsurface investigations, excavation, dewatering, bracing, footing, mat foundations, piles and pile foundations, caissons and cofferdams, other special foundations.

Restriction: Graduate students only.

ENGRCEE 232. Geotech Earthquake Engineering. 4 Units.
In-situ and laboratory determination of dynamic soil properties, liquefaction of soil, cyclic softening of clays, seismic compression and settlement analyses, ground improvement methods, seismic slope stability, introduction to soil structure interaction.

Restriction: Graduate students only.

ENGRCEE 242. Advanced Strength of Materials. 4 Units.

Restriction: Graduate students only.

ENGRCEE 243. Mechanics of Composite Materials. 4 Units.
Stress-strain relationship for orthotropic materials; invariant properties of an orthotropic lamina; biaxial strength theory for an orthotropic lamina; mechanics of materials approach to stiffness; elasticity approach to stiffness; classical lamination theory; strength of laminates; statistical theory of fatigue damage.

Restriction: Graduate students only.
ENGRCEE 247. Structural Dynamics. 4 Units.

Restriction: Graduate students only.

ENGRCEE 249. Earthquake Engineering. 4 Units.
Earthquake magnitude, intensity, and frequency. Seismic damage to structures. Earthquake load prediction including response spectra, normal mode, and direct integration techniques. The basis of building code earthquake load requirements for buildings. Seismic response of special structures. Lifeline engineering.

Restriction: Graduate students only.

ENGRCEE 250. Finite Element Method in Structural Engineering. 4 Units.
Finite element concepts in structural engineering including variational formulations, shape functions, elements assembly, convergence and computer programming. Stiffness of truss, beam, and frame members, two- and three-dimensional solids, plate and shell elements. Static, vibration, stability, and inelastic analysis.

Restriction: Graduate students only.

ENGRCEE 254. Advanced Reinforced Concrete Behavior and Design. 4 Units.

Restriction: Graduate students only.

ENGRCEE 255. Advanced Behavior and Design of Steel Structures. 4 Units.
Advanced principles of structural steel design. Analysis and design of beam-column members, braced and unbraced frames for buildings, and plate girders. Review of seismic design provisions. Design of connections.

Restriction: Graduate students only.

ENGRCEE 258. Earthquake Resistant Structural Design. 4 Units.

Restriction: Graduate students only.

ENGRCEE 260. Desalination. 4 Units.
Introduction of state of technology, costs and benefits, environmental issues, and implementation issues related to desalination. Emphasis on membrane processes and biofouling prevention.

Restriction: Graduate students only.

ENGRCEE 261. Applied Environmental Microbiology. 4 Units.
Microbes in the environment and their impact on human interactions. Microbiological application in solving environmental engineering problems.

Restriction: Graduate students only.

ENGRCEE 262. Environmental Chemistry II. 4 Units.
Advanced concepts from physical and organic chemistry as they relate to environmental engineering. Emphasis on equilibrium and kinetics as they apply to redox reactions, coordination, absorption, gas phase reactions, and ion exchange.

Restriction: Graduate students only.

ENGRCEE 263. Advanced Biological Treatment Processes. 4 Units.
Analysis of biological processes in natural and engineered systems. Biological treatment processes, both aerobic and anaerobic, with emphasis on suspended growth systems including design consideration. Containment degradation or control covered. Includes laboratory on molecular tools used in wastewater treatment.

Restriction: Graduate students only.
ENGRCEE 264. Carbon and Energy Footprint Analysis. 4 Units.
Process design for wastewater treatment. Mass- and energy- balance analysis applied to water and wastewater treatment systems. Case studies include analysis of water supply, treatment, reclamation, and reuse.

Restriction: Graduate students only.

Concurrent with ENGRCEE 164.

ENGRCEE 265. Physical-Chemical Treatment Processes. 4 Units.
Theory and dynamics of physical and chemical separation processes in water and wastewater treatment. Topics include coagulation, sedimentation, filtration, gas transfer, membrane separations, and absorption.

Restriction: Graduate students only.

Concurrent with ENGRCEE 165.

ENGRCEE 266. Drinking Water and Wastewater Biotechnology. 4 Units.
Water and wastewater microbiology. Engineering principles, molecular aspects, and overview of microorganisms of importance to public health. Topics include aerobic and anaerobic wastewater treatment and disinfection of pathogens in water, wastewaters, and biosolids.

Restriction: Graduate students only.

ENGRCEE 267. Energy, Climate Change, and Urban Air Quality. 4 Units.
An introduction to the connection between energy, climate change, and urban air quality. It will focus on air quality and climate implications of energy choices, bringing light to the most important and time-relevant issues.

Restriction: Graduate students only.

ENGRCEE 271. Flow in Unsaturated Porous Media. 4 Units.
Fluid flow in the unsaturated zone (zone of aeration) of the subsurface. Soil-water physics, flow in regional groundwater systems, miscible displacement, mathematical modeling techniques.

Restriction: Graduate students only.

Concurrent with ENGRCEE 172.

ENGRCEE 272. Groundwater Hydrology. 4 Units.
Topics include conservation of fluid mass, storage properties or porous media, matrix compressibility, boundary conditions, flow nets, well hydraulics, groundwater chemistry, and solute transport. Includes introduction to advanced topics in porous media. Design projects and computer applications included.

Restriction: Graduate students only.

ENGRCEE 273. Watershed Modeling. 4 Units.
Basic principles of hydrologic modeling are practiced. Concepts of watershed delineation, land use change impact, design studies, and GIS tools are discussed. Focus on the USACE (HEC) software tools (HEC-HMS and HEC-RAS) along with their associated GIS interfaces.

Restriction: Graduate students only.

Concurrent with ENGRCEE 173.

ENGRCEE 274. Climate Data Analysis. 4 Units.
Trend analysis; statistical indices for diagnosing and detecting changes in extremes; nonstationary processes; extreme value analysis; multivariate extreme value methods; tail dependence estimation; uncertainties in observed and projected changes in climate extremes.

ENGRCEE 275. Topics in Coastal Engineering. 4 Units.
Linear wave theory. Wave properties: particle kinematics, energy propagation, shoaling, refraction, reflection, diffraction, and breaking. Wave statistics and spectra. Selected topics from: design of coastal structures; harbor engineering; littoral transport and shoreline morphology; and hydrodynamics of estuaries.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.
ENGRCEE 276. Hydrology. 4 Units.
Elements of the hydrologic cycle including precipitation, infiltration, evapotranspiration, ground water, and runoff. Unit Hydrograph theory and routing methods. Introduction to precipitation/runoff relationship and watershed modeling. Statistical methods and flood frequency analysis. Discussion section covers advanced topics.
Restriction: Graduate students only.
Concurrent with ENGRCEE 176.

ENGRCEE 277. Hydrologic Transport Fundamentals. 4 Units.
Process description, mathematical and numerical modeling of transport processes in surface and ground water. Topics include advection, molecular diffusion, Taylor dispersion, mechanical dispersion in porous media, shear flow dispersion in channels, and turbulent jets and plumes.
Prerequisite: ENGRMAE 278
Restriction: Graduate students only.

ENGRCEE 278. Fluid Mechanics of Open Channels. 4 Units.
Fundamentals of fluid motion in open channels. Navier-Stokes equations and one-dimensional momentum and energy principles. Topics include rapidly varied flow, flow resistance and turbulence, gradually varied flow, unsteady flow, and computational methods for channel flow modeling.
Restriction: Graduate students only.
Concurrent with ENGRCEE 178.

ENGRCEE 279. Hydrologic Computational Modeling. 4 Units.
Computational modeling of multi-dimensional flow and scalar transport problems in surface and ground water. Topics include mathematical model formulation, numerical method selection, serial and parallel implementation, model verification and validation.
Prerequisite: ENGRCEE 272 and ENGRCEE 277 and ENGRCEE 278
Restriction: Graduate students only.

ENGRCEE 281. Structural Reliability. 4 Units.
Restriction: Graduate students only.

ENGRCEE 283. Mathematical Methods in Engineering Analysis. 4 Units.
Matrices; vector calculus; eigenvalue problems; Fourier analysis; partial differential equations; special functions; numerical analysis; finite difference method.

ENGRCEE 284. Engineering Decision and Risk Analysis. 4 Units.
Develops applications of statistical decision theory in engineering. Presents the fundamental tools used in engineering decision making and analysis of risk under conditions of uncertainty. All concepts are presented and illustrated thoroughly with engineering problems.
Restriction: Graduate students only.

ENGRCEE 289. Analysis of Hydrologic Systems. 4 Units.

ENGRCEE 290. Merging Models and Data. 4 Units.
Restriction: Graduate students only.
ENGRCEE 291. Hydrologic Remote Sensing. 4 Units.
Introduction to principles of remote sensing and application in hydrology. Review of sensor systems, thermal and multispectral image processing, and image classification. Examples from remote sensing of hydrologic processes such as precipitation, soil moisture, and vegetation are covered.
Prerequisite: ENGRCEE 276
Restriction: Graduate students only.

ENGRCEE 295. Seminars in Engineering. 1-4 Units.
Seminars scheduled each year by individual faculty in major field of interest.
Grading Option: Satisfactory/unsatisfactory only.
Repeatability: Unlimited as topics vary.
Restriction: Graduate students only.

ENGRCEE 296. Master of Science Thesis Research. 1-16 Units.
Individual research or investigation conducted in preparation of the thesis required for the M.S. degree in Engineering.
Grading Option: Satisfactory/unsatisfactory only.
Repeatability: May be repeated for credit unlimited times.
Restriction: Graduate students only.

ENGRCEE 297. Doctor of Philosophy Dissertation Research. 1-16 Units.
Individual research or investigation conducted in preparation for the dissertation required for the Ph.D. degree in Engineering.
Grading Option: Satisfactory/unsatisfactory only.
Repeatability: May be repeated for credit unlimited times.
Restriction: Graduate students only.

ENGRCEE 298. Special Topics in Civil Engineering. 1-4 Units.
Presentation of advanced topics and special research areas in civil engineering.
Repeatability: Unlimited as topics vary.
Restriction: Graduate students only.

ENGRCEE 299. Individual Research. 1-16 Units.
Individual research or investigation under the direction of an individual faculty member.
Grading Option: Satisfactory/unsatisfactory only.
Repeatability: May be repeated for credit unlimited times.
Restriction: Graduate students only.

Department of Electrical Engineering and Computer Science

H. Kumar Wickramsinghe, Department Chair
2213 Engineering Hall
949-824-4821
http://www.eng.uci.edu/dept/eecs

Overview
Electrical Engineering and Computer Science is a broad field encompassing such diverse subject areas as computer systems, distributed computing, computer networks, control, electronics, photonics, digital systems, circuits (analog, digital, mixed-mode, and power electronics), communications, signal processing, electromagnetics, and physics of semiconductor devices. Knowledge of the mathematical and natural sciences is applied to the theory, design, and implementation of devices and systems for the benefit of society. The Department offers three undergraduate degrees: Electrical Engineering, Computer Engineering, as well as Computer Science and Engineering. Computer Science and Engineering is offered in conjunction with the Donald Bren School of Information and Computer Sciences; information is available in the Interdisciplinary Studies section (p. 1167) of the Catalogue.
Some electrical engineers focus on the study of electronic devices and circuits that are the basic building blocks of complex electronic systems. Others study power electronics and the generation, transmission, and utilization of electrical energy. A large group of electrical engineers studies the application of these complex systems to other areas, including medicine, biology, geology, and ecology. Still another group studies complex electronic systems such as automatic controls, telecommunications, wireless communications, and signal processing.

Computer engineers are trained in various fields of computer science and engineering. They engage in the design and analysis of digital computers and networks, including software and hardware. Computer design includes topics such as computer architecture, VLSI circuits, computer graphics, design automation, system software, data structures and algorithms, distributed computing, and computer networks. Computer Engineering courses include programming in high-level languages such as Python, C++ and Java; use of software packages for analysis and design; design of system software such as operating systems; design of hardware/software interfaces and embedded systems; and application of computers in solving engineering problems. Laboratories in both hardware and software experiences are integrated within the Computer Engineering curriculum.

The undergraduate curriculum in Electrical Engineering and Computer Engineering provides a solid foundation for future career growth, enabling graduates’ careers to grow technically, administratively, or both. Many electrical and computer engineers will begin work in a large organizational environment as members of an engineering team, obtaining career satisfaction from solving meaningful problems that contribute to the success of the organization’s overall goal. As their careers mature, technical growth most naturally results from the acquisition of an advanced degree and further development of the basic thought processes instilled in the undergraduate years. Administrative growth can result from the development of management skills on the job and/or through advanced degree programs in management.

Graduates of Electrical Engineering, Computer Engineering, and Computer Science and Engineering will find a variety of career opportunities in areas including wireless communication, voice and video coding, biomedical electronics, circuit design, optical devices and communication, semiconductor devices and fabrication, power systems, power electronics, computer hardware and software design, computer networks, design of computer-based control systems, application software, data storage and retrieval, computer graphics, pattern recognition, computer modeling, parallel computing, and operating systems.

**Undergraduate Major in Computer Engineering**

**Program Educational Objectives:** Graduates of the Computer Engineering program will (1) be engaged in professional practice at or beyond the entry level or enrolled in high-quality graduate programs building on a solid foundation in engineering, mathematics, the sciences, humanities and social sciences, and experimental practice as well as modern engineering methods; (2) be innovative in the design, research and implementation of systems and products with strong problem solving, communication, teamwork, leadership, and entrepreneurial skills; (3) proactively function with creativity, integrity and relevance in the ever-changing global environment by applying their fundamental knowledge and experience to solve real-world problems with an understanding of societal, economic, environmental, and ethical issues. (Program educational objectives are those aspects of engineering that help shape the curriculum; achievement of these objectives is a shared responsibility between the student and UCI.)

The undergraduate Computer Engineering curriculum includes a core of mathematics, physics, and chemistry. Engineering courses in fundamental areas fill in much of the remaining curriculum.

**Admissions**

**High School Students:** See School Admissions (p. 564) information.

**Transfer Students:** Preference will be given to junior-level applicants with the highest grades overall, and who have satisfactorily completed the following required courses: two years of approved calculus, one year of calculus-based physics with laboratories (mechanics, electricity and magnetism), completion of lower-division writing, one course in computational methods (e.g., C, C++), and one course in circuit analysis (with laboratory). For course equivalency specific to each college, visit assist.org (http://catalogue.uci.edu/thehenrysamuelischoolofengineering/departmentofelectricalengineeringandcomputerscience/assist.org).

Students are encouraged to complete as many of the lower-division degree requirements as possible prior to transfer. Students who enroll at UCI in need of completing lower-division coursework may find that it will take longer than two years to complete their degrees. For further information, contact The Henry Samueli School of Engineering at 949-824-4334.

**Requirements for the B.S. in Computer Engineering**

All students must meet the University Requirements (p. 91).
All students must meet the School Requirements (p. 564).

**Major Requirements:**

Mathematics and Basic Science Courses:
EECS 55  Engineering Probability
EECS 70LA  Network Analysis I Laboratory
EECS 145  Electrical Engineering Analysis
I&C SCI 6D  Discrete Mathematics for Computer Science
MATH 2A- 2B  Single-Variable Calculus
and Single-Variable Calculus
MATH 2D  Multivariable Calculus
MATH 3A  Introduction to Linear Algebra
MATH 3D  Elementary Differential Equations
PHYSICS 7C  Classical Physics
PHYSICS 7LC  Classical Physics Laboratory
PHYSICS 7D- 7E  Classical Physics
and Classical Physics
PHYSICS 7LD  Classical Physics Laboratory

One additional math or basic science elective from the following:
I&C SCI 6B  Boolean Logic and Discrete Structures
MATH 2E  Multivariable Calculus
PHYSICS 51A  Modern Physics
PHYSICS 52A  Fundamentals of Experimental Physics
or other courses as approved by faculty advisor.

Engineering Topics Courses:
Students must complete a minimum of 26 units of engineering design.

Core Courses:
EECS 12  Introduction to Programming
EECS 20  Computer Systems and C Programming
EECS 22  Advanced C Programming
EECS 22L  Software Engineering Project in C Language
EECS 31  Introduction to Digital Systems
EECS 31L  Introduction to Digital Logic Laboratory
EECS 40  Object-Oriented Systems and Programming
EECS 50  Discrete-Time Signals and Systems
EECS 70A  Network Analysis I
EECS 70B  Network Analysis II
EECS 70LB  Network Analysis II Laboratory
EECS 111  System Software
EECS 112  Organization of Digital Computers
EECS 112L  Organization of Digital Computers Laboratory
EECS 113  Processor Hardware/Software Interfaces
EECS 114  Engineering Data Structures and Algorithms
EECS 118  Introduction to Knowledge and Software Engineering
EECS 119  VLSI
EECS 148  Computer Networks
EECS 159A- 159B  Senior Design Project I
and Senior Design Project II
EECS 170A  Electronics I
EECS 170LA  Electronics I Laboratory
EECS 170B  Electronics II
EECS 170LB  Electronics II Laboratory

With the approval of a faculty advisor, students select any additional engineering topics courses needed to satisfy school and department requirements.

Engineering Elective Courses:
Select, with approval of a faculty advisor, a minimum of three courses of engineering topics.

COMPSCI 142A  Compilers and Interpreters
EECS 101  Introduction to Machine Vision
EECS 116  Introduction to Data Management
EECS 117  Parallel Computer Systems
EECS 141A  Communication Systems I
EECS 141B  Communication Systems II
EECS 150  Continuous-Time Signals and Systems
EECS 152A  Digital Signal Processing
EECS 152B  Digital Signal Processing Design and Laboratory
EECS 199  Individual Study (up to 3 graded units)
ENGR 7A- 7B  Introduction to Engineering I
and Introduction to Engineering II (*)

* ENGR 7A and ENGR 7B can be counted as 4 units of Engineering Electives. ENGR 7A and ENGR 7B are available only to lower-division students. Both ENGR 7A and ENGR 7B must be taken to be counted as an Engineering Elective.

Engineering Professional Topics Courses
ENGR 190W  Communications in the Professional World

At most an aggregate total of 6 units of EECS 199 may be used to satisfy degree requirements; EECS 199 is open to students with a 3.0 GPA or higher.

(The nominal Computer Engineering program will require 187 units of courses to satisfy all university and major requirements. Because each student comes to UCI with a different level of preparation, the actual number of units will vary.)

Planning a Program of Study

The sample program of study chart shown is typical for the major in Computer Engineering. Students should keep in mind that this program is based upon a sequence of prerequisites, beginning with adequate preparation in high school mathematics, physics, and chemistry. Students who are not adequately prepared, or who wish to make changes in the sequence for other reasons, must have their program approved by their advisor. Computer Engineering majors must consult at least once every year with the academic counselors in the Student Affairs Office and with their faculty advisor.

Students must obtain approval for their program of study and must see their faculty advisor at least once each year.
Undergraduate Major in Computer Science and Engineering (CSE)

This program is administered jointly by the Department of Electrical Engineering and Computer Science (EECS) in The Henry Samueli School of Engineering and the Department of Computer Science in the Donald Bren School of Information and Computer Sciences. For information, see the Interdisciplinary Studies (p. 1167) section (p. 1167) of the Catalogue.

Requirements for the B.S. in Computer Science and Engineering

All students must meet the University Requirements (p. 91).

Major Requirements: See the Interdisciplinary Studies (p. 1167) section of the Catalogue.

Undergraduate Major in Electrical Engineering

Program Educational Objectives: Graduates of the Electrical Engineering program will (1) engage in professional practice in academia, industry, or government; (2) promote innovation in the design, research and implementation of products and services in the field of electrical engineering through strong communication, leadership and entrepreneurial skills; (3) engage in life-long learning in the field of electrical engineering. (Program educational objectives are those aspects of engineering that help shape the curriculum; achievement of these objectives is a shared responsibility between the student and UCI.)

The undergraduate Electrical Engineering curriculum is built around a basic core of humanities, mathematics, and natural and engineering science courses. It is arranged to provide the fundamentals of synthesis and design that will enable graduates to begin careers in industry or to go on to graduate study. UCI Electrical Engineering students take courses in network analysis, electronics, electronic system design, signal processing, control systems, electromagnetics, and computer engineering. They learn to design circuits and systems to meet specific needs and to use modern computers in problem analysis and solution.

Electrical Engineering majors have the opportunity to select a specialization in Electro-optics and Solid-State Devices; and Systems and Signal Processing. In addition to the courses offered by the Department, the major program includes selected courses from the Donald Bren School of Information and Computer Sciences.

Admissions

High School Students: See School Admissions (p. 564) information.

Transfer Students: Preference will be given to junior-level applicants with the highest grades overall, and who have satisfactorily completed the following required courses: two years of approved calculus, one year of calculus-based physics with laboratories (mechanics, electricity and magnetism), completion of lower-division writing, one course in computational methods (e.g., C, C++), and one course in circuit analysis (with laboratory). For course equivalency specific to each college, visit assist.org (http://catalogue.uci.edu/thehenrysamuelischoolofengineering/departmentofelectricalengineeringandcomputerscience/assist.org).

Students are encouraged to complete as many of the lower-division degree requirements as possible prior to transfer. Students who enroll at UCI in need of completing lower-division coursework may find that it will take longer than two years to complete their degrees. For further information, contact The Henry Samueli School of Engineering at 949-824-4334.

**Electrical Engineering Specialization:**

Students must satisfy the requirements for one of the five specializations listed below.

**Technical Elective Courses:**

In addition to a specialization, and with approval of a faculty advisor, students must select a minimum of three other technical elective courses, comprising of at least 10 units. At least one of these courses must be from outside the student’s specialization. All EECS courses not required for the major are approved as technical electives. Four (4) units of 199 course work count as one technical elective. ENGR 7A and ENGR 7B can be counted as 4 units of Technical Electives. ENGR 7A and ENGR 7B are available only to lower-division students. Both ENGR 7A and ENGR 7B must be taken to be counted as a Technical Elective.

**Engineering Professional Topics Courses**

ENGR 190W  
Communications in the Professional World

At most an aggregate total of 6 units of EECS 199 may be used to satisfy degree requirements; EECS 199 is open to students with a 3.0 GPA or higher.

(The nominal Electrical Engineering program will require 188-191 units of courses to satisfy all university and major requirements. Because each student comes to UCI with a different level of preparation, the actual number of units will vary.)

**Specialization in Electronic Circuit Design:**

Requires:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>EECS 170D</td>
<td>Integrated Electronic Circuit Design</td>
</tr>
<tr>
<td>EECS 170E</td>
<td>Analog and Communications IC Design</td>
</tr>
</tbody>
</table>

and select four of the following:

<table>
<thead>
<tr>
<th>Course Code</th>

**Program of Study**

Listed below are sample programs for each of the five specializations within Electrical Engineering. These sample programs are typical for the accredited major in Electrical Engineering. Students should keep in mind that this program is based upon a rigid set of prerequisites, beginning with adequate preparation in high school mathematics, physics, and chemistry. Therefore, the course sequence should not be changed except for the most compelling reasons. Students who are not adequately prepared, or who wish to make changes in the sequence for other reasons, must have their
programs approved by their advisor. Electrical Engineering majors must consult with the academic counselors in the Student Affairs Office and with their faculty advisors at least once a year.

### Graduate Study in Electrical and Computer Engineering

The Department offers M.S. and Ph.D. degrees in Electrical and Computer Engineering with a concentration in Electrical Engineering and in Computer Engineering. Because most graduate courses are not repeated every quarter, students should make every effort to begin their graduate program in the fall.

Detailed descriptions of the two concentrations are as follows.

#### Electrical Engineering Concentration (EE)

The Electrical Engineering faculty study the following areas: optical and solid-state devices, including quantum electronics and optics, integrated electro-optics and acoustics, design of semiconductor devices and materials, analog and mixed-signal IC design, microwave and microwave devices, and scanning acoustic microscopy; systems engineering and signal processing, including communication theory, machine vision, signal processing, power electronics, neural networks, communications networks, systems engineering, and control systems. Related communication networks topics are also addressed by the Networked Systems M.S. and Ph.D. degrees (listed in the Interdisciplinary Studies section (p. 1145) of the Catalogue).
Computer Engineering Concentration (CPE)
The concentration in Computer Engineering provides students with a solid base in the design, development, and evaluation of computer systems. Thrust areas include computer architecture, software, and embedded systems, but the program is highly customizable to the specific interests of the student. The research activities of the faculty in this concentration include parallel and distributed computer systems, distributed software architectures and databases, ultra-reliable real-time computer systems, VLSI architectures, reconfigurable computing, computer design automation, low-power design, embedded systems, computer communication protocols, computer networks, security, programming languages for parallel/distributed processing, knowledge management, service-oriented architectures, and software engineering.

Master of Science Degree General Requirements
Two plans are offered for the M.S.: a thesis option and a comprehensive examination option. For either option, students are required to develop a complete program of study with advice from their faculty advisor. The graduate advisor must approve the study plan. Part-time study toward the M.S. is available. The program of study must be completed within four calendar years from first enrollment.

Plan I: Thesis Option
The thesis option requires completion of 12 courses of study; an original research investigation; the completion of an M.S. thesis; and approval of the thesis by a thesis committee. The thesis committee is composed of three full-time faculty members with the faculty advisor of the student serving as the chair. Required undergraduate core courses and graduate seminar courses, such as EECS 290, EECS 292, EECS 293, EECS 294, and EECS 295, may not be counted toward the 12 courses. No more than one course of EECS 299 and one undergraduate elective course may be counted toward the 12 courses. Up to four of the required 12 courses may be from EECS 296 (M.S. Thesis Research) with the approval of the student’s thesis advisor. Additional concentration-specific requirements are as follows; a list of core and concentration courses is given at the end of this section.

Electrical Engineering Concentration:
At least seven concentration courses in the Electrical Engineering Concentration (EE) must be completed. All courses must be completed with a grade of B (3.0) or better.

Computer Engineering Concentration:
Three core courses in the Computer Engineering Concentration (CPE) must be completed: EECS 211, EECS 213, and EECS 215. At least four additional concentration or approved courses must also be completed. All courses must be completed with a grade of B (3.0) or better.

Plan II: Comprehensive Examination Option
The comprehensive examination option requires the completion of 12 courses and a comprehensive examination. Only one EECS 299 course can be counted if the EECS 299 course is four or more units. Undergraduate core courses and graduate seminar courses, such as EECS 290, EECS 292, EECS 293, EECS 294, and EECS 295, may not be counted toward the 12 courses requirement. No more than two of undergraduate elective courses may be counted. In fulfillment of the comprehensive examination element of the M.S. program, students can choose one of the two alternatives: 1) EECS 290 Curricular Practical Training or 2) EECS 294 Electrical Engineering and Computer Science Colloquium. Either of the two alternatives may be taken for 1 unit and completed with a satisfactory grade to fulfill the comprehensive exam requirements. Additional concentration-specific requirements are as follows; a list of core and concentration courses is given at the end of this section.

Electrical Engineering Concentration:
Students enrolled in the Electrical Engineering (EE) concentration who choose the Comprehensive Examination option must select one of the following plans of study.

Circuits and Devices Plan of Study:
Select four of the following:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>EECS 270A</td>
<td>Advanced Analog Integrated Circuit Design I</td>
</tr>
<tr>
<td>EECS 270B</td>
<td>Advanced Analog Integrated Circuit Design II</td>
</tr>
<tr>
<td>EECS 277A</td>
<td>Advanced Semiconductor Devices I</td>
</tr>
<tr>
<td>EECS 277B</td>
<td>Advanced Semiconductor Devices II</td>
</tr>
<tr>
<td>EECS 280A</td>
<td>Advanced Engineering Electromagnetics I</td>
</tr>
<tr>
<td>EECS 285A</td>
<td>Optical Communications</td>
</tr>
</tbody>
</table>

At least five additional courses from the list of EE concentration courses must be completed. All must be completed with a grade of B (3.0) or better.

Systems Plan of Study:
Select four of the following:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>EECS 240</td>
<td>Random Processes</td>
</tr>
<tr>
<td>EECS 241A</td>
<td>Digital Communications I</td>
</tr>
<tr>
<td>EECS 250</td>
<td>Digital Signal Processing I</td>
</tr>
<tr>
<td>EECS 251A</td>
<td>Detection, Estimation, and Demodulation Theory</td>
</tr>
<tr>
<td>EECS 260A</td>
<td>Linear Systems I</td>
</tr>
<tr>
<td>EECS 267A</td>
<td>Industrial and Power Electronics</td>
</tr>
</tbody>
</table>

1 |
At least five additional courses from the list of EE concentration courses must be completed. All must be completed with a grade of B (3.0) or better.

If all six courses are not offered in an academic year, students who graduate in that year can petition to replace the courses that are not offered by EECS 242 and/or EECS 244.

1 This course is also a core course.

In addition to fulfilling the course requirements outlined above, it is a University requirement for the Master of Science degree that students fulfill a minimum of 36 units of study.

### Doctor of Philosophy Degree General Requirements

The doctoral program in Electrical and Computer Engineering is tailored to the individual background and interest of the student. There are several milestones to pass: admission to the Ph.D. program by the Graduate Committee; Ph.D. preliminary examination on the background and potential for success in the doctoral program; departmental teaching requirement which can be satisfied through service as a teaching assistant or equivalent; original research work; development of a research report and dissertation proposal; advancement to Ph.D. candidacy in the third year (second year for students who entered with a master's degree) through the Ph.D. qualifying examination conducted on behalf of the Irvine Division of the Academic Senate; completion of a significant research investigation; and completion and approval of a dissertation. A public Ph.D. dissertation defense is also required. During the Ph.D. study, four units of EECS 290 or EECS 294 must be completed.

The Ph.D. preliminary examination is conducted twice a year, in the spring and fall quarters. Detailed requirements for each concentration are specified in the departmental Ph.D. preliminary examination policies, available from the EECS Graduate Admissions Office. A student who already has an M.S. on enrollment must pass the Ph.D. preliminary examination within one complete academic year cycle after entering the Ph.D. program. A student who does not already have an M.S. on enrollment must pass the Ph.D. preliminary examination within two complete academic year cycles after entering the Ph.D. program. A student has only two chances to take and pass the Ph.D. preliminary examination. A student who fails the Ph.D. preliminary examination twice will be asked to withdraw from the program, or will be dismissed from the program, and may not be readmitted into the program.

The Ph.D. is granted upon the recommendation of the Doctoral Committee and the Dean of Graduate Studies. Part-time study toward the Ph.D. is not permitted. The normative time for completion of the Ph.D. is five years (four years for students who entered with a master's degree). The maximum time permitted is seven years.

### Program in Law and Graduate Studies (J.D./M.S.-ECE; J.D./Ph.D.-ECE)

Highly qualified students interested in combining the study of law with graduate qualifications in the ECE program are invited to undertake concurrent degree study under the auspices of UC Irvine’s Program in Law and Graduate Studies (PLGS). Students in this program pursue a coordinated curriculum leading to a J.D. degree from the School of Law in conjunction with a Master’s or Ph.D. degree in the ECE program. Additional information is available from the PLGS Program Director’s Office, 949-824-4158, or by email to plgs@uci.edu. A full description of the program, with links to all relevant application information can be found at the School of Law Concurrent Degree Programs website (http://www.law.uci.edu/academics/interdisciplinary-studies/concurrent-degrees.html) and in the Law School section (p. 1179) of the Catalogue.
Faculty

Mohammad A. Al Faruque, Ph.D. University of Kaiserslautern, Assistant Professor of Electrical Engineering and Computer Science (system-level design, embedded systems, cyber-physical-systems, multi-core systems)

Nicolaos G. Alexopoulos, Ph.D. University of Michigan, Professor Emeritus of Electrical Engineering and Computer Science

Ender Ayanoglu, Ph.D. Stanford University, Professor of Electrical Engineering and Computer Science (communication systems, communication theory, communication networks)

Nader Bagherzadeh, Ph.D. University of Texas at Austin, Professor of Electrical Engineering and Computer Science; Computer Science (parallel processing, computer architecture, computer graphics, VLSI design)

Neil J. Bershad, Ph.D. Rensselaer Polytechnic Institute, Professor Emeritus of Electrical Engineering and Computer Science

Ozdal Boyraz, Ph.D. University of Michigan, Associate Professor of Electrical Engineering and Computer Science (silicon photonics and optical communications systems)

Peter J. Burke, Ph.D. Yale University, Professor of Electrical Engineering and Computer Science; Biomedical Engineering; Chemical Engineering and Materials Science (nano-electronics, bio-nanotechnology)

Filippo Capolino, Ph.D. University of Florence, Associate Professor of Electrical Engineering and Computer Science (optics/electromagnetics in nanostructures and sensors, antennas/microwaves, RF and wireless systems)

Aparna Chandramowlishwaran, Ph.D. Georgia Institute of Technology, Assistant Professor of Electrical Engineering and Computer Science (parallel programming models, domain specific compilers, algorithm-architecture co-design, n-body particle methods, scientific and high-performance computing)

Pai H. Chou, Ph.D. University of Washington, Professor Emeritus of Electrical Engineering and Computer Science; Computer Science (embedded systems, wireless sensor systems, medical devices, real-time systems, hardware/software co-synthesis)

Jose B. Cruz, Ph.D. University of Illinois at Urbana-Champaign, Professor Emeritus of Electrical Engineering and Computer Science

Franco De Flaviis, Ph.D. University of California, Los Angeles, Professor of Electrical Engineering and Computer Science (microwave systems, wireless communications, electromagnetic circuit simulations)

Brian C. Demsky, Ph.D. Massachusetts Institute of Technology, Associate Professor of Electrical Engineering and Computer Science; Computer Science (compiler programming, language software engineering, fault tolerance)

Rainer B. Doemer, Ph.D. Dortmund University, Professor of Electrical Engineering and Computer Science; Computer Science (system-level design, embedded computer systems, design methodologies, specification and modeling languages)

Ahmed Eltawil, Ph.D. University of California, Los Angeles, Professor of Electrical Engineering and Computer Science (design of system and VLSI architectures for broadband wireless communication, implementations and architectures for digital processing)

Leonard A. Ferrari, Ph.D. University of California, Irvine, Professor Emeritus of Electrical Engineering and Computer Science

Daniel D. Gajski, Ph.D. University of Pennsylvania, Professor Emeritus of Electrical Engineering and Computer Science (embedded systems, software/hardware design, design methodologies and tools, science of design)

Jean-Luc Gaudiot, Ph.D. University of California, Los Angeles, Professor of Electrical Engineering and Computer Science; Computer Science (parallel processing, computer architecture, processor architecture)

Michael M. Green, Ph.D. University of California, Los Angeles, Associate Dean for Undergraduate Student Affairs of The Henry Samueli School of Engineering and Professor of Electrical Engineering and Computer Science (analog/mixed-signal IC design, broadband circuit design, theory of nonlinear circuits)

Glenn E. Healey, Ph.D. Stanford University, Professor of Electrical Engineering and Computer Science (machine vision, computer engineering, image processing, computer graphics, intelligent machines)

Payam Heydari, Ph.D. University of Southern California, Professor of Electrical Engineering and Computer Science (design and analysis of analog, RF and mixed-signal integrated circuits, analysis of signal integrity and high-frequency effects of on-chip interconnects in high-speed VLSI circuits)

Syed A. Jafar, Ph.D. Stanford University, Professor of Electrical Engineering and Computer Science (wireless communication and information theory)

Hamid Jafarkhani, Ph.D. University of Maryland, College Park, Conexant-Broadcom Chair in the Center for Pervasive Communications and UCI Chancellor’s Professor of Electrical Engineering and Computer Science (communication theory, coding, wireless networks, multimedia networking)
Pramod Khargonekar, Ph.D. University of Florida, UCI Distinguished Professor of Electrical Engineering and Computer Science (systems and control theory; learning and intelligent systems; applications to renewable energy and smart grid, neural engineering, and economics; leadership and creativity; technology and society)

Stuart A. Kleinfelder, Ph.D. Stanford University, Professor of Electrical Engineering and Computer Science (first integrated sensor/readout arrays for visual, IR, X-ray, charged particles)

Fadi J. Kurdahi, Ph.D. University of Southern California, Director, Center for Embedded Computer Systems and Associate Dean for Graduate and Professional Studies and Professor of Electrical Engineering and Computer Science; Computer Science (VLSI system design, design automation of digital systems)

Tomas Lang, Ph.D. Stanford University, Professor Emeritus of Electrical Engineering and Computer Science

Chin C. Lee, Ph.D. Carnegie Mellon University, Professor of Electrical Engineering and Computer Science (bonding technology, electronic packaging, acoustics, microwaves, semiconductor devices, thermal management)

Henry P. Lee, Ph.D. University of California, Berkeley, Professor of Electrical Engineering and Computer Science (photons, fiber-optics and compound semiconductors)

Guann-Pyng Li, Ph.D. University of California, Los Angeles, Director of the UCI Division of the California Institute for Telecommunications and Information Technology (Calit2), Director of the Integrated Nanosystems Research Facility and Professor of Electrical Engineering and Computer Science; Biomedical Engineering; Chemical Engineering and Materials Science (high-speed semiconductor technology, optoelectronic devices, integrated circuit fabrication and testing)

Kwei-Jay Lin, Ph.D. University of Maryland, College Park, Professor of Electrical Engineering and Computer Science; Computer Science (real-time systems, distributed systems, service-oriented computing)

Athina Markopoulou, Ph.D. Stanford University, Associate Professor of Electrical Engineering and Computer Science; Computer Science (networking—reliability and security, multimedia networking, measurement and control, design and analysis of network protocols and algorithms, internet reliability and security, multimedia streaming, network measurements and control)

Phillip C-Y Sheu, Ph.D. University of California, Berkeley, Professor of Electrical Engineering and Computer Science; Biomedical Engineering; Computer Science (database systems, interactive multimedia systems)

Jack Sklansky, Sc.D. Columbia University, Professor Emeritus of Electrical Engineering and Computer Science

Keyue M. Smedley, Ph.D. California Institute of Technology, Professor of Electrical Engineering and Computer Science (power electronics, alternative energy power generation, and motion control)

Allen R. Stubberud, Ph.D. University of California, Los Angeles, Professor Emeritus of Electrical Engineering and Computer Science

A. Lee Swindlehurst, Ph.D. Stanford University, Professor of Electrical Engineering and Computer Science (signal processing, estimation and detection theory, applications in wireless communications, geo-positioning, radar, sonar, biomedicine)

Harry H. Tan, Ph.D. University of California, Los Angeles, Professor Emeritus of Electrical Engineering and Computer Science

Chen S. Tsai, Ph.D. Stanford University, UCI Chancellor’s Professor of Electrical Engineering and Computer Science (integrated and fiber optics, devices and materials, integrated acoustooptics and magnetooptics, integrated microwave magnetics, Ultrasonic Atomization for Nanoparticles Synthesis, silicon photonics)

Wei Kang (Kevin) Tsai, Ph.D. Massachusetts Institute of Technology, Professor Emeritus of Electrical Engineering and Computer Science

Zhiying Wang, Ph.D. California Institute of Technology, Assistant Professor of Electrical Engineering and Computer Science (information theory, coding for storage, compression and computation for genomic data)

H. Kumar Wickramasinghe, Ph.D. University of London, Henry Samuei Endowed Chair in Engineering and Department Chair and Professor of Electrical Engineering and Computer Science; Biomedical Engineering; Chemical Engineering and Materials Science (nanoscale measurements and characterization, scanning probe microscopy, storage technology, nano-bio measurement technology)

**Affiliate Faculty**

Lubomir Bic, Ph.D. University of California, Irvine, Professor of Computer Science; Electrical Engineering and Computer Science (parallel and distributed computing, mobile agents)

Elaheh Bozorgzadeh, Ph.D. University of California, Los Angeles, Associate Professor of Computer Science; Electrical Engineering and Computer Science (design automation and synthesis for embedded systems, VLSI CAD, reconfigurable computing)
Carter Butts, Ph.D. Carnegie Mellon University, Professor of Sociology; Electrical Engineering and Computer Science; Statistics (mathematical sociology, social networks, quantitative methodology, human judgment and decision making, economic sociology)

Zhongping Chen, Ph.D. Cornell University, Professor of Biomedical Engineering; Electrical Engineering and Computer Science; Otolaryngology; Surgery (biomedical optics, optical coherence tomography, bioMEMS, biomedical devices)

Nikil D. Dutt, Ph.D. University of Illinois at Urbana–Champaign, UCI Chancellor’s Professor of Computer Science; Cognitive Sciences; Electrical Engineering and Computer Science (embedded systems, computer architecture, electronic design automation, software systems, brain-inspired architectures and computing)

Magda S. El Zarki, Ph.D. Columbia University, Professor of Computer Science; Electrical Engineering and Computer Science; Informatics (telecommunications, networks, wireless communication, video transmission)

Charless C. Fowlkes, Ph.D. University of California, Berkeley, Associate Professor of Computer Science; Cognitive Sciences; Electrical Engineering and Computer Science (computer vision, machine learning, computational biology)

Michael S. Franz, Ph.D. Swiss Federal Institute of Technology in Zurich, Professor of Computer Science; Electrical Engineering and Computer Science (systems software, particularly compilers and virtual machines, trustworthy computing, software engineering)

Michael T. Goodrich, Ph.D. Purdue University, UCI Chancellor’s Professor of Computer Science; Electrical Engineering and Computer Science (computer security, algorithm design, data structures, Internet algorithmics, geometric computing, graphic drawing)

Gultekin Gulsen, Ph.D. Bogazici University, Associate Professor of Radiological Sciences; Biomedical Engineering; Electrical Engineering and Computer Science; Physics and Astronomy (in vivo molecular imaging, diffuse optical tomography, fluorescence tomography, photo-magnetic imaging, multi-modality imaging)

Ian G. Harris, Ph.D. University of California, San Diego, Associate Professor of Computer Science; Electrical Engineering and Computer Science (hardware/software covalidation, manufacturing test)

Dan S. Hirschberg, Ph.D. Princeton University, Professor of Computer Science; Electrical Engineering and Computer Science (analyses of algorithms, concrete complexity, data structures, models of computation)

Scott A. Jordan, Ph.D. University of California, Berkeley, Professor of Computer Science; Electrical Engineering and Computer Science (pricing and differentiated services in the Internet, resource allocation in wireless networks, telecommunications policy)

Frithjof Kruggel, M.D. Ludwig Maximilian University of Munich, Professor of Biomedical Engineering; Electrical Engineering and Computer Science (biomedical signal and image processing, anatomical and functional neuroimaging in humans, structure-function relationship in the human brain)

Marco Levorato, Ph.D. University of Padua, Assistant Professor of Computer Science; Electrical Engineering and Computer Science

Aditi Majumder, Ph.D. University of North Carolina at Chapel Hill, Professor of Computer Science; Electrical Engineering and Computer Science (novel displays and cameras for computer graphics and visualization, human-computer interaction, applied computer vision)

Gopi Meenakshisundaram, Ph.D. University of North Carolina at Chapel Hill, Professor of Computer Science; Electrical Engineering and Computer Science (geometry and topology for computer graphics, image-based rendering, object representation, surface reconstruction, collision detection, virtual reality, telepresence)

Sabee Y. Molloi, Ph.D. University of Wisconsin-Madison, Professor of Radiological Sciences; Biomedical Engineering; Electrical Engineering and Computer Science (quantitative aspects of medical x-ray imaging and its applications to cardiac and breast imaging)

Zoran Nenadic, Ph.D. Washington University, Associate Professor of Biomedical Engineering; Electrical Engineering and Computer Science (adaptive biomedical signal processing, control algorithms for biomedical devices, brain-machine interfaces, modeling and analysis of biological neural networks)

Alexandru Nicolau, Ph.D. Yale University, Department Chair and Professor of Computer Science; Electrical Engineering and Computer Science (architecture, parallel computation, programming languages and compilers)

Eric Potma, Ph.D. University of Groningen, Associate Professor of Chemistry; Electrical Engineering and Computer Science (analytical, chemical biology, physical chemistry and chemical physics)

Henry Samueli, Ph.D. University of California, Los Angeles, Associate Professor of Computer Science; Electrical Engineering and Computer Science (digital signal processing, communications systems engineering, CMOS integrated circuit design for applications in high-speed data transmission systems)

Isaac D. Scherson, Ph.D. Weizmann Institute of Science, Professor of Computer Science; Electrical Engineering and Computer Science (parallel computing architectures, massively parallel systems, parallel algorithms, interconnection networks, performance evaluation)
Andrei M. Shkel, Ph.D. University of Wisconsin-Madison, Professor of Mechanical and Aerospace Engineering; Biomedical Engineering; Electrical Engineering and Computer Science (design and advanced control of micro-electro-mechanical systems (MEMS), precision micro-sensors and actuators for telecommunication and information technologies, MEMS-based health monitoring systems, disposable diagnostic devices, prosthetic implants)

William C. Tang, Ph.D. University of California, Berkeley, Professor of Biomedical Engineering; Chemical Engineering and Materials Science; Electrical Engineering and Computer Science (micro-electro-mechanical systems (MEMS) nanoscale engineering for biomedical applications, microsystems integration, microimplants, microbiomechanics, microfluidics)

Xiangmin Xu, Ph.D. Vanderbilt University, Associate Professor of Anatomy and Neurobiology; Biomedical Engineering; Electrical Engineering and Computer Science (local cortical circuits)

Homayoun Yousefi’zadeh, Ph.D. University of Southern California, Electrical Engineering and Computer Science (communications networks)

Courses

EECS 1. Introduction to Electrical Engineering and Computer Engineering. 1 Unit.
Introduction to the fields of Electrical Engineering and Computer Engineering, including possible careers in both traditional and new emerging areas. Background on both the Electrical Engineering and the Computer Engineering majors, curriculum requirements, specializations, and faculty research interests. Course may be offered online.

(Design units: 0)

Restriction: Electrical Engineering Majors have first consideration for enrollment. Computer Engineering Majors have first consideration for enrollment.

EECS 10. Computational Methods in Electrical and Computer Engineering. 4 Units.

(Design units: 0)

Corequisite: MATH 2A
Prerequisite: MATH 2A

Overlaps with EECS 12, I&C SCI 31.

Restriction: Electrical Engineering Majors have first consideration for enrollment. Chemical Engineering Majors have first consideration for enrollment.

EECS 12. Introduction to Programming. 4 Units.

(Design units: 0)

Corequisite: MATH 2A

Overlaps with EECS 10, I&C SCI 31.

Restriction: Computer Engineering Majors have first consideration for enrollment.

EECS 20. Computer Systems and C Programming. 4 Units.
Introduction to computing systems. Data representation and operations. Simple logic design. Basic computer organization. Instruction set architecture and assembly language programming. Introduction to C. Functions and recursion, data structures, pointers. Programming laboratory.

(Design units: 1)

Prerequisite: EECS 12

Restriction: Electrical Engineering Majors have first consideration for enrollment. Computer Engineering Majors have first consideration for enrollment.

EECS 22. Advanced C Programming. 3 Units.

(Design units: 1)

Prerequisite: EECS 10 or EECS 20

Restriction: Electrical Engineering Majors have first consideration for enrollment. Computer Engineering Majors have first consideration for enrollment.
EECS 22L. Software Engineering Project in C Language. 3 Units.
Hands-on experience with the ANSI-C programming language. Medium-sized programming projects, team work. Software specification, documentation, implementation, testing. Definition of data structures and application programming interface. Creation of program modules, linking with external libraries. Rule-based compilation, version control.

(Design units: 3)
Prerequisite: EECS 22
Restriction: Computer Engineering Majors have first consideration for enrollment.

EECS 31. Introduction to Digital Systems. 4 Units.
Digital representation of information. Specification, analysis, design and optimization or combinational and sequential logic, register-transfer components and register-transfer systems with datapaths and controllers. Introduction to high-level and algorithmic state-machines and custom processors.

(Design units: 2)
Prerequisite: I&C SCI 31 or EECS 10 or EECS 12 or ENGRMAE 10
Restriction: Computer Science Engineering Majors have first consideration for enrollment. Electrical Engineering Majors have first consideration for enrollment. Computer Engineering Majors have first consideration for enrollment.

EECS 31L. Introduction to Digital Logic Laboratory. 3 Units.
Introduction to common digital integrated circuits: gates, memory circuits, MSI components. Operating characteristics, specifications, applications. Design of simple combinational and sequential digital systems (arithmetic processors game-playing machines). Construction and debugging techniques using hardware description languages and CAD tools.

(Design units: 3)
Prerequisite: EECS 31 and (EECS 10 or EECS 12 or I&C SCI 32)
Restriction: Computer Science Engineering Majors have first consideration for enrollment. Electrical Engineering Majors have first consideration for enrollment. Computer Engineering Majors have first consideration for enrollment.

EECS 40. Object-Oriented Systems and Programming. 4 Units.

(Design units: 2)
Prerequisite: EECS 22L
Restriction: Computer Engineering Majors have first consideration for enrollment.

EECS 50. Discrete-Time Signals and Systems. 4 Units.
Analysis of discrete-time linear-time-invariant (DTLTI) systems in the time domain and using z-transforms. Introduction to techniques based on Discrete-Time, Discrete, and Fast Fourier Transforms. Examples of their application to digital signal processing and digital communications.

(Design units: 0)
Prerequisite: EECS 70A
Restriction: Computer Science Engineering Majors have first consideration for enrollment. Electrical Engineering Majors have first consideration for enrollment. Computer Engineering Majors have first consideration for enrollment.

EECS 55. Engineering Probability. 4 Units.
Sets and set operations; nature of probability, sample spaces, fields of events, probability measures; conditional probability, independence, random variables, distribution functions, density functions, conditional distributions and densities; moments, characteristic functions, random sequences, independent and Markov sequences.

(Design units: 0)
Prerequisite: MATH 2D
Restriction: Computer Engineering Majors have first consideration for enrollment. Electrical Engineering Majors have first consideration for enrollment.
EECS 70A. Network Analysis I. 4 Units.

(Design units: 1)

Corequisite: MATH 3D
Prerequisite: PHYSICS 7D and (EECS 10 or EECS 12 or ENGRMAE 10 or I&C SCI 31)

Overlaps with ENGRMAE 60.

Restriction: Computer Science Engineering Majors have first consideration for enrollment. Electrical Engineering Majors have first consideration for enrollment. Mechanical Engineering Majors have first consideration for enrollment. Aerospace Engineering Majors have first consideration for enrollment. Civil Engineering Majors have first consideration for enrollment. Computer Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment. Environmental Engineering Majors have first consideration for enrollment.

EECS 70B. Network Analysis II. 4 Units.

(Design units: 1)

Corequisite: EECS 70LB
Prerequisite: (BME 60B or EECS 10 or EECS 12 or I&C SCI 31 or ENGRCEE 20 or ENGRMAE 10) and EECS 70A

Restriction: Electrical Engineering Majors have first consideration for enrollment. Computer Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.

EECS 70LA. Network Analysis I Laboratory. 1 Unit.
Laboratory to accompany EECS 70A.

(Design units: 0)

Corequisite: EECS 70A
Prerequisite: PHYSICS 7D and EECS 10

EECS 70LB. Network Analysis II Laboratory. 1 Unit.
Laboratory to accompany EECS 70B. Materials fee.

(Design units: 1)

Corequisite: EECS 70B
Prerequisite: (BME 60B or EECS 10 or EECS 12 or I&C SCI 31 or ENGRCEE 20 or ENGRMAE 10) and EECS 70A

Restriction: Electrical Engineering Majors have first consideration for enrollment. Computer Engineering Majors have first consideration for enrollment.

EECS 101. Introduction to Machine Vision. 3 Units.
The use of digital computers for the analysis of visual scenes; image formation and sensing, color, segmentation, shape estimation, motion, stereo, pattern classification, computer architectures, applications. Computer experiments are used to illustrate fundamental principles.

(Design units: 2)

Prerequisite: EECS 150 or EECS 50

Restriction: Electrical Engineering Majors have first consideration for enrollment. Computer Engineering Majors have first consideration for enrollment.
EECS 111. System Software. 4 Units.
Multiprogramming, interrupt, processes, kernel, parallelism, critical sections, deadlocks, communication, multiprocessing, multilevel memory management, binding, name management, file systems, protection, resource allocation, scheduling. Experience with concurrent programming, synchronization mechanisms, interprocess communication.

(Design units: 2)
Prerequisite: EECS 112 and (I&C SCI 46 or EECS 114)
Overlaps with COMPSCI 143A.
Restriction: Computer Science Engineering Majors have first consideration for enrollment. Computer Engineering Majors have first consideration for enrollment.

EECS 112. Organization of Digital Computers. 4 Units.
Building blocks and organization of digital computers, the arithmetic, control, and memory units, and input/output devices and interfaces. Microprogramming and microprocessors.

(Design units: 4)
Prerequisite: EECS 31L
Overlaps with COMPSCI 152.
Restriction: Computer Science Engineering Majors have first consideration for enrollment. Electrical Engineering Majors have first consideration for enrollment. Computer Engineering Majors have first consideration for enrollment.

EECS 112L. Organization of Digital Computers Laboratory. 3 Units.
Specification and implementation of a processor-based system using a hardware description language such as VHDL. Hands-on experience with design tools including simulation, synthesis, and evaluation using testbenches.

(Design units: 3)
Prerequisite: EECS 112
Restriction: Computer Science Engineering Majors have first consideration for enrollment. Computer Engineering Majors have first consideration for enrollment.

EECS 113. Processor Hardware/Software Interfaces. 4 Units.
Hardware/software interfacing, including memory and bus interfaces, devices, I/O, and compiler code generation/instruction scheduling. Experience microcontroller programming and interfacing. Specific compiler code generation techniques including local variable and register allocations, instruction dependence and scheduling, and code optimization.

(Design units: 3)
Prerequisite: EECS 112
Restriction: Computer Engineering Majors have first consideration for enrollment.

EECS 114. Engineering Data Structures and Algorithms. 4 Units.
Introduces abstract behavior of classes data structures, alternative implementations, informal analysis of time and space efficiency. Also introduces classic algorithms and efficient algorithm design techniques (recursion, divide-and-conquer, branch-and-bound, dynamic programming).

(Design units: 2)
Prerequisite: EECS 40
Restriction: Computer Engineering Majors have first consideration for enrollment.
EECS 116. Introduction to Data Management. 4 Units.
Introduction to the design of databases and the use of database management systems (DBMS) for applications. Topics include entity-relationship modeling for design, relational data model, relational algebra, relational design theory, and Structured Query Language (SQL) programming.

(Design units: 1)
Prerequisite: I&C SCI 33 or CSE 43 or EECS 114. I&C SCI 33 with a grade of C or better. CSE 43 with a grade of C or better
Same as COMPSCI 122A.
Restriction: Computer Science Engineering Majors have first consideration for enrollment. School of Info & Computer Sci students have first consideration for enrollment.

EECS 117. Parallel Computer Systems. 4 Units.
Fundamentals of parallel computing with designing, analyzing, implementing parallel algorithms on HPC architectures. Parallel models: work-depth, I/O memory models. Parallel architectures: shared-memory machines, distributed-memory machines, vector processors. Parallel algorithms and programming models for each machine type are discussed.

(Design units: 1)
Prerequisite: EECS 20 and EECS 114 and EECS 112
Restriction: Computer Engineering Majors have first consideration for enrollment.

EECS 118. Introduction to Knowledge and Software Engineering. 4 Units.
Introduction of basic concepts in knowledge engineering and software engineering. Knowledge representation and reasoning, search planning, software life cycle, requirements engineering, software design languages, declarative programming, testing, database and web programming.

(Design units: 2)
Prerequisite: EECS 40
Restriction: Computer Engineering Majors have first consideration for enrollment.

EECS 119. VLSI. 4 Units.
Design techniques for Very Large Scale Integrated (VLSI) systems and chips. Review CMOS and related process technologies; primitives such as logic gates and larger design blocks; layout; floor planning; design hierarchy, component interfaces; use of associated CAD tools for design.

(Design units: 4)
Prerequisite: EECS 112 and EECS 170B
Overlaps with EECS 170D, CSE 112.
Restriction: Computer Engineering Majors have first consideration for enrollment.

EECS 141A. Communication Systems I. 3 Units.
Introduction to analog communication systems including effects of noise. Modulation-demodulation for AM, DSB-SC, SSB, VSB, QAM, FM, PM, and PCM with application to radio, television, and telephony. Signal processing as applied to communication systems.

(Design units: 1)
Prerequisite: EECS 55 and EECS 150
Restriction: Computer Engineering Majors have first consideration for enrollment. Electrical Engineering Majors have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment.

EECS 141B. Communication Systems II. 3 Units.

(Design units: 1)
Prerequisite: EECS 141A
Restriction: Computer Engineering Majors have first consideration for enrollment. Electrical Engineering Majors have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment.
EECS 144. Antenna Design for Wireless Communication Links. 4 Units.

(Design units: 0)
Prerequisite: EECS 180A

EECS 145. Electrical Engineering Analysis. 4 Units.
Vector calculus, complex functions and linear algebra with applications to electrical engineering problems.

(Design units: 0)
Prerequisite: MATH 3D

Restriction: Computer Engineering Majors have first consideration for enrollment. Electrical Engineering Majors have first consideration for enrollment.

EECS 148. Computer Networks. 4 Units.
Computer network architectures, protocols, and applications. Internet congestion control, addressing, and routing. Local area networks. Multimedia networking.

(Design units: 2)
Prerequisite: EECS 55 or STATS 67

Same as COMPSCI 132.

Restriction: Computer Engineering Majors have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment.

EECS 150. Continuous-Time Signals and Systems. 4 Units.
Characteristics and properties of continuous-time (analog) signals and systems. Analysis of linear time-invariant continuous-time systems using differential equation convolutional models. Analysis of these systems using Laplace transforms, Fourier series, and Fourier transforms. Examples from applications to telecommunications.

(Design units: 0)
Prerequisite: EECS 70A and EECS 145

Restriction: Electrical Engineering Majors have first consideration for enrollment. Computer Engineering Majors have first consideration for enrollment.

EECS 152A. Digital Signal Processing. 3 Units.
Nature of sampled data, sampling theorem, difference equations, data holds, z-transform, w-transform, digital filters, Butterworth and Chebychev filters, quantization effects.

(Design units: 2)
Prerequisite: EECS 50

Restriction: Computer Science Engineering Majors have first consideration for enrollment. Electrical Engineering Majors have first consideration for enrollment. Computer Engineering Majors have first consideration for enrollment.

EECS 152B. Digital Signal Processing Design and Laboratory. 3 Units.
Design and implementation of algorithms on a DSP processor and using computer simulation. Applications in signal and image processing, communications, radar, etc.

(Design units: 3)
Prerequisite: (EECS 22 or I&C SCI 45C) and EECS 152A

Restriction: Computer Science Engineering Majors have first consideration for enrollment. Electrical Engineering Majors have first consideration for enrollment. Computer Engineering Majors have first consideration for enrollment.
EECS 159A. Senior Design Project I. 3 Units.
Teaches problem definition, detailed design, integration, and testability with teams of students specifying, designing, building, and testing complex systems. Lectures include engineering values, discussions, and ethical ramifications of engineering decisions.

(Design units: 3)
Prerequisite: EECS 113 or EECS 170C or COMPSCI 145
Restriction: Seniors only. Computer Science Engineering Majors only. Electrical Engineering Majors only. Computer Engineering Majors only.

EECS 159B. Senior Design Project II. 3 Units.
Teaches problem definition, detailed design, integration, and testability with teams of students specifying, designing, building, and testing complex systems. Lectures include engineering values, discussions, and ethical ramifications of engineering decisions.

(Design units: 3)
Prerequisite: EECS 159A
Restriction: Computer Science Engineering Majors only. Electrical Engineering Majors only. Computer Engineering Majors only.

EECS 160A. Introduction to Control Systems. 4 Units.
Modeling, stability, and specifications of feedback control systems. Root locus, Bode plots, Nyquist criteria, and state-space methods for dynamic analysis and design.

(Design units: 2)
Corequisite: EECS 160LA
Prerequisite: (EECS 10 or ENGRMAE 10) and EECS 150 and EECS 170B and EECS 170LB
Restriction: Electrical Engineering Majors have first consideration for enrollment.

EECS 160LA. Control Systems I Laboratory. 1 Unit.
Laboratory accompanying EECS 160A. Materials fee.

(Design units: 1)
Corequisite: EECS 160A
Restriction: Electrical Engineering Majors have first consideration for enrollment.

EECS 163. Power Systems. 4 Units.
Generation, transmission, and use of electrical energy. Fault calculation, protection, stability, and power flow.

(Design units: 1)
Corequisite: EECS 163L
Prerequisite: EECS 70B
Restriction: Electrical Engineering Majors have first consideration for enrollment.

EECS 163L. Power Systems Laboratory. 1 Unit.
Experiments and field trips relevant to studies in power systems. Materials fee.

(Design units: 0)
Corequisite: EECS 163
Restriction: Electrical Engineering Majors have first consideration for enrollment.

EECS 166A. Industrial and Power Electronics. 4 Units.
Power switching devices, pulse width modulation (PWM) methods, switching converter topologies, control, and magnetics. Materials fee.

(Design units: 2)
Prerequisite: EECS 170C and EECS 160A
Restriction: Electrical Engineering Majors have first consideration for enrollment.
Concurrent with EECS 267A.
EECS 170A. Electronics I. 4 Units.
The properties of semiconductors, electronic conduction in solids, the physics and operation principles of semiconductor devices such as diodes and transistors, transistor equivalent circuits, and transistor amplifiers.

(Design units: 1)
Corequisite: PHYSICS 7E
Prerequisite: PHYSICS 7D and EECS 70A

Restriction: Computer Engineering Majors have first consideration for enrollment. Electrical Engineering Majors have first consideration for enrollment.

EECS 170B. Electronics II. 4 Units.
Design and analysis of single-stage amplifiers, biasing circuits, inverters, logic gates, and memory elements based on CMOS transistors.

(Design units: 2)
Corequisite: EECS 170LB
Prerequisite: EECS 70B and EECS 170A and EECS 70LA

Restriction: Computer Engineering Majors have first consideration for enrollment. Electrical Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.

EECS 170C. Electronics III. 4 Units.
Principles of operation, design, and utilization of integrated circuit modules, including multi-stage amplifiers, operational amplifiers and logic circuits.

(Design units: 2)
Corequisite: EECS 170LC
Prerequisite: EECS 170B and EECS 170LB

Restriction: Electrical Engineering Majors have first consideration for enrollment.

EECS 170D. Integrated Electronic Circuit Design. 4 Units.
Design and fabrication of modern digital integrated circuits. Fabrication of CMOS process, transistor-level design simulation, functional characteristics of basic digital integrated circuits, and different logic families including the static and dynamic logic, layout, and extraction of digital circuits.

(Design units: 4)
Prerequisite: EECS 170C and EECS 170LC

Overlaps with EECS 119, CSE 112.

Restriction: Electrical Engineering Majors have first consideration for enrollment. Computer Engineering Majors have first consideration for enrollment.

EECS 170E. Analog and Communications IC Design. 4 Units.
Advanced topics in design of analog and communications integrated circuits. Topics include: implementation of passive components in integrated circuits; overview of frequency response of amplifiers, bandwidth estimation techniques, high-frequency amplifier design; design of radio-frequency oscillators.

(Design units: 3)
Prerequisite: EECS 170C

EECS 170LA. Electronics I Laboratory. 1 Unit.
Laboratory accompanying EECS 170A to perform experiments on semiconductor material properties, semiconductor device physics and operation principles, and transistor amplifiers to improve experimental skills and to enhance the understanding of lecture materials.

(Design units: 1)
Corequisite: EECS 170A and PHYSICS 7E
Prerequisite: PHYSICS 7D and EECS 70B

Restriction: Computer Engineering Majors have first consideration for enrollment. Electrical Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.
EECS 170LB. Electronics II Laboratory. 1 Unit.
Laboratory accompanying EECS 170B.

(Design units: 1)
Corequisite: EECS 170B
Prerequisite: EECS 170A and EECS 170LA

Restriction: Computer Engineering Majors have first consideration for enrollment. Electrical Engineering Majors have first consideration for enrollment.

EECS 170LC. Electronics III Laboratory. 1 Unit.
Laboratory accompanying EECS 170C to provide hands-on training in design of digital/analog circuits/subsystems. Materials fee.

(Design units: 1)
Corequisite: EECS 170C
Prerequisite: EECS 170B and EECS 170LB

Restriction: Electrical Engineering Majors have first consideration for enrollment.

EECS 174. Semiconductor Devices. 4 Units.
Metal-semiconductor junctions, diodes, bipolar junction transistors, MOS structures, MOSFETs, CMOS technology, LEDs, and laser diodes.

(Design units: 1)
Prerequisite: EECS 170A

Restriction: Electrical Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.

EECS 176. Fundamentals of Solid-State Electronics and Materials. 4 Units.
Physical properties of semiconductors and the roles materials play in device operation. Topics include: crystal structure, phonon vibrations, energy band, transport phenomenon, optical properties and quantum confinement effect essential to the understanding of electronic, optoelectronic and nanodevices.

(Design units: 1)
Prerequisite: EECS 170A

Restriction: Electrical Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.

EECS 179. Microelectromechanical Systems (MEMS). 4 Units.
Small-scale machines, small-scale phenomena, MEMS fabrication, MEMS CAD tools, MEMS devices and packaging, MEMS testing.

(Design units: 2)
Restriction: Upper-division students only. Electrical Engineering Majors have first consideration for enrollment. Biomedical Engineering Majors have first consideration for enrollment.

EECS 180A. Engineering Electromagnetics I. 4 Units.
Electrostatics, magnetostatics, and electromagnetic fields: solutions to problems in engineering applications; transmission lines, Maxwell’s equations and phasors, plane wave propagation, reflection, and transmission. Formerly EECS 180.

(Design units: 1)
Corequisite: MATH 2D and MATH 3D
Prerequisite: PHYSICS 7E and EECS 145

Restriction: Biomedical Engineering Majors have first consideration for enrollment. Electrical Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.
EECS 180B. Engineering Electromagnetics II. 4 Units.
Time-varying electromagnetic fields, plane waves, polarization, guidance of waves like rectangular waveguides and microstrips, optical fibers resonant
cavities, skin effects and losses, spherical waves, radiation and reception of waves, antenna basics. Formerly EECS 187.

(Design units: 1)
Prerequisite: EECS 180A
Restriction: Electrical Engineering Majors have first consideration for enrollment.

EECS 180C. Engineering Electromagnetics III. 4 Units.

(Design units: 0)
Prerequisite: EECS 180B
Restriction: Electrical Engineering Majors have first consideration for enrollment.

EECS 182. Monolithic Microwave Integrated Circuit (MMIC) Analysis and Design. 4 Units.
Design of microwave amplifiers including low-noise amplifiers, multiple stage amplifiers, power amplifiers, and introduction to broadband amplifiers. The
goal is to provide the basic knowledge for the design of microwave amplifiers ranging from wireless system to radar system.

(Design units: 3)
Prerequisite: EECS 180A

EECS 188. Optical Electronics. 4 Units.
Photodiodes and optical detection, photometry and radiometry, geometric optics, lens theory, imaging system, EM wave propagation, optical
waveguides and fibers, heterojunction structures, laser theory, semiconductor lasers, and optical transmission system.

(Design units: 1)
Prerequisite: EECS 180A
Restriction: Electrical Engineering Majors have first consideration for enrollment.

EECS 195. Special Topics in Electrical and Computer Engineering. 1-4 Units.
Studies special topics in selected areas of Electrical and Computer Engineering. Topics addressed vary each quarter.

(Design units: 1-4)
Prerequisite: Prerequisites vary.
Repeatability: Unlimited as topics vary.

EECS 198. Group Study. 1-4 Units.
Group study of selected topics in Electrical and Computer Engineering.

(Design units: 1-4)
Repeatability: May be repeated for credit unlimited times.
Restriction: Upper-division students only.

EECS 199. Individual Study. 1-4 Units.
For undergraduate Engineering majors in supervised but independent reading, research, or design. Students taking Individual study for design credit are
to submit a written paper to the instructor and to the Undergraduate Student Affairs Office in the School of Engineering.

(Design units: 1-4)
Repeatability: May be taken for credit for 8 units.
EECS 199P. Individual Study. 1-4 Units.
For undergraduate Engineering majors in supervised but independent reading, research, or design. Students taking individual study for design credit are to submit a written paper to the instructor and to the Student Affairs Office in the School of Engineering.

(Design units: 1-4)

Grading Option: Pass/no pass only.

Repeatability: May be repeated for credit unlimited times.

EECS 202A. Principles of Imaging. 4 Units.
Linear systems, probability and random processes, image processing, projecting imaging, tomographic imaging.

Same as PHYSICS 233A.

Restriction: Graduate students only.

Concurrent with PHYSICS 147A.

EECS 202B. Techniques in Medical Imaging I: X-ray, Nuclear, and NMR Imaging. 4 Units.
Ionizing radiation, planar and tomographic radiographic and nuclear imaging, magnetism, NMR, MRI imaging.

Prerequisite: EECS 202A

Same as PHYSICS 233B.

Restriction: Graduate students only.

Concurrent with PHYSICS 147B.

EECS 202C. Techniques in Medical Imaging II: Ultrasound, Electrophysiological, Optical. 4 Units.
Sound and ultrasound, ultrasonic imaging, physiological electromagnetism, EEG, MEG, ECG, MCG, optical properties of tissues, fluorescence and bioluminescence, MR impedance imaging, MR spectroscopy, electron spin resonance and ESR imaging.

Prerequisite: EECS 202B

Same as PHYSICS 233C.

Restriction: Graduate students only.

Concurrent with PHYSICS 147C.

EECS 203A. Digital Image Processing. 4 Units.
Pixel-level digital image representation and elementary operations; Fourier and other unitary transforms; compression, enhancement, filtering, and restoration; laboratory experience is provided.

Restriction: Graduate students only.

EECS 211. Advanced System Software. 4 Units.
Study of operating systems including interprocess communication, scheduling, resource management, concurrency, reliability, validation, protection and security, and distributed computing support. System software design languages and modeling analysis.

Restriction: Graduate students only.

EECS 213. Computer Architecture. 4 Units.
Problems in hardware, firmware (microprogram), and software. Computer architecture for resource sharing, real-time applications, parallelism, microprogramming, and fault tolerance. Various architectures based on cost/performance and current technology.

Restriction: Graduate students only.

EECS 215. Design and Analysis of Algorithms. 4 Units.
Computer algorithms from a practical standpoint. Algorithms for symbolic and numeric problems such as sorting, searching, graphs, and network flow. Analysis includes algorithm time and space complexity.
EECS 217. VLSI System Design. 4 Units.
Overview of integrated fabrication, circuit simulation, basic device physics, device layout, timing; MOS logic design; layout generation, module generation, techniques for very large scale integrated circuit design.

Restriction: Graduate students only.

EECS 219. Distributed Software Architecture and Design. 4 Units.
Practical issues for reducing the software complexity, lowering cost, and designing and implementing distributed software applications. Topics include the distributed object model distributed environment, platform-independent software agents and components, the middleware architecture for distributed real-time and secure services.

Prerequisite: EECS 211

Restriction: Graduate students only.

EECS 220. Advanced Digital Signal Processing Architecture. 4 Units.
Study the latest DSP architectures for applications in communication (wired and wireless) and multimedia processing. Emphasis given to understanding the current design techniques and to evaluate the performance, power, and application domain of the latest DSP processors.

Prerequisite: EECS 213

Restriction: Graduate students only.

EECS 221. Topics in Computer Engineering. 4 Units.
New research results in computer engineering.

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.

EECS 222. Embedded System Modeling. 4 Units.
Computational models for embedded systems. System-level specification and description languages. Concepts, requirements, examples. Embedded system models at different levels of abstraction. Modeling of test benches, design under test, IP components. Discrete event simulation, semantics, and algorithms. Formerly EECS 222A.

Restriction: Graduate students only.

EECS 223. Real-Time Computer Systems. 4 Units.
Time bases, clock synchronization, real-time communication protocols, specification of requirements, task scheduling. Validation of timelines, real-time configuration management.

Prerequisite: EECS 211 and EECS 213

Restriction: Graduate students only.

EECS 224. High-Performance Computing. 4 Units.
Fundamentals of high-performance computing, covering both theory and practice. Topics include performance analysis and tuning, design of parallel and I/O efficient algorithms, basics of parallel machine architectures, and current/emerging programming models (shared memory, distributed memory, and accelerators).

Prerequisite: EECS 215 or COMPSCI 260

Restriction: Graduate students only.

EECS 225. Embedded Systems Design. 4 Units.
Embedded systems design flow and methodology. Design space exploration. Co-design of hardware and software, embedded architecture and network exploration and synthesis. System software/hardware interface generation. Real-time constraints, specification-to-architecture mapping, design tools and methodologies. Formerly EECS 222B.

Restriction: Graduate students only.

EECS 226. Embedded System Software. 4 Units.
Embedded system software concepts, requirements, examples, for engineering applications such as multi-media and automotive. Software generation methodology. Algorithmic specification, design constraints. Embedded operating systems. Static, dynamic, real-time scheduling. Input/output, interrupt handling. Code generation, compilation, instruction set simulation. Formerly EECS 222C.

Restriction: Graduate students only.
EECS 227. Cyber-Physical System Design. 4 Units.
Model-based design of cyber-physical systems including, e.g., plant, sensing, control, actuation, embedded hardware/software, communication, real-time analysis, various levels of simulation (MILS, SILS, HILS), tools and methodologies for automatic synthesis, and application from various interdisciplinary domains.
Restriction: Graduate students only.

EECS 228. Program Analysis. 4 Units.
Advance study of programming languages, compilers, and interpreters. Static and dynamic program analysis and its use in compilation, optimization, garbage collection, bug finding, and parallelization.
Prerequisite: EECS 215 or COMPSCI 260
Restriction: Graduate students only.

EECS 229. Low Power SoC Design. 4 Units.
From an inverter to server centers, low-power design theory and practice in modern systems-on-chip (SoC), energy efficient design time and runtime methods are surveyed at circuit, RTL, and architecture levels. Lab assignments will help students quantify tradeoffs and design practices.
Prerequisite: EECS 217
Restriction: Graduate students only.

EECS 230. Energy Efficiency. 4 Units.
Green energy sources for production, transmission, storage, and utilization of electricity, with a special focus on solar, wind, and nuclear energy production. Study of newly developed renewable sources of energy including capital cost, product cost, environmental issues, and technical feasibility.

EECS 240. Random Processes. 4 Units.
Restriction: Graduate students only.

EECS 241A. Digital Communications I. 4 Units.
Concepts and applications of digital communication systems. Baseband digital transmission of binary, multi-amplitude, and multidimensional signals. Introduction to and performance analysis of different modulation schemes.

EECS 241B. Digital Communications II. 4 Units.
Concepts and applications of equalization, multi-carrier modulation, spread spectrum and CDMA. Digital communications through fading memory channels.
Prerequisite: EECS 241A
Restriction: Graduate students only.

EECS 242. Information Theory. 4 Units.
Fundamental capabilities and limitations of information sources and information transmission systems. Analytical framework for modeling and evaluating communication systems: entropy, mutual information asymptotic equipartition property, entropy rates of a stochastic process, data compression, channel capacity, differential entropy, the Gaussian channel.
Prerequisite: EECS 240

EECS 243. Error Correcting Codes. 4 Units.
Different techniques for error correcting codes and analyzing their performance. Linear block codes; cyclic codes; convolutional codes. Minimum distance; optimal decoding; Viterbi decoding; bit error probability. Coding gain; trellis coded modulation.
Prerequisite: EECS 240
Restriction: Graduate students only.
EECS 244. Wireless Communications. 4 Units.
Prerequisite: EECS 241B
Restriction: Graduate students only.

EECS 245. Space-Time Coding. 4 Units.
A fundamental study of: Capacity of MIMO Channels, space-time code design criteria, space-time block codes, space-time trellis codes, differential detection for multiple antennas, spatial multiplexing, BLAST.
Prerequisite: EECS 242
Restriction: Graduate students only.

EECS 247. Information Storage. 4 Units.
Storage architecture, storage network and networking algorithms in data centers, principle of storage devices and non-volatile memory, data consistency, data availability and integrity, power management.
Restriction: Graduate students only.

EECS 248A. Computer and Communication Networks. 4 Units.
Prerequisite: EECS 148 or COMPSCI 132
Same as COMPSCI 232, NET SYS 201.
Restriction: Graduate students only.

EECS 250. Digital Signal Processing I. 4 Units.
Fundamental principles of digital signal processing, sampling, decimation and interpolation, discrete Fourier transforms and FFT algorithms, transversal and recursive filters, discrete random processes, and finite-word effects in digital filters.
Restriction: Graduate students only.

EECS 251A. Detection, Estimation, and Demodulation Theory. 4 Units.
Prerequisite: EECS 240

EECS 251B. Detection, Estimation, and Demodulation Theory. 4 Units.
Prerequisite: EECS 240

EECS 260A. Linear Systems I. 4 Units.
State-space representation of continuous-time and discrete-time linear systems. Controllability, observability, stability. Realization of rational transfer functions.
Restriction: Graduate students only.

EECS 261A. Linear Optimization Methods. 4 Units.
Restriction: Graduate students only.
EECS 267A. Industrial and Power Electronics. 4 Units.
Power switching devices, pulse width modulation (PWM) methods, switching converter topologies, control, and magnetics. Materials fee.

Restriction: Graduate students only.

Concurrent with EECS 166A.

EECS 267B. Topics in Industrial and Power Electronics. 4 Units.
Practical design of switching converters, electromagnetic compatibility, thermal management, and/or control methods.

Prerequisite: EECS 267A

Restriction: Graduate students only.

EECS 270A. Advanced Analog Integrated Circuit Design I. 4 Units.
Basic transistor configurations; differential pairs; active load/current sources; supply/temperature-independent biasing; op-amp gain and output stages; amplifier frequency response and stability compensation; nonidealities in op-amps; noise and dynamic range in analog circuits.

Restriction: Graduate students only.

EECS 270B. Advanced Analog Integrated Circuit Design II. 4 Units.
Advanced transistor modeling issues; discrete-time and continuous-time analog Integrated Circuit (IC) filters; phase-locked loops; design of ICs operating at radio frequencies; low-voltage/low-power design techniques; A/D and D/A converters; AGC circuits.

Prerequisite: EECS 270A

Restriction: Graduate students only.

EECS 270C. Design of Integrated Circuits for Broadband Applications. 4 Units.
Topics include: broadband standards and protocols; high-frequency circuit design techniques; PLL theory and design; design of transceivers; electrical/optical interfaces.

Prerequisite: EECS 270A

Restriction: Graduate students only.

EECS 270D. Radio-Frequency Integrated Circuit Design. 4 Units.
Topics include: RF component modeling; matching network design; transmission line theory/modeling; Smith chart and S-parameters; noise modeling of active and passive components; high-frequency amplifier design; low-noise amplifier (LNA) design; mixer design; RF power amplifier.

Prerequisite: EECS 270A

Restriction: Graduate students only.

EECS 272. Topics in Electrical Engineering. 4 Units.
New research results in electronic system design.

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.

EECS 275A. Very Large Scale Integration (VLSI) Project. 4 Units.
Students create VLSI design projects from conception through architecture, floor planning, detailed design, simulation, verification, and submission for project fabrication. Emphasis on practical experience in robust VLSI design techniques. (Successful students are expected to take EECS 275B.)

Restriction: Graduate students only.

EECS 275B. Very Large Scale Integration (VLSI) Project Testing. 4 Units.
Test and document student-created Complementary Metal Oxide Semiconductor (CMOS) Very Large Scale Integration (VLSI) projects designed in EECS 275A. Emphasis on practical laboratory experience in VLSI testing techniques. Materials fee.

Prerequisite: EECS 275A

Restriction: Graduate students only.
EECS 277A. Advanced Semiconductor Devices I. 4 Units.
Advanced complementary metal-oxide-semiconductor field-effect transistors (CMOSFET), device scaling, device modeling and fabrication, equivalent circuits, and their applications for digital, analog, RF.

Restriction: Graduate students only.

EECS 277B. Advanced Semiconductor Devices II. 4 Units.
Metal-semiconductor field-effect transistors (MESFET), heterojunction bipolar transistors (HBT), microwave semiconductor devices, equivalent circuits, device modeling and fabrication, microwave amplifiers, transmitters, and receivers.

Restriction: Graduate students only.

EECS 277C. Nanotechnology. 4 Units.

Restriction: Graduate students only.

EECS 278. Micro-System Design. 4 Units.
Covers the fundamentals of the many disciplines needed for design of Micro-Electro-Mechanical Systems (MEMS): microfabrication technology, structural mechanics on micro-scale, electrostatics, circuit interface, control, computer-aided design, and system integration.

Same as ENGRMAE 247.

Restriction: Graduate students only.

EECS 279. Micro-Sensors and Actuators. 4 Units.
Introduction to the technology of Micro-Electro-Mechanical Systems (MEMS). Fundamental principles and applications of important microsensors, actuation principles on microscale. Introduction to the elements of signal processing; processing of materials for micro sensor/actuator fabrication; smart sensors and microsensor/microactuator array devices.

Same as ENGRMAE 249.

Restriction: Graduate students only.

EECS 280A. Advanced Engineering Electromagnetics I. 4 Units.
Stationary electromagnetic fields, Maxwell's equations, circuits and transmission lines, plane waves, guided waves, and radiation.

Restriction: Graduate students only.

EECS 280B. Advanced Engineering Electromagnetics II. 4 Units.
Two- and three-dimensional boundary value problems, dielectric waveguides and other special waveguides, microwave networks and antenna arrays, electromagnetic properties of materials, and electromagnetic optics.

Prerequisite: EECS 280A

Restriction: Graduate students only.

EECS 282. Monolithic Microwave Integrated Circuit (MMIC) Analysis and Design II. 4 Units.
Design of microwave amplifiers using computer-aided design tools. Covers low-noise amplifiers, multiple stage amplifiers, broadband amplifiers, and power amplifiers. Hybrid circuit design techniques including filters and baluns. Theory and design rules for microwave oscillator design.

Restriction: Graduate students only.

EECS 285A. Optical Communications. 4 Units.
Introduction to fiber optic communication systems, optical and electro-optic materials, and high-speed optical modulation and switching devices.

Restriction: Graduate students only.

EECS 285B. Lasers and Photonics. 4 Units.
Covers the fundamentals of lasers and applications, including Gaussian beam propagation, interaction of optical radiation with matters, and concepts of optical gain and feedback. Applications are drawn from diverse fields of optical communication, signal processing, and material diagnosis.

Prerequisite: Undergraduate course work in electromagnetic theory and atomic physics.
EECS 285C. Nano Imaging. 4 Units.
Theory and practice of modern nanoscale imaging techniques and applications. Traces the development of microscopy from ancient times to modern
day techniques used for visualizing the nano-world from atoms to molecules including hands-on experience in the laboratory.

Restriction: Graduate students only.

EECS 286. Biomedical and Wearable Microdevices. 4 Units.
Preliminary details on prototyping and fabrication techniques for biomedical and wearable microdevices. Behavior and properties of modern microdevice
materials such as hydrogel, PDMS, biopolymer, smart materials, and their uses. Basic biosensing modalities and practical implementations in modern
devices.

Prerequisite: Knowledge of undergraduate-level basic physics is required.

Restriction: Graduate students only.

EECS 290. Curricular Practical Training. 1 Unit.
Curricular practical training. Students will go through practical training under an industry mentor in a technical field corresponding to their concentration
area.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

EECS 292. Preparation for M.S. Comprehensive Examination. 1-8 Units.
Individual reading and preparation for the M.S. comprehensive examination.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

EECS 293. Preparation for Ph.D. Preliminary Examination. 1-8 Units.
Individual reading and preparation for the Ph.D. preliminary examination.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

EECS 294. Electrical Engineering and Computer Science Colloquium. 1 Unit.
Invited speakers discuss their latest research results in electrical engineering and computer science.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

EECS 295. Seminars in Engineering. 1-4 Units.
Scheduled each year by individual faculty in major field of interest.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.

EECS 296. Master of Science Thesis Research. 1-16 Units.
Individual research or investigation conducted in the pursuit of preparing and completing the thesis required for the M.S. degree in Engineering.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.
EECS 297. Doctor of Philosophy Dissertation Research. 1-16 Units.
Individual research or investigation conducted in preparing and completing the dissertation required for the Ph.D. degree in Engineering.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

EECS 298. Topics in Electrical Engineering and Computer Science. 4 Units.
Study of Electrical and Computer Engineering concepts.

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.

EECS 299. Individual Research. 1-16 Units.
Individual research or investigation under the direction of an individual faculty member.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

Department of Mechanical and Aerospace Engineering

Derek Dunn-Rankin, Department Chair
4221 Engineering Gateway
949-824-8451
http://mae.eng.uci.edu/

Overview
The Department of Mechanical and Aerospace Engineering offers two undergraduate B.S. programs: one in Mechanical Engineering and the other in Aerospace Engineering. M.S. and Ph.D. programs in Mechanical and Aerospace Engineering are also offered.

Mechanical engineers design, manufacture, and control machines ranging from robots to aircraft and spacecraft, design engines and power plants that drive these machines, analyze the environmental impact associated with power generation, and strive to promote environmental quality. To achieve their goals, mechanical engineers use mathematics, physics, and chemistry together with engineering science and technology in areas such as fluid mechanics, heat transfer, dynamics, controls, and atmospheric science. Mechanical Engineering students at UCI learn the problem-solving, modeling, and testing skills required to contribute to advances in modern technology.

Mechanical Engineering undergraduates complete required courses that provide engineering fundamentals and technical electives that allow students to study particular areas of interest. Specializations are available in Aerospace Engineering, Energy Systems and Environmental Engineering, Flow Physics and Propulsion Systems, and Design of Mechanical Systems. Independent research opportunities allow students to pursue other avenues for focusing their studies.

Aerospace Engineering deals with all aspects of aircraft and spacecraft design and operation, thus requiring the creative use of many different disciplines. Aerospace engineers work the forefront of technological advances and are leaders in scientific discoveries.

The undergraduate curriculum in Aerospace Engineering includes courses in subsonic and supersonic aerodynamics, propulsion, controls and performance, light-weight structures, spacecraft dynamics, and advanced materials. In the senior capstone course, students work in teams on the preliminary design of a commercial jet transport.

Career opportunities for Aerospace Engineering graduates are in the broad range of aerospace industries, including manufacturers of aircraft, spacecraft, engines, and aircraft/spacecraft components; makers of aircraft/spacecraft simulators; and government research laboratories.

On This Page:
- Aerospace Engineering (p. 759)
- Mechanical Engineering (p. 762)

Undergraduate Major in Aerospace Engineering

Program Educational Objectives: Graduates of the program will have the professional and scientific education that allows them to be successful as career engineers and in the most demanding graduate programs. Specifically, they will be able to (1) function in professional environments in industry, government, and academia applying and building upon engineering science knowledge, problem-solving skills, and communication skills; (2) function as members of teams and in leadership roles applying ethical standards including the AIAA code of ethics within and beyond traditional Aerospace Engineering disciplines; and (3) remain current with technology and contemporary scientific and societal issues, and consequently improve skills and
knowledge through a lifelong process of learning. (Program educational objectives are those aspects of engineering that help shape the curriculum; achievement of these objectives is a shared responsibility between the student and UCI.)

The undergraduate Aerospace Engineering curriculum includes a core of mathematics, physics, and chemistry. Engineering courses in fundamental areas constitute much of the remaining curriculum. A few technical electives allow the undergraduate student to specialize somewhat or to pursue broader understanding. A senior capstone design experience culminates the curriculum.

Admissions

High School Students: See School admissions (p. 564) information.

Transfer Students: Preference will be given to junior-level applicants with the highest grades overall, and who have satisfactorily completed the following required courses: two years of approved calculus, one year of calculus-based physics with laboratories (mechanics, electricity and magnetism), completion of lower-division writing, one course in general chemistry (with laboratory), statics, and one course in introductory programming. For course equivalency specific to each college, visit assist.org (http://catalogue.uci.edu/thehenrysamuelischoolofengineering/departmentofmechanicalandaerospaceengineering/assist.org).

Students are encouraged to complete as many of the lower-division degree requirements as possible prior to transfer. Students who enroll at UCI in need of completing lower-division coursework may find that it will take longer than two years to complete their degrees. For further information, contact The Henry Samueli School of Engineering at 949-824-4334.

Requirements for the B.S. in Aerospace Engineering

All students must meet the University Requirements (p. 91).
All students must meet the School Requirements (p. 564). (p. 564)

ENGRMAE 135  Compressible Flow
ENGRMAE 136  Aerodynamics
ENGRMAE 146  Astronautics
ENGRMAE 150  Mechanics of Structures
ENGRMAE 150L  Mechanics of Structures Laboratory
ENGRMAE 157  Lightweight Structures
ENGRMAE 158  Aircraft Performance
ENGRMAE 159  Aircraft Design
ENGRMAE 170  Introduction to Control Systems
ENGRMAE 175  Dynamics and Control of Aerospace Vehicles

Technical Elective Courses:
students select a minimum of 3 courses of technical electives, incorporating at least 1 unit of design. Any upper-division course in the department not used for the degree may be used as a technical elective. With approval of the Undergraduate Advisor, students may choose from other departments’ upper-division courses that have primarily technical content. Preapproved courses are listed on the MAE website: http://engineering.uci.edu/files/mae-technical-electives.pdf

Engineering Professional Topics Course:
ECON 20A  Basic Economics I
or ECON 23  Basic Economics for Engineers
ENGR 190W  Communications in the Professional World

At most an aggregate total of 4 units of 199 or H199 courses may be used to satisfy degree requirements.

(The nominal Aerospace Engineering program will require 185 units of courses to satisfy all university and major requirements. Because each student comes to UCI with a different level of preparation, the actual number of units will vary.)

Design unit values are indicated at the end of each course description. The faculty advisors and the Undergraduate Student Affairs Office can provide necessary guidance for satisfying the design requirements. Selection of elective courses must be approved by the student’s faculty advisor and the departmental undergraduate advisor.

ENGR 7A-ENGR 7B is a technical elective, available only to first year students in Fall and Winter quarters. Both ENGR 7A & ENGR 7B must be taken to count as a technical elective. If ENGR 7A-ENGR 7B is taken, this will replace one technical elective course in the senior year.

The sample program of study chart shown is typical for the major in Aerospace Engineering. This program is based upon a set of prerequisites, beginning with adequate preparation in high school mathematics, physics, and chemistry. Students should consult with their academic counselor to structure their program of study. Aerospace Engineering majors must consult at least once every year with the academic counselors in the Student Affairs Office and with their faculty advisor.

**Undergraduate Major in Mechanical Engineering**

*Program Educational Objectives:* Graduates of the program will have the professional and scientific education that allows them to be successful as career engineers and in the most demanding graduate programs. Specifically, they will be able to (1) function in professional environments in industry, government, and academia applying and building upon engineering science knowledge, problem-solving skills, and communication skills; (2) function as members of teams and in leadership roles applying ethical standards including the ASME code of ethics within and beyond traditional Mechanical Engineering disciplines; and (3) remain current with technology and contemporary scientific and societal issues, and consequently improve skills and knowledge through a lifelong process of learning. (Program educational objectives are those aspects of engineering that help shape the curriculum; achievement of these objectives is a shared responsibility between the student and UCI.)

The undergraduate Mechanical Engineering curriculum includes a foundation of mathematics, physics, and chemistry. Engineering courses in fundamental areas constitute much of the remaining curriculum. A few technical electives allow the undergraduate student to specialize somewhat or to pursue broader understanding. A senior capstone design experience culminates the curriculum.

**Admissions**

*High School Students:* See School Admissions (p. 564) information.

*Transfer Students:* Preference will be given to junior-level applicants with the highest grades overall, and who have satisfactorily completed the following required courses: two years of approved calculus, one year of calculus-based physics with laboratories (mechanics, electricity and magnetism), completion of lower-division writing, one course in general chemistry (with laboratory), one course in introductory programming, statics, and engineering graphics.

Students are encouraged to complete as many of the lower-division degree requirements as possible prior to transfer. Students who enroll at UCI in need of completing lower-division coursework may find that it will take longer than two years to complete their degrees. For further information, contact The Henry Samueli School of Engineering at 949-824-4334.

**Requirements for the B.S. in Mechanical Engineering**

*All students must meet the University Requirements* (p. 91).

*All students must meet the School Requirements* (p. 564).

### Mathematics and Basic Science Courses:

| CHEM 1A | General Chemistry |
| or ENGR 1A | General Chemistry for Engineers |
| CHEM 1LE | Accelerated General Chemistry Lab |
| MATH 2A- 2B | Single-Variable Calculus and Single-Variable Calculus |
| MATH 2D | Multivariable Calculus |
| MATH 2E | Multivariable Calculus |
| MATH 3A | Introduction to Linear Algebra |
| MATH 3D | Elementary Differential Equations |
| PHYSICS 7C | Classical Physics |
| PHYSICS 7LC | Classical Physics Laboratory |
| PHYSICS 7D- 7E | Classical Physics and Classical Physics |
| PHYSICS 7LD | Classical Physics Laboratory |
| PHYSICS 52A | Fundamentals of Experimental Physics |

One additional General Education Category II course offered by the Schools of Physical Sciences, Biological Sciences, or Information and Computer Sciences.

**Engineering Topics Courses:**
Students must complete a minimum of 24 units of engineering design.

**Core Courses:**

- ENGR 54 Principles of Materials Science and Engineering
- ENGRMAE 10 Introduction to Engineering Computations
- ENGRMAE 30 Statics
- ENGRMAE 52 Computer-Aided Design
- ENGRMAE 60 Electric Circuits
- ENGRMAE 70A Network Analysis I
- ENGRMAE 80 Dynamics
- ENGRMAE 91 Introduction to Thermodynamics
- ENGRMAE 106 Mechanical Systems Laboratory
- ENGRMAE 107 Fluid Thermal Science Laboratory
- ENGRMAE 112 Propulsion
  - or ENGRMAE 115 Applied Engineering Thermodynamics
- ENGRMAE 120 Heat and Mass Transfer
- ENGRMAE 130A Introduction to Fluid Mechanics
- ENGRMAE 130B Introduction to Viscous and Compressible Flows
- ENGRMAE 145 Theory of Machines and Mechanisms
- ENGRMAE 147 Vibration
- ENGRMAE 150 Mechanics of Structures
- ENGRMAE 150L Mechanics of Structures Laboratory
- ENGRMAE 151 Mechanical Engineering Design
- ENGRMAE 155 Composite Materials and Structures
  - or ENGRMAE 156 Mechanical Behavior and Design Principles
  - or ENGRMAE 157 Lightweight Structures
- ENGRMAE 170 Introduction to Control Systems
- ENGRMAE 189 Senior Project - Special Topics (minimum of 3 units)

**Technical Elective Courses:**

- Students select a minimum of 16 units of technical electives. Any upper-division course in the department not used for the degree may be used as a technical elective. At least 8 units of the technical electives must come from mechanical engineering oriented MAE courses. With approval of the Undergraduate Advisor, students may choose any remaining technical elective units from other departments’ upper-division courses that have primarily technical content. Preapproved courses from other departments as well as the identified mechanical engineering oriented MAE courses are listed on the MAE website: http://engineering.uci.edu/files/mae-technical-electives.pdf

**Engineering Professional Topics Course:**

- ECON 20A Basic Economics I
- or ECON 23 Basic Economics for Engineers
- ENGR 190W Communications in the Professional World

At most an aggregate total of 4 units of 199 or H199 courses may be used to satisfy degree requirements.

(The nominal Mechanical Engineering program will require 189 units of courses to satisfy all university and major requirements. Because each student comes to UCI with a different level of preparation, the actual number of units will vary.)

**Specialization in Aerospace Engineering:**

- Completion of a Senior Design Project in this area, and
- select two of the following:
  - ENGRMAE 112 Propulsion
  - ENGRMAE 135 Compressible Flow
  - ENGRMAE 136 Aerodynamics
  - ENGRMAE 158 Aircraft Performance
  - ENGRMAE 159 Aircraft Design
  - ENGRMAE 175 Dynamics and Control of Aerospace Vehicles

**Specialization in Energy Systems and Environmental Engineering:**

- Completion of a Senior Design Project in this area, and
select two of the following:
- ENGRMAE 110: Combustion and Fuel Cell Systems
- ENGRMAE 112: Propulsion
- ENGRMAE 114: Fuel Cell Fundamentals and Technology
- ENGRMAE 115: Applied Engineering Thermodynamics
- ENGRMAE 117: Solar and Renewable Energy Systems
- ENGRMAE 118: Sustainable Energy Systems
- ENGRMAE 164: Air Pollution and Control

Specialization in Flow Physics and Propulsion Systems:
Completion of a Senior Design Project in this area, and
select two of the following:
- ENGRMAE 110: Combustion and Fuel Cell Systems
- ENGRMAE 112: Propulsion
- ENGRMAE 113: Electric Propulsion
- ENGRMAE 135: Compressible Flow

Specialization in Design of Mechanical Systems:
Completion of a Senior Design Project in this area, and
select two of the following:
- ENGR 165: Advanced Manufacturing
- ENGRMAE 152: Introduction to Computer-Aided Engineering
- ENGRMAE 171: Digital Control Systems
- ENGRMAE 172: Design of Computer-Controlled Robots
- ENGRMAE 183: Computer-Aided Mechanism Design
- ENGRMAE 188: Engineering Design in Industry

Design unit values are indicated at the end of each course description. The faculty advisors and the Student Affairs Office can provide necessary guidance for satisfying the design requirements. Selection of elective courses must be approved by the student’s faculty advisor and the departmental undergraduate advisor.

The Mechanical and Aerospace Engineering faculty have special interest and expertise in four thrust areas: continuum mechanics; power, propulsion, and environment; micro/nanomechanics; and systems and design.

Continuum mechanics faculty study the physics of fluids, physics and chemistry of solids, and structural mechanics. Areas of emphasis in fluid mechanics include incompressible and compressible turbulent flows, multiphase flow, chemically reacting and other nonequilibrium flows, aeroacoustics, aerooptics, and fluid-solid interaction. In the field of solid mechanics, research and course work emphasize theoretical and computational approaches which contribute to a basic understanding of and new insight into the properties and behavior of condensed matter. General areas of interest are large-strain and large-rotation inelastic solids, constitutive modeling, and fracture mechanics. Computational algorithms center on boundary element methods and the new class of meshless methods. Studies in structural mechanics involve the analysis and synthesis of low-mass structures, smart structures, and engineered materials, with emphasis on stiffness, stability, toughness, damage tolerance, longevity, optimal life-cycle costs and self-adaptivity.

Research in power, propulsion, and environment encompasses aerospace propulsion, combustion and thermophysics, fuel cell technologies, and atmospheric physics and impacts. In aerospace propulsion, particular emphasis is placed in the areas of turbomachinery, spray combustion, combustion instability, innovative engine cycles, and compressible turbulent mixing. The topic of combustion and thermophysics addresses the fundamental fluid-dynamical, heat-transfer, and chemical mechanisms governing combustion in diverse settings. Fuel cell research encompasses the development of fuel-cell technology, hybrid engines, and thermionic devices. Activities cover the thermodynamics of energy systems, the controls associated with advanced energy systems, and systems analyses. The area of atmospheric physics and impacts deals with the modeling and controlling of chemical pollution, particle dispersion, and noise emission caused by energy-generation and propulsion devices. Research on atmospheric turbulence addresses the energy exchanges between the Earth’s land and ocean surfaces and the overlying atmosphere.

Micro/nanomechanics encompasses the thrusts of miniaturization engineering, mechatronics, and biotechnology. Miniaturization engineering is relevant to the development of small-scale mechanical, chemical and biological systems for applications in biotechnology, automotive, robotic, and alternative energy applications. It involves the establishment of scaling laws, manufacturing methods, materials options and modeling from the atom to the macro system. Mechatronic design is the integrated and optimal design of a mechanical system and its embedded control system. Main focus research is the design, modeling, and characterization of Micro Electro Mechanical Systems (MEMS). Particular emphasis is placed on analysis and design of algorithmic methods and physical systems that realize sensor-based motion planning. The thematic area of biotechnology involves the understanding, modeling, and application of fundamental phenomena in mechanical engineering, electrical engineering, and chemistry towards the development of biosensors and actuators.

Systems and design research is conducted in the areas of dynamic systems optimization and control, biomechanical engineering, robotics and machine learning, and design engineering. Advanced concepts in dynamics, optimization and control are applied to the areas of biorobotics, flight trajectory design, guidance and navigation, learning systems, micro sensors and actuators, flexible structures, combustion, fuel cells, and fluid-optical interactions. Biomechanical engineering integrates physiology with engineering in order to develop innovative devices and algorithms for medical diagnosis and treatment. The focus of robotics and machine learning is the creation of machines with human-like intelligence capabilities for learning. Faculty in design engineering develop methodologies to address issues ranging from defining the size and shape of components needed for force and motion specifications, to characterizing performance in terms of design parameters, cost and complexity.

Aerospace engineering research efforts combine specialties from each of the four thrust areas toward the design, modeling, and operation of complex systems.
The Department offers the M.S. and Ph.D. degrees in Mechanical and Aerospace Engineering.

Master of Science Degree

Two plans are available to pursue study toward the M.S.: a thesis option and a comprehensive examination option. Opportunities are available for part-time study toward the M.S. The Plan of Study for both options must be developed in consultation with a Faculty Advisor and approved by the Department Graduate Advisor.

Plan I: Thesis Option

The thesis option requires completion of eight graduate, technical and science courses; the completion of an original research project with a Faculty Advisor, the writing of the thesis describing it; and approval of the thesis by a thesis committee. This plan is available for those who wish to gain research experience or as preparation for study toward the doctoral degree. Students must complete 12 units of ENGRMAE 296, 3 units of ENGRMAE 298, and four graduate courses from a restricted list in the selected major. Additionally, four of the eight required graduate courses must be from the MAE Department. With the approval of the graduate advisor, one non-core graduate course may be replaced by an upper-division undergraduate course in MAE; this course may not have been used to satisfy the undergraduate degree requirements.

NOTE: Students who enter prior to fall of 2008 should follow the course requirements outlined within the Catalogue of the year they entered. The change in number of units per course is not intended to change the course requirements for the degree or to have any impact in the number of courses students are taking. As such, students will need to continue to meet the same high standards and plan of study requirements as previously required. Students will work with their advisor to create a plan of study encompassing the equivalent topical requirements, as well as the equivalent number of courses to the previous 36 unit requirement (i.e., at least 8 graduate-level courses to meet the 24, 200–289 level unit requirement).

Plan II: Comprehensive Examination Option

The comprehensive examination option requires completion of eleven graduate, technical and science courses, plus a comprehensive exam. Students must complete 3 units of ENGRMAE 298 and four graduate courses from a restricted list. Additionally, six of the eleven required graduate courses must be from the MAE Department. Up to two of the required courses may be replaced by an equivalent number of units of ENGRMAE 294, which includes execution and documentation of a research or design project under a faculty advisor. With the approval of the graduate advisor, one graduate course may be replaced by an upper-division undergraduate course in MAE; this course may not be used to satisfy both undergraduate and graduate degree requirements. Consult the MAE Department (http://mae.eng.uci.edu) website (http://mae.eng.uci.edu) or Graduate Advisor, for detailed information on the comprehensive exam.

NOTE: Students who entered prior to fall of 2008 should follow the course requirements outlined within the Catalogue of the year they entered. The change in number of units per course is not intended to change the course requirements for the degree or to have any impact in the number of courses students are taking. As such, students will need to continue to meet the same high standards and plan of study requirements as previously required. Students will work with their advisor to create a plan of study encompassing the equivalent topical requirements, as well as the equivalent number of courses to the previous 36 unit requirement (i.e., at least 11 graduate-level courses to meet the 33, 200–289 level unit requirement).

Doctor of Philosophy Degree

The doctoral program in Mechanical and Aerospace Engineering is tailored to the individual needs and background of the student. The detailed program of study for each Ph.D. student is formulated in consultation with a faculty advisor who takes into consideration the objectives and preparation of the candidate.

Within this flexible framework the Department maintains specific guidelines that outline the milestones of a typical doctoral program. All doctoral students should consult the Departmental Ph.D. guidelines for program details, but there are several milestones to be passed: admission to the Ph.D. program by the faculty; completion of three non-research graduate, technical courses beyond M.S. degree requirements; passage of a preliminary examination or similar assessment of the student’s background and potential for success in the doctoral program; course work; meeting departmental teaching requirements, which can be satisfied through service as a teaching assistant or equivalent; research preparation; formal advancement to candidacy in the third year (second year for students who entered with a master’s degree) through a qualifying examination conducted on behalf of the Irvine division of the Academic Senate; development of a research proposal; completion of a significant research investigation, and completion and defense of an acceptable dissertation. There is no foreign language requirement. The degree is granted upon the recommendation of the Doctoral Committee and the Dean of Graduate Studies. Students enrolled in the Ph.D. program must take a full-time load (minimum of 12 units). The normative time for completion of the Ph.D. is five years (four years for students who entered with a master’s degree). The maximum time permitted is seven years.

Before seeking admission, Ph.D. applicants are encouraged to communicate directly and in some detail with prospective faculty sponsors. The student’s objectives and financial resources must coincide with a faculty sponsor’s research interests and research support. Financial aid in the form of a teaching assistantship or fellowship may not cover the period of several years required to complete the program. During the balance of the period the student will be in close collaboration with the faculty research advisor.

Faculty

Satya N. Atluri, ScD Massachusetts Institute of Technology, Professor Emeritus of Mechanical and Aerospace Engineering
James E. Bobrow, Ph.D. University of California, Los Angeles, Professor Emeritus of Mechanical and Aerospace Engineering (robotics, applied nonlinear control, optimization methods)

Jacob Brouwer, Ph.D. Massachusetts Institute of Technology, Associate Professor of Mechanical and Aerospace Engineering; Civil and Environmental Engineering (high-temperature electrochemical dynamics, fuel cells, renewable and sustainable energy)

Donald Dabdub, Ph.D. California Institute of Technology, Professor of Mechanical and Aerospace Engineering; Civil and Environmental Engineering (mathematical modeling of urban and global air pollution, dynamics of atmospheric aerosols, secondary organic aerosols, impact of energy generation on air quality, chemical reactions at gas-liquid interfaces)

Derek Dunn-Rankin, Ph.D. University of California, Berkeley, Department Chair and Professor of Mechanical and Aerospace Engineering; Civil and Environmental Engineering; Environmental Health Sciences (combustion, optical particle sizing, particle aero-dynamics, laser diagnostics and spectroscopy)

Said E. Elghobashi, Ph.D. University of London, Professor of Mechanical and Aerospace Engineering (direct numerical simulation of turbulent, chemically reacting and dispersed two-phase flows)

Manuel Gamero-Castaño, Ph.D. Yale University, Associate Professor of Mechanical and Aerospace Engineering (electric propulsion, electrospray, atomization, aerosol diagnostics)

Tryphon Georgiou, Ph.D. University of Florida, Professor of Mechanical and Aerospace Engineering (control theory, systems engineering, statistical signal processing, applied mathematics)

Faryar Jabbari, Ph.D. University of California, Los Angeles, Professor of Mechanical and Aerospace Engineering (robust and nonlinear control theory, adaptive parameter identification)

Selma S. Kia, Ph.D. University of California, Irvine, Assistant Professor of Mechanical and Aerospace Engineering (distributed control and optimization of multi-agent networked systems)

John C. Larue, Ph.D. University of California, San Diego, Professor of Mechanical and Aerospace Engineering (fluid mechanics, micro-electrical-mechanical systems (MEMS), turbulence, heat transfer, instrumentation)

Jae Ho Lee, Ph.D. Stanford University, Assistant Professor of Mechanical and Aerospace Engineering; Chemical Engineering and Materials Science (nanofabrication and thermoelectric energy conversion)

Feng Liu, Ph.D. Princeton University, Professor of Mechanical and Aerospace Engineering (computational fluid dynamics and combustion, aerodynamics, aeroelasticity, propulsion, turbomachinery aerodynamics and aeronautics)

Marc J. Madou, Ph.D. Ghent University, UCI Chancellor’s Professor of Mechanical and Aerospace Engineering; Biomedical Engineering; Chemical Engineering and Materials Science (fundamental aspects of micro/nano-electro-mechanical systems (MEMS/NEMS), biosensors, nanofluidics, biomimetics)

J. Michael McCarthy, Ph.D. Stanford University, Professor of Mechanical and Aerospace Engineering (machine design and kinematic synthesis of spatial mechanisms and robots)

Kenneth D. Mease, Ph.D. University of Southern California, Professor of Mechanical and Aerospace Engineering (flight guidance and control, nonlinear dynamical systems)

Dimitri Papamoschou, Ph.D. California Institute of Technology, Professor of Mechanical and Aerospace Engineering (compressible mixing and turbulence, jet noise reduction, diagnostics for compressible flow, acoustics in moving media)

Roger H. Rangel, Ph.D. University of California, Berkeley, Professor of Mechanical and Aerospace Engineering (fluid dynamics and heat transfer of multiphase systems including spray combustion, atomization and metal spray solidification, applied mathematics and computational methods)

David J. Reinkensmeyer, Ph.D. University of California, Berkeley, Professor of Anatomy and Neurobiology; Biomedical Engineering; Mechanical and Aerospace Engineering; Physical Medicine and Rehabilitation (robotics, mechatronics, biomedical engineering, rehabilitation, biomechanics, neural control of movement)

Timothy Rupert, Ph.D. Massachusetts Institute of Technology, Assistant Professor of Mechanical and Aerospace Engineering; Chemical Engineering and Materials Science (mechanical behavior, nanomaterials, structure property relationships, microstructural stability, grain boundaries and interfaces, materials characterization)

G. Scott Samuelsen, Ph.D. University of California, Berkeley, Director of Advanced Power and Energy Program, Research Professor and Professor Emeritus of Mechanical and Aerospace Engineering; Civil and Environmental Engineering (energy, fuel cells, hydrogen economy, propulsion, combustion and environmental conflict, turbulent transport in complex flows, spray physics, NOx and soot formation, laser diagnostics and experimental methods, application of engineering science to practical propulsion and stationary systems, environmental ethics)
William E. Schmitendorf, Ph.D. Purdue University, Professor Emeritus of Mechanical and Aerospace Engineering

Andrei M. Shkel, Ph.D. University of Wisconsin-Madison, Professor of Mechanical and Aerospace Engineering; Biomedical Engineering; Electrical Engineering and Computer Science (design and advanced control of micro-electro-mechanical systems (MEMS), precision micro-sensors and actuators for telecommunication and information technologies, MEMS-based health monitoring systems, disposable diagnostic devices, prosthetic implants)

Athanasios Sideris, Ph.D. University of Southern California, Professor of Mechanical and Aerospace Engineering (robust and optimal control theory and design, neural networks, learning systems and algorithms)

William A. Sirignano, Ph.D. Princeton University, Henry Samueli Endowed Chair in Engineering and Professor of Mechanical and Aerospace Engineering (combustion theory and computational methods, multiphase flows, high-speed turbulent reacting flows, flame spread, microgravity combustion, miniature combustors, fluid dynamics, applied mathematics)

Haithem Taha, Ph.D. Virginia Polytechnic Institute and State University, Assistant Professor of Mechanical and Aerospace Engineering (dynamics and control, aerodynamic modeling, optimization applications)

Lorenzo Valdevit, Ph.D. Princeton University, Director of the Institute for Design and Manufacturing Innovation (IDMI) and Associate Professor of Mechanical and Aerospace Engineering; Chemical Engineering and Materials Science (multifunctional sandwich structures, thermal protection systems, morphing structures, active materials, MEMS, electronic packaging, cell mechanics)

Mark Walter, Ph.D. California Institute of Technology, Lecturer with Security of Employment of Mechanical and Aerospace Engineering (mechanics of materials using advanced experimental and numerical techniques to investigate the initiation and propagation of damage on micro to macro size scales; response of multifunctional materials in simulated application environments; building energy efficiency)

Yoon Jin Won, Ph.D. Pennsylvania State University, Associate Professor of Mechanical and Aerospace Engineering (fuel cells, computational modeling, thermo-fluidics, two-phase flows, electrochemistry, Computational Fluid Dynamics (CFD), turbulent combustion)

Gregory N. Washington, Ph.D. North Carolina State University at Raleigh, Stacy Nicholas Dean of The Henry Samueli School of Engineering and Professor of Mechanical and Aerospace Engineering (dynamic systems: modeling and control, design and control of mechanically actuated antennas, advanced control of machine tools, design and control of Hybrid Electric Vehicles, structural position, vibration control with smart materials)

Yoon Jin Won, Ph.D. Stanford University, Assistant Professor of Mechanical and Aerospace Engineering; Center for Educational Partnerships (multiscale structures for thermal and energy applications, in particular fabrication, characterization, and integration of structured materials)

**Affiliate Faculty**

Joyce H. Keyak, Ph.D. University of California, San Francisco, Professor in Residence of Radiological Sciences; Biomedical Engineering; Mechanical and Aerospace Engineering (bone mechanics, finite element modeling, quantitative computed tomography, prosthetic implants, osteoporosis, metastatic tumors in bone, radiation therapy)

Arash Kheradvar, Ph.D. California Institute of Technology, Associate Professor of Biomedical Engineering; Mechanical and Aerospace Engineering (cardiac mechanics, cardiovascular devices, cardiac imaging)

Abraham P. Lee, Ph.D. University of California, Berkeley, William J. Link Chair in Biomedical Engineering and Department Chair and Professor of Biomedical Engineering; Mechanical and Aerospace Engineering (Lab-on-a-Chip health monitoring instruments, drug delivery micro/nanoparticles, integrated cell sorting microdevices, lipid vesicles as carriers for cells and biomolecules, high throughput droplet bioassays, microfluidic tactile sensors)

Robert H. Liebeck, Ph.D. University of Illinois at Urbana-Champaign, ; Mechanical and Aerospace Engineering (aircraft design)

Beth A. Lopour, Ph.D. University of California, Berkeley, Assistant Professor of Biomedical Engineering; Mechanical and Aerospace Engineering (computational neuroscience, signal processing, mathematical modeling, epilepsy, translational research)

Vincent G. McDonell, Ph.D. University of California, Irvine, ; Mechanical and Aerospace Engineering (droplet transport, measurement, simulation, control, analysis of liquid spray and gas fired combustion systems and alternative fuels)

Carsten R. Mehring, Ph.D. University of California, Irvine, ; Mechanical and Aerospace Engineering (multidisciplinary multi-scale systems and phenomena)

Lawrence J. Muzio, Ph.D. University of California, Berkeley, ; Mechanical and Aerospace Engineering (thermodynamics, combustion and combustion in practical systems, air pollution formation and control, advanced diagnostics applied to practical combustion systems)

Vasan Venugopalan, ScD Massachusetts Institute of Technology, Department Chair and Professor of Chemical Engineering and Materials Science; Biomedical Engineering; Mechanical and Aerospace Engineering; Surgery (laser-induced thermal, mechanical and radiative transport processes for application in medical diagnostics, therapeutics, biotechnology, micro-electro-mechanical systems (MEMS))
Frederic Yui-Ming Wan, Ph.D. Massachusetts Institute of Technology, Professor Emeritus of Mathematics; Mechanical and Aerospace Engineering (applied and computational mathematics, mathematical and computational biology)

Courses

ENGRMAE 10. Introduction to Engineering Computations. 4 Units.
Introduction to the solution of engineering problems through the use of the computer. Elementary programming in FORTRAN and Matlab is taught. No previous knowledge of computer programming is assumed.

(Design units: 1)
Corequisite: MATH 2A
Prerequisite: MATH 2A
Overlaps with EECS 10, EECS 12, BME 60B.
Restriction: School of Engineering students have first consideration for enrollment.

ENGRMAE 30. Statics. 4 Units.
Addition and resolution of forces, distributed forces, equivalent system of forces centroids, first moments, moments and products on inertia, equilibrium of rigid bodies, trusses, beams, cables. Course may be offered online.

(Design units: 0)
Corequisite: MATH 2D
Prerequisite: MATH 2D and PHYSICS 7C
Same as ENGRCEE 30, ENGR 30.
Restriction: School of Engineering students have first consideration for enrollment.

ENGRMAE 52. Computer-Aided Design. 4 Units.
Develops skills for interpretation and presentation of mechanical design drawings and the use of CAD in engineering design. An integrated approach to drafting based on sketching, manual drawing, and three-dimensional CAD techniques is presented.

(Design units: 0.5)
Restriction: Mechanical Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.

ENGRMAE 57. Manufacturing Processes in Engineering. 2 Units.

(Design units: 0)
Grading Option: Pass/no pass only.
Restriction: School of Engineering students have first consideration for enrollment.

ENGRMAE 60. Electric Circuits. 4 Units.
Design and analysis of analog circuits based on lumped circuit elements with emphasis on the use of operational amplifiers. Sinusoidal and transient response. Constructional and laboratory testing of analog circuits, and introduction to data acquisition. Materials fee.

(Design units: 2)
Corequisite: MATH 3D
Prerequisite: PHYSICS 7D and PHYSICS 7LD
Overlaps with EECS 70A.
Restriction: Mechanical Engineering Majors have first consideration for enrollment. Aerospace Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.
ENGRMAE 80. Dynamics. 4 Units.
Introduction to the kinematics and dynamics of particles and rigid bodies. The Newton-Euler, Work/Energy, and Impulse/Momentum methods are explored for ascertaining the dynamics of particles and rigid bodies. An engineering design problem using these fundamental principles is also undertaken.

(Design units: 0.5)

Prerequisite: MATH 2D and PHYSICS 7C

Same as ENGRCEE 80, ENGR 80.

Restriction: Mechanical Engineering Majors have first consideration for enrollment. Aerospace Engineering Majors have first consideration for enrollment. Civil Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment. Environmental Engineering Majors have first consideration for enrollment.

ENGRMAE 91. Introduction to Thermodynamics. 4 Units.
Thermodynamic principles; open and closed systems representative of engineering problems. First and second law of thermodynamics with applications to engineering systems and design.

(Design units: 0.5)

Prerequisite: PHYSICS 7C and MATH 2D

Overlaps with CBEMS 45B, CBEMS 65A.

Restriction: Mechanical Engineering Majors have first consideration for enrollment. Aerospace Engineering Majors have first consideration for enrollment. Civil Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment. Environmental Engineering Majors have first consideration for enrollment.

ENGRMAE 93. Topics in Design Project. 1-2 Units.
Early-stage design/hands-on experience for lower-division students, and allows them to participate along side seniors in the design project.

(Design units: 1)

Repeatability: Unlimited as topics vary.

Restriction: Mechanical Engineering Majors have first consideration for enrollment. Aerospace Engineering Majors have first consideration for enrollment.

ENGRMAE 106. Mechanical Systems Laboratory. 4 Units.
Experiments in linear systems, including op-amp circuits, vibrations, and control systems. Emphasis on demonstrating that mathematical models can be useful tools for the analysis and design of electro-mechanical systems. Materials fee.

(Design units: 2)

Prerequisite: ENGRMAE 60 or EECS 70A

Restriction: Mechanical Engineering Majors have first consideration for enrollment. Aerospace Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.

ENGRMAE 107. Fluid Thermal Science Laboratory. 4 Units.
Fluid and thermal engineering laboratory. Experimental analysis of fluid flow, heat transfer, and thermodynamic systems. Probability, statistics, and uncertainly analysis. Report writing is emphasized and a design project is required. Materials fee.

(Design units: 1)

Corequisite: ENGRMAE 120

Restriction: Mechanical Engineering Majors have first consideration for enrollment.
ENGRMAE 108. Aerospace Laboratory. 4 Units.
Analytical and experimental investigation in aerodynamics, fluid dynamics, and heat transfer. Emphasis on study of flow over objects and lift and drag on airfoils. Introduction to basic diagnostic techniques. Report writing is emphasized. Design project is required. Materials fee.

(Design units: 2)
Prerequisite: ENGRMAE 130B
Restriction: Aerospace Engineering Majors have first consideration for enrollment. Mechanical Engineering Majors have first consideration for enrollment.

ENGRMAE 110. Combustion and Fuel Cell Systems. 4 Units.
Fundamentals of gaseous, liquid, and coal-fired combustion and fuel cell systems. Fuels, fuel-air mixing, aerodynamics, and combustion and fuel cell thermodynamics. Operating and design aspects of practical systems including engines, power generators, boilers, furnaces, and incinerators.

(Design units: 2)
Prerequisite: ENGRMAE 115
Restriction: Chemical Engineering Majors have first consideration for enrollment. Environmental Engineering Majors have first consideration for enrollment. Mechanical Engineering Majors have first consideration for enrollment.

ENGRMAE 112. Propulsion. 4 Units.
Application of thermodynamics and fluid mechanics to basic flow processes and cycle performance in propulsion systems: gas turbines, ramjets, scramjets, and rockets.

(Design units: 1)
Prerequisite: ENGRMAE 130B
Restriction: Aerospace Engineering Majors have first consideration for enrollment. Mechanical Engineering Majors have first consideration for enrollment.

ENGRMAE 113. Electric Propulsion. 4 Units.
Space propulsion requirements and maneuvers, stressing those best suited to electric propulsion. An introduction to plasma physics. Electrothermal, electromagnetic and electrostatic accelerators, with emphasis in technologies (ion engines, Hall thrusters and colloidal thrusters) belonging to the latter family.

(Design units: 1)
Prerequisite: ENGRMAE 112
Concurrent with ENGRMAE 213.

ENGRMAE 114. Fuel Cell Fundamentals and Technology. 4 Units.
Introduction to electrochemistry and electrocatalysis; nature of fuel-cell electrodes and electrolytes; charge transfer reactions at interfaces; charge transport and mass transport processes; fuel processing reactions; determination of fuel cell efficiency, fuel flexibility, emissions and other characteristics.

(Design units: 0)
Prerequisite: ENGRMAE 115
Restriction: Seniors only. Mechanical Engineering Majors have first consideration for enrollment. Aerospace Engineering Majors have first consideration for enrollment.
Concurrent with ENGRMAE 214A.
ENGRMAE 115. Applied Engineering Thermodynamics. 4 Units.
Application of thermodynamic principles to compressible and incompressible processes representative of practical engineering problems; power cycles, refrigeration cycles, multicomponent mixtures, air conditioning systems, combustion, and compressible flow. Design of a thermodynamic process.

(Design units: 2)
Prerequisite: ENGRMAE 91
Overlaps with CBEMS 45C, CBEMS 65B.
Restriction: Mechanical Engineering Majors have first consideration for enrollment. Chemical Engineering Majors have first consideration for enrollment. Environmental Engineering Majors have first consideration for enrollment.

ENGRMAE 117. Solar and Renewable Energy Systems. 4 Units.
Basic principles, design, and operation of solar and other renewable energy systems including solar photo-voltaic, solar thermal, wind, and PEM fuel cell. Includes power generation and storage, and renewable fuels for transportation and stationary power generation.

(Design units: 1)
Prerequisite: ENGRMAE 91
Restriction: Mechanical Engineering Majors have first consideration for enrollment.

ENGRMAE 118. Sustainable Energy Systems. 4 Units.
Basic principles, design, and operation of sustainable energy systems including wind, solar photo-voltaic and thermal, hydroelectric, geothermal, oceanic, biomass combustion, advanced coal, and next generation nuclear. Includes power generation, storage, and transmission for stationary power generation.

(Design units: 1)
Prerequisite: ENGRMAE 115
Concurrent with ENGRMAE 218.

ENGRMAE 120. Heat and Mass Transfer. 4 Units.
Fundamentals of heat and mass transfer. Conduction, heat and mass transfer by convection in laminar and turbulent flows, radiation heat transfer, and combined modes of heat and mass transfer. Practical engineering applications.

(Design units: 0)
Prerequisite: ENGRMAE 130B
Overlaps with CBEMS 125B.
Restriction: Aerospace Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment. Mechanical Engineering Majors have first consideration for enrollment.

ENGRMAE 130A. Introduction to Fluid Mechanics. 4 Units.
Fundamental concepts; fluid statics; fluid dynamics; Bernoulli's equation; control-volume analysis; basic flow equations of conservation of mass, momentum, and energy; differential analysis; potential flow; viscous incompressible flow.

(Design units: 0)
Prerequisite: PHYSICS 7C and MATH 2D and MATH 2E and MATH 3D and (ENGRMAE 30 or ENGRCEE 30 or ENGR 30) and (ENGRMAE 80 or ENGRCEE 80 or ENGR 80) and ENGRMAE 91. PHYSICS 7C with a grade of C- or better. MATH 2D with a grade of C- or better. MATH 2E with a grade of C- or better. MATH 3D with a grade of C- or better. ENGRMAE 30 with a grade of C- or better. ENGRMAE 80 with a grade of C- or better. ENGRMAE 91 with a grade of C- or better
Overlaps with CBEMS 125A, ENGRCEE 170.
Restriction: Mechanical Engineering Majors have first consideration for enrollment. Aerospace Engineering Majors have first consideration for enrollment.
**ENGRMAE 130B. Introduction to Viscous and Compressible Flows. 4 Units.**

Introduction to the analysis of viscous flows including fully developed laminar and turbulent flow in a pipe, viscous flow over immersed bodies, evaluation of boundary layer characteristics, lift and drag, compressible flow in a duct and normal shock waves.

(Design units: 1)

Prerequisite: ENGRMAE 130A

Restriction: Mechanical Engineering Majors have first consideration for enrollment. Aerospace Engineering Majors have first consideration for enrollment.

**ENGRMAE 132. Computational Fluid Dynamics. 4 Units.**

Introduction to computational fluid dynamics in simple engineering devices. The numerical simulations will be performed via the widely-used software ANSYS-Fluent. While Fluent is the choice of software, all major CFD packages are based on a similar numerical method.

(Design units: 0)

Prerequisite: ENGRMAE 130B. ENGRMAE 130B with a grade of C- or better

Restriction: Aerospace Engineering Majors only. Mechanical Engineering Majors only.

**ENGRMAE 135. Compressible Flow. 4 Units.**

Compressibility effects in fluid mechanics. One-dimensional flow with area variation, friction, heat transfer, and shocks. Design of gas supply systems. Two-dimensional flow with oblique shocks and isentropic waves. Supersonic airfoil theory and design, wind tunnel design. Basic diagnostics.

(Design units: 1)

Prerequisite: ENGRMAE 130B

Restriction: Aerospace Engineering Majors have first consideration for enrollment. Mechanical Engineering Majors have first consideration for enrollment.

**ENGRMAE 136. Aerodynamics. 4 Units.**

Analysis of flow over aircraft wings and airfoils, prediction of lift, moment, and drag. Topics: fluid dynamics equations; flow similitude; viscous effects; vorticity, circulation, Kelvin's theorem, potential flow; superposition principle, Kutta-Joukowski theorem; thin airfoil theory; finite wing theory; compressibility.

(Design units: 1)

Prerequisite: ENGRMAE 130B

Restriction: Aerospace Engineering Majors have first consideration for enrollment. Mechanical Engineering Majors have first consideration for enrollment.

**ENGRMAE 145. Theory of Machines and Mechanisms. 4 Units.**

Presents the basic mathematical theory of machines. Focuses on the principles of cam design, gearing and gear train analysis, and the kinematic and dynamic analysis of linkages, together with an introduction to robotics.

(Design units: 2)

Prerequisite: ENGRMAE 52 and ENGRMAE 80 and MATH 3A

Restriction: Mechanical Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.

**ENGRMAE 146. Astronautics. 4 Units.**

Motion in gravitational force fields, orbit transfers, rocketry, interplanetary trajectories, attitude dynamics and stabilization, navigation, reentry, the space environment.

(Design units: 1)

Prerequisite: ENGRMAE 80

Restriction: Aerospace Engineering Majors have first consideration for enrollment.
ENGRMAE 147. Vibrations. 4 Units.
Analysis of structural vibrations of mechanical systems. Modeling for lumped and distributed parameter systems. Topics include single and multi-degree of freedom systems, free and forced vibrations, Fourier series, convolution integral, mass/stiffness matrices, and normal modes with design project.

(Design units: 1)
Prerequisite: (ENGR 80 or ENGRCEE 80 or ENGRMAE 80) and MATH 2E and MATH 3D
Restriction: Mechanical Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.

ENGRMAE 150. Mechanics of Structures. 4 Units.

(Design units: 2)
Prerequisite: (ENGRCEE 30 or ENGR 30 or ENGRMAE 30) and MATH 3A
Same as ENGR 150.
Overlaps with ENGRCEE 150.
Restriction: Aerospace Engineering Majors have first consideration for enrollment. Biomedical Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment. Mechanical Engineering Majors have first consideration for enrollment.

ENGRMAE 150L. Mechanics of Structures Laboratory. 1 Unit.

(Design units: 0)
Corequisite: ENGRMAE 150
Prerequisite: ENGRMAE 30 or ENGR 30 or ENGRCEE 30
Overlaps with ENGRCEE 150L.
Restriction: Mechanical Engineering Majors have first consideration for enrollment. Aerospace Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.

ENGRMAE 151. Mechanical Engineering Design. 4 Units.
A comprehensive group design project experience that involves identifying customer needs, idea generation, reverse engineering, preliminary design, standards, prototype development, testing, analysis, and redesign of a product involving fluid, thermal, and mechanical components. Introduces design for manufacturing and the environment. Materials fee.

(Design units: 3)
Corequisite: ENGRMAE 170
Prerequisite: ENGRMAE 120 and ENGRMAE 145
Restriction: Seniors only. Mechanical Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.

ENGRMAE 152. Introduction to Computer-Aided Engineering. 4 Units.
Elements and principles of computer-aided engineering with modern hardware and software are presented with a design focus. Case studies are used to assist in finite-element method techniques. Not offered every year.

(Design units: 2)
Prerequisite: (ENGRMAE 150 or ENGR 150) and ENGRMAE 120
Restriction: Materials Science Engineering Majors have first consideration for enrollment.
ENGRMAE 153. Advanced BIOMEMS Manufacturing Techniques. 4 Units.
Introduction to BIOMEMS. Advanced biotechnology/biomedicine equipment based on MEMS and NEMS. Fundamentals of MEMS/NEMS sensing techniques and the biological and physics principles involved and the preferred MEMS and NEMS manufacturing techniques.

(Design units: 0)
Concurrent with ENGRMAE 253.

ENGRMAE 155. Composite Materials and Structures. 4 Units.
Motivation for composite materials. Different classifications according to the nature of the matrix (PMC, MMC, CMC) and the reinforcement topology (fibers, whiskers, particulates). Mechanical properties. Failure mechanisms. Designing with composite materials. Advantages and limitations of homogenization techniques for numerical modeling.

(Design units: 0)
Prerequisite: ENGR 54 and (ENGRMAE 150 or ENGRCEE 150 or ENGR 150)
Restriction: Chemical Engineering Majors have first consideration for enrollment. Civil Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment. Mechanical Engineering Majors have first consideration for enrollment.
Concurrent with ENGRMAE 255.

ENGRMAE 156. Mechanical Behavior and Design Principles. 4 Units.
Principles governing structure and mechanical behavior of materials, relationship relating microstructure and mechanical response with application to elasticity, plasticity, yielding, necking, creep, and fracture of materials. Introduction to experimental techniques to characterize the properties of materials. Design parameters.

(Design units: 2)
Prerequisite: ENGR 54
Same as CBEMS 155.
Restriction: Chemical Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment. Mechanical Engineering Majors have first consideration for enrollment.

ENGRMAE 157. Lightweight Structures. 4 Units.

(Design units: 2)
Prerequisite: ENGR 150 or ENGRCEE 150 or ENGRMAE 150
Restriction: Aerospace Engineering Majors only. Civil Engineering Majors only. Materials Science Engineering Majors only. Mechanical Engineering Majors only.

ENGRMAE 158. Aircraft Performance. 4 Units.
Flight theory applied to subsonic propeller and jet aircraft. Nature of aerodynamic forces, drag and lift of wing and fuselage, high-lift devices, level-flight performance, climb and glide performance, range, endurance, take-off and landing distances, static and dynamic stability and control.

(Design units: 2)
Prerequisite: ENGRMAE 130A
Restriction: Aerospace Engineering Majors have first consideration for enrollment. Mechanical Engineering Majors have first consideration for enrollment.

ENGRMAE 159. Aircraft Design. 4 Units.
Preliminary design of subsonic general aviation and transport aircraft with emphasis on layout, aerodynamic design, propulsion, and performance. Estimation of total weight and weight distribution, design of wings, fuselage, and tail, selection and location of engines, prediction of overall performance.

(Design units: 4)
Prerequisite: ENGRMAE 112 and ENGRMAE 136 and ENGRMAE 158
Restriction: Aerospace Engineering Majors have first consideration for enrollment. Mechanical Engineering Majors have first consideration for enrollment.
ENGRMAE 164. Air Pollution and Control. 4 Units.
Sources, dispersion, and effects of air pollutants. Topics include emission factors, emission inventory, air pollution, meteorology, air chemistry, air quality modeling, impact assessment, source and ambient monitoring, regional control strategies.

(Design units: 2)
Prerequisite: ENGRMAE 91 and (ENGRMAE 130A or ENGRCEE 170)
Restriction: Chemical Engineering Majors have first consideration for enrollment. Environmental Engineering Majors have first consideration for enrollment. Mechanical Engineering Majors have first consideration for enrollment.

ENGRMAE 170. Introduction to Control Systems. 4 Units.

(Design units: 2)
Prerequisite: (ENGRMAE 80 or ENGRCEE 80 or ENGR 80) and ENGRMAE 106
Restriction: Mechanical Engineering Majors have first consideration for enrollment. Aerospace Engineering Majors have first consideration for enrollment. Civil Engineering Majors have first consideration for enrollment. Materials Science Engineering Majors have first consideration for enrollment.

ENGRMAE 171. Digital Control Systems. 4 Units.

(Design units: 2)
Prerequisite: ENGRMAE 170
Restriction: Civil Engineering Majors have first consideration for enrollment. Mechanical Engineering Majors have first consideration for enrollment.

ENGRMAE 172. Design of Computer-Controlled Robots. 4 Units.
Students design a small robotic device and program it to exhibit sentient behaviors. The basic aspects of mechatronic design are covered, including motor and sensor selection, control strategies, and microcomputer programming for the implementation of control paradigms.

(Design units: 3)
Corequisite: ENGRMAE 60
Prerequisite: ENGRMAE 170
Restriction: Mechanical Engineering Majors have first consideration for enrollment.

Concurrent with ENGRMAE 280.

ENGRMAE 175. Dynamics and Control of Aerospace Vehicles. 4 Units.

(Design units: 3)
Prerequisite: ENGRMAE 106
Restriction: Aerospace Engineering Majors have first consideration for enrollment. Mechanical Engineering Majors have first consideration for enrollment.

ENGRMAE 183. Computer-Aided Mechanism Design. 4 Units.
Focuses on design of planar, spherical, and spatial mechanisms using computer algebra and graphics. Topics include exact and approximate analytical design techniques. Students are required to use existing software (or develop new algorithms) to design various mechanisms for new applications.

(Design units: 4)
Prerequisite: MATH 3A
Restriction: Mechanical Engineering Majors have first consideration for enrollment.
ENGRMAE 184. Fundamentals of Experimental Design. 4 Units.
Review of statistics as applied to experimental research. Fundamentals and principles of statistical experimental design and analysis with emphasis on understanding and use of designed experiments, response surfaces, linear regression modeling, and process optimization.

(Design units: 1)

Restriction: Mechanical Engineering Majors have first consideration for enrollment. Aerospace Engineering Majors have first consideration for enrollment.

Concurrent with ENGRMAE 284.

ENGRMAE 185. Numerical Analysis in Mechanical Engineering. 4 Units.

(Design units: 2)

Prerequisite: ENGRMAE 10 and MATH 3D and MATH 2E

Overlaps with MATH 105A.

Restriction: Civil Engineering Majors have first consideration for enrollment. Mechanical Engineering Majors have first consideration for enrollment.

ENGRMAE 188. Engineering Design in Industry. 4 Units.
Principles of engineering design in the context of an industrial application. Local manufacturing firms define an engineering design project to be completed in 10 weeks. Projects include initial brainstorming to final design, with a formal presentation.

(Design units: 4)

Repeatability: May be taken for credit 3 times.

Restriction: Mechanical Engineering Majors have first consideration for enrollment.

ENGRMAE 189. Senior Project - Special Topics. 1-4 Units.
Group or individual senior project of theoretical or applied nature involving design. Materials fee.

(Design units: 1-4)

Repeatability: May be taken for credit for 12 units as topics vary.

Restriction: Seniors only. Mechanical Engineering Majors only.

ENGRMAE 193. Topics in MAE Design. 1-4 Units.
Provides early-stage design/hands-on experience for upper-division students, and allows them to participate in senior design projects course ENGRMAE 189.

(Design units: 1)

Repeatability: May be taken for credit for 12 units as topics vary.

Restriction: Aerospace Engineering Majors have first consideration for enrollment. Mechanical Engineering Majors have first consideration for enrollment.

ENGRMAE 195. Seminars in Engineering. 1-4 Units.
Seminars by individual faculty in major fields of interest. Materials fee.

(Design units: 1-4)

Repeatability: Unlimited as topics vary.

ENGRMAE 198. Group Study. 1-4 Units.
Group study of selected topics in Aerospace and Mechanical Engineering.

(Design units: 1-4)

Repeatability: May be repeated for credit unlimited times.

Restriction: Upper-division students only.
ENGRMAE 199. Individual Study. 1-4 Units.
For undergraduate Engineering majors in supervised but independent reading, research, or design. Students taking individual study for design credit are to submit a written paper to the instructor and to the Undergraduate Student Affairs Office in the School of Engineering.

(Design units: 1-4)
Repeatability: May be taken for credit for 8 units.

ENGRMAE 199P. Individual Study. 1-4 Units.
For undergraduate Engineering majors in supervised but independent reading, research, or design. Students taking individual study for design are to submit a written paper to the instructor and to the Undergraduate Student Affairs Office in the School of Engineering.

(Design units: 1-4)
Grading Option: Pass/no pass only.
Repeatability: May be repeated for credit unlimited times.

ENGRMAE 200A. Engineering Analysis I. 4 Units.
Linear algebra, including vector spaces, matrices, linear systems of equations, least squares, and the eigenvalue problem. Ordinary differential equations, including analytical and numerical solution methods, stability, and phase portraits.

Restriction: Graduate students only.

ENGRMAE 200B. Engineering Analysis II. 4 Units.
Review of ordinary differential equations, including Bessel and Legendre functions. Partial differential equations, including the diffusion equation, Laplace's equation, and the wave equation. Fourier series, Fourier and Laplace transforms and their applications.

Restriction: Graduate students only.

ENGRMAE 205. Perturbation Methods in Engineering. 4 Units.

Prerequisite: ENGRMAE 200A and ENGRMAE 200B. Knowledge of linear differential equations.

Restriction: Graduate students only.

ENGRMAE 206. Nonlinear Optimization Methods. 4 Units.

Prerequisite: ENGRMAE 200A

Restriction: Graduate students only.

ENGRMAE 207. Methods of Computer Modeling in Engineering and the Sciences. 4 Units.
Unified introduction to finite volume, finite element, field-boundary element, meshless, primal, dual, and mixed methods. Nonlinear problems posed by ordinary as well as partial differential equations. Computer implementations and comparisons of accuracy and convergence.

Restriction: Graduate students only.

ENGRMAE 210. Advanced Fundamentals of Combustion. 4 Units.
Premixed, nonpremixed, and heterogeneous reactions, with emphasis on kinetics, thermal ignition, turbulent flame propagation, detonations, explosions, flammability limits, diffusion flame, quenching, flame stabilization, and particle and spray combustion. Not offered every year.

Prerequisite: ENGRMAE 224 or ENGRMAE 230B

Restriction: Graduate students only.

ENGRMAE 212. Engineering Electrochemistry: Fundamentals and Applications. 4 Units.
Introduction to engineering electrochemistry fundamentals and applications. Examine thermodynamics and transport principles in typical electrochemical systems. Electrochemical sensors, batteries, fuel cells, and supercapacitors. Manufacturing aspects will also be covered.

Restriction: Graduate students only.
ENGRMAE 213. Electric Propulsion. 4 Units.
Space propulsion requirements and maneuvers, stressing those best suited to electric propulsion. An introduction to plasma physics. Electrothermal, electromagnetic and electrostatic accelerators, with emphasis in technologies (ion engines, Hall thrusters and colloidal thrusters) belonging to the latter family.

Restriction: Graduate students only.
Concurrent with ENGRMAE 113.

ENGRMAE 214A. Fuel Cell Fundamentals and Technology. 4 Units.
Introduction to electrochemistry and electrocatalysis; nature of fuel-cell electrodes and electrolytes; charge transfer reactions at interfaces; charge transport and mass transport processes; fuel processing reactions; determination of fuel cell efficiency, fuel flexibility, emissions and other characteristics.

Restriction: Graduate students only.
Concurrent with ENGRMAE 114.

ENGRMAE 214B. Fuel Cell Systems and Degradation. 4 Units.
Fuel cell systems design; impacts of operating conditions; experimental and theoretical analysis methods for fuel cells systems; introduction to degradation mechanisms and mitigation techniques; provides broad insight into fuel-cell science, technology, system design and operation. Offered every other year.
Prerequisite: ENGRMAE 214A
Restriction: Graduate students only.

ENGRMAE 214C. PEM Fuel Cells. 4 Units.
An in-depth introduction to the fundamentals of PEM fuel cells, including thermodynamics, kinetics, and transport in electrochemical systems. Topics of specific interest to mechanical engineers will include water/heat management and dynamic responses.
Prerequisite: ENGRMAE 214A
Restriction: Graduate students only.

ENGRMAE 215. Advanced Combustion Technology. 4 Units.
Pollutant formation and experimental methods. Formation of gaseous pollutants and soot; transformation and emission of fuel contaminants in gas, liquid, and solid fuel combustion; methods employed to measure velocity, turbulence intensity, temperature, composition, particle size; methods to visualize reacting flows.
Prerequisite: ENGRMAE 200A and (ENGRMAE 230A or ENGRMAE 270A)
Restriction: Graduate students only.

ENGRMAE 216. Statistical Thermodynamics. 4 Units.
Statistics of independent particles, development of quantum mechanical description of atoms and molecules, application of quantum mechanics, evaluation of thermodynamics properties for solids, liquids, and gases, statistical mechanics of dependent particles (ensembles).
Restriction: Graduate students only.

ENGRMAE 217. Generalized Thermodynamics. 4 Units.
Generalized thermodynamics develops the laws of continuum thermodynamics from a set of plausible and intuitive postulates. The postulates are motivated qualitatively by a statistical description of matter and are justified by a posterior success for the resulting theory.
Restriction: Graduate students only.

ENGRMAE 218. Sustainable Energy Systems. 4 Units.
Basic principles, design and operation of sustainable energy systems including wind, solar photo-voltaic and thermal, hydroelectric, geothermal, oceanic, biomass combustion, advanced coal and next generation nuclear. Includes power generation, storage, and transmission for stationary power generation.
Restriction: Graduate students only.
Concurrent with ENGRMAE 118.
ENGRMAE 220. Conduction Heat Transfer. 4 Units.
Steady state and transient conduction heat transfer in one- and multi-dimensional geometries. Analytical methods, exact and approximate. Numerical techniques are also included.

Restriction: Graduate students only.

ENGRMAE 221. Convective Heat and Mass Transfer. 4 Units.

Prerequisite: ENGRMAE 230B

Restriction: Graduate students only.

ENGRMAE 222. Radiative Heat Transfer. 4 Units.

Restriction: Graduate students only.

ENGRMAE 223A. Numerical Methods in Heat, Mass, and Momentum Transport (Laminar Flows) I. 4 Units.
Introduction to the discretization of various types of partial differential equations (parabolic, elliptic, hyperbolic). Finite-volume discretization for one- and two-dimensional flows. Use of a two-dimensional elliptic procedure to predict sample laminar flows.

Prerequisite or corequisite: ENGRMAE 230A

Restriction: Graduate students only.

ENGRMAE 223B. Numerical Methods in Heat, Mass, and Momentum II. 4 Units.

Prerequisite: ENGRMAE 223A

Restriction: Graduate students only.

ENGRMAE 224. Advanced Transport Phenomena. 4 Units.

Restriction: Graduate students only.

ENGRMAE 226. Special Topics in Fluid and Thermal Sciences. 1-4 Units.
Special topics of current interest in fluid mechanics, heat and mass transfer, multiphase flows, or combustion. Emphasis could be placed on theory, computational methods, or experimental techniques.

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.

ENGRMAE 227. Thermal Resistance Analysis in Microdevices and Nanomaterials. 4 Units.
Heat transfer and thermal resistance analysis relevant for microdevices and nanomaterials. Overview of recent progress in nanotechnology and materials science. Thermal modeling strategies for novel electronic devices and energy conversion systems.

Restriction: Graduate students only.

ENGRMAE 228. Nanoscale Phase Change Transport Physics. 4 Units.
Discusses a wide range of phase change processes (i.e., evaporation, boiling, condensation, and freezing) through the use of novel thermal metamaterials with the aim of enhancing phase change performances.

Prerequisite: Undergraduate-level heat transfer is recommended.

Restriction: Graduate students only.
ENGRMAE 230A. Inviscid Incompressible Fluid Mechanics I. 4 Units.
Restriction: Graduate students only.

ENGRMAE 230B. Viscous Incompressible Fluid Mechanics II. 4 Units.
Restriction: Graduate students only.

ENGRMAE 230C. Compressible Fluid Dynamics. 4 Units.
Prerequisite: ENGRMAE 230A or ENGRMAE 230B
Restriction: Graduate students only.

ENGRMAE 230D. Theoretical Foundations of Fluid Mechanics. 4 Units.
Prerequisite: ENGRMAE 230A and ENGRMAE 230B
Restriction: Graduate students only.

ENGRMAE 231. Fundamentals of Turbulence. 4 Units.
Prerequisite: ENGRMAE 230A and ENGRMAE 230B
Restriction: Graduate students only.

ENGRMAE 233. Turbulent Free Shear Flows. 4 Units.
Prerequisite: ENGRMAE 200B and ENGRMAE 230A and ENGRMAE 230B
Restriction: Graduate students only.

ENGRMAE 236. Nonequilibrium Gas Dynamics. 4 Units.
Prerequisite: ENGRMAE 230C
Restriction: Graduate students only.

ENGRMAE 237. Computational Fluid Dynamics. 4 Units.
Mathematical, physical, and computational fundamentals of computational fluid dynamics, numerical methods for solving the Euler and Navier-Stokes equations. Topics include: finite-difference and finite-volume discretization, time marching methods, von Neumann analysis, upwinding, flux splitting, TVD, and other high-resolution shock-capturing schemes.
Prerequisite: ENGRMAE 230C
Restriction: Graduate students only.
ENGRMAE 238. Experimental Fluid Dynamics. 4 Units.

Prerequisite: ENGRMAE 230A and ENGRMAE 230B

Restriction: Graduate students only.

ENGRMAE 239. Dynamics of Unsteady Flows. 4 Units.

Prerequisite: ENGRMAE 230A is recommended.

Restriction: Graduate students only.

ENGRMAE 241. Dynamics. 4 Units.
Kinematics and dynamics of three-dimensional motions. Lagrange's equations, Newton-Euler equations. Applications include robot systems and spinning satellites.

Restriction: Graduate students only.

ENGRMAE 242. Robotics. 4 Units.

Restriction: Graduate students only.

ENGRMAE 244. Theoretical Kinematics. 4 Units.
Spatial rigid body kinematics is presented with applications to robotics. Orthogonal Matrices, Rodrigues' formula, Quaternions, Plucker coordinates, screw theory, and dual numbers are studied using modern projective geometry and multi-linear algebra. Applications include trajectory planning, inverse kinematics, and workspace analysis.

Restriction: Graduate students only.

ENGRMAE 245. Spatial Mechanism Design. 4 Units.
Fundamental kinematic theory required for planar, spherical, and spatial mechanism design. The focus is on algebraic methods for the exact solution of constraint equations. Not offered every year.

Restriction: Graduate students only.

ENGRMAE 247. Micro-System Design. 4 Units.
Covers the fundamentals of the many disciplines needed for design of Micro-Electro-Mechanical Systems (MEMS): microfabrication technology, structural mechanics on micro-scale, electrostatics, circuit interface, control, computer-aided design, and system integration.

Same as EECS 278.

Restriction: Graduate students only.

ENGRMAE 249. Micro-Sensors and Actuators. 4 Units.
Introduction to the technology of Micro-Electro-Mechanical Systems (MEMS). Fundamental principles and applications of important microsensors, actuation principles on microscale. Introduction to the elements of signal processing; processing of materials for micro sensor/actuator fabrication; smart sensors and microsensor/microactuator array devices.

Same as EECS 279.

Restriction: Graduate students only.

ENGRMAE 250. Biorobotics. 4 Units.
Sensors, actuators, and neural circuits for biological movement control from an engineering perspective. Current approaches to robotic and mechatronic devices that support and enhance human movement in health and following neurologic injuries like stroke and spinal cord injury.

Restriction: Graduate students only.
ENGRMAE 252. Fundamentals of Microfabrication. 4 Units.
Introduces Engineering and Science students to the science of miniaturization. Different options to make very small machines (micro and nano size) are reviewed, materials choices are discussed, scaling laws are analyzed, and many practical applications are listed.

Restriction: Graduate students only.

ENGRMAE 253. Advanced BIOMEMS Manufacturing Techniques. 4 Units.
Introduction to BIOMEMS. Advanced biotechnology/biomedicine equipment based on MEMS and NEMS. Fundamentals of MEMS/NEMS sensing techniques and the biological and physics principles involved and the preferred MEMS and NEMS manufacturing techniques.

Restriction: Graduate students only.
Concurrent with ENGRMAE 153.

ENGRMAE 254. Mechanics of Solids and Structures. 4 Units.
Finite deformation kinematics; stress and strain measures; invariance in solid mechanics; objective rates; constitutive theory of elastic and inelastic solids; rate formulations; computational approaches; theories of plates and shells; applications to aerospace vehicles.

Restriction: Graduate students only.

ENGRMAE 255. Composite Materials and Structures. 4 Units.
Motivation for composite materials. Different classifications according to the nature of the matrix (PMC, MMC, CMC) and the reinforcement topology (fibers, whiskers, particulates). Mechanical properties. Failure mechanisms. Designing with composite materials. Advantages and limitations of homogenization techniques for numerical modeling.

Restriction: Graduate students only.
Concurrent with ENGRMAE 155.

ENGRMAE 256. Nanomechanics. 4 Units.
Nanoscale materials and the experimental and computational techniques used to measure their properties. Mechanical behavior is the main focus, but other material properties such as diffusion and electron transport are discussed.

Restriction: Graduate students only.

ENGRMAE 258. Mechanical Behavior of Solids - Continuum Theories. 4 Units.
Presents a continuum, macroscopic view of deformation and failure of solids. Covers elasticity, plasticity, visco-elasticity, visco-plasticity, fracture and fatigue. Topics include discussions of physical behavior, mathematical formalism and measurement techniques.

Prerequisite: ENGRMAE 254
Restriction: Graduate students only.

ENGRMAE 259. Mechanical Behavior of Solids - Atomistic Theories. 4 Units.
Presents atomistic mechanisms that control mechanical behavior of materials. Covers plasticity, dislocation theory, strengthening mechanisms, high-temperature diffusion and gain boundary sliding, shear localization, void formation, ductile rupture, brittle fracture and fatigue.

Restriction: Graduate students only.

ENGRMAE 260. Current Issues Related to Tropospheric and Stratospheric Processes. 4 Units.
Examination of current issues related to the atmosphere, including energy usage; toxicology; effects on humans, forests, plants, and ecosystems; particulate matter (PM10); combustion; modeling and meteorology; airborne toxic chemicals and risk assessment; application of science to development of public policies.

Prerequisite: ENGRMAE 261 or CHEM 245 or EARTHSS 240
Same as CHEM 241.
Restriction: Graduate students only.

ENGRMAE 270A. Linear Systems I. 4 Units.
Input-output and state-space representations of continuous-time linear systems. State transition matrices, Controllability and observability. Irreducible realizations. State feedback and observer design.

Restriction: Graduate students only.
ENGRMAE 270B. Linear Systems II. 4 Units.

Prerequisite: ENGRMAE 270A
Restriction: Graduate students only.

ENGRMAE 272. Robust Control Theory. 4 Units.

Prerequisite: ENGRMAE 270A
Restriction: Graduate students only.

ENGRMAE 274. Optimal Control. 4 Units.
Principles and methods of optimal control. Topics include objectives and issues in controlling nonlinear systems; linear variational and adjoint equations; optimality conditions via variational calculus, maximum principle, and dynamic programming; solution methods; applications to control robots and aerospace vehicles.

Prerequisite: ENGRMAE 200A and ENGRMAE 270A
Restriction: Graduate students only.

ENGRMAE 275. Nonlinear Feedback Systems. 4 Units.
Advanced tools for feedback control system analysis and synthesis. Norms, operators, Lp spaces, contraction mapping theorem, Lyapunov techniques along with their extensions. Circle criterion positivity and passivity. Applications to nonlinear control methods, such as sliding mode or adaptive techniques.

Prerequisite: ENGRMAE 270B
Restriction: Graduate students only.

ENGRMAE 276. Geometric Nonlinear Control. 4 Units.
Using the mathematics of differential geometry, a number of the concepts and results of linear systems theory have been extended to nonlinear systems. Describes these extensions and illustrate their use in nonlinear system analysis and design. Not offered every year.

Prerequisite: ENGRMAE 200A and ENGRMAE 270A
Restriction: Graduate students only.

ENGRMAE 277. Learning Control Systems. 4 Units.

Restriction: Graduate students only.

ENGRMAE 278. Parameter and State Estimation. 4 Units.

Prerequisite: ENGRMAE 200A and ENGRMAE 270A
Restriction: Graduate students only.

ENGRMAE 279. Special Topics in Mechanical Systems. 4 Units.
Selected topics of current interest in mechanical systems. Topics include robotics, kinematics, control, dynamics, and geometric modeling.

Prerequisite: ENGRMAE 270A and ENGRMAE 241
Repeatability: Unlimited as topics vary.
Restriction: Graduate students only.
ENGRMAE 280. Design of Computer-Controlled Robots. 4 Units.
The basic aspects of mechatronic design are covered, including motor and sensor selection, control strategies, finite state machines, inertial measurement units, and implementation of advanced feedback control laws. Students work in groups to create their own mechatronic device.

Restriction: Graduate students only.

Concurrent with ENGRMAE 172.

ENGRMAE 284. Fundamentals of Experimental Design. 4 Units.
Fundamentals and principles of statistical experimental design and analysis. Emphasis addresses understanding and use of designed experiments, response surfaces, linear regression modeling, process optimization, and development of links between empirical and theoretical models.

Restriction: Graduate students only.

Concurrent with ENGRMAE 184.

ENGRMAE 289. Master of Science Thesis Project. 4 Units.
Tutorial in which masters-level students taking the comprehensive examination option undertake a masters-level research project.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

ENGRMAE 295. Special Topics in Mechanical and Aerospace Engineering. 1-4 Units.
Special topics by individual faculty in major fields of interest.

Repeatability: Unlimited as topics vary.

ENGRMAE 296. Master of Science Thesis Research. 1-16 Units.
Individual research or investigation conducted in the pursuit of preparing and completing the thesis required for the M.S. in Engineering.

Repeatability: May be repeated for credit unlimited times.

ENGRMAE 297. Doctor of Philosophy Dissertation Research. 1-16 Units.
Individual research or investigation conducted in the pursuit of preparing and completing the dissertation required for the Ph.D. in Engineering.

Repeatability: May be repeated for credit unlimited times.

ENGRMAE 298. Seminars in Mechanical and Aerospace Engineering. 1 Unit.
Presentation of advanced topics and reports of current research efforts in mechanical engineering. Required of all graduate students in mechanical engineering.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

ENGRMAE 299. Individual Research. 1-16 Units.
Individual research or investigation under the direction of an individual faculty member.

Repeatability: May be repeated for credit unlimited times.

Restriction: Consent of instructor to enroll
School of Humanities

Overview

The School of Humanities promotes practical liberal arts for the 21st century. The School is internationally recognized for its outstanding programs in the main areas of humanistic inquiry: history; languages; philosophy; and literature, film, and the arts. With a faculty whose distinctions include two Pulitzer Prizes and numerous other national and international awards, the School offers 22 majors and 36 minors that include those in traditional disciplines, languages other than English, and interdisciplinary areas of study.

The core educational mission of the humanities is imparting to students tools of analysis that will allow them to understand, describe, and explain the world around them in a critical context. A liberal arts education in the humanities prepares students to examine a variety of written and visual forms and to communicate effectively. All Humanities students are introduced to writing, philosophy, history, visual culture, literature, and a language other than English. Students in Humanities majors are given the opportunity to conduct an intensive conversation with the traditions, both past and present; and as a result, develop the ability to understand and make sense of other people and their cultures. Humanistic inquiry equips students to enter the world as globally thinking citizens.

Because language is the humanist's essential tool and the traditional medium of historical record, philosophical speculation, and literary creation and criticism, the School of Humanities places special emphasis on language and training in composition. The School offers programs in more than a dozen languages other than English. The serious study of language other than English is crucial to fostering critical thinking, objective self-reflection, and international awareness. The distinguished programs in creative writing, literary journalism, and the Program in Academic English/English as a Second Language are housed in Humanities. Humanities Core integrates the multi-disciplinary study of the humanities along with lower-division writing for majors who enter as freshmen.

Interdisciplinary study is an essential feature of the Humanities Honors Program as well as of many of the School's undergraduate degree programs. Examples of undergraduate programs located in Humanities that cut across disciplinary boundaries are the majors in Global Cultures, Global Middle East Studies, and Religious Studies, and the interdisciplinary minors in Archaeology, Latin American Studies, and Medical Humanities.

Students majoring in the humanities are particularly well-prepared for careers in all fields that rely on analysis, judgment, and argument. Humanities students have moved into business, medicine, the law, education, politics, public policy, academia, new media and journalism. Employers in all sectors increasingly request college graduates who can communicate effectively across cultures, think critically, and have the ability to learn and adapt on the job. Employers can provide a specific form of technical training, but the School of Humanities provides the thinking and writing skills, as well as the social and emotional intelligence that allow graduates to excel in a wide range of professions.

**Honors at Graduation**

Campus criteria for honors at graduation are described in the section Honors Recognition (p. 90). In addition to campus criteria, the School of Humanities uses cumulative GPA as the criterion for the awarding of Honors at Graduation. The official designation of Honors on the diploma and transcript will be based upon the candidate’s cumulative GPA and total units completed at the end of the final quarter.

**Humanities Commons**

**Julia R. Lupton, Associate Dean for Research**

1110 Humanities Gateway; 949-824-1662
http://www.humanities.uci.edu/commons/; HumCom@uci.edu (HumCom@uci.edu)

UCI’s Humanities Commons explores the scope of human experience by supporting faculty and graduate student scholarship, engaging in collaborative projects, and providing opportunities for campus-public partnerships. The Humanities Commons provides small grants to School of Humanities faculty for research expenses, conference programming, publication subvention, and conference travel. School of Humanities graduate students can apply for funding for dissertation research and for presenting collaborative conferences. In addition to serving as a liaison and coordinator for cross-campus and multi-campus projects, the Humanities Commons builds partnerships that engage the School of Humanities with community organizations and public institutions.

**Humanities Studio and Computing Facility**

The Humanities Studio/Academic Resources & Technology (formerly Humanities Instructional Resource Center) and the Humanities Computing Facility (HCF) share space in Humanities Hall and provide comprehensive technology support for instruction, research, and faculty and staff development.

The Humanities Studio services and facilities include video and audio libraries, and audiovisual equipment. HCF includes the computer labs, fee-based laser printing, support for wireless networking in the Humanities quad, and computing consultation. Both facilities provide technology-related research and development assistance for faculty, and both graduate and undergraduate students. HCF houses two PC labs, one Macintosh lab, and one drop-in lab (with both Macs and PCs). The facility has more than 100 stations. HCF also provides a wide range of computer services (scanning, document conversion, workshops, and more).

Both HCF and Humanities Studio labs provide a wide variety of instructional resources such as multimedia applications and development stations, foreign language word processing, Web browsing (including support for non-Roman alphabets), language learning materials, among others. The labs are available to Humanities students, instructors, and staff for class instruction and drop-in purposes.

Thanks to a partnership between Graham Arader and Georges Van Den Abbeele, Dean of the School of Humanities, Humanities Studio is currently home to $1 million worth of historic art from Arader's historic art collection. The art is available for viewing throughout the Humanities Studio. The artwork features natural history watercolors, woodcuts, engravings, lithographs, chromolithographs, and maps dating from the 16th to 19th centuries.

Arader has devoted more than four decades to building a comprehensive gallery of natural history artwork, including hand-colored aquatints and lithographs by John James Audubon and other important ornithological, zoological, and botanical artists. Arader has confirmed that Audubon's works
continue to be his most sought-after pieces. For more information, or to schedule an art-viewing in advance, please contact the Operations Manager of Humanities Studio, at 949-824-6344.

Additional information may be obtained by visiting the Humanities Studio website (http://www.humanities.uci.edu/hirc), the HCF Computer Consulting Office, 4000 Humanities Gateway, 949-824-7609, or the Humanities Studio main offices, 269 Humanities Hall, 949-824-6344.

**Humanities Out There (H.O.T.) Program**

Humanities Commons, Humanities Gateway 1st Floor
949-824-1948

H.O.T. is an outreach program between UCI's School of Humanities and local cultural institutions, such as public libraries and museums. The program consists of a quarterly series of pedagogical and public humanities training sessions. Undergraduate students in the program volunteer at the quarter’s chosen field site, supervised by faculty and advanced graduate students in the humanities.

Requirements for undergraduates include attending at least five training sessions at UCI; attending at least two workshops in the field; weekly electronic journal entries; and a three- to five-page paper with an academic focus. Undergraduates can earn two or four units of H.O.T. credit each quarter through HUMAN 195.

**Dr. Samuel M. Jordan Center for Persian Studies and Culture**

Touraj Daryaee, Director
1118 Humanities Gateway
949-824-3638
http://www.humanities.uci.edu/persianstudies/
sjcps@uci.edu (sjcps@uci.edu)

The Samuel Jordan Center for Persian Studies and Culture is devoted to the study of Iran and the Persianate world. Drawing on the strengths of the entire campus, the Center focuses on interdisciplinary research projects that bridge the arts, humanities, engineering, medicine, and the sciences. The Center sponsors events such as lectures, performances, and film screenings that draw a campus and community audience throughout the year.

Courses, including language, literature, history, music, and culture at the undergraduate and graduate levels, are the backbone of the Center’s academic and pedagogical mission. These academic courses are offered by affiliated faculty and administered by different units. The Humanities Language Learning Program offers courses on Persian language. Courses in ancient, medieval, and modern Persian history are administered by the Department of History. Courses on modern Persian literature and the language of Iranian diaspora are offered through the Department of Comparative Literature. And courses on Persian music are housed within the Department of Music. A list of courses and information on the Persian Studies minor is available on the minor’s website (http://www.humanities.uci.edu/persianstudiesminor).

**Requirements for the Bachelor’s Degree**

All students must meet the University Requirements (p. 91).

**School Requirements**

1. Satisfactory completion of HUMAN 1A-HUMAN 1AS-HUMAN 1B-HUMAN 1BS-HUMAN 1C-HUMAN 1CS taken for letter grades in the freshman year.
   Transfer students in all majors in the School of Humanities may substitute for the Humanities Core appropriate course work as described on the School of Humanities website (http://www.humanities.uci.edu/undergrad/academics/core.php). No overlap is permitted between the Humanities Core substitution and a student's departmental/major requirements.

   2. College-level course work equivalent to UCI's sixth quarter of study (2C level, or for Latin or Greek, one 103 and one 104, or two 103s or 104s) in a language other than English or equivalent competence. The final course must be taken for a letter grade and passed with a grade of C or better.
   NOTE: Please refer to the course listings in the Catalogue (http://catalogue.uci.edu/allcourses/) for information regarding required prerequisites for the 2C level language courses, or Latin or Greek 103 or 104.

   Unless otherwise specified, courses taken to satisfy major, minor, and school requirements must be a minimum of 4 units each. Unless otherwise specified, no more than one independent or directed group study course may be petitioned toward major or minor requirements. Unless otherwise specified, all courses taken to satisfy major and school requirements must be taken for a letter grade.

   Quarterly consultation with a faculty advisor is recommended.

**Maximum Overlap Between Major Requirements:** In fulfilling degree requirements for multiple majors, a maximum of two courses may overlap between any two majors.

**Maximum Overlap Between Major and Minor Requirements:** In fulfilling minor requirements, a maximum of two courses may overlap between a major and a minor. No course overlap is permitted between minors.
Normal Progress in the Major: School of Humanities majors are expected to take at least one course required for their major program each quarter as well as make progress toward the completion of the School’s language other than English requirement.

School Residence Requirement: At least five upper-division courses required for each major must be completed successfully at UCI. Completion of a minor program is optional; however, for certification in a minor, at least four upper-division courses required for the minor must be completed successfully at UCI. See individual major and minor requirements for specific courses and how participation in the Education Abroad Program (EAP) can affect the residence requirement. Exceptions are considered on a case-by-case basis and decided in consultation between the appropriate department or faculty member and the Associate Dean of Humanities for Curriculum and Student Affairs.

Internship Policy. In most cases, Humanities students are not allowed to earn credit for off-campus internships. However, if a department or program determines that the internship is academically appropriate and promotes the student’s academic goals, the student may take the internship as Independent Study and unit credit will be given. The sponsoring department or program and the instructor will in all cases require a substantial academic product, such as a paper, growing out of the internship.

A student who wishes to seek approval for an off-campus internship and earn course credit must file an Independent Study form with the department/program of the sponsoring faculty. A student who wishes to apply approved credit toward degree requirements, other than elective units, must also petition for approval from the Humanities Undergraduate Study Office, prior to beginning the internship.

UCI approved internship courses are applied to major requirements as specified by individual major requirements.

Change of Major. Students who wish to change their major to one offered by the School of Humanities should contact the Humanities Undergraduate Counseling Office for information about change-of-major requirements, procedures, and policies. Information is also available at the UCI Change of Major Criteria website (http://www.changeofmajor.uci.edu).

Undergraduate Programs

The following majors are offered:

- African American Studies, B.A. (p. 798)
- Art History, B.A. (p. 803)
- Asian American Studies, B.A. (p. 812)
- Chinese Studies, B.A.: (p. 846)
- Classics, B.A. (p. 820)
- Comparative Literature, B.A. (p. 833)
- East Asian Cultures, B.A. (p. 846)
- English, B.A. (p. 871)
- European Studies, B.A. (p. 888)
- Film and Media Studies, B.A. (p. 920)
- French, B.A. (p. 891)
- Gender and Sexuality Studies B.A. (p. 928)
- German Studies, B.A. (p. 893)
- Global Middle East Studies, B.A. (p. 938)
- Global Cultures, B.A. (p. 936)
- History, B.A. (p. 940)
- Japanese Language and Literature, B.A. (p. 846)
- Korean Literature and Culture, B.A. (p. 846)
- Literary Journalism, B.A. (p. 871)
- Philosophy, B.A. (p. 966)
- Religious Studies, B.A. (p. 983)
- Spanish, B.A. (p. 989)

The following minors are offered:

- African American Studies (p. 798)
- Archaeology (p. 822)
- Art History (p. 805)
- Asian American Studies (p. 813)
- Asian Studies (p. 1005)
- Chinese Language and Literature (p. 849)
- Chinese Studies (p. 849)
- Classical Civilization (p. 822)
- Comparative Literature (p. 833)
- English (p. 874)
- European Studies (p. 888)
- Film and Media Studies (p. 921)
The Office of Undergraduate Study provides academic counseling to students pursuing majors within the School of Humanities, as well as students interested in changing to, or adding a double major in School of Humanities disciplines. Students should consult an academic counselor with questions about University policies and regulations, degree requirements, course content, options for majors and minors, study abroad, honors opportunities, or when facing academic difficulties.

### Humanities Peer Mentor Program

The Humanities Peer Mentor Program is designed to address some of the academic, cultural, and social needs of freshmen in the School of Humanities. While all new Humanities freshmen will benefit from participation in the program, it is particularly useful for new first generation college students. It has a goal of developing leadership skills in both the mentors and the protogees/mentees. The program features two-tiered mentoring, with successful upper-division students mentoring small groups of new students, and the student mentors in turn working with faculty and staff. Another focus of the program is to encourage the student mentors to go on to graduate school.

Participants attend workshops on topics such as communication styles, study skills, procrastination and time management, and studying abroad, as well as take part in a variety of more social events. They also produce weekly journals in which they express their ideas and raise issues for their mentors. Call 949-824-5132 for additional information.

### Humanities Honors Program

The Honors Program within the School of Humanities is a two-year, upper-division program designed to challenge exceptional students from all majors by providing special opportunities for intellectual growth in an interdisciplinary setting. Honors students benefit from small seminars, individual faculty attention, peer support, and the chance to pursue independent research. They think deeply about the meaning and value of humanistic inquiry and thus actively shape its future while honing their skills as thinkers, writers, and citizens of the world.

Humanities Honors students complete a two-part course of study. In their junior year, students take three quarters of an interdisciplinary Proseminar (HUMAN H120) organized around a single topic or problem, such as crime and punishment, state and civil society, the development of religion in the West, or the self, nature, and the American dream. The sequence is designed to compare and contrast modes of analysis and critical thinking in several disciplines in the Humanities, such as history, literary studies, and philosophy. In a small seminar setting, students are encouraged to become reflective about their own chosen disciplines.
In their senior year, students take a sequence of courses beginning in the fall with a Senior Honors Seminar (HUMAN H140), and continuing in the winter and spring with the Senior Honors Thesis (HUMAN H141) and the Senior Honors Colloquium (HUMAN H142W), in which they complete an independent research project under the direction of a faculty member on a topic chosen by the student. A prize is awarded for the year’s outstanding thesis.

In both sequences, the Honors students benefit from their close association with exceptional scholars and the challenge and support of their intellectual peers.

Students interested in learning how the Humanities Honors Program will fit into their regular courses of study are encouraged to contact the Humanities Undergraduate Study Director; telephone 949-824-5132.

**Campuswide Honors Program**

The Campuswide Honors Program is available to selected high-achieving students from all academic majors from their freshman through senior years. For more information contact the Campuswide Honors Program, 1200 Student Services II; 949-824-5461; honors@uci.edu; or visit the Campuswide Honors Program website (http://honors.uci.edu).

**Study Abroad Center**

The Study Abroad Center, which includes the UC Education Abroad Program (EAP) and the International Opportunities Program (IOP), assists students in taking advantage of the many worldwide opportunities that exist for study, work, internship, volunteering, and research. School of Humanities majors and minors can benefit from a broader perspective of their fields by studying for one year at a university in such countries as China, France, Germany, Italy, Japan, Russia, Spain, or the United Kingdom through UCEAP. Students can also augment their exposure to other cultures with programs sponsored through IOP. Visit the Study Abroad Program website (http://www.studyabroad.uci.edu) or an academic counselor for additional information.

**Language Other than English Placement and Progression**

The following policies apply to all UCI students taking language other than English courses.

**Language Other Than English Progression.** Within the beginning and intermediate language instructional sequences (1A-B-C and 2A-B-C, and for Latin and Greek, 1A-B-C and 100) students must earn a grade of at least C (or Pass) in order to advance to the next level of instruction, unless an exception is permitted by the appropriate course director and the Associate Dean of Humanities for Curriculum and Student Services. A student may not go back and take a lower-level course for credit once a more advanced level has been completed with a passing grade. Nor may a student be enrolled in more than one level of the same language at the same time (for example, a student may not enroll in language 2B and 2C concurrently).

**Language Other Than English Placement.** Placement tests are required for the following languages: Arabic, Chinese, Hebrew, Japanese, Korean, Persian, Spanish (for students with no previous college course work), and Vietnamese. Contact the UCI Academic Testing Center for information; telephone 949-824-6207; email: testcenter@uci.edu (testoff@uci.edu); or visit the Testing Center website (http://www.testingcenter.uci.edu). Placement tests are recommended but not required for French and German language courses. The purpose of placement testing is to ensure success in UCI language courses.

For languages other than English which are not listed above (and for French and German if the placement test is not taken), students entering UCI with previous high school language training only are placed as follows: in general, one year of high school work is equated with one quarter of UCI work. Thus, students with one, two, three, or four years of high school language other than English will normally enroll in 1B-, 1C-, 2A-, or 2B-level language courses, respectively. Students who opt to “go back” one quarter will earn credit (i.e., a student with three years of high school language other than English may opt to take 1C instead of 2A). If it has been five or more years since the last high school course, the student may begin at 1A for credit. Exceptions must have the approval of the appropriate course director and the Associate Dean of Humanities for Curriculum and Student Services. Students will not receive credit for repeating at UCI language other than English courses for which they received transfer credit from another institution, even if they are placed by testing into the equivalent of a previously taken course.

**Language Other Than English Advanced Placement Credit.** Students cannot earn units or grade points at UCI in courses from which they have been exempted on the basis of Advanced Placement credit. However, since Advanced Placement awards a maximum of 8 units for scores of 4 and 5, students may elect to take 2C or the equivalent for credit.

**Native Speakers of Languages Other Than English.** A native speaker of a language other than English is defined by the University as someone who attended the equivalent of secondary school in another country where the language of instruction was other than English. Students with prior background in a language other than English should consult the UCI Academic Testing Center to see if a placement test is available to demonstrate competence in that language. If an appropriate means of evaluating competence in a non-English language of instruction does not exist, satisfactory completion, with a C average or better, or equivalent, of one year of formal schooling at the 10th-grade level or higher in an institution where the language of instruction is not English will meet the School of Humanities Language Other Than English requirement equal to second-year language. Appropriate documentation and translation, when necessary, must be presented to substantiate that the course work was completed. For some majors offered by the School of Humanities, students may be exempted from taking third-year language study in that language. In this case, the student must substitute appropriate upper-division courses in the major to replace the number of exempted courses. For example, if a native speaker of Spanish is exempted from SPANISH 3A and SPANISH 3B, that student must replace those two courses with two other upper-division Spanish courses offered by the Department of Department of Spanish and Portuguese.
Repeating Deficient Foreign Language Other Than English Grades. First- and second-year language other than English courses and third-year language other than English composition courses are sequential and each is prerequisite to the next. This is generally true also of fourth-year Chinese, Japanese, and Korean. Students wishing to repeat a deficient grade in one of these courses must repeat it prior to continuing on to the next level of the language. A student may not go back and retake a lower-level course for credit once a more advanced level has been completed with a passing grade.

Graduate Programs

Humanities Office of Graduate Study

Yong Chen, Associate Dean for Curriculum and Student Services
157 Humanities Instructional Building
949-824-5557

The School of Humanities offers graduate degrees in a wide range of disciplines, as well as in interdisciplinary programs. The School’s graduate programs are generally aimed at those pursuing a Ph.D., with the Master’s degree awarded along the way. Exceptions include the M.A. program in the Department of English, the M.A. program in the Department of History and the Department of European Languages and Literatures, and 4+1 M.A. programs (B.A. and M.A in five years) in Art History, Asian American Studies, and European Thought and Culture. In addition, the Department of English administers the M.F.A. in Creative Writing (Fiction/Poetry).

The School of Humanities houses five graduate emphases that may be pursued in conjunction with study toward the doctorate: Asian American Studies, Critical Theory, Feminist Studies, Latin American Studies, and Visual Studies.

Graduate students participate in the affairs of the School of Humanities by serving as representatives on various departmental, schoolwide, and campuswide committees.

Courses

HUMAN 1A. Humanities Core Lecture. 4 Units.
Through a range of cultural traditions and an interdisciplinary approach to works of literature, history, philosophy, and contemporary media, this course introduces students to the humanities.

Restriction: Lower-division students only.

HUMAN 1AES. Humanities Core Writing: Entry Level Writing. 4 Units. 2 Workload Units.
A small writing course for Entry Level Writing students exploring the ideas presented in the companion lecture course and illustrated in the literary, historical, philosophical, and media works assigned.

Corequisite: HUMAN 1A
Grading Option: Workload Credit Letter Grade with P/NP.
Overlaps with HUMAN 1AS, HUMAN H1AS.
Restriction: Lower-division students only.

HUMAN 1AS. Humanities Core Writing. 4 Units.
A small writing course in which students explore the ideas presented in the companion lecture course and illustrated in the literary, historical, philosophical, and media works assigned.

Corequisite: HUMAN 1A
Prerequisite: Satisfaction of the UC Entry Level Writing requirement.
Overlaps with HUMAN 1AES, HUMAN H1AS.
Restriction: Lower-division students only.

HUMAN 1B. Humanities Core Lecture. 4 Units.
Through a range of cultural traditions and an interdisciplinary approach to works of literature, history, philosophy, and contemporary media, students are introduced to the humanities.

Restriction: Lower-division students only.
HUMAN 1BES. Humanities Core Writing: Entry Level Writing. 4 Units. 2 Workload Units.
A small writing course for Entry Level Writing students exploring the ideas presented in the companion lecture course and illustrated in the literary, historical, philosophical, and media works assigned.

Corequisite: HUMAN 1B
Prerequisite: HUMAN 1AES. HUMAN 1AES with a grade of C- or better

Grading Option: Workload Credit Letter Grade with P/NP.

Overlaps with HUMAN 1BS, HUMAN H1BS.

Restriction: Lower-division students only.

HUMAN 1BS. Humanities Core Writing. 4 Units.
A small writing course in which students explore the ideas presented in the companion lecture course and illustrated in the literary, historical, philosophical, and media works assigned.

Corequisite: HUMAN 1B
Prerequisite: Satisfaction of the UC Entry Level Writing requirement.

Overlaps with HUMAN H1BS, HUMAN 1BES.

Restriction: Lower-division students only.

HUMAN 1C. Humanities Core Lecture. 4 Units.
Through a range of cultural traditions and an interdisciplinary approach to works of literature, history, philosophy, and contemporary media, students are introduced to the humanities.

Prerequisite: HUMAN 1A or HUMAN 1B

Restriction: Lower-division students only.

HUMAN 1CES. Humanities Core Writing: Entry Level Writing. 4 Units. 2 Workload Units.
A small writing course for Entry Level Writing students exploring the ideas presented in the companion lecture course and illustrated in the literary, historical, philosophical, and media works assigned.

Corequisite: HUMAN 1C
Prerequisite: HUMAN 1BES with a grade of C- or lower.

Grading Option: Workload Credit Letter Grade with P/NP.

Overlaps with HUMAN 1CS, HUMAN H1CS.

Restriction: Lower-division students only.

HUMAN 1CS. Humanities Core Writing. 4 Units.
A small writing course in which students explore the ideas presented in the companion lecture course and illustrated in the literary, historical, philosophical, and media works assigned.

Corequisite: HUMAN 1C
Prerequisite: HUMAN 1AS or HUMAN H1AS or HUMAN 1AES or HUMAN 1BS or HUMAN H1BS or HUMAN 1BES. HUMAN 1AS with a grade of C or better. HUMAN H1AS with a grade of C or better. HUMAN 1AES with a grade of C or better. HUMAN 1BS with a grade of C or better. HUMAN H1BS with a grade of C or better. HUMAN 1BES with a grade of C or better.

Overlaps with HUMAN H1CS, HUMAN 1CES.

Restriction: Lower-division students only.
HUMAN H1AS. Humanities Core Writing: Honors. 4 Units.
A small writing course for Campuswide Honors students exploring the ideas presented in the companion lecture course and illustrated in the literary, historical, philosophical, and media works assigned.

Corequisite: HUMAN 1A
Prerequisite: Satisfaction of the UC Entry Level Writing requirement.

Overlaps with HUMAN 1AS, HUMAN 1AES.

Restriction: Campuswide Honors Program students only. Lower-division students only.

HUMAN H1BS. Humanities Core Writing: Honors. 4 Units.
A small writing course for Campuswide Honors students exploring the ideas presented in the companion lecture course and illustrated in the literary, historical, philosophical, and media works assigned.

Corequisite: HUMAN 1B
Prerequisite: Satisfaction of the UC Entry Level Writing requirement.

Overlaps with HUMAN 1BS, HUMAN 1BES.

Restriction: Campuswide Honors Program students only. Lower-division students only.

HUMAN H1CS. Humanities Core Writing: Honors. 4 Units.
A small writing course for Campuswide Honors students exploring the ideas presented in the companion lecture course and illustrated in the literary, historical, philosophical, and media works assigned.

Corequisite: HUMAN 1C
Prerequisite: HUMAN 1AS or HUMAN H1AS or HUMAN 1AES or HUMAN 1BS or HUMAN H1BS or HUMAN 1BES with a grade of C or better.

Overlaps with HUMAN 1CS, HUMAN 1CES.

Restriction: Lower-division students only. Campuswide Honors Program students only.

HUMAN 10. Masterpieces of Literature. 4 Units.
Students closely read major works of world literature that are significant (1) in their own right, (2) for a specific literary tradition, and (3) because of their reception in other cultural contexts. Literature written in English and English translation.

Repeatability: Unlimited as topics vary.

HUMAN 52. Foundations of Bilingual Education and Bilingualism. 4 Units.
Provides a comprehensive overview of current issues in bilingual education and bilingualism. Topics include dimensions of bilingualism, the effects of bilingualism on children's linguistic and cognitive development, bilingual education programs, literacy, special needs, and assessment.

Same as EDUC 52, LINGUIS 51B.

HUMAN H80. Exploring Memory. 4 Units.
Questions about human memory are central to a wide range of disciplines. Students will explore how historians, sociologists, social psychologists, legal experts, and neuroscientists understand human memory and apply their findings to understand and shape their own societies.

Restriction: Campuswide Honors Program students only.

HUMAN H81. The Vietnam War. 4 Units.
Examines the origins, evolution, opposition against, conclusion, and legacy of the United States in the Vietnam War.

Restriction: Campuswide Honors Program students only.
HUMAN H82. Sanctuary: Medieval and Modern. 4 Units.
Principles and significance of the practice of legal sanctuary in medieval English history, literature, and religion. Development of modern use of churches and other safe spaces in the American Civil Rights movement, immigrant sanctuary movements, and international asylum.
Restriction: Campuswide Honors Program students only.
(General Education III or IV).

HUMAN H83. How Nations Remember. 4 Units.
Just like people, nations select and organize what and how they want to remember. Compares how specific historical events (such as slavery and the Holocaust) are memorialized in various countries and represented in public art works, museums, literature, and film.
Restriction: Campuswide Honors Program students only.
(III)

HUMAN 100. Latin America and the Caribbean. 4 Units.
Introduces students to Latin America and the Caribbean by focusing on the social, cultural, economic, and/or political issues and processes that have widely affected the region during various time periods.
Repeatability: Unlimited as topics vary.

HUMAN H120. Honors Proseminar. 4 Units.
Interdisciplinary Honors courses organized each year around a single topic problem designed to compare and contrast modes of analysis in history, literary studies, and philosophy.
Repeatability: May be taken for credit 3 times as topics vary.
Restriction: Humanities Honors students only.

HUMAN H140. Senior Honors Seminar. 4 Units.
Directed by Humanities Honors Thesis Advisor and required of students in Humanities Honors program and Humanities majors in Campuswide Honors Program. Designed to facilitate exchange of ideas and research strategies among students and begin process of writing senior honors thesis.
Restriction: Humanities Honors students only. Seniors only.

HUMAN H141. Senior Honors Thesis. 4 Units.
Directed independent research required of participants in the Humanities Honors Program and Humanities majors in the Campuswide Honors Program.
Prerequisite: HUMAN H140
Restriction: Campuswide Honors Program students only. Humanities Honors students only.

HUMAN H142W. Senior Honors Colloquium. 4 Units.
Completion, presentation, and discussion of Senior Honors Theses.
Prerequisite: HUMAN H141
Restriction: Campuswide Honors Program students only. Humanities Honors students only.
(Ib)

HUMAN H145. Arts of Contemporary Communication. 4 Units.
A workshop seminar exploring the theory and practice of visual design, data visualization, and oral presentation. Designed to get students to think about, and hone their skills in, effective presentation of information in multiple media.
Restriction: Campuswide Honors Program students only. Humanities Honors Program students can enroll as space allows.

HUMAN 175. Topics in Humanities and Science. 4 Units.
Interdisciplinary topics exploring the relationship between the humanities and the physical and biological sciences.
Repeatability: May be taken for credit 3 times as topics vary.
HUMAN 195. Humanities Out There (H.O.T.) Practicum. 0 - 2 Units.
H.O.T. sponsors tutoring opportunities in local schools and after-school sites for UCI students. Requirements include weekly one-hour training sessions at UCI; at least eight off-site tutoring sessions; and short writing assignments.

Grading Option: Pass/no pass only.

Repeatability: May be taken for credit for 8 units.

HUMAN 197. Individual Field Study. 1-4 Units.
Individually arranged field study.

Repeatability: May be repeated for credit unlimited times.

HUMAN 198. Directed Group Study. 1-4 Units.
Directed group study on special topics.

Grading Option: Pass/no pass only.

Repeatability: Unlimited as topics vary.

HUMAN 199. Directed Research. 1-4 Units.
Directed research for senior Humanities students.

Repeatability: Unlimited as topics vary.

Restriction: Seniors only.

HUMAN 220B. Studies in Literary Theory and Its History. 4 Units.
Introduction to criticism and aesthetics for beginning graduate students. Readings from continental, English, and American theorists.

Same as CRITISM 220B.

Restriction: Graduate students only.

HUMAN 260A. Critical Theory Workshop.
A year-long Critical Theory Workshop, conducted by a team of instructors, conceived as a reading group, and developed with the input of all participants, where significant texts are discussed and analyzed in class.

Grading Option: Satisfactory/unsatisfactory only.

Restriction: Graduate students only.

HUMAN 260B. Critical Theory Workshop.
A year-long Critical Theory Workshop, conducted by a team of instructors, conceived as a reading group, and developed with the input of all participants, where significant texts are discussed and analyzed in class.

Grading Option: Satisfactory/unsatisfactory only.

Restriction: Graduate students only.

HUMAN 260C. Critical Theory Workshop. 4 Units.
A year-long Critical Theory Workshop, conducted by a team of instructors, conceived as a reading group, and developed with the input of all participants, where significant texts are discussed and analyzed in class.

Grading Option: Satisfactory/unsatisfactory only.

Restriction: Graduate students only.

HUMAN 261. Race and Justice Studies Writing Seminar . 4 Units.
A required writing-intensive seminar conducted by an instructor affiliated with the Race and Justice Studies emphasis. Students with manuscripts on relevant topics will read and critique peer manuscripts, and revise manuscripts toward completion of articles, dissertation chapters, and other publications.

Prerequisite: CRM/LAW C260C

Same as CRM/LAW C261, SOC SCI 253K.

Restriction: Graduate students only.
HUMAN 265A. Issues In Latin American Studies I.
Students discuss significant texts on Latin America from a range of disciplines in the humanities, social sciences, and the arts. This course will meet 3-4 times per quarter throughout the academic year.
Grading Option: Satisfactory/unsatisfactory only.

HUMAN 265B. Issues In Latin American Studies II.
Students discuss significant texts on Latin America from a range of disciplines in the humanities, social sciences, and the arts. This course will meet 3-4 times per quarter throughout the academic year.
Prerequisite: HUMAN 265A
Grading Option: Satisfactory/unsatisfactory only.

HUMAN 265C. Issues In Latin American Studies III. 4 Units.
Students discuss significant texts on Latin America from a range of disciplines in the humanities, social sciences, and the arts. This course will meet 3-4 times per quarter throughout the academic year.
Prerequisite: HUMAN 265B
Grading Option: Satisfactory/unsatisfactory only.

HUMAN 270. Advanced Critical Theory. 4 Units.
Seminars on various topics in critical theory.
Prerequisite: Students should have taken introductory courses before enrolling in these seminars.
Repeatability: Unlimited as topics vary.

HUMAN 298. Humanities Out There (H.O.T.) Practicum. 4 Units.
Individual study with H.O.T. faculty supervisor.
Repeatability: May be repeated for credit unlimited times.

HUMAN 398A. Foreign Language Teaching: Approaches and Methods. 2 Units.
Introduces approaches and methods of foreign language learning and teaching, and the theoretical models of second-language acquisition and teaching. Focus areas include lesson planning, teaching vocabulary, grammar, speaking, reading, writing, listening, culture, task-based teaching, uses of digital media.
Restriction: Graduate students only.

HUMAN 398B. Foreign Language Teaching: Approaches and Methods. 2 Units.
Introduces approaches and methods of foreign language learning and teaching, and the theoretical models of second-language acquisition and teaching. Focus areas include lesson planning, teaching vocabulary, grammar, speaking, reading, writing, listening, culture, task-based teaching, uses of digital media.
Restriction: Graduate students only.

HUMAN 399. University Teaching. 4 Units.
Limited to Teaching Associates in Humanities Core course.
Grading Option: Satisfactory/unsatisfactory only.
Repeatability: May be repeated for credit unlimited times.
Restriction: Graduate students only.

Department of African American Studies

Frank Wilderson, Department Chair
3000 Humanities Gateway
949-824-2376
http://www.humanities.uci.edu/afam/

Overview
African American Studies is an interdisciplinary program which offers undergraduate students an opportunity to study those societies and cultures established by the people of the African diaspora. The Department's curriculum encourages students to investigate the African American experience
from a variety of disciplinary perspectives and theoretical approaches. Among the topics explored in the course offerings are the process of colonization and the forced migration of African people, the positionality of African people in the racialized symbolic and social orders of the western hemisphere, the rhetoric produced by and about African people, and the cultural and aesthetic values associated with “blackness” and “Africanness.” The Department offers a B.A. program in African American Studies and a minor.

Career Opportunities
UCI graduates with a B.A. in African American Studies enhance their chances of success in the job market and in the highly competitive arena of graduate and professional school admissions, especially in the fields of medicine and other health professions, law, and business. Employers and admissions officers understand that many of their employees and graduates will one day work in communities with significant African American populations, and for this reason they give due consideration to applicants who have in-depth knowledge of African American culture.

Requirements for the B.A. in African American Studies
All students must meet the University Requirements (p. 91).
All students must meet the School Requirements (p. 788).

Requirements for the Major
A. Complete the following African American Studies introductory series:
   - AFAM 40A African American Studies I
   - AFAM 40B African American Studies II
   - AFAM 40C African American Studies III
B. Select three courses, with one from three of the following five rubrics:
   - Humanities (AFAM 110–119)
   - Gender/Sexuality (AFAM 120–129)
   - History (AFAM 130–139)
   - Fine Arts (AFAM 140–149)
   - Social Sciences (AFAM 150–159)
C. Select five additional upper-division electives from AFAM 110–159, 163.
D. Complete:
   - AFAM 162W The Black Protest Tradition

Residence Requirement for the Major: A minimum of five upper-division courses required for the major must be completed successfully at UCI.

Requirements for the Minor in African American Studies

Requirements for the Minor
A. Complete the following African American Studies introductory series:
   - AFAM 40A African American Studies I
   - AFAM 40B African American Studies II
   - AFAM 40C African American Studies III
B. Select three courses, with one from three of the following five rubrics:
   - Humanities (AFAM 110–119)
   - Gender/Sexuality (AFAM 120–129)
   - History (AFAM 130–139)
   - Fine Arts (AFAM 140–149)
   - Social Sciences (AFAM 150–159)
C. Select one additional upper-division elective from AFAM 110–159, 163.

Residence Requirement for the Minor: Four upper-division courses required for the minor must be completed successfully at UCI. Two of the four may be taken through the UC Education Abroad Program, provided course content is approved in advance by the appropriate department chair.

Faculty
Nahum D. Chandler, Ph.D. University of Chicago, Professor of African American Studies; Comparative Literature; European Languages and Studies (modern philosophy, intellectual history, history of the human sciences)

Bridget R. Cooks Cumbo, Ph.D. University of Rochester, Associate Professor of African American Studies; Art History; Culture and Theory; Visual Studies (African American art, museum studies, feminist and post-colonial theory)
Sandra Harvey, Ph.D. University of California, Santa Cruz, Assistant Professor of African American Studies (black diasporas, sovereignty, indigeneity, visual art and culture, Enlightenment philosophy, feminist and queer theories)

Douglas M. Haynes, Ph.D. University of California, Berkeley, Vice Provost for Equity and Diversity and Professor of History; African American Studies; European Languages and Studies (social and cultural history of modern Britain, social history of modern medicine)

Ulysses S. Jenkins, M.F.A. Otis Art Institute, Professor of Art; African American Studies (video art production, performance art)

Victoria E. Johnson, Ph.D. University of Southern California, Associate Professor of Film and Media Studies; African American Studies; Culture and Theory; Visual Studies (television, critical race theory, sound, media policy, sport)

John Murillo III, Ph.D. Brown University, Assistant Professor of African American Studies (Afro-pessimism, theoretical physics, radical black feminism, literary theory, 20th/21st century black literature, black speculative fiction)

Rajagopalan Radhakrishnan, Ph.D. Binghamton University, State University of New York, UCI Chancellor's Professor of English; African American Studies; Comparative Literature; Culture and Theory (critical theory, postcoloniality, nationalisms and diasporas, poststructuralism, postmodernism, democracy and minority discourse, cultural studies, globalization and transnationalism)

Jared Charles Sexton, Ph.D. University of California, Berkeley, Associate Professor of African American Studies; Culture and Theory; Film and Media Studies; Visual Studies (race and sexuality, policing and imprisonment, contemporary U.S. cinema and political culture, multiracial coalition, critical theory)

Darryl Taylor, D.M.A. University of Michigan, Professor of Music; African American Studies

Frank B. Wilderson III, Ph.D. University of California, Berkeley, Director of the Graduate Program in Culture and Theory and Department Chair and Professor of African American Studies; Culture and Theory (Afro-Pessimism, film theory, Marxism, narratology)

Affiliate Faculty

Alex Borucki, Ph.D. Emory University, Associate Professor of History; African American Studies (African diaspora, early modern Atlantic world, slave trade, colonial Latin America)

Sohail Daulatzai, Ph.D. University of Southern California, Associate Professor of Film and Media Studies; African American Studies; Visual Studies (African American studies, postcolonial theory, race, hip hop, Muslim diasporas)

Jessica Millward, Ph.D. University of California, Los Angeles, Associate Professor of History; African American Studies; Culture and Theory (U.S., slavery, African diaspora, African American gender and women)

Tiffany Willoughby-Herard, Ph.D. University of California, Santa Barbara, Associate Professor of African American Studies; Comparative Literature; Culture and Theory; Political Science (South Africa, poor whites, race in foreign policy, diaspora, comparative racial politics, third world feminisms, feminist pedagogy, black political thought)

Courses

**AFAM 40A. African American Studies I. 4 Units.**

Discusses main contours of African American experience from the forced importation of Africans into the Americas in the late fifteenth century to the development of social movements in post-emancipation societies of the late nineteenth and twentieth centuries.

((III or IV) and VII ).

**AFAM 40B. African American Studies II. 4 Units.**

Introduction to the history of modern racial thinking in Western society and its relationship to the material contexts of racial oppression, with emphasis on its development in British colonies and U.S.

((III or IV) and VII ).

**AFAM 40C. African American Studies III. 4 Units.**

Introduction to theories of racial blackness in the modern world, with emphasis on developments in British colonies and U.S. Traces emergence of blackness as term of collective identity, social organization, and political mobilization.

((III or IV) and VII ).
AFAM 50. Introductory Topics in African American Studies. 4 Units.
Introduction to a broad range of topics in African American studies, exploring history, literature, art, culture, politics, and contemporary social issues. Topical organization of courses addresses issues that have been of importance historically and are reshaping the African diaspora today.
Repeatability: Unlimited as topics vary.

AFAM 111A. Modern African American Art. 4 Units.
Investigates the history of modern African American art; emphasis on the politics of representation. Examines art in a variety of media from material culture and textiles to painting and photography. Issues of migration, nationalism, gender, sexuality, and hybridity are discussed.
Same as ART HIS 164A.

AFAM 111B. Contemporary African American Art. 4 Units.
Investigates the history of contemporary African American art; emphasis on the politics of representation. Explores art in a variety of media: painting, sculpture, photography, installation, and new media. Cultural politics, appropriation, identity, gender, sexuality, hybridity and civil rights issues discussed.
Same as ART HIS 164B.

AFAM 112A. Early African American Literature. 4 Units.
Examines the earliest forms of black literary practices, including the jeremiad, the slave narrative, the pamphlet, poetry, the short story, and how these literary forms are related to the historical experiences of enslavement and emancipation.
Repeatability: Unlimited as topics vary.

AFAM 112B. African American Literature 1900-Present. 4 Units.
Examines individual literary forms and/or authors, as well as movements such as the Harlem Renaissance and the Black Arts Movement. Explores how black literary practices represent the conditions of modern subjectivities and environments.
Repeatability: Unlimited as topics vary.

AFAM 113. African American Cinema and Media. 4 Units.
Explores the diversity of Black creative production and the historical, social, and economic forces that shaped their emergence. May include Black film, hip-hop culture, fine art, photography, and others.
Repeatability: Unlimited as topics vary.

AFAM 114. International Cultures. 4 Units.
Explores the various cultures of the African diaspora and their impacts on a global scale. Examines a diverse range of media, including music (reggae, hip-hop), literature, film, and others and the links between culture and social movements throughout the diaspora.
Repeatability: Unlimited as topics vary.

AFAM 115. Race and Visual Representation. 4 Units.
Examines film, documentary, fine art, photography, and other visual media to explore the multiple ways in which ideas about race are projected and woven through the visual landscape and the impacts this has on perpetuating social inequalities.
Repeatability: Unlimited as topics vary.

AFAM 116. African Literatures. 4 Units.
Examines literary figures, forms, and movements of African societies. Explores how these literatures represent indigenous cultural practices, the conditions of modernity, and the relations between both.
Repeatability: Unlimited as topics vary.

AFAM 117. Asian American and African American Relations. 4 Units.
Addresses relationships of Asian American and African American communities in the United States. Topics include race, class, gender, labor, economic systems, political mobilization, community, civil rights, activism, cultural expression.
Same as HISTORY 152B, ASIANAM 167.

AFAM 118. Topics in African American Humanities. 4 Units.
Provides students with an opportunity to pursue advanced work in African American studies from one or more humanities approaches (literature, film and media studies, art history, and others).
Repeatability: Unlimited as topics vary.
AFAM 125. African American Women in Art. 4 Units.
Examines depictions of and by African American women in art and popular culture through a variety of media including textiles, painting, sculpture, photography, and installation. Focuses on African American women's experiences, perspectives, and strategies for contemporary representation.

Same as ART HIS 164D.

AFAM 128. Topics in Gender/Sexuality. 4 Units.
Expressions of genders and sexualities across the spectrum of African American experience and creativity.

Repeatability: Unlimited as topics vary.

AFAM 134A. Caribbean History: Colonization to Emancipation. 4 Units.
Exploration of the history of the archipelago from pre-Columbian times to the end of slavery; examining the impact of European colonization, decimation of the indigenous populations, African slavery, resistance, and emancipation; the unity and diversity of experience in region.

Same as HISTORY 164A.

AFAM 134B. Caribbean History: Emancipation to Independence. 4 Units.
Post-emancipation and anti-colonial struggles ending with political independence for most of the region. Examines social, political, economic, cultural dimensions of post-emancipation period, including large-scale migration to Central America, the U.S., and Britain; the region's global cultural and political contribution.

Same as HISTORY 164B.

AFAM 137. History of the African Diaspora. 4 Units.
Examines the causes and consequences of the multiple diasporas of African peoples since the sixteenth century in the Atlantic world, especially the Americas and Europe.

Same as HISTORY 134E.

AFAM 138. Topics in African American History. 4 Units.
Studies in selected areas of African American history. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

Same as HISTORY 150.

AFAM 142. Topics in African American Drama. 4 Units.
Considers African American theatrical performance and production, including acting, design and production, dramaturgy, criticism and theory, and stagecraft.

Repeatability: Unlimited as topics vary.

AFAM 143. Topics in African American Music. 4 Units.
Examines African American musical forms and traditions, such as blues, jazz, and reggae, in performance and/or critical and theoretical contexts.

Repeatability: Unlimited as topics vary.

AFAM 144. Topics in Expressive Forms. 4 Units.
Examines various forms of aesthetic expression in the African diaspora, including dance, music, and the plastic arts, as well as artistic visions of black cyberspace, digital activism, film, video, and aesthetic conceptions of the future.

Repeatability: Unlimited as topics vary.

AFAM 145. African Americans and Photography. 4 Units.
Explores depictions of and by African Americans through photography. Examines the history of photography in relationship to African American culture through a variety of media from early daguerreotype processes to digital imagery.

Same as ART HIS 164E.

AFAM 148. Advanced Studio Topics. 4 Units.
Provides an intensive and specialized working environment for practice of a variety of fine arts as practiced in African American traditions: painting, drawing, sculpture, photography, video, music, digital arts, and performance.

Repeatability: Unlimited as topics vary.
AFAM 151. Comparative Minority Politics. 4 Units.
Examines the political experiences of Blacks, Latinos, and Asian Americans in the United States from roughly 1950 to the present. Focuses on how each group has pursued political empowerment via both conventional political channels and social movements.

Same as ASIANAM 132, CHO/LAT 147, POL SCI 124C.

AFAM 152. African American Politics. 4 Units.
Examines politics of African Americans in order to gain a broader perspective of the American political process. Major developments in African American politics (including the civil rights movement, Black presidential bids), continuing problem of racism, responsiveness of key governing institutions.

Same as POL SCI 124E.

AFAM 153. African American Psychology. 4 Units.
Historical overview of the development of black psychology and the African American frame of reference. Topics include personality development, psychological assessment, issues in education, black mental health, and the role of the African American psychologist in the community.

Same as PSYCH 174E.

AFAM 154. African American Social Formations. 4 Units.
Topics which promote critical investigation into the historical, political, and social formations associated with the Black Diaspora.

Repeatability: Unlimited as topics vary.

AFAM 155. Intercultural Studies. 4 Units.
Studies relationships between various cultural formations within the Black Diaspora and the exchange, amalgamations, and tensions between Black Diasporic formations and non-Black formations. Examines expressions of racialization as representation, adaption, and resistance.

Repeatability: Unlimited as topics vary.

AFAM 156. African Societies and Politics. 4 Units.
Examines the violent incorporation of Africa within European modernity. Places the discourse of Pan-Africanism, African Nationalisms, Negritude, African Marxism, and/or African Socialism in juxtaposition to the forces of capitalism, colonialism, and imperialism that restructure African history.

Repeatability: Unlimited as topics vary.

AFAM 157. Critical Race Theory. 4 Units.
Introduction to Critical Race Theory and key American cases on racial inequality. Using this literature, examines the possibilities and pitfalls of legal claims of race, gender, and sexuality discrimination in the age of colorblindness.

Same as CRM/LAW C178.

Restriction: Upper-division students only.

AFAM 158. Topics in African American Social Sciences. 4 Units.
Provides students with an opportunity to pursue advanced work in African American studies from one or more social science approaches (psychology, sociology, anthropology, economics, and others).

Repeatability: Unlimited as topics vary.

AFAM 162W. The Black Protest Tradition. 4 Units.
History and discourses of the black protest tradition. Traces emergence of black protest against racial slavery and white supremacy from the early colonial period to present and the complex elaboration of identity politics within black communities in the twentieth century.

Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.

Restriction: Upper-division students only.

AFAM 163. Seminar in African American Studies. 4 Units.
Explores theoretical and methodological issues in Black Studies via concentrated work on a specific ensemble of questions. Emphasis is on generating student responses to the material covered through oral and written reports.

Repeatability: Unlimited as topics vary.
AFAM 198. Directed Group Study. 1-4 Units.
Special topics through directed reading. Paper required.

Repeatability: May be taken for credit for 24 units.

AFAM 199. Independent Study. 1-4 Units.
Investigation of special topics through directed reading. Paper required.

Repeatability: May be repeated for credit unlimited times.

AFAM 399. University Teaching. 4 Units.
Limited to teaching assistants.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

Department of Art History
Bert Winther-Tamaki, Department Chair
2000 Humanities Gateway
949-824-8596
http://www.humanities.uci.edu/arthistory/

Overview
The Department of Art History offers a major and minor in Art History. Art History is the study of works of art and other visual artifacts from all regions of the world and all periods of history. Consequently, the undergraduate curriculum in Art History, with its global perspective, is one of the most diverse disciplines in the humanities. Through Art History, students learn how to describe and interpret a range of objects including sculpture, painting, photography, architecture, and “new media” such as video and performance art. These skills, along with the program’s intense focus on writing and verbal expression, prepare students to think critically and to express themselves clearly at a time when visual communication is becoming ever more important.

Because works of art are always created within a larger cultural context, Art History courses are a good way to understand what other places or times were like. Students may explore, for example, ancient Greece, 19th century Japan, or even the 21st century United States. Majors in Art History are encouraged to take related courses in other fields in the humanities and to pursue the study of language beyond the minimum requirements. Because of its international perspective, Art History is a particularly good major for students interested in studying abroad. There are many study centers throughout the world associated with the University’s Education Abroad Program that offer widely varied selections of Art History courses.

Art History offers a unique one-year Master’s Program in which all current UCI undergraduate students can build upon their undergraduate work to complete an M.A. in Art History in one additional year beyond the completion of the Bachelor’s degree. The M.A. program in Art History is designed to provide students with advanced skills and broad knowledge in the discipline of art history. See the graduate section (http://catalogue.uci.edu/schoolofhumanities/departmentofarthistory/#graduatetext) for detailed information.

Career Opportunities
Following their graduation, students with a B.A. in Art History have found employment in art galleries, auction houses, and museums, and they have entered graduate programs with a view to careers in university teaching, curatorial work, and art conservation. Moreover, with its strong emphasis on developing critical skills in writing, speaking, and analysis, Art History also provides an excellent preparation for many other careers. UCI graduates have pursued professional paths ranging from medicine and law, to business and education, to information technologies and architecture. As in the case of arts administration or intellectual property law, some of these professional pursuits have depended on and continue to make use of training in the arts.

Requirements for the B.A. in Art History
All students must meet the University Requirements (p. 91).
All students must meet the School Requirements (p. 788).

Departmental Requirements for the Major
A. Select three of the following:

<table>
<thead>
<tr>
<th>ART HIS 40A</th>
<th>Ancient Egyptian, Greek, and Roman Art and Architecture</th>
</tr>
</thead>
<tbody>
<tr>
<td>ART HIS 40B</td>
<td>Arts of Europe: Medieval and Renaissance</td>
</tr>
<tr>
<td>ART HIS 40C</td>
<td>Early Modern and Modern Art in Europe and America</td>
</tr>
<tr>
<td>ART HIS 42A</td>
<td>History of Asian Art: Arts of India</td>
</tr>
<tr>
<td>ART HIS 42B</td>
<td>History of Asian Art: Arts of China</td>
</tr>
</tbody>
</table>
**ART HIS 42C**
History of Asian Art: Arts of Japan

**ART HIS 42D**
History of Asian Art: Arts of Islam

**ART HIS 44**
Image Collision: A Multicultural Approach to Images and Their Users

**B. Select eight upper-division Art History courses, with at least one course in each of the following geographical regions:**

**Americas:** Art History 140, 156, 163–167

**Europe:** Art History 100–140

**Asia:** Art History 150–163

and at least one course in each of the following five historical periods:

- **Ancient:**
  - Art History 100–107
  - ART HIS 155A
  - Ancient India

- **Medieval:**
  - ART HIS 110
  - Studies in Medieval Art
  - ART HIS 111B
  - Byzantine Art: 650-1450
  - ART HIS 112
  - Studies in Early Christian and Byzantine Art
  - ART HIS 114
  - Studies in Western Medieval Art
  - ART HIS 155B
  - Medieval India

- **Early Modern:**
  - Art History 120–128
  - ART HIS 151B
  - Later Imperial China
  - ART HIS 162A
  - Early Modern Japan
  - ART HIS 165A
  - Early American Art

- **Modern:**
  - ART HIS 134B
  - Modern European Art: From Revolution to Realism
  - ART HIS 134C
  - Modern European Art: From Impressionism to the Fauves
  - ART HIS 134D
  - Modern European Art: From Cubism to Surrealism
  - ART HIS 134E
  - Topics in Modern European Art
  - ART HIS 145A
  - Studies in Modern Architecture
  - ART HIS 151C
  - Modern China
  - ART HIS 155C
  - Modern India
  - ART HIS 156
  - Art and Globalization, Modern
  - ART HIS 162B
  - Modern Japan
  - ART HIS 164A
  - Modern African American Art
  - ART HIS 164E
  - African Americans and Photography
  - ART HIS 165B
  - Nineteenth Century American Art
  - ART HIS 165C
  - Modern American Art
  - ART HIS 183B
  - 20th Century Photographic History
  - ART HIS 183C
  - Selected Topics in Photographic History

- **Contemporary:**
  - ART HIS 140A
  - History of Contemporary Art
  - ART HIS 140B
  - Topics in Contemporary Art
  - ART HIS 145B
  - Studies in Architecture after 1945
  - ART HIS 162C
  - Contemporary Japan
  - ART HIS 163
  - Asian American Art, Contemporary
  - ART HIS 164B
  - Contemporary African American Art
  - ART HIS 164D
  - African American Women in Art
  - ART HIS 183B
  - 20th Century Photographic History
  - ART HIS 183C
  - Selected Topics in Photographic History

**C. Complete:**

**ART HIS 190W**
Art History Methods

**D. Select one of the following options:**

1. Two quarters of:
ART HIS 198  Advanced Seminar: Topics in Art History
2. or one quarter of:
ART HIS 196  Ethics, Law, and Art
and
ART HIS 198  Advanced Seminar: Topics in Art History

1 NOTE: A course may apply as both one Geographical Region and one Historical Period, but no course may be used to satisfy more than one Geographical Region or more than one Historical Period.

Students should enroll in ART HIS 190W (for upper-division writing) as early as possible in their junior year, after successfully completing UCI’s lower-division writing requirement. It is strongly recommended that students complete ART HIS 190W before taking ART HIS 198.

Residence Requirement for the Major: Five upper-division courses required for the major must be completed successfully at UCI.

4+1 Program in Art History

The 4+1 program allows students to earn a bachelor’s degree in Art History while simultaneously completing courses that can be applied toward a master’s degree in Art History. This unique structure permits students to complete coursework for their master’s degree during the undergraduate term and one additional year.

The M.A. program in Art History is designed to provide students with advanced skills and broad knowledge in the discipline of art history. The faculty is particularly well equipped to guide students with special interests in American, Asian, and European art history.

For more information on the 4+1 M.A. in Art History, visit the Art History Graduate tab (p. 805).

Requirements for the Minor in Art History

Departmental Requirements

A. Select three of the following:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>ART HIS 40A</td>
<td>Ancient Egyptian, Greek, and Roman Art and Architecture</td>
</tr>
<tr>
<td>ART HIS 40B</td>
<td>Arts of Europe: Medieval and Renaissance</td>
</tr>
<tr>
<td>ART HIS 40C</td>
<td>Early Modern and Modern Art in Europe and America</td>
</tr>
<tr>
<td>ART HIS 42A</td>
<td>History of Asian Art: Arts of India</td>
</tr>
<tr>
<td>ART HIS 42B</td>
<td>History of Asian Art: Arts of China</td>
</tr>
<tr>
<td>ART HIS 42C</td>
<td>History of Asian Art: Arts of Japan</td>
</tr>
<tr>
<td>ART HIS 42D</td>
<td>History of Asian Art: Arts of Islam</td>
</tr>
<tr>
<td>ART HIS 44</td>
<td>Image Collision: A Multicultural Approach to Images and Their Users</td>
</tr>
</tbody>
</table>

B. Select four upper-division Art History courses from 100–198, excluding ART HIS 190W.

Residence Requirement for the Minor: Four upper-division courses required for the minor must be completed successfully at UCI. By petition, two of the four may be taken through the UC Education Abroad Program, providing course content is approved in advance by the department chair.

4+1 M.A. Program in Art History

The 4+1 program allows students to earn a bachelor’s degree while simultaneously completing courses that can be applied toward a master’s degree in Art History. This unique structure permits students to complete coursework for their master’s degree during the undergraduate term and one additional year. This is a 4+1 M.A. Program for UCI undergraduates majoring in Art History or other majors.

The M.A. program in Art History is designed to provide students with advanced skills and broad knowledge in the discipline of art history. The faculty is particularly well equipped to guide students with special interests in American, Asian, and European art history.

Requirements

Students can begin coursework during the last year of the B.A. and are required to take a total of nine courses, equivalent to 36 units, toward the M.A. Nine courses are required for the degree:

A. Complete:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>ART HIS 298</td>
<td>Master’s Seminar: Topics in Art History (two quarters)</td>
</tr>
<tr>
<td>VIS STD 290A</td>
<td>Art History: Theories and Methods</td>
</tr>
<tr>
<td>VIS STD 295</td>
<td>Graduate Seminar in Visual Studies (three quarters)</td>
</tr>
<tr>
<td>ART HIS 299</td>
<td>Master’s Thesis Research (two quarters)</td>
</tr>
</tbody>
</table>

One additional elective graduate seminar
The Master’s Thesis is an approximately 20-page work of independent research supervised by a member of the faculty. Students wishing to participate in the program should apply either in their final undergraduate year or in the spring quarter of their penultimate year, which would allow them to begin course work toward the M.A. in their last undergraduate year.

For more information, please visit: http://www.humanities.uci.edu/arthistory/graduate/51.php

**Graduate Program in Visual Studies**

In conjunction with the Department of Film and Media Studies, the Department of Art History offers a graduate program in Visual Studies. A program description and graduate courses may be found in the Program in Visual Studies section (p. 1012).

**Faculty**

George C. Bauer, Ph.D. Princeton University, *Professor Emeritus of Art History* (Renaissance and Baroque)

Linda F. Bauer, Ph.D. New York University, *Professor Emerita of Art History* (Renaissance and Baroque)

Roland Betancourt, Ph.D. Yale University, *Assistant Professor of Art History; Visual Studies* (Byzantine and Medieval Art, Critical Theory)

Bridget R. Cooks Cumbo, Ph.D. University of Rochester, *Associate Professor of African American Studies; Art History; Culture and Theory; Visual Studies* (African American art, museum studies, feminist and post-colonial theory)

Aglaya Glebova, Ph.D. University of California, Berkeley, *Assistant Professor of Art History; Film and Media Studies; Visual Studies* (history and theory of photography and film, European avant-garde, Russian and Soviet art)

Anna Gonosová, Ph.D. Harvard University, *Professor Emerita of Art History* (Byzantine art, Medieval art)

James D. Herbert, Ph.D. Yale University, *Professor of Art History; Visual Studies* (modern European art)

Judy H. Ho, Ph.D. Yale University, *Professor Emerita of Art History* (Chinese art, archaeology, common religion, Buddhist art)

Philip Leider, M.A. University of Nebraska, *Senior Lecturer with Security of Employment Emeritus of Art History*

Lyle Massey, Ph.D. University of California, Los Angeles, *Associate Professor of Art History; Visual Studies* (Italian Renaissance and early modern European art, gender theory, science studies)

Margaret Miles, Ph.D. Princeton University, *Professor of Art History; Religious Studies; Visual Studies* (Greek and Roman art, archaeology)

Tyrus Miller, Ph.D. Stanford University, *Dean of the School of Humanities and Professor of English; Art History; Visual Studies* (modernist and avant-garde studies in literature and visual arts; critical theory and aesthetics; modern architecture and urbanism; East-Central European studies; culture of socialism and post-socialism; Frankfurt School theory)

James P. Nisbet, Ph.D. Stanford University, *Associate Professor of Art History; Visual Studies* (modern and contemporary art)

Alka Patel, Ph.D. Harvard University, *Associate Professor of Art History; History; Religious Studies; Visual Studies* (South Asian and Islamic art and architecture, historiographies, Islamic diasporas in Cuba)

Amy Powell, Ph.D. Harvard University, *Associate Professor of Art History; European Languages and Studies; Religious Studies; Visual Studies* (Late medieval and early modern art of northern Europe, critical theory)

Sally A. Stein, Ph.D. Yale University, *Professor Emerita of Art History* (American art, history of photography, feminist theory)

Dickran L. Tashjian, Ph.D. Brown University, *Professor Emeritus of Art History* (American art and literature, American and European avant-garde, art and technology)

Cécile Marie Whiting, Ph.D. Stanford University, *Professor of Art History; Visual Studies* (American art, 20th century visual culture)

Bert Winther-Tamaki, Ph.D. New York University, *Department Chair and Professor of Art History; Asian American Studies; Visual Studies* (modern Japanese art and visual culture, Asian American art, art and globalization)

Roberta Wue, Ph.D. New York University, *Associate Professor of Art History; Visual Studies* (modern Chinese art, photography, print culture)

**Courses**

*ART HIS 40A. Ancient Egyptian, Greek, and Roman Art and Architecture. 4 Units.*

An overview of Prehistoric, Egyptian, Greek, and Roman art. Considers how and why the peoples of antiquity created art and architecture, as well as the significance of these works within their social, religious, and historical contexts.

(IV, VIII)
ART HIS 40B. Arts of Europe: Medieval and Renaissance. 4 Units.
Focuses on the art of the Mediterranean area and Europe between ca. A.D. 350 and 1600. By means of movements and artists, examines the cultural identities of the Christian, Islamic, and Early Modern worlds.

(IV, VIII)

ART HIS 40C. Early Modern and Modern Art in Europe and America. 4 Units.
The visual arts from the seventeenth to the twenty-first centuries. Explores the purposes and meaning of painting, sculpture, and architecture in relation to artists, viewers, and historical events.

(IV, VIII)

ART HIS 42A. History of Asian Art: Arts of India. 4 Units.
Emphasizing Hindu, Buddhist, and Islamic art of greater India (Pakistan, Bangladesh, Sri Lanka) from proto-historic to modern times. Themes include art as a source of history, commercial and religious pan-Asian connections, nationalism, and modern versus historical identities.

(IV, VIII)

ART HIS 42B. History of Asian Art: Arts of China. 4 Units.
An introduction to the arts and visual culture of China from Neolithic to modern times. Themes include the representation of power, death and the afterlife, popular culture and elite arts, landscape and women's painting, and concludes with contemporary China.

(IV, VIII)

ART HIS 42C. History of Asian Art: Arts of Japan. 4 Units.
Examines compelling images and objects of spirit and power created in Japan over many centuries. Themes include Buddhist icons, narrative illustration, popular prints, architecture, manga, and the avant-garde. Japanese interactions with Korean, Chinese, and European culture are emphasized.

(IV, VIII)

ART HIS 42D. History of Asian Art: Arts of Islam. 4 Units.
Examines past and present Islamic art, spanning 1,500 years and extending from the Americas through Indonesia. Themes include Islam as a globalizing force, the definition of "Islamic," and the competing roles of religion and politics in making art.

(IV, VIII)

ART HIS 44. Image Collision: A Multicultural Approach to Images and Their Users. 4 Units.
Comparisons between present-day visual culture and pre-modern art to re-evaluate the ways in which one understands the contemporary histories of underrepresented groups in the United States.

(IV and VII).

ART HIS 100. Studies in Ancient Art . 4 Units.
Topics in Egyptian, Prehistoric, and Etruscan art of the Mediterranean area treated with specific reference to relevant cultural and historical settings. Specialized courses in Greek and Roman art are also taught.

Repeatability: Unlimited as topics vary.

ART HIS 103. Studies in Greek Art. 4 Units.
Topics in Greek art, architecture, and topography from the Prehistoric period through the end of the fourth century B.C.E.

Repeatability: Unlimited as topics vary.

ART HIS 107. Studies in Roman Art. 4 Units.
Topics in Hellenistic and Roman art and architecture; stresses historical and political background.

Repeatability: Unlimited as topics vary.

ART HIS 110. Studies in Medieval Art. 4 Units.
Specialized topics in Medieval art and architecture in Europe, the Mediterranean area, and the Near East between the fourth and fifteenth centuries. Examples: the Art of the Migration Period, Medieval City.

Repeatability: Unlimited as topics vary.

ART HIS 111B. Byzantine Art: 650-1450. 4 Units.
Studies in the development of the art and architecture of the Byzantine Empire between ca. 650 and 1450.
ART HIS 112. Studies in Early Christian and Byzantine Art. 4 Units.
Selected topics on the development of the art and architecture of the Later Roman and Byzantine Empires between ca. 300 and 1453. Examples: Early Christian architecture, Byzantine painting.
Repeatability: Unlimited as topics vary.

ART HIS 114. Studies in Western Medieval Art. 4 Units.
Selected topics on the development of art and architecture in Western Europe between ca. 700 and 1400. Examples: Romanesque painting, Gothic architecture.
Repeatability: Unlimited as topics vary.

ART HIS 120. Studies in Renaissance and Baroque Art. 4 Units.
Selected topics on the art and architecture of Europe between the fifteenth and eighteenth centuries. Examples: Renaissance and Baroque prints, Bruegel to Rubens.
Repeatability: Unlimited as topics vary.

ART HIS 121. Studies in Southern Renaissance Art. 4 Units.
Selected topics determined by individual faculty members exploring historical developments and individual artists of the fifteenth and sixteenth centuries in Italy and Spain. Examples: Renaissance Venice, Age of Michelangelo.
Repeatability: Unlimited as topics vary.

ART HIS 122. Studies in Northern Renaissance Art. 4 Units.
Selected topics determined by individual faculty members exploring historical developments and individual artists of the fifteenth and sixteenth centuries in Northern Europe. Examples: Late Medieval art, painting from Van Eyck to Bosch.
Repeatability: Unlimited as topics vary.

ART HIS 125. Studies in Southern Baroque Art. 4 Units.
Selected topics determined by individual faculty members exploring historical developments and individual artists of the seventeenth and eighteenth centuries in Italy and Spain. Example: Rome in the seventeenth century.
Repeatability: Unlimited as topics vary.

ART HIS 128. Studies in Northern Baroque Art. 4 Units.
Selected topics determined by individual faculty members exploring historical developments and individual artists of the seventeenth and eighteenth centuries in Northern Europe. Example: the Age of Rembrandt.
Repeatability: Unlimited as topics vary.

ART HIS 134A. Modern European Art: From Revolution to Realism. 4 Units.
History of European painting and other arts from 1789 to 1851, as the continent lurched through revolution, reaction, and the birth of modern societies and sensibilities.

ART HIS 134C. Modern European Art: From Impressionism to the Fauves. 4 Units.
History of European painting and urban transformation from 1851 to 1907, when Paris stood strong as the unquestioned cultural capital of the nineteenth century.

ART HIS 134D. Modern European Art: From Cubism to Surrealism. 4 Units.
History of European painting, sculpture, and design from 1907 to 1940, when Paris and painting lost their dominance as other cultural centers and other media claimed renewed importance.

ART HIS 134E. Topics in Modern European Art. 4 Units.
Selected topics within the period 1643 to 1940.
Repeatability: Unlimited as topics vary.

ART HIS 140A. History of Contemporary Art. 4 Units.
Selected topics exploring historical developments of contemporary art from 1945 to the present. Examples: American Art 1945-1989, European Art 1945-1989, Art After 1989. Works of art are studied as cultural, social, and political practices.
Repeatability: Unlimited as topics vary.
ART HIS 140B. Topics in Contemporary Art. 4 Units.
Selected topics exploring artistic movements, artists, and/or issues in contemporary art from 1945 to the present. Examples include Junk Art, Countercultures, Art and Politics Now. Works of art are studied as cultural, social, and political practices.

Repeatability: Unlimited as topics vary.

ART HIS 145A. Studies in Modern Architecture. 4 Units.
Architecture and related design practices from the late eighteenth century through 1945 are studied in relation to social, aesthetic, technological, and political questions.

Repeatability: Unlimited as topics vary.

ART HIS 145B. Studies in Architecture after 1945. 4 Units.
Architecture and related design practices from 1945 through present are studied in relation to social, aesthetic, technological, and political questions.

Repeatability: Unlimited as topics vary.

ART HIS 145C. Topics in the History of Modern and Contemporary Architecture. 4 Units.
Varying topics from the late eighteenth century to the present. Architecture and related design practices are studied in relation to social, aesthetic, technological, and political questions.

Repeatability: Unlimited as topics vary.

ART HIS 150. Studies in Asian Art. 4 Units.
Topics include visual studies in China, Japan, Korea and India.

Repeatability: Unlimited as topics vary.

ART HIS 151B. Later Imperial China. 4 Units.
Investigates the uses, subjects, styles, and social contexts of art made in the later Imperial dynasties, whether court art, religious art, women's painting, scholar painting, or art for the market.

ART HIS 151C. Modern China. 4 Units.
Examines the evolution and media of Chinese art and visual culture in the context of modern China's sweeping historical, social, and political changes.

ART HIS 155A. Ancient India. 4 Units.
Examines the visual and religious history of the region defined as "India" today, but necessarily encompassing modern Bangladesh and Pakistan. Culminates with the supposed Golden Age of the Gupta empire and its far-reaching legacies.

Same as HISTORY 170A, REL STD 122.

ART HIS 155B. Medieval India. 4 Units.
Begins with the Gupta period's aesthetic legacies in South Asia's architecture, sculpture, and painting. Explores the dispersal of Islam throughout South Asia, including the Muslim communities of southern India.

Same as HISTORY 170B, REL STD 123.

ART HIS 155C. Modern India. 4 Units.
Examines the imperial patronage of the Mughal emperors, covering their territorial holdings extending from Afghanistan through western Bangladesh. Continues with the "aftermath" of the Mughal empire and the rise of British commercialism and colonialism.

ART HIS 155D. Topics in the Art and Architecture of India. 4 Units.
Studies in selected areas of Art and Architecture of India. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

ART HIS 156. Art and Globalization, Modern. 4 Units.
Study of modern art as a cause and expression of increasing contacts between cultures. Focusing on regions in Asia and the Americas, adoption of European oil painting, indigenous art movements, and national capital architecture are explored.

ART HIS 162A. Early Modern Japan. 4 Units.
Focuses on the Edo Period (1615-1868), an enormously productive time in the early modern development of Japanese art in woodblock prints, painting, and crafts. Topics include the image of the beautiful woman, kabuki actor prints, and intoxicated ink painting.

ART HIS 162B. Modern Japan. 4 Units.
Explores artistic developments during the tumultuous modernization of Japan from 1868-1945, with a focus on painting, commercial art, and architecture. Topics include arts of the Japanese Empire, neo-traditional arts, responses to European modernism, and war propaganda.
ART HIS 162C. Contemporary Japan. 4 Units.
Study of various media of Japanese art from the time of war defeat in 1945 until the present. Topics include artists’ responses to the nuclear bomb, the aesthetics of the “economic miracle,” avant-garde groups, manga, and innovations in architecture.

ART HIS 163. Asian American Art, Contemporary. 4 Units.
Study of the Asian American experience in contemporary art and visual culture. Art by Asian Americans of diverse backgrounds as well as the history of visualization of Asian identities in American art/visual culture.

ART HIS 164A. Modern African American Art. 4 Units.
Investigates the history of modern African American art; emphasis on the politics of representation. Examines art in a variety of media from material culture and textiles to painting and photography. Issues of migration, nationalism, gender, sexuality, and hybridity are discussed.
Same as AFAM 111A.

ART HIS 164B. Contemporary African American Art. 4 Units.
Investigates the history of contemporary African American art; emphasis on the politics of representation. Explores art in a variety of media: painting, sculpture, photography, installation, and new media. Cultural politics, appropriation, identity, gender, sexuality, hybridity and civil rights issues discussed.
Same as AFAM 111B.

ART HIS 164C. Topics in African American Art. 4 Units.
Studies in selected areas of African American Art. Topics addressed vary each quarter.
Repeatability: Unlimited as topics vary.

ART HIS 164D. African American Women in Art. 4 Units.
Examines depictions of and by African American women in art and popular culture through a variety of media including textiles, painting, sculpture, photography, and installation. Focuses on African American women’s experiences, perspectives, and strategies for contemporary representation.
Same as AFAM 125.

ART HIS 164E. African Americans and Photography. 4 Units.
Explores depictions of and by African Americans through photography. Examines the history of photography in relationship to African American culture through a variety of media from early daguerreotype processes to digital imagery.
Same as AFAM 145.

ART HIS 165A. Early American Art. 4 Units.
An examination of American visual culture from 1620 to 1860 from the era of European exploration and colonization of the New World to the beginning of the Civil War.

ART HIS 165B. Nineteenth Century American Art. 4 Units.
An exploration of American visual culture from 1860 to 1900, including paintings, sculpture, and photographs produced during the Civil War and during the decades of prosperity that followed.

ART HIS 165C. Modern American Art. 4 Units.
Focusing on the period from 1900 until 1965, this course considers the emergence and institutionalization of modern art in the United States.

ART HIS 165D. Topics in American Art. 4 Units.
Varying topics within the period 1620 to 1970. Works of art are studied in their cultural, social, and political contexts.
Repeatability: Unlimited as topics vary.

ART HIS 167. Latin American Art History. 4 Units.
Historical periods vary with each offering and may range from pre-Columbian societies, through the colonial era, to developments in modern and contemporary art.
Repeatability: Unlimited as topics vary.

ART HIS 175. Studies in Native and Tribal Art. 4 Units.
Varying topics on the art and culture of native and tribal societies. For example, North American Indians.
Repeatability: Unlimited as topics vary.
ART HIS 180. Topics in the Criticism of Art. 4 Units.
Selected topics discussed on the theoretical and/or practical dimensions of art historical criticism.
Repeatability: Unlimited as topics vary.

ART HIS 181. Topics in Museum Studies. 4 Units.
Addresses the historical and contemporary function of the museum as an instructional device. The function of exhibitions in the public sphere, and the roles of curators, educators, and the public are analyzed.
Repeatability: Unlimited as topics vary.

ART HIS 183B. 20th Century Photographic History. 4 Units.
Varying topics within the history of photography in the 20th century. Photographic practice studied in relation to art history, cultural history, and social history.
Repeatability: Unlimited as topics vary.

ART HIS 183C. Selected Topics in Photographic History. 4 Units.
Varying topics within the history of photography from the early 19th century to the present. Photographic practice studied in relation to art history, cultural history, and social history. Examples include documentary; pictorialism and art photography; photomontage, photographic books.
Repeatability: Unlimited as topics vary.

ART HIS 185. Topics in Visual Studies. 4 Units.
Interdisciplinary topics on the cultural analysis of visual artifacts and practices.
Repeatability: Unlimited as topics vary.

ART HIS 190W. Art History Methods. 4 Units.
Theory and practice of art history, with an emphasis on formal and social models of analyzing and writing about art.
Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.
Restriction: Upper-division students only. Art History Majors only.

ART HIS 196. Ethics, Law, and Art. 4 Units.
Addresses a broad range of ethical and legal issues pertaining to art, ownership, looting and theft, museum policies, and cultural heritage.
Prerequisite: Background in Art History or Legal Studies.
Concurrent with ART HIS 296.

ART HIS 198. Advanced Seminar: Topics in Art History. 4 Units.
Discussion and report-oriented seminar with emphasis on reading, writing, and thinking about problems in art history. Examples: Gothic Cathedral, Portraiture East and West.
Prerequisite: Recommended: ART HIS 190W.
Repeatability: Unlimited as topics vary.
Restriction: Upper-division students only. Art History Majors have first consideration for enrollment.
Concurrent with ART HIS 298.

ART HIS 199. Independent Study in Art History. 1-4 Units.
Supervised, but independent reading or research on art historical topics.
Repeatability: May be taken for credit 4 times.
Restriction: Art History Majors only.

ART HIS 296. Ethics, Law, and Art. 4 Units.
Addresses a broad range of ethical and legal issues pertaining to art, ownership, looting and theft, museum policies, and cultural heritage.
Prerequisite: Background in Art History or Legal Studies.
Concurrent with ART HIS 196.
ART HIS 298. Master’s Seminar: Topics in Art History. 4 Units.
Studies in selected areas of Art History. Examples include Gothic Cathedral, Portraiture East and West.

Repeatability: Unlimited as topics vary.
Concurrent with ART HIS 198.

ART HIS 299. Master’s Thesis Research. 4 Units.
Research and writing of the Master’s thesis.
Grading Option: Satisfactory/unsatisfactory only.
Repeatability: May be repeated for credit unlimited times.
Restriction: Graduate students only.

ART HIS 399. University Teaching. 4 Units.
Limited to teaching assistants.
Grading Option: Satisfactory/unsatisfactory only.
Repeatability: May be repeated for credit unlimited times.
Restriction: Graduate students only.

Department of Asian American Studies

Judy Wu, Chair
3000 Humanities Gateway
949-824-2376
http://www.humanities.uci.edu/aas/

Overview
The Department of Asian American Studies examines the historical and contemporary experiences of Asians in the United States and in a global context. The curriculum seeks to provide an analysis of the cultural, political, and economical organization of Asian American communities. Students are invited to participate and partake in broadening their understanding of multicultural perspectives within U.S. society. The Department offers a B.A. program in Asian American Studies, a 4+1 B.A./M.A. program, a minor, and a graduate emphasis.

The Department also contributes to the Culture and Theory Ph.D. program, which uses the strengths of interdisciplinary programs and departments, particularly African American Studies, Chicano/Latino Studies, Asian American Studies, Critical Theory, and Gender and Sexuality Studies. This degree uses a problem-oriented rather than a disciplinary approach to issues of race, gender, and sexuality in relation to diasporas, transnational, and postcolonial contexts, all of which are broadly based in the humanities, social sciences, and arts.

Scholarship Opportunities
The Ching-Suei Su Endowed Memorial Scholarship is awarded annually to sophomores or juniors who are majoring in Asian American Studies, East Asian Languages and Literatures, or Linguistics (with an emphasis on an East Asian language) and who demonstrate academic excellence and campus or community service.

Undergraduate Program

Requirements for the B.A. in Asian American Studies
All students must meet the University Requirements (p. 91).
All students must meet the School Requirements (p. 788).

Department Requirements for the Major in Asian American Studies
A. Three introductory Asian American Studies core courses:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>ASIANAM 50</td>
<td>Asian American Histories</td>
</tr>
<tr>
<td>or ASIANAM 51</td>
<td>The U.S. and Asia</td>
</tr>
<tr>
<td>and</td>
<td></td>
</tr>
<tr>
<td>ASIANAM 52</td>
<td>Asian American Communities</td>
</tr>
<tr>
<td>or ASIANAM 53</td>
<td>Asian Americans and Race</td>
</tr>
<tr>
<td>and</td>
<td></td>
</tr>
<tr>
<td>ASIANAM 54</td>
<td>Asian American Stories</td>
</tr>
</tbody>
</table>
or ASIANAM 55

B. Complete the following:

ASIANAM 100W

Research Methodologies for Asian American Studies

C. Select one course from each of the following areas:

<table>
<thead>
<tr>
<th>Humanities/Arts: Asian American Studies 110–129</th>
</tr>
</thead>
<tbody>
<tr>
<td>Social Science/Social Ecology: Asian American Studies 130–149</td>
</tr>
<tr>
<td>Asian American Sub-groups: Asian American Studies 151–160</td>
</tr>
<tr>
<td>Ethnic/Race/Gender Relations: Asian American Studies 161–170</td>
</tr>
</tbody>
</table>

D. Select four additional upper-division elective Asian American Studies courses. Students may request, by petition, one lower-division course to count as an elective. This course must be primarily focused on issues relevant to Asian American Studies.

**Residence Requirement for the Major:** A minimum of five upper-division courses required for the major must be completed successfully at UCI.

### Additional Information

#### Career Opportunities

Many career opportunities exist for students who graduate with a B.A. in Asian American Studies, such as service with national and international organizations which seek knowledge of American multicultural society in general, and of Asian American peoples and cultures in particular; positions as area specialists with state and federal government agencies; careers in the private sector with corporations or private organizations which have a significant portion of their activities in the U.S. and the Pacific Rim; and positions of service and leadership within Asian American communities. Students may also continue their education and pursue professional or graduate degrees.

#### Requirements for the Minor in Asian American Studies

**Requirements for the Minor**

A. Three introductory Asian American Studies core courses:

<table>
<thead>
<tr>
<th>ASIANAM 50</th>
<th>Asian American Histories</th>
</tr>
</thead>
<tbody>
<tr>
<td>or ASIANAM 51</td>
<td>The U.S. and Asia</td>
</tr>
</tbody>
</table>

and

<table>
<thead>
<tr>
<th>ASIANAM 52</th>
<th>Asian American Communities</th>
</tr>
</thead>
<tbody>
<tr>
<td>or ASIANAM 53</td>
<td>Asian Americans and Race</td>
</tr>
</tbody>
</table>

and

<table>
<thead>
<tr>
<th>ASIANAM 54</th>
<th>Asian American Stories</th>
</tr>
</thead>
<tbody>
<tr>
<td>or ASIANAM 55</td>
<td>Asian Americans and the Media</td>
</tr>
</tbody>
</table>

B. Four upper-division courses selected from ASIANAM 100W–169, ASIANAM 199.

**Residence Requirement for the Minor:** Four upper-division courses required for the minor must be completed successfully at UCI. Two of the four may be taken through the UC Education Abroad Program, provided course content is approved in advance by the Department.

### 4+1 Program in Asian American Studies

The combined B.A. and M.A. in Asian American Studies is designed for students looking to engage in the most critical issues at the forefront of the field. At the conclusion of the program, graduates are trained in interdisciplinary theories and methods for social justice-driven research and have developed an understanding of issues facing local, national, and global Asian American communities through first-hand interaction and engagement.

#### Admissions

All students wishing to participate in the program should first meet with the Director of Graduate Study to discuss eligibility and coursework opportunities. In order to be considered admissible, at minimum, students must meet the following criteria:

- Current UCI undergraduate student status
- Cumulative 3.0 GPA
- Cumulative 3.3 GPA in all Asian American Studies coursework
- Two Asian American Studies courses: one selected from ASIANAM 50, 51, 52, 53, or 54, and one other lower- or upper-division course in Asian American Studies

Applications are accepted on a rolling basis during the final year of undergraduate study. The process to apply is as follows:

- Set up an advising appointment with the Humanities Graduate Counselor.
- Complete an online graduate application through UCI Graduate Division.
• Submit the following supplemental application materials: official transcripts of all post-secondary work, one letter of recommendation from an Asian American Studies core or affiliate faculty member, and a 10-page writing sample.

Course Requirements
All students at the graduate level of the B.A./M.A. program must complete a total of nine courses (36 units) for the degree.

A. Complete the following:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Name</th>
</tr>
</thead>
<tbody>
<tr>
<td>ASIANAM 200A</td>
<td>Theory and Methods in Asian American Studies</td>
</tr>
<tr>
<td>ASIANAM 200B</td>
<td>Contemporary Issues in Asian American Studies</td>
</tr>
<tr>
<td>ASIANAM 200C</td>
<td>Leadership and Social Change in Asian American Communities</td>
</tr>
<tr>
<td>ASIANAM 200D</td>
<td>Introduction to Asian American Studies Research</td>
</tr>
</tbody>
</table>

B. Complete three of the following:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Name</th>
</tr>
</thead>
<tbody>
<tr>
<td>ASIANAM 290</td>
<td>Directed Research</td>
</tr>
</tbody>
</table>

C. Select one graduate level elective

Language Requirement
Students must complete college-level coursework equivalent to UCI’s sixth quarter of study (2C level, or for Latin or Greek, one 103 and one 104, or two 103s or 104s) in a language other than English or equivalent competence. The final course must be taken for a letter grade and passed with a grade of C or better.

Degree Conferral
M.A. students may complete one of the following options as their degree capstone. Regardless of capstone track, all students must have a minimum GPA of 3.5 and complete a defense open to the public to earn the degree.

Plan I – Thesis: The thesis, approximately 25 to 35 pages in length, is a piece of independent research reviewed and approved by the faculty advisor and the thesis committee.

Plan II – Comprehensive Exam: At the end of the final quarter, the M.A. candidate must pass a comprehensive exam that illustrates mastery of key concepts and methods of inquiry in Asian American Studies. The final format of the exam is determined in consultation with the faculty advisor, but can take various forms, including a creative work or a policy report. A written evaluation of said work, approximately 10 to 15 pages in length, is also be submitted for review. The exam is administered by the faculty advisor and an exam committee comprised of at least two additional Asian American Studies faculty members.

Time to Degree
Students complete all degree requirements and the Master’s thesis/comprehensive exam within one year (three quarters) once they have transitioned to graduate student status. Maximum time to degree is two years after the Bachelor’s degree.

Graduate Emphasis in Asian American Studies
The Department of Asian American Studies offers a graduate emphasis in Asian American Studies, which is available in conjunction with selected departmental graduate programs.

Requirements
Students in the graduate emphasis complete a minimum of four courses, including ASIANAM 200A and ASIANAM 200B (offered every other year), and two electives, one of which is selected from the student’s own department or area of interest, and the other from a discipline outside that department or area.

Subject to the requirements of participating academic units, Ph.D. students in the emphasis should have at least one Asian American Studies core faculty member on their qualifying examination and dissertation committees. With the approval of the Asian American Studies Graduate Committee, affiliated faculty members can sit in place of the core faculty. (There are no requirements concerning qualifying examinations or theses for master’s students.)

Applicants to the emphasis must be admitted to a participating UCI graduate program. For complete information about application policies and procedures, as well as the requirements of the emphasis, see one of the Asian American Studies faculty members.

Faculty
Christine Bacareza Balance, Ph.D. New York University, Associate Professor of Asian American Studies; Culture and Theory; Gender and Sexuality Studies (Performance studies, popular music, critical race and ethnic studies, Filipino/Filipino American studies, queer & feminist theory)
Dorothy B. Fujita-Rony, Ph.D. Yale University, Associate Professor of Asian American Studies; History (U.S. history, Asian American studies)
Claire J. Kim, Ph.D. Yale University, Professor of Asian American Studies; Culture and Theory; Political Science
Ngoc-Tram Le-Huynh, M.A., University of California, Los Angeles, Lecturer of Asian American Studies
James K. Lee, Ph.D. University of California, Los Angeles, Associate Professor of Asian American Studies; Culture and Theory; Religious Studies (Asian American literature and culture, contemporary U.S. literature, race and ethnic studies, urban studies, religious studies)
Julia Hyoun Joo Lee, Ph.D. University of California, Los Angeles, Associate Professor of Asian American Studies; Culture and Theory (Asian American literature and culture, African American literature and culture, ethnic literature, twentieth-century American literature.)
Beheroze F. Shroff, M.F.A. University of California, Los Angeles, Lecturer of Asian American Studies
Linda T. Võ, Ph.D. University of California, San Diego, Professor of Asian American Studies; Culture and Theory; Sociology; Urban Planning and Public Policy (race and ethnic relations, immigrants and refugees, gender relations, community and urban studies)
Judy Tzu-Chun Wu, Ph.D. Stanford University, Department Chair and Professor of Asian American Studies; Culture and Theory (Asian American history; comparative racialization and immigration; empire and decolonization; gender and sexuality)

Affiliate Faculty
Kei Akagi, B.A. International Christian University, Professor of Music; Asian American Studies
Yong Chen, Ph.D. Cornell University, Associate Dean of Curriculum and Student Services and Professor of History; Asian American Studies; Religious Studies (Asian American history and immigration, food and culture, U.S./China economic and cultural interactions)
Kyung Hyun Kim, Ph.D. University of Southern California, Professor of Korean Culture; Asian American Studies; Film and Media Studies; Visual Studies (East Asian cinema, modern Korea, critical theory)
Stephen Lee, J.D. University of California, Berkeley, Professor of School of Law; Asian American Studies
Daphne Pi-Wei Lei, Ph.D. Tufts University, Head of Doctoral Studies and Professor of Drama; Asian American Studies (Asian theatre, Asian American theatre, intercultural theatre, gender theory, performance theory)
Simon Leung, B.A. University of California, Los Angeles, Professor of Art; Asian American Studies (new genres, critical theory, contemporary art history, performance)
Sanjoy Mazumdar, Ph.D. Massachusetts Institute of Technology, Professor of Urban Planning and Public Policy; Asian American Studies; Religious Studies
Bert Winther-Tamaki, Ph.D. New York University, Department Chair and Professor of Art History; Asian American Studies; Visual Studies (modern Japanese art and visual culture, Asian American art, art and globalization)

Courses
ASIANAM 50. Asian American Histories. 4 Units.
Examines and compares diverse experiences of major Asian American groups since the mid-nineteenth century. Topics include origins of emigration; the formation and transformation of community; gender and family life; changing roles of Asian Americans in American society. Formerly ASIANAM 60A. Same as HISTORY 15C, SOC SCI 78A.
((III or IV) and VII ).

ASIANAM 51. The U.S. and Asia. 4 Units.
Explores the historical and contemporary transnational linkages between the U.S. and regions in Asia and their resultant flows of people, goods, and ideas. Attention given to the role of militarism and processes of globalization, and the histories of cultural contact/conflict.
((III or IV) and VIII ).

ASIANAM 52. Asian American Communities. 4 Units.
Examines the renewal of Asian immigration following World War II. Explores contemporary Asian American populations and communities in the U.S., and the impact of contemporary Asian immigration on the U.S. political economy and social order.
Same as SOC SCI 78B.
(III, VII)
ASIANAM 53. Asian Americans and Race. 4 Units.
Analyzes the Asian American experience in comparative perspective, which includes comparisons of different ethnic and racial groups, and across gender and class. Possible topics include labor, economy, politics, migration, nation, popular culture, gender, family, sexuality, and multiraciality.

Same as SOC SCI 78C.

(III, VII)

ASIANAM 54. Asian American Stories. 4 Units.
Examines stories from Asian American communities through literary texts and other media. Selected themes may include the following: dislocation/relocation, finding/inventing a usable past, poetics/politics in language, identities/ethnicities.

(IV, VII)

ASIANAM 55. Asian Americans and the Media. 4 Units.
Investigates popular representations of and cultural productions by Asian Pacific Americans and Asians in the Americas from the late-nineteenth century to the present. Cultural media may include political cartoons, film/television, popular music, visual art, blogs/Web sites, and performance.

(IV, VII)

ASIANAM 100W. Research Methodologies for Asian American Studies. 4 Units.
Explores various research methodologies for Asian American Studies combining theoretical knowledge with field research. Goals: conduct field research about immigrants and refugees from Asia. Topics vary: migration and labor, assimilation and cultural preservation, cultural expressions in the diaspora.

Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.

(Ib)

ASIANAM 110. Asian American Writers. 4 Units.
Literary analysis of Asian American writers’ representations of issues of identity, class, history among others. Variety of literary forms—novel, poem, drama, essay—included in a study of a variety of Asian American ethnic groups.

Repeatability: Unlimited as topics vary.

ASIANAM 111. Asian American History. 4 Units.
Introduction to important themes in the history of people of Asian ancestry in the United States from the nineteenth century to the present.

Repeatability: Unlimited as topics vary.

ASIANAM 112. Asian American Art History. 4 Units.
Investigation of Asian American experience expressed by art and visual culture throughout the twentieth century. Art by Asian Americans of diverse backgrounds as well as the history of cultural visualization of Asian identities in American art/visual culture.

Repeatability: Unlimited as topics vary.

ASIANAM 114. Asian American Film and Video. 4 Units.
Topics include histories of Asian American film and video, including documentaries, experimental, short subjects, feature-length independent film, and other forms of cinematic expression. Explores issues of identity (national, racial, gendered, among others).

Repeatability: Unlimited as topics vary.

ASIANAM 116. Asian Americans and Popular Culture. 4 Units.
Focuses on Asian Americans’ relationship to popular culture as both producers and consumers. Topics include consumer cultures and subcultures, cyberspace and public space, popular music, indy comics and other print media.

Repeatability: Unlimited as topics vary.

ASIANAM 118. Race and Performance. 4 Units.
Focuses on new ways of understanding race, ethnicity, class, and gender issues through performance.

ASIANAM 131. Asian American Politics. 4 Units.
Provides various overviews of politics within Asian American communities. May compare with African American and/or Latino politics.

Repeatability: Unlimited as topics vary.
ASIANAM 132. Comparative Minority Politics. 4 Units.
Examines the political experiences of Blacks, Latinos, and Asian Americans in the United States from roughly 1950 to the present. Focuses on how each group has pursued political empowerment via both conventional political channels and social movements.

Same as AFAM 151, CHC/LAT 147, POL SCI 124C.

ASIANAM 137. Asian American Labor. 4 Units.
Explores history of Asian Americans and work from the nineteenth century to the present. Areas of study include migration, colonialism, family, social organization, and work culture.

Same as HISTORY 152A.

ASIANAM 138. Race and Urban Space. 4 Units.
Examines how ethnic and racial processes shape and structure interactions in urban settings, such as schools, housing, employment, and public spaces, with attention to the international impact of globalization and postcolonial forces.

ASIANAM 142. Muslim Identities in North America. 4 Units.
Explores multiple identities of Muslims in North America, including indigenous Muslims and immigrants of many national origins. Explores religious, political, cultural, ethnic, class differences among American Muslims, turning to Islamic institutions or events near UCI to conduct fieldwork projects.

Same as ANTHRO 125Z.

ASIANAM 143. Religious Traditions of Asian Americans. 4 Units.
Studies the religious traditions of Asian Americans, focusing on the transplantation of religious institutions, establishment of sacred spaces, celebration of religious holidays, socialization of children, as well as birth, marriage, gender relations, death, family.

Same as SOCIOL 136.

ASIANAM 144. The Politics of Protest. 4 Units.
Examines the Civil Rights, Black Power, and women’s movements in relationship to the Asian American movement. Uses social movement theories to illuminate the cases, and the cases to critique and revise the theories.

Same as POL SCI 124A.

(VII)

ASIANAM 150. Special Topics in Asian American Studies. 4 Units.
Analyzes a variety of themes in Asian American Studies—identity, history, culture—from various interdisciplinary perspectives in humanities, arts, social sciences.

Repeatability: Unlimited as topics vary.

ASIANAM 151. Asian American Ethnic Groups. 4 Units.
Topics include study of the history, culture, and social formations of diverse Asian American subgroups such as Pacific Islanders, Hmong, Thai, Indonesian, Indian subcontinental, among others.

Repeatability: Unlimited as topics vary.

ASIANAM 151C. Korean American Studies. 4 Units.
Explores the factors that have distinctly shaped the Korean American experience, including patterns of racial domination, the profile of immigrant flow, immigrant roles in the urban political economy, politics in Korea, and the role of the church.

Same as SOC SCI 178C.

ASIANAM 151D. Vietnamese American Studies. 4 Units.
Studies the resettlement of Vietnamese in the United States following their exodus from Southeast Asia. Topics include the Vietnam War, the 1975 evacuation, boat and land refugees, the shaping of Vietnamese communities, and Vietnamese American literature.

Same as SOC SCI 178D.

ASIANAM 151E. Japanese American Studies. 4 Units.
Studies the settlement of Japanese in Hawaii and the continental United States since the late 19th century. Topics include sugar plantations, development of rural Japanese America, World War II internment, post-War community development, and persistence of Japanese American identity.

Same as SOC SCI 178E.
ASIANAM 151F. South Asian American Studies. 4 Units.
Examines and compares the experiences of South Asian immigrants in the U.S. over time. Looks at the economic, political, and social positions of the immigrants, with special emphasis on religious changes and the changes in the second and later generations.

Same as SOC SCI 178F.

Restriction: Asian American Studies Majors have first consideration for enrollment. Social Policy/Public Service Majors have first consideration for enrollment.

ASIANAM 151H. Southeast Asian American Studies. 4 Units.
Analyzes experiences of refugees and immigrants from Southeast Asia, which may include those from Cambodia, Laos, Vietnam, and the Philippines. Examines political and economic factors for their exodus and how they reconstruct their identities, histories, and communities.

Same as SOC SCI 178H.

ASIANAM 151J. Chinese American Studies. 4 Units.
Analyzes the experiences of Chinese in the United States. Immigration, Chinese exclusion, racial and gender identity. Historical overview and contemporary issues covered.

Same as SOC SCI 178J.

ASIANAM 151K. Filipina/Filipino American Studies. 4 Units.
Explores the experience of Filipina/Filipino Americans from the era of Spanish colonization of the Philippines to present-day community formations in the United States, with special emphasis on the 20th century. Topics include colonialism, nation, migration, gender, and culture.

Same as SOC SCI 178K.

ASIANAM 162. Asian American Women. 4 Units.
Examines the representations and experiences of Asian American women from diverse perspectives. Explores the commonalities and differences among various groups of Asian American women, with particular focus on history, culture, values, and family roles.

Same as SOC SCI 177B.

ASIANAM 164. Topics in Intersectionality. 4 Units.
Topics include intersectional analysis of various themes related to ethnicity, gender, sexuality, and race within Asian American communities.

Repeatability: Unlimited as topics vary.

ASIANAM 166. Race and Citizenship. 4 Units.
Examines historical and contemporary patterns of racialization in relation to citizenship. Topics may include racial categorization, immigration, and comparative racialization.

ASIANAM 167. Asian American and African American Relations. 4 Units.
Addresses relationships of Asian American and African American communities in the United States. Topics include race, class, gender, labor, economic systems, political mobilization, community, civil rights, activism, cultural expression.

Same as AFAM 117, HISTORY 152B.

ASIANAM 168. Politics of Animal Rights. 4 Units.
Examines animal rights/welfare movement’s efforts to transform moral, practical, and legal standing of nonhuman animals in contemporary U.S. Explores intersection of racism, sexism, and speciesism informed by theories of race and ethnicity, including Asian American Studies.

Same as POL SCI 126F.

Restriction: Political Science Majors have first consideration for enrollment. Asian American Studies Majors have first consideration for enrollment.

ASIANAM 199. Independent Study. 1-4 Units.
Directed reading and research in consultation with a faculty member. Substantial written work required.

Repeatability: May be repeated for credit unlimited times.

ASIANAM 200A. Theory and Methods in Asian American Studies. 4 Units.
Introduction to the intersection of the social sciences, humanities, and other fields that constitute the theory and methodology of Asian American Studies. Focuses on the interventions and contestations within Asian American Studies that have transformed the discipline in recent years.

Restriction: Graduate students only.
ASIANAM 200B. Contemporary Issues in Asian American Studies. 4 Units.
Examines the interrelations between history, theory, and race in the aftermath of the twentieth-century decolonial movements, offering an account of race through postcolonial and postnationalist approaches in comparative contexts. Considers the interventions made by transnational feminist and racialized queer critiques.

Restriction: Graduate students only.

ASIANAM 200C. Leadership and Social Change in Asian American Communities. 4 Units.
Introduces students to models of community-engaged learning and leadership that are central to the field of Asian American studies. Designed to expose students to histories and models of organizing in Asian American communities and forms of community-based research.

Restriction: Graduate students only.

ASIANAM 200D. Introduction to Asian American Studies Research. 4 Units.
Introduces students to research topics and methods within the field of Asian American studies. Aims to expose students to core and affiliated faculty to help them identify possible advisors for master's research projects or members of doctoral committees.

Restriction: Graduate students only.

ASIANAM 201. Graduate Topics in Asian American Studies. 4 Units.
Seminars on various topics in Asian American Studies.

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.

ASIANAM 250. Advanced Topics in Asian American Studies. 4 Units.
Seminar covering various areas of research within Asian American Studies as an interdisciplinary field. Recommended for advanced graduate students.

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.

ASIANAM 290. Directed Research. 4-12 Units.
Directed graduate study/research in Asian American Studies.

Repeatability: May be taken for credit for 24 units.

Restriction: Graduate students only.

ASIANAM 291. Directed Reading. 4 Units.
Readings focused on specialized topics in consultation with, and with the consent of, a faculty member.

Repeatability: May be taken for credit for 12 units.

Restriction: Graduate students only.

ASIANAM 399. University Teaching. 4 Units.
Limited to teaching assistants.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Restriction: Emphasis in Asian American Studies graduate students only.

Department of Classics

Paul Andrew Zissos, Department Chair
400 Murray Krieger Hall
949-824-6735
http://www.humanities.uci.edu/classics/

Overview
The Department of Classics aims to provide the undergraduate student with a working knowledge of the origins and heritage of Graeco-Roman civilization. The Department is committed to a twofold purpose: (1) disseminating interest in and knowledge of Classical Civilization through the teaching
of Greek and Latin language and literature; and (2) helping students, through courses in Classical literature, history, civilization, mythology, and religion taught through English translations, to appreciate the achievements of Greek and Roman culture and their pervasive influence on our own civilization.

**Study Abroad**

The Department of Classics encourages students to take advantage of educational opportunities abroad while making progress toward their UCI degree. Classics majors and minors can benefit from a broader perspective of the field by studying for periods ranging from one quarter to one year at any number of universities all over the world through the UC Education Abroad Program. Students can also augment their exposure to Greek, Latin, and Classical civilizations by studying for a summer or during the academic year in Greece or Italy at programs sponsored by other academic institutions through the International Opportunities Program. To determine how study abroad can fit into a Classics major, visit the UCI Study Abroad Center's Study Abroad in Your Major website (http://www.cie.uci.edu/academics/academicplanning.html). See the Department of Classics Undergraduate Program Advisor for additional information.

**Career Opportunities**

The study of the ancient world is a valuable possession for modern life. The discipline of Classics is an important part of a well-rounded education. Greek and Latin language and literature, history, philosophy, mythology and religion make an excellent basis for exploring all periods of Western culture up to the present day. Classics is an interdisciplinary study, exploring human culture through a variety of methods and points of view. For this reason, the student who chooses to major in Classics may find many professional opportunities.

Graduate and professional schools in medicine, law, management, and other fields welcome students with training in Classics. So do many business corporations. Business, industry, and technology are well acquainted with the value of an education in Classics. They are aware that students with a strong background in a respected and challenging major such as Classics are disciplined thinkers who can express themselves in clear, coherent, and cogent language, capabilities that are considered valuable in future physicians, lawyers, and managers.

There are also specific vocational opportunities open to the graduate in Classics. A major in this field may lead to a career in high school teaching, or (after appropriate further study) in college or university teaching. It is also an excellent preparation for advanced study in other academic disciplines such as archaeology, history, comparative literature, philosophy, and linguistics, as well as for theological studies and for work in a wide range of the humanities and social sciences.

The UCI Career Center provides services to students and alumni including career counseling, information about job opportunities, a career library, and workshops on résumé preparation, job search, and interview techniques. See the Career Center (p. 145) section (p. ) for additional information.

The Department offers a major in Classics with three possible emphases. Students may choose an emphasis in Greek and Latin Language and Literature, Latin Language and Literature, or Classical Civilization. Students are encouraged to consult with the Classics faculty regarding the appropriate choice of major and design of their programs.

For the emphasis in Greek and Latin Language and Literature, study of the Classics must be based on competence in both Greek and Latin. This emphasis is designed to provide the student with language competence as rapidly as possible, so that by the end of first-year Greek or Latin the student has already been introduced to some of the major Classical authors in the original language. From then on, courses are devoted to reading and interpreting the literature of ancient Greece and Rome. In addition to their training in the languages, students increase their knowledge of the literature, history, and thought of the ancient world through the close study of some of its finest writers.

The Latin Language and Literature emphasis is designed for those students who want to focus on Rome and the Latin language as their area of study. By the end of first-year Latin, students will be reading and analyzing some of the most influential works in Latin literature. In addition to gaining an expertise in Latin, students also devote a portion of their study to an examination of the history and culture of ancient Rome by taking upper-division Classical Civilization courses with Rome as their focus and/or additional Latin courses. Courses from other departments in the School of Humanities with a focus on later historical periods heavily influenced by Roman culture (such as the medieval period) may be used to satisfy some of the degree requirements, with prior approval of the Department of Classics.

The emphasis in Classical Civilization is designed for students who do not plan to concentrate on the Classical languages or pursue graduate study in the Classics, yet wish to obtain an undergraduate degree based on a sound knowledge of the Classical world. This major requires one year of study (or its equivalent) of either Greek or Latin and courses taught in English translation concerning such topics as Classical literature, civilization, history, archaeology, art, drama, and philosophy.

Students entering UCI with previous Greek or Latin training may be given advanced standing. Usually, one year of high school work is equated with one quarter of UCI work. For example, students with one, two, or three years of high school Latin (or Greek) will enroll in Latin (or Greek) 1B, 1C, and 100, respectively. Placement may vary (depending on the extent of the student’s preparation) and a placement test may be required. Students with transfer credit for Greek and/or Latin may not repeat those courses for credit. Students with high school training in the Classical languages are required to consult with the Classics undergraduate advisor before enrolling in Greek or Latin courses.

The Department adheres to the policy of giving its students an opportunity to participate in the departmental decision-making process. Student representatives, elected from and by the undergraduate majors, participate in all open departmental meetings. Representatives are responsible for maintaining close liaison with their constituency, for representing the students’ interest in curriculum and personnel matters.
Inquiries regarding language placement, prerequisites, planning a program of study, or other matters related to the Department’s offerings should be
directed to the Office of the Chair, 400 Murray Krieger Hall, telephone 949-824-6735.

Requirements for the B.A. in Classics
All students must meet the University Requirements (p. 91).
All students must meet the School Requirements (p. 788).
All students are subject to the Language Other Than English Placement and Progression (p. 789) policies.

Departmental Requirements for the Major
The B.A. program in Classics is devoted to the study of languages, literature, and culture of ancient Greece and Rome. Students select one of three
emphases: (1) Greek and Latin Language and Literature; (2) Latin Language and Literature; or (3) Classical Civilization.

Emphasis in Greek and Latin Language and Literature
A. Choose either Greek Focus or Latin Focus:

1. Greek Focus:

   CLASSIC 36A- 36B- 36C
   The Formation of Ancient Greek Society: Early Greece
   and The Formation of Ancient Greek Society: Late Archaic and Classical
   Greece
   and The Formation of Ancient Greek Society: Fourth-Century and
   Hellenistic Greece

   and select six upper-division courses in GREEK 100–104, GREEK 120
   and select three upper-division courses in LATIN 100–104
   or

   2. Latin Focus:

   CLASSIC 37A- 37B- 37C
   The Formation of Ancient Roman Society: Origins to Roman Republic
   and The Formation of Ancient Roman Society: Roman Empire
   and The Formation of Ancient Roman Society: The Fall of Rome

   and select six upper-division courses in LATIN 100–104
   and select three upper-division courses in GREEK 100–104

B. One additional upper-division course in Greek or Latin. One upper-division Classics class (CLASSIC 140, CLASSIC 150, CLASSIC 160,
CLASSIC 170, CLASSIC 176) may be substituted for the upper-division Greek or Latin course with prior approval of the departmental undergraduate
advisor.

C. Senior Capstone Requirement:

CLASSIC 192A-CLASSIC 192B (or equivalent) taken during the senior year. Under the guidance of a faculty mentor, students design and execute
a senior project. Students may plan a project centering on an area of strong interest and may write a research paper, design a creative project, a
primary or secondary school curriculum, or other similar projects. All project proposals must be approved by the end of CLASSIC 192A. Six units
of CLASSIC 198, CLASSIC 199, or GREEK 199 may be substituted for CLASSIC 192A-CLASSIC 192B with prior approval of the departmental
undergraduate advisor.

Emphasis in Latin Language and Literature
A. Complete:

CLASSIC 37A- 37B- 37C
The Formation of Ancient Roman Society: Origins to Roman Republic
and The Formation of Ancient Roman Society: Roman Empire
and The Formation of Ancient Roman Society: The Fall of Rome

B. Select six upper-division courses in LATIN 100–104.

C. Select four upper-division courses from the following:

<table>
<thead>
<tr>
<th>Course</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>LATIN 103</td>
<td>Seminar in Latin Prose</td>
</tr>
<tr>
<td>LATIN 104</td>
<td>Seminar in Latin Poetry</td>
</tr>
<tr>
<td>CLASSIC 140</td>
<td>Classics and History: The Ancient World</td>
</tr>
<tr>
<td>CLASSIC 150</td>
<td>Classical Mythology</td>
</tr>
<tr>
<td>CLASSIC 160</td>
<td>Topics in Classical Literature in English Translation</td>
</tr>
<tr>
<td>CLASSIC 170</td>
<td>Topics in Classical Civilization</td>
</tr>
<tr>
<td>CLASSIC 176</td>
<td>International Studies and the Classics</td>
</tr>
</tbody>
</table>

Courses taken in another UCI department may be substituted with prior approval of the departmental undergraduate advisor; three of these courses
must be Roman in topic (the fourth course may have a Greek topic).

D. Senior Capstone Requirement:
CLASSIC 192A-CLASSIC 192B (or equivalent) taken during the senior year. Under the guidance of a faculty mentor, students design and execute a senior project. Students may plan a project centering on an area of strong interest and may write a research paper, design a creative project, a primary or secondary school curriculum, or other similar projects. All project proposals must be approved by the end of CLASSIC 192A. Six units of CLASSIC 198, CLASSIC 199, LATIN 198, or LATIN 199 may be substituted for CLASSIC 192A-CLASSIC 192B with prior approval of the departmental undergraduate advisor.

Emphasis in Classical Civilization

A. Select one of the following:

| LATIN 1A- 1B- 1C | Fundamentals of Latin and Fundamentals of Latin and Fundamentals of Latin |
| GREEK 1A- 1B- 1C | Fundamentals of Greek and Fundamentals of Greek and Fundamentals of Greek |

or equivalent

and select one of the following:

| CLASSIC 37A- 37B- 37C | The Formation of Ancient Roman Society: Origins to Roman Republic and The Formation of Ancient Roman Society: Roman Empire and The Formation of Ancient Roman Society: The Fall of Rome |

B. Select five upper-division Classics courses.

C. Select two additional upper-division Classics courses. These courses may be in Classics, Greek, Latin, History, Art History, Philosophy, or other related field. Courses must focus on the ancient Mediterranean and if taken in another UCI department, must have the prior approval of the departmental undergraduate advisor.

D. Senior Capstone Requirement:

CLASSIC 192A-CLASSIC 192B (or equivalent) taken during the senior year. Under the guidance of a faculty mentor, students design and execute a senior project. Students may plan a project centering on an area of strong interest and may write a research paper, design a creative project, a primary or secondary school curriculum, or other similar projects. All project proposals must be approved by the end of CLASSIC 192A. Six units of CLASSIC 198 or CLASSIC 199 may be substituted for CLASSIC 192A-CLASSIC 192B with prior approval of the departmental undergraduate advisor.

Residence Requirement for the Major: At least five upper-division courses required for the major must be completed successfully at UCI.

Planning a Program of Study

The Department believes in close consultation with students on academic advising and program planning. Students planning to major in Classics or minor in Greek, Latin, or Classical Civilization are strongly urged to consult with the departmental faculty at the earliest moment to learn about the various programs.

Minor in Archaeology

The interdisciplinary minor in Archaeology introduces students to modern archaeological theory and practice. Students are exposed to different approaches and theoretical frameworks used in the reconstruction of cultures based on their material remains and examine the use of such approaches and frameworks in a comparative context that emphasizes one geographic area. Students also become familiar with the importance of understanding the historical, geographic, and environmental contexts in which a particular material culture develops and transforms. The minor helps to prepare students for advanced training in art history, the archaeology of specific geographical regions, cultural resource management, museum studies, and historical preservation. It emphasizes classical and historical archaeology of the last 5,000 years of human history.

Requirements for the Minor in Archaeology

Completion of seven courses (28 units). Only one course from requirements D–F may be lower division. Courses that are listed in the Catalogue as “topics vary” must be approved by the Department of Classics undergraduate advisor.

A. Complete:

ANTHRO 2C Introduction to Archaeology

B. Select one lower-division survey course on the pre-modern world from the following:
<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
</tr>
</thead>
<tbody>

</table>

**Residence Requirement for the Minor**

Four upper-division courses required for the minor must be completed successfully at UCI. Two of the four may be taken through the UC Education Abroad Program provided course content is approved in advance by the Humanities Undergraduate Study Office.
Minors in Greek, Latin, and Classical Civilization

Requirements for the Minor in Greek
A. Complete:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>GREEK 1C</td>
<td>Fundamentals of Greek</td>
</tr>
</tbody>
</table>

B. Select six upper-division courses from GREEK 100-104. GREEK 120 may be substituted for one course at the 100 level.

1 Students who are exempted from GREEK 1C must instead complete an additional upper-division Classics or Greek course offered by the Department.

Requirements for the Minor in Latin
A. Complete:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>LATIN 1C</td>
<td>Fundamentals of Latin</td>
</tr>
</tbody>
</table>

B. Select six upper-division courses from LATIN 100-104.

1 Students who are exempted from LATIN 1C must instead complete an additional upper-division Classics or Latin course offered by the Department.

Requirements for the Minor in Classical Civilization
A. Select one of the following:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>CLASSIC 37A-37B-37C</td>
<td>The Formation of Ancient Roman Society: Origins to Roman Republic and The Formation of Ancient Roman Society: Roman Empire and The Formation of Ancient Roman Society: The Fall of Rome</td>
</tr>
</tbody>
</table>

B. Select five upper-division Classics courses, one of which may be in a related field such as history, art history, or philosophy.

Residence Requirement for the Minors (Greek, Latin, and Classical Civilization): Four upper-division courses must be completed successfully at UCI. By petition, two of the four may be taken through the UC Education Abroad Program, providing course content is approved in advance by the appropriate department chair.

The University of California Tri-Campus Graduate Program in Classics
UC Irvine, UC Riverside, and UC San Diego
Michele Salzman, Chair, Joint Executive Committee

NOTE: Admission to the program is not available at this time. Contact the Department for information.

The UC Tri-Campus Graduate Program in Classics is a joint venture that combines faculty in Classics and related disciplines from the three southernmost University of California campuses—UC Irvine, UC Riverside, and UC San Diego.

Students accepted into the program may enroll at any of the three campuses, but normally apply for admission through UCI, which is the main location for instruction and administration. Applications are reviewed by an admissions committee composed of faculty members from all three campuses.

The goal of the program is to provide a graduate education that unites the main currents of modern literary, cultural, and social theory with the traditional skills and methodologies of classical philology. Candidates for degrees are expected to exhibit facility in Greek and Latin, competence in research, including theoretical approaches to texts and objects, digital skills for research and teaching, and experience in teaching. These goals are realized through the four core courses (CLASSIC 200A, CLASSIC 200B, CLASSIC 200C and CLASSIC 201) and seminars (CLASSIC 220).

All entering students are admitted into the Ph.D. program. With the exception of those granted advanced standing because they hold the M.A. in Classics from another institution, entering students may be awarded an M.A. along the way.
Faculty
Luci Berkowitz, Ph.D. Ohio State University, Professor Emerita of Classics, UCI (Greek literary history, computer application to literature)

Cynthia L. Claxton, Ph.D. University of Washington, Senior Lecturer in Classics, Undergraduate Program Director, and Humanities Language Learning Director, UCI (Greek prose, historiography)

Anthony Edwards, Ph.D. Cornell University, Professor of Classics and Comparative Literature, UCSD (epic, Greek comedy, critical theory)

Richard I. Frank, Ph.D. University of California, Berkeley, Professor Emeritus of History and Classics, UCI (Roman history, Latin elegy and satire, classical tradition)

Zina Giannopoulou, Ph.D. University of Illinois, Associate Professor of Classics and Graduate Advisor, UCI (literary theory and Platonic hermeneutics, Classical and Hellenistic philosophy, Greek tragedy and epic)

David Glidden, Ph.D. Princeton University, Professor Emeritus of Philosophy, UCR (Greek and Roman philosophy)

Denver Graninger, Ph.D. Cornell University, Assistant Professor of History, UCR (social and political implications of Greek religion)

Monte Johnson, Ph.D. University of Toronto, Associate Professor of Philosophy, UCSD (ancient philosophy)

Dayna Kalleres, Ph.D. Brown University, Associate Professor of Literature and the Study of Religion, UCSD (early to late antique Christian literature and culture)

Andromache Karanika, Ph.D. Princeton University, Associate Professor of Classics, UCI (Greek epic poetry, Greek lyric, folklore)

Marianne McDonald, Ph.D. University of California, Irvine, Professor of Theatre and Classics, UCSD (Greek and Roman theatre, ancient drama in modern plays, film, and opera)

Margaret M. Miles, Ph.D. Princeton University, Professor of Art History and Classics, UCI (Greek and Roman art and archaeology, ancient Sicily, Greek religion)

Jozef Müller, Ph.D. Princeton University, Assistant Professor of Philosophy, UCR (Aristotle, Plato, Hellenistic Philosophy, and Neoplatonism)

Sheldon Nodelman, Ph.D. Yale University, Associate Professor of Visual Arts, UCSD (Classical art and architecture, Roman portraiture, critical theory)

Maria C. Pantelia, Ph.D. Ohio State University, Department Chair and Professor of Classics, Director, Thesaurus Linguae Graecae®, UCI (Greek epic, Hellenistic poetry, digital technologies in the humanities)

Lisa Raphals, Ph.D. University of Chicago, Professor of Chinese/Comparative Literature, UCR (comparative philosophy, religion, history of science, and gender, with other interests in poetics and science fiction and media studies)

Wendy Raschke, Ph.D. State University of New York, Buffalo, Lecturer in Classics, UCR (Roman satire, Greek art and archaeology)

Michele Salzman, Ph.D. Bryn Mawr College, Chair, Joint Executive Committee, UC Tri-Campus Graduate Program in Classics and Professor of History, UCR (Late antiquity; Roman history and literature, religion, women’s studies)

Thomas F. Scanlon, Ph.D. Ohio State University, Professor of Classics, UCR (Greek and Roman historiography, ancient athletics)

Dana F. Sutton, Ph.D. University of Wisconsin, Professor Emeritus of Classics, UCI (Greek and Latin drama, Greek poetry, Anglo-Latin literature)

Edward Watts, Ph.D. Yale University, Professor of History, UCSD (intellectual and religious history of the Early Byzantine Empire)

Andrew Zissos, Ph.D. Princeton University, Associate Professor of Classics, UCI (Latin epic, medieval Latin, Roman culture)

Master of Arts in Classics
Requirements
The requirements for the M.A. are two years (six quarters) of course work, followed by a comprehensive examination or completion of a Master’s thesis. A reading knowledge of either German, French, Italian, or an equivalent language, demonstrated by examination or appropriate course work, is also required. M.A. students must successfully complete a minimum of 12 approved, seminar-level courses. The normal course load is three 200-level courses each quarter distributed as follows: nine quarters of CLASSIC 220; three quarters of CLASSIC 200A, CLASSIC 200B, CLASSIC 200C, and CLASSIC 201; a fourth quarter may be substituted for a CLASSIC 220. Up to one quarter of CLASSIC 290 for research and writing of the Master’s thesis may be substituted for a CLASSIC 220. If remedial work is required in Greek or Latin, with the Graduate Advisor’s approval, one enhanced upper-division Greek or Latin course (enrolled as a CLASSIC 280) may be substituted for a CLASSIC 220. With the Graduate Advisor’s approval, M.A. students may substitute one external graduate seminar in a relevant area outside of Classics (at any of the three participating campuses) for a CLASSIC 220. At the end of a student’s M.A. studies, a positive vote of the program faculty is necessary for continuation in the Ph.D. program. The expected time for completion of the M.A. is two years.
Doctor of Philosophy in Classics

Requirements

The requirements for the Ph.D. are three years (nine quarters) of course work. Minimum course requirements are four quarters of CLASSIC 200A, CLASSIC 200B, CLASSIC 200C, and CLASSIC 201; 12 quarters of CLASSIC 220; two external graduate seminars, from departments or programs outside of Classics. These may be taken from the offerings of any of the three campuses. Students may take up to two quarters of enhanced upper-division Greek or Latin courses (enrolled as 280s) in place of CLASSIC 220s with permission of the Graduate Advisor if remedial work is required in Greek or Latin. Where appropriate, in the third year of course work, a second CLASSIC 200A, CLASSIC 200B, or CLASSIC 200C, may be substituted for a CLASSIC 220. CLASSIC 280, Independent Study (supervised research), may be substituted for CLASSIC 220s only with the permission of the Graduate Advisor. Up to 12 equivalent graduate-level courses completed elsewhere may be substituted for Tri-Campus Program courses with approval of the Joint Executive Committee. CLASSIC 280 may be used, normally in the fourth year, to provide time to work on the Greek and Latin reading lists and to prepare for Qualifying Examinations, but these courses do not count toward the required 18 courses. Students are encouraged to take courses and seminars in relevant areas outside the program at any of the three campuses. At this stage, and during the fourth year of study, students are expected to have read extensively in the primary texts, in literary history and theory, and in ancient history. In addition, experience in supervised teaching and/or research activity is normally required. In order to qualify as a candidate for the Ph.D. and enter the dissertation stage, a student must pass a set of five written qualifying examinations, including Greek translation and Latin translation; Greek history and Roman history; history of Greek and Roman literature. Once these examinations have been passed, a student must submit a substantial dissertation prospectus, comparable to a research paper in scope and detail, and pass an oral examination administered by the candidacy committee. Ph.D. students must also demonstrate reading proficiency in one modern research language (normally German and French or Italian) by the end of their second year either through appropriate course work or by examination. Proficiency in a second modern research language is expected by the end of the third year. The normative time for advancement to candidacy is four years. The normative time for completion of the Ph.D. is six years, and the maximum time permitted is eight years.

The facilities, course offerings, programs, and individual faculty mentorship of all three campuses are available to students in the UC Tri-Campus Graduate Program in Classics. In addition, program resources are enhanced through a cooperative teaching arrangement among the Tri-Campus Program and the Classics graduate programs at UC Los Angeles, UC Santa Barbara, and the University of Southern California.

Thesaurus Linguae Graecae®

The Thesaurus Linguae Graecae® (TLG®) is a research center at UCI. TLG has created a digital library of Greek literature, a unique resource for research in Greek literary and linguistic studies. Although administratively separate, TLG is closely affiliated with the Department of Classics. Information is available in the Office of Research (p. 154) section (p. 154) of this Catalogue.

Faculty

Luci B. Berkowitz, Ph.D. Ohio State University, Professor Emerita of Classics (Greek literary history, computer applications to literature)

Cynthia L. Claxton, Ph.D. University of Washington, Senior Lecturer Emerita of Classics (Greek prose, historiography)

Richard I. Frank, Ph.D. University of California, Berkeley, Professor Emeritus of History; Classics (Roman history, Classical tradition)

Zina Giannopoulou, Ph.D. University of Illinois at Urbana-Champaign, Graduate Advisor and Associate Professor of Classics (philosophy and literature, Classical tradition, Plato, Greek tragedy and epic)

Andromache Karanika, Ph.D. Princeton University, Associate Professor of Classics; Religious Studies (Greek epic poetry, Greek lyric, folklore)

Maria C. Pantelia, Ph.D. Ohio State University, Director, Thesaurus Linguae Graecae® and Professor of Classics; Religious Studies (Greek epic, Hellenic poetry, digital technologies in the humanities)

Patrick J. Sinclair, Ph.D. Northwestern University, Professor Emeritus of Classics (rhetoric, Latin prose, lexicography)

Richard Snyder, Ph.D. University of Southern California, Lecturer of Classics (philosophy and literature, epic tradition, Latin poetry)

Dana Sutton, Ph.D. University of Wisconsin-Madison, Professor Emeritus of Classics (Greek and Latin drama, Greek poetry, Anglo-Latin literature)

Paul A. Zissos, Ph.D. Princeton University, Department Chair and Humanities Language Learning Program Director and Professor of Classics (Latin epic, medieval Latin, Roman history and culture, Classical reception)

Classics Courses

CLASSIC 10. Scientific and Specialized Terminology, 4 Units.

A study of English terms derived from Greek and Latin and important to contemporary medicine, science, and other professions, with emphasis on development of word-building skills. No prior knowledge of Greek or Latin required.
CLASSIC 36A. The Formation of Ancient Greek Society: Early Greece. 4 Units.
A survey of ancient Greek civilization from its origins in the Bronze Age to the mid-Archaic period. Examines political and social history, as well as literature, art, religion, and archaeological remains.

Same as HISTORY 36A.

CLASSIC 36B. The Formation of Ancient Greek Society: Late Archaic and Classical Greece. 4 Units.
A survey of ancient Greek civilization from the Late Archaic period to the Classical period. Focuses on major institutions and cultural phenomena as seen through the study of ancient Greek literature, history, archaeology, and religion.

Same as HISTORY 36B.

CLASSIC 36C. The Formation of Ancient Greek Society: Fourth-Century and Hellenistic Greece. 4 Units.
A survey of ancient Greek civilization from the fourth century BCE through to the Hellenistic period. Focuses on major institutions and cultural phenomena as seen through the study of ancient Greek literature, history, archaeology, and religion.

Same as HISTORY 36C.

CLASSIC 37A. The Formation of Ancient Roman Society: Origins to Roman Republic. 4 Units.
A survey of the development of Roman civilization from its eighth century BCE beginnings to the civil wars of the first century BCE. Examines political and social history, as well as literature, art, architecture, and religion.

Same as HISTORY 37A.

CLASSIC 37B. The Formation of Ancient Roman Society: Roman Empire. 4 Units.
A survey of Roman civilization from Augustus’s consolidation of power following the civil wars of the first century BCE to the crisis of the third century CE. Includes social history, literature, art, architecture, and religion.

Same as HISTORY 37B.

CLASSIC 37C. The Formation of Ancient Roman Society: The Fall of Rome. 4 Units.
A survey of Roman civilization from the crisis of the third century CE to the so-called “fall of Rome” in 476 CE. Examines political and social history, as well as literature, art, architecture, and religion.

Same as HISTORY 37C.

CLASSIC 45A. Classical Mythology: The Gods. 4 Units.
An overview of the main myths of the gods of the ancient Greeks and Romans and their influence in contemporary and later literature and art. Includes readings from both ancient and modern sources.

CLASSIC 45B. Classical Mythology: The Heroes. 4 Units.
An overview of the main myths of the heroes of the ancient Greeks and Romans and their influence in contemporary and later literature and art. Includes readings from both ancient and modern sources.

CLASSIC 45C. Classical Mythology: Ancient and Modern Perspectives of Classical Mythology. 4 Units.
Detailed examination of key Greek and Roman myths, their interpretations, and the influence they have exerted on literature, art, and popular culture in subsequent periods.
CLASSIC 99. Special Studies in Classics. 1-4 Units.
Lower-division level independent research with Classics faculty.
Repeatability: May be repeated for credit unlimited times.

CLASSIC 140. Classics and History: The Ancient World. 4 Units.
Selected topics in society and culture of the Graeco-Roman world. Readings in translation.
Repeatability: Unlimited as topics vary.

CLASSIC 150. Classical Mythology. 4 Units.
Selected myths and legends as used in Classical literature, and their modern interpretations.

CLASSIC 160. Topics in Classical Literature in English Translation. 4 Units.
Studies in selected areas of Classical literature. Topics addressed vary each quarter.
Repeatability: Unlimited as topics vary.

CLASSIC 160W. Topics in Classical Literature in English Translation. 4 Units.
Studies in selected areas of Classical literature. Topics addressed vary each quarter.
Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.
Repeatability: Unlimited as topics vary.

CLASSIC 166. Topics in Classical Reception. 4 Units.
Studies in selected areas of Classical reception. Topics addressed vary each quarter.
Repeatability: Unlimited as topics vary.

CLASSIC 170. Topics in Classical Civilization. 4 Units.
Studies in selected areas of Classical civilization. Topics addressed vary each quarter.
Repeatability: Unlimited as topics vary.

CLASSIC 176. International Studies and the Classics. 4 Units.
Develops a broader understanding of the formation of different cultures and countries of Classical times and their impact on the modern world.
Repeatability: Unlimited as topics vary.

CLASSIC 192A. Senior Capstone. 2 Units.
Under the guidance of a faculty mentor, majors design and execute a senior project. This project may be a research paper, dramatic production, school curriculum, etc. All projects must be approved by the faculty mentor.
Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.
Grading Option: In Progress (Letter Grade with P/NP).

CLASSIC 192B. Senior Capstone. 4 Units.
Under the guidance of a faculty mentor, majors design and execute a senior project. This project may be a research paper, dramatic production, school curriculum, etc. All projects must be approved by the faculty mentor.
Prerequisite: CLASSIC 192A. Satisfactory completion of the Lower-Division Writing requirement.

CLASSIC 198. Directed Group Study. 4 Units.
Special topics in Classical studies through directed reading and research.
Repeatability: May be repeated for credit unlimited times.

CLASSIC 199. Independent Study in Classics. 1-4 Units.
Independent research with Classics faculty.
Repeatability: May be repeated for credit unlimited times.
CLASSIC 200A. Contemporary Literary Theory and the Classics. 4 Units.
An introduction to contemporary literary theory focusing on important critical approaches; topics vary from year to year.
Repeatability: Unlimited as topics vary.

CLASSIC 200B. Diachronic Perspectives on Classical Antiquity. 4 Units.
Examines ways in which Classical texts and ideas have been received and appropriated for the diverse purposes of ancient and subsequent cultures.
Repeatability: Unlimited as topics vary.

CLASSIC 200C. Greece and Rome in Their Contemporary Cultural Contexts. 4 Units.
An introduction to the methods and perspectives of social scientific theory which can be used to study the material and social dimensions of the ancient cultures of Greece and Rome.
Repeatability: Unlimited as topics vary.

CLASSIC 203A. Survey of Greek Literature. 4 Units.
Intensive Greek readings in poetry and prose selected from the Tri-Campus Program reading list.
Repeatability: May be taken for credit 2 times as topics vary.

CLASSIC 203B. Survey of Latin Literature. 4 Units.
Intensive Latin readings in poetry and prose selected from the Tri-Campus Program reading list.
Repeatability: May be taken for credit 2 times as topics vary.

CLASSIC 205. CONCURRENT READING. 2 Units.
Special Instance.
Repeatability: May be repeated for credit unlimited times.
Restriction: Graduate students only.

CLASSIC 220. Classics Graduate Seminar. 4 Units.
Subject matter variable; mainly but not exclusively major literary topics.
Repeatability: Unlimited as topics vary.
Restriction: Graduate students only.

CLASSIC 280. Independent Study. 4-12 Units.
Supervised independent research. Subject varies.
Repeatability: May be repeated for credit unlimited times.
Restriction: Graduate students only.

CLASSIC 290. Research in Classics. 4-12 Units.
Research under Classics faculty.
Repeatability: May be repeated for credit unlimited times.
Restriction: Graduate students only.

CLASSIC 299. Dissertation Research. 4-12 Units.
Dissertation research with Classics faculty.
Repeatability: May be repeated for credit unlimited times.
Restriction: Graduate students only.

CLASSIC 399. University Teaching. 4 Units.
Limited to Teaching Assistants.
Grading Option: Satisfactory/unsatisfactory only.
Repeatability: May be repeated for credit unlimited times.
Restriction: Graduate students only.
Greek Courses

GREEK 1A. Fundamentals of Greek. 5 Units.
Elements of Classical Greek grammar, syntax, and vocabulary.
Overlaps with GREEK S1AB.
Restriction: GREEK 1A and GREEK S1AB may not be taken for full credit.

GREEK 1B. Fundamentals of Greek. 5 Units.
Elements of Classical Greek grammar, syntax, and vocabulary.
Prerequisite: GREEK 1A. GREEK 1A with a grade of C or better
Overlaps with GREEK S1AB, GREEK S1BC.
Restriction: GREEK 1B and GREEK S1AB and GREEK S1BC may not be taken for full credit.

GREEK 1C. Fundamentals of Greek. 5 Units.
Introduction to reading texts.
Prerequisite: GREEK 1B. GREEK 1B with a grade of C or better
Overlaps with GREEK S1BC.
Restriction: GREEK 1C and GREEK S1BC may not be taken for full credit.

(VI)

GREEK S1AB. Fundamentals of Greek. 7.5 Units.
First half of first- year Greek in an intensified form.
Overlaps with GREEK 1A, GREEK 1B.
Restriction: GREEK S1AB and GREEK 1A and GREEK 1B may not be taken for full credit.

GREEK S1BC. Fundamentals of Greek. 7.5 Units.
Second half of first- year Greek in an intensified form.
Prerequisite: GREEK S1AB or GREEK 1B. GREEK S1AB with a grade of C or better. GREEK 1B with a grade of C or better
Overlaps with GREEK 1C, GREEK 1B.
Restriction: GREEK S1BC and GREEK 1B and GREEK 1C may not be taken for full credit.

(VI)

GREEK 99. Special Studies in Greek. 1-4 Units.
Lower-division level independent research with Greek faculty.
Repeatability: May be repeated for credit unlimited times.

GREEK 100. Topics in Attic Greek. 4 Units.
Selected readings in Attic Greek prose and poetry. Authors may include Xenophon, Lysias, Antiphon, Euripides, and others. Selections from prose and poetry will be read each quarter. Grammar and syntax review included.
Prerequisite: GREEK 1C. GREEK 1C with a grade of C or better. Placement into GREEK 100 is also accepted.
Repeatability: Unlimited as topics vary.

GREEK 103. Seminar in Greek Prose. 4 Units.
Specialized and focused study of a particular Greek prose author or topic.
Prerequisite: GREEK 100
Repeatability: Unlimited as topics vary.
GREEK 104. Seminar in Greek Poetry. 4 Units.
Specialized and focused study of a particular topic or author of Greek poetry.

Prerequisite: GREEK 100

Repeatability: Unlimited as topics vary.

GREEK 120. Reading of Selected Portions of the New Testament. 4 Units.
Studies in selected areas of the New Testament. Topics addressed vary each quarter.

Prerequisite: GREEK 1C or GREEK S1BC

Repeatability: Unlimited as topics vary.

GREEK 198. Directed Group Study. 4 Units.
Special topics in Greek culture and civilization through directed reading and research.

Repeatability: May be repeated for credit unlimited times.

GREEK 199. Independent Studies in Greek. 1-4 Units.
Independent research with Greek faculty.

Repeatability: May be repeated for credit unlimited times.

Latin Courses

LATIN 1A. Fundamentals of Latin. 5 Units.
Elements of Latin grammar, syntax, and vocabulary.

Overlaps with LATIN S1AB.

Restriction: LATIN 1A and LATIN S1AB may not be taken for full credit.

LATIN 1B. Fundamentals of Latin. 5 Units.
Elements of Latin grammar, syntax, and vocabulary.

Prerequisite: LATIN 1A. LATIN 1A with a grade of C or better

Overlaps with LATIN S1AB, LATIN S1BC.

Restriction: LATIN 1B and LATIN S1AB and LATIN S1BC may not be taken for full credit.

LATIN 1C. Fundamentals of Latin. 5 Units.
Introduction to reading texts, including study of the poetry of Catullus and selected readings.

Prerequisite: LATIN 1B. LATIN 1B with a grade of C or better

Overlaps with LATIN S1BC.

Restriction: LATIN 1C and LATIN S1BC may not be taken for full credit.

(VI)

LATIN S1AB. Fundamentals of Latin. 7.5 Units.
First half of first-year Latin in an intensified form.

Overlaps with LATIN 1A, LATIN 1B.

Restriction: LATIN S1AB and LATIN 1A and LATIN 1B may not be taken for full credit.
LATIN S1BC. Fundamentals of Latin. 7.5 Units.
Second half of first-year Latin in an intensified form.
Prerequisite: LATIN S1AB or LATIN 1B. LATIN S1AB with a grade of C or better. LATIN 1B with a grade of C or better
Overlaps with LATIN 1B, LATIN 1C.
Restriction: LATIN S1BC and LATIN 1B and LATIN 1C may not be taken for full credit.

(VI)

LATIN 99. Special Studies in Latin. 1-4 Units.
Lower-division level independent research with Latin faculty.
Repeatability: May be repeated for credit unlimited times.

LATIN 100. Topics in Classical Latin. 4 Units.
Selected readings in Classical Latin prose and poetry. Authors may include Cicero, Caesar, Ovid, Catullus, and others. Selections from prose and poetry will be read each quarter. Grammar and syntax review included.
Prerequisite: LATIN 1C. LATIN 1C with a grade of C or better. Placement into Latin 100 is also accepted.
Repeatability: Unlimited as topics vary.

LATIN 103. Seminar in Latin Prose. 4 Units.
Specialized and focused study of a particular Latin prose author or topic.
Prerequisite: LATIN 100
Repeatability: Unlimited as topics vary.

LATIN 104. Seminar in Latin Poetry. 4 Units.
Specialized and focused study of a particular topic or author in Latin poetry.
Prerequisite: LATIN 100
Repeatability: Unlimited as topics vary.

LATIN 198. Directed Group Study. 1-4 Units.
Special topics in Roman culture and civilization through directed reading and research.
Repeatability: May be repeated for credit unlimited times.

LATIN 199. Independent Studies in Latin. 1-4 Units.
Independent research with Latin faculty.
Repeatability: May be repeated for credit unlimited times.

Department of Comparative Literature

Nasrin Rahimieh, Department Chair
243 Humanities Instructional Building
949-824-6406
http://www.humanities.uci.edu/complit/
complit@uci.edu

Overview
Comparative Literature is the study of the world through its literatures and cultures. Critical theory and translation provide frameworks for making moves: across languages, media, geographic borders, and political visions. In the Department of Comparative Literature, graduate and undergraduate students immerse themselves in national and regional literatures—of Asia, Africa, Latin America, North America, and Europe—while simultaneously placing those cultural practices within dynamic global exchanges, both historical and contemporary. Through courses, conferences, collaborative projects, and digital media, Comparative Literature at UCI advances critical cosmopolitanism—a kind of worldliness cultivated by creative engagements with power, peoples, and their symbolic practices. From novel to poetry, drama to film, monuments to political protest, comics to audio, urban space to visual culture—Comparative Literature introduces students to global cultures in the widest sense, and to the theoretical lenses essential for putting them in perspective. Writing, speaking, visualizing, blogging, social networking: through multiple media Comparative Literature students at every level interpret and engage
with other academics and publics outside the academy. Together, students of Comparative Literature strive for a continually evolving practice of critical awareness and political action: a global literacy and citizenship through which to face the challenges of life and work in the 21st century.

The Department seeks to foster and maintain a lively community that includes undergraduates, graduates, and faculty, and to that end holds a variety of meetings and activities so that majors can get to know one another and other members of the Department.

**Requirements for the B.A. in Comparative Literature**

**All students must meet the University Requirements** (p. 91).

**All students must meet the School Requirements** (p. 788).

**Department Requirements for the Major**

A. Complete:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>COM LIT 60A</td>
<td>World Literature</td>
</tr>
<tr>
<td>COM LIT 60B</td>
<td>Reading with Theory</td>
</tr>
<tr>
<td>COM LIT 60C</td>
<td>Cultural Studies</td>
</tr>
</tbody>
</table>

B. Complete:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>COM LIT 190W</td>
<td>Advanced Seminar in Comparative Literature and Theory (capstone seminar)</td>
</tr>
</tbody>
</table>

C. Select two additional upper-division elective courses in Comparative Literature or two other upper-division courses offered in the School of Humanities. Students may request, by petition, one lower-division Comparative Literature course to count as an elective.

D. Completion of one of the three emphases:

1. **Emphasis in Comparative Literature and Critical Theory**

   (a) Select five upper-division courses in Comparative Literature.

   (b) Competence in a foreign language sufficient for reading and understanding literature and culture in that language may be demonstrated through course work in one of the following ways:

   1. Two upper-division courses in a foreign literature or culture in which texts are read in the original, or
   2. One upper-division course in a foreign literature or culture in which texts are read in the original, plus one upper-division course in a literature or culture in translation, or
   3. Students of Chinese, Japanese, and Korean take three years of language training plus one approved upper-division course in a foreign literature or culture in which texts are read in the original language or in translation, or
   4. Students of languages for which no language training is offered past 2C may take any two upper-division courses in a foreign literature or culture in translation.
   5. Students who study Greek and Latin fulfill the entire requirement by successfully completing two years of college-level language training and one upper-division course in a foreign literature or culture in translation.

   An Independent Study course may substitute for any part (i.e., either a language or literature course) of the foreign language requirement upon petition to the undergraduate studies director in Comparative Literature.

2. **Emphasis in Cultural Studies**

   (a) Select six upper-division courses in Comparative Literature (three of which must be from the following list):

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>COM LIT 105</td>
<td>Topics in Comparative Multiculturalism</td>
</tr>
<tr>
<td>COM LIT 130</td>
<td>Gender, Sexuality, Race, Class</td>
</tr>
<tr>
<td>COM LIT 132</td>
<td>Discourse, Ideologies, and Politics</td>
</tr>
<tr>
<td>COM LIT 140</td>
<td>Critical Cultural Studies</td>
</tr>
<tr>
<td>COM LIT 141</td>
<td>Popular Culture</td>
</tr>
<tr>
<td>COM LIT 142</td>
<td>The Metropolis and Other Cultural Geographies</td>
</tr>
<tr>
<td>COM LIT 143</td>
<td>Literature, Arts, and Media</td>
</tr>
<tr>
<td>COM LIT 144</td>
<td>Literature, History, and Society</td>
</tr>
</tbody>
</table>

3. **Emphasis in World Literature**

   Select six upper-division courses in Comparative Literature (three of which must be from the following list):

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>COM LIT 100A</td>
<td>Nations, Regions, and Beyond</td>
</tr>
<tr>
<td>COM LIT 105</td>
<td>Topics in Comparative Multiculturalism</td>
</tr>
<tr>

</tr>
<tr>
<td>COM LIT 123</td>
<td>Literatures in Dialogue</td>
</tr>
<tr>
<td>COM LIT 150</td>
<td>Literature in Translation</td>
</tr>
</tbody>
</table>
**Graduate Program**

Two features give Comparative Literature at UC Irvine its distinctive character. First, the department is committed to a conception of transnational comparatism in which the Euro-American zone is not accorded any privileged position while literatures and cultures of the Americas, Asia, Africa, and Latin America - the literatures of the colonized more generally - are accorded their rightful place. Second, the department trains its students in a range of theoretical perspectives that have been transforming scholarship over the past few decades. Ph.D. students in Comparative Literature pursue research that values lines of inquiry over pre-set national and genre categories.

The program views literary texts as one among many contexts of cultural production, such as environmental practices, rural and urban space production, and film images and visual representation. The interdisciplinary nature of the program involves reciprocal and mutually transformative relations with critical theory, informed by such well-established modes of thought as Marxism and psychoanalysis. Intensive, sustained work in critical theory is as important a part of the Ph.D. program as the study of literatures and literary pedagogies.

The M.A. is considered to be a step toward the Ph.D.; only students intending to complete the doctorate are admitted to the program. Applicants must hold a B.A. or equivalent degree and should normally have majored in Comparative Literature or another major involving cultural study. Majors in other disciplines (e.g., philosophy or history) will be considered seriously, provided that a sufficient background in literary and cultural studies and in at least one foreign language is demonstrated.

**Program Details**

Rather than demanding that Ph.D. students compare two national literatures, graduate students in the program may explore the internal differences of a cultural and political phenomenon or pursue a problem that exists transverse to various categories. Graduate students plan individualized course work with their advisors to prepare them for research on their chosen questions. In addition, the Department offers an emphasis in Translation Studies (see the departmental graduate student handbook for a description of this emphasis). Graduate students in Comparative Literature may also complete collaborative Ph.D.s with other selected Humanities Ph.D. programs within UCI. They may also complete campus-wide interdisciplinary emphases such as the Critical Theory Emphasis, Graduate Feminist Emphasis, Visual Studies Emphasis, and the Graduate Emphasis in Race and Justice Studies.

A minor field specialization is recommended. This optional component promotes engagement with a field or methodology outside the student’s specialization. It may be of a national, historical, disciplinary, or methodological nature, with the student of western postmodern literary theory and

---

**Residence Requirement for the Comparative Literature Major:** COM LIT 190W and four additional upper-division courses in Comparative Literature or other upper-division courses offered in the School of Humanities must be completed successfully at UCI. By petition, two of the four may be taken through the UC Education Abroad Program, providing course content is approved by the appropriate program advisor or chair.

**Planning a Program of Study**

The Department offers close consultation for academic planning. All students should plan courses of study with faculty advisors. Students who wish to pursue double majors, special programs, or study abroad are urged to seek advising as early as possible.

**Additional Information**

**Careers for the Comparative Literature Major**

Courses in Comparative Literature train students to read critically, to think and write analytically in a variety of genres and media, to learn languages, and to do independent research, always in a global context. This course of study helps qualify majors for careers in education, international relations, law, government, technology, communications and media, nonprofit organizations, and publishing. In recent years graduates from the Department of Comparative Literature have won Fulbrights, gone on to law school, nursing school, and master’s programs in social work or psychology, and found jobs in public relations firms, done editorial work, and conducted clinical research in pharmaceutical firms. The Comparative Literature major is also excellent preparation for an academic career. Graduates have gone on to Ph.D. programs at Michigan, Cambridge, Harvard, Princeton, UCLA, UC Berkeley, and other schools. Many also teach English, world literature, and modern foreign languages at the high-school level.

**Minor in Comparative Literature**

**Departmental Requirements for the Comparative Literature Minor**

<table>
<thead>
<tr>
<th>Course ID</th>
<th>Course Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>COM LIT 60A</td>
<td>World Literature</td>
</tr>
<tr>
<td>COM LIT 60B</td>
<td>Reading with Theory</td>

</tr>
</tbody>
</table>

**Residence Requirement for the Comparative Literature Minor:** Four upper-division courses must be completed successfully at UCI. By petition, two of the four may be taken through the UC Education Abroad Program, providing course content is approved by the appropriate program advisor or chair.
forms engaging in a focused study of ancient Greek or Roman philosophy and culture, for example, or the student of East Asian languages and diasporic literatures may work in anthropology or ethnography. This optional component of the student’s program may be fulfilled through course work, independent studies, or a Qualifying Examination topic.

Graduate students in Comparative Literature must demonstrate a command of two foreign languages consistent with their particular focus of study within the program. Competence in two foreign languages is required for the Ph.D. and is verified through examination, a longer translation project, and/or course work.

Teaching
The Department recognizes that most of its graduate students intend to become teachers, and believes that graduate departments should be training college teachers as well as scholars—indeed, that teaching and scholarship complement one another. Thus candidates for the Ph.D. are expected to acquire experience in teaching, and all Ph.D. candidates gain supervised training as part of the seminar work required for the degree.

Fellowships
A range of fellowships offered by UC Irvine are available to students in the Department (https://grad.uci.edu/funding/fellowships-awards).

Master of Arts in Comparative Literature
Requirements
Entering students are assigned a faculty advisor who usually serves as the chair of the student’s M.A. examination committee (which consists of at least two other members of the faculty). Nine courses and an examination are required to complete the degree. The normal academic load for both M.A. and Ph.D. candidates is three courses a quarter; teaching assistants take two courses in addition to earning credit for University teaching. Only in exceptional circumstances will students be permitted to undertake programs of less than six full courses during the academic year.

Examination
The M.A. examination is normally taken during the fifth quarter. For the examination, the candidate submits an M.A. paper and a statement of purpose outlining past and future course work and preliminary plans for the Ph.D. qualifying examination. The M.A. examination consists of a discussion of the student’s paper and the statement of purpose. In practice, it resembles an extended advising session, but with particularly close attention to the student’s paper.

Doctor of Philosophy in Comparative Literature
The doctoral program in Comparative Literature prepares the student for a professional career in the research and teaching of comparative literary and cultural studies. Some students also choose to enter professions (e.g., specialized research, nonprofit organizations, international cultural exchange) in which the specialized work in a specific field indicated by an advanced degree is highly desirable.

Requirements
Normally, students who have not done graduate work at another university must complete at least 18 courses. Upon completion of the course work, the student takes a qualifying examination on four areas formulated by the student in consultation with the four faculty members who make up the examination committee. The four areas are to cover a major field, a secondary field, a special topic, and theory. All four areas are to be related to each other and to work toward the dissertation. The examination is part written, part oral, according to a formula decided by the student and the committee. The examination as a whole should reflect the student’s ability to work in at least two languages.

After passing the qualifying examination, the student forms a dissertation committee of three faculty members, formulates a dissertation topic in consultation with them, and submits a prospectus for the dissertation along with a preliminary bibliography. Study toward the Ph.D. culminates in the dissertation. The normative time for advancement to candidacy is four years. The normative time for completion of the Ph.D. is seven years, and the maximum time permitted is nine years. Program advising and timelines encourage completion in six years.

Faculty
M. Ackbar Abbas, M.Phil. University of Hong Kong, Professor of Comparative Literature; Film and Media Studies; Visual Studies (Hong Kong culture and postcolonialism, visual culture, architecture and cinema, cultural theory, globalization)

Aijaz Ahmad, UCI Chancellor’s Professor of Comparative Literature (critical theory, world literature, marxism, tricontinental social thought)

Elizabeth G. Allen, Ph.D. University of Michigan, Associate Professor of English; Comparative Literature; Religious Studies (Chaucer, Gower, 15th century poetry; exemplary literature, romance, chronicle, episodic form; intersections between ethics and politics, politics and religion; hospitality, sovereignty, legal and constitutional history of England)

Eyal Amiran, Ph.D. University of Virginia, Professor of Comparative Literature; Film and Media Studies; Visual Studies (digital media theory, twentieth-century literature, narrative and textual theory, psychoanalysis, modern and postmodern intellectual history)

Etienne Balibar, Ph.D. Catholic University of Nijmegen, Professor Emeritus of French; Comparative Literature (political philosophy, critical theory, epistemology of the social sciences, ethics)
Nahum D. Chandler, Ph.D. University of Chicago, Professor of African American Studies; Comparative Literature; European Languages and Studies (modern philosophy, intellectual history, history of the human sciences)

Alicia Cox, Ph.D. University of California, Riverside, Assistant Professor of Comparative Literature (19th-century American literature; Native American and Indigenous literature and cultural studies; gender and sexuality studies; queer Indigenous studies; Indigenous feminisms; autobiography; American Indian boarding school studies; settler colonialism)

Herschel Farbman, Ph.D. Yale University, Associate Professor of French; Comparative Literature (modernism, critical theory)

Alexander Gelley, Ph.D. Yale University, Professor Emeritus of Comparative Literature (eighteenth- and nineteenth-century European novel, critical theory)

David Theo Goldberg, Ph.D. The Graduate Center, City University of New York, Director of the UC Humanities Research Institute and Professor of Comparative Literature; Anthropology; Criminology, Law and Society (race, racism, race and the law, political theory, South Africa, digital humanities)

Hu Ying, Ph.D. Princeton University, Professor of Chinese; Comparative Literature (narrative literature, translation theory, feminist theory)

Virginia W. Jackson, Ph.D. Princeton University, Chair in Rhetoric and Communication and Associate Professor of English; Comparative Literature (poetics, 19th, 20th and 21st century American poetry, 19th century American literature and culture, the history of literary theory)

Susan C. Jarratt, Ph.D. University of Texas at Austin, Professor Emerita of Comparative Literature; Education (histories and theories of rhetoric, ancient Greek rhetoric, writing studies)

Adriana M. Johnson, Ph.D. Duke University, Associate Professor of Comparative Literature (Latin American literature and film, subaltern studies, postcolonial studies, politics and culture)

Ketu H. Katrak, Ph.D. Bryn Mawr College, Professor of Drama; Comparative Literature (drama and performance, African drama and Ancient Sanskrit drama [from India], postcolonial literature and theory, women writers and feminist theory)

Arlene Keizer, Ph.D. University of California, Berkeley, Associate Professor of English; Comparative Literature (African American and Caribbean literature, critical race and ethnic studies, feminist and psychoanalytic theory, cultural studies)

Catherine Liu, Ph.D. Yale University, Professor of Film and Media Studies; Comparative Literature; Visual Studies (Hou Hsiao-hsien, culture wars, Frankfurt School, historiography of critical theory/cultural studies, surveillance, cold war culture and neoliberalism)

Margherita Long, Ph.D. Princeton University, Associate Professor of Japanese; Comparative Literature (Japanese literature and film; ecocriticism; peace activism; feminist theory; eco-documentary)

Julia R. Lupton, Ph.D. Yale University, Associate Dean for Research and Professor of English; Comparative Literature; Education; Religious Studies (Renaissance literature, literature and psychology)

Steven J. Mailloux, Ph.D. University of Southern California, Professor Emeritus of English; Comparative Literature (rhetoric, critical theory, American literature, law and literature)

Catherine Malabou, Ph.D. Ecole des Hautes Etudes en Sciences Sociales, Professor of Comparative Literature; French (German idealism, contemporary French philosophy, cultural theory, neurobiology, epigenetics)

J. Hillis Miller, Ph.D. Harvard University, UCI Endowed Chair and Professor Emeritus of Comparative Literature; English (Victorian literature, critical theory)

Liron Mor, Ph.D. Cornell University, Assistant Professor of Comparative Literature (literary and critical theory, contemporary Israeli and Palestinian literature and film, postcolonial theories, conflict, sympathy, questions of translation and literary adaptation)

Jane O. Newman, Ph.D. Princeton University, Professor of Comparative Literature; English; European Languages and Studies; Religious Studies (comparative Renaissance and early modern literature and culture [English, French, German, Italian, neo-Latin], Mediterranean Renaissance studies, Baroque, afterlives of antiquity, Walter Benjamin, Erich Auerbach, pre-modern lessons for the modern and post-modern)

Carrie J. Noland, Ph.D. Harvard University, Professor of French; Comparative Literature (20th-century poetry and poetics, avant-garde movements in art and literature, critical theory, performance studies)

Margot Norris, Ph.D. State University of New York College at Buffalo, Professor Emerita of English; Comparative Literature (modern Irish, British, American and continental modernism, literature and war)

Laura B. O'Connor, Ph.D. Columbia University, Associate Professor of English; Comparative Literature (Irish literature, twentieth-century poetry, Anglo-American modernism)
Courses

COM LIT 8. Travels in Comparative Literature. 4 Units.
Readings in English and in English translation on such topics as love, war, cities, travel writing, politics, fantasy and science fiction, violence.
Repeatability: Unlimited as topics vary.
(IV)

COM LIT 9. Introduction to Multiculturalism. 4 Units.
Various themes and forms of literary and cultural production within a multicultural framework, including African American, Asian American, Chicano/ Latino, and Native American literatures and cultures.
Repeatability: Unlimited as topics vary.
(IV, VII)

COM LIT 10. Topics in World Literature. 4 Units.
Introduction to texts from across the globe and from different historical periods. Readings in English and English translation.
Repeatability: Unlimited as topics vary.
(IV and VIII).
COM LIT 60A. World Literature. 4 Units.
An introduction to the comparative study of literatures and cultures in a global context. Studies literary texts and other media across the borders of various cultures, historical periods, and traditions. All texts are read in English translation.

(IV and VIII ).

COM LIT 60B. Reading with Theory. 4 Units.
Introduction to theory and methods of literary and cultural criticism in a global context. Students read theoretical approaches to literature, culture, and ideas. Marx and Freud, e.g., may be studied alongside readings in narrative poetry, film, song lyrics, novel.

(IV, VIII)

COM LIT 60C. Cultural Studies. 4 Units.
Introduces students to a variety of cultural practices (literature, blogs, films, radio, comics) from across the globe. Focuses on the ways that context, genre, and medium (e.g., written, visual, oral) affect how these practices are produced, circulated, and received.

(IV, VIII)

COM LIT 100A. Nations, Regions, and Beyond. 4 Units.
Intensive study of national and regional cultural and literary traditions from across the globe, among them the literary and cultural production of the Middle East, Africa, Europe, the Americas, and Asia.

Repeatability: Unlimited as topics vary.

COM LIT 102. Comparative Studies in Literature and Theory. 4 Units.
In-depth discussion of special topics.

Repeatability: Unlimited as topics vary.

COM LIT 102W. Comparative Studies in Literature and Theory. 4 Units.
In-depth discussion of special topics.

Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.

Repeatability: Unlimited as topics vary.

(Ib)

COM LIT 105. Topics in Comparative Multiculturalism. 4 Units.
Treats the literatures and cultures of one or more minority groups in California and the United States, including African Americans, Asian Americans, Chicano/Latinos, and Native Americans, and their relations to other national literatures.

Prerequisite: Satisfactory completion of the lower-division writing requirement.

Repeatability: May be repeated for credit unlimited times.

COM LIT 107. Colonialisms and Postcolonialisms. 4 Units.
Explores topics such as colonialism and race, decolonization, pre- and postcoloniality, globalization, and the cultural dynamics of colonization and subjectivity.

Repeatability: Unlimited as topics vary.

COM LIT 108. Diasporic Literatures and Cultures. 4 Units.
Literatures, cultures, and histories of diasporic groups, e.g., literature of the Persian diaspora; cinema of the African diaspora.

Repeatability: Unlimited as topics vary.

COM LIT 120. Philosophy, Culture, and Literature. 4 Units.
Discusses contemporary and historical philosophical questions and figures--for example, existentialism or debates about artificial intelligence--in interaction with culture and literature.

Repeatability: Unlimited as topics vary.

COM LIT 121. Narrative, Pattern, and Text. 4 Units.
Explores textual patterns, structures, and effects. May include topics such as novel, hypertext, genre, reader responses, intertextuality.

Repeatability: Unlimited as topics vary.
COM LIT 122. Rhetorical Approaches to Literature. 4 Units.
Studies the art and politics of rhetoric and persuasion in connection with cultural works from various times and places, for example, classical political speeches, Internet journalism.

Repeatability: Unlimited as topics vary.

COM LIT 123. Literatures in Dialogue. 4 Units.
Studies how texts interact across time and space in a global context. Uses concepts of influence, imitation, and parody, to ask, for example, how the Homeric epics can help us understand Caribbean novels and U.S. movies such as Troy.

Repeatability: Unlimited as topics vary.

COM LIT 130. Gender, Sexuality, Race, Class. 4 Units.
Discusses the roles of differences such as race, class, gender, and sexuality in society, culture, and literature across the globe, covering topics such as theoretical and literary representations of queer sexuality, gender performance, critical race theory.

Repeatability: Unlimited as topics vary.

COM LIT 131. Psychoanalysis and Culture. 4 Units.
Discusses major psychoanalytic writings of Freud and others in connection with questions of culture.

Repeatability: Unlimited as topics vary.

COM LIT 132. Discourse, Ideologies, and Politics. 4 Units.
Compares ideologies and systems, e.g., nationalism and fundamentalism, as they affect literature and culture in a global context.

Repeatability: Unlimited as topics vary.

COM LIT 140. Critical Cultural Studies. 4 Units.
Introduces a variety of ways of understanding cultural phenomena in relation to different power structures. These cultural phenomena may include comics, film, literature, sports, music, festivals, telling stories, or eating out.

Repeatability: Unlimited as topics vary.

COM LIT 141. Popular Culture . 4 Units.
Critical analyses of popular culture such as comics, oral narratives, films, TV, music, in an international framework.

Repeatability: Unlimited as topics vary.

COM LIT 142. The Metropolis and Other Cultural Geographies. 4 Units.
Examines the relationship between space and culture; cultural production in the city, suburb, and/or countryside; spaces in texts and artifacts (film, literature, comics, photographs) in a global context.

Repeatability: Unlimited as topics vary.

COM LIT 143. Literature, Arts, and Media. 4 Units.
Explores literature and other arts and media in a global context. May include film and electronic media, fine arts, oral cultures, architecture, in an international framework.

Repeatability: Unlimited as topics vary.

COM LIT 144. Literature, History, and Society. 4 Units.
Explores the relationship between literary texts and their historical and social contexts in an international framework. Courses may address, for example, literary and cultural expressions in social revolutions or the way literary texts talk back to medicine, religion, and anthropology.

Repeatability: Unlimited as topics vary.

COM LIT 150. Literature in Translation. 4 Units.
The study of literary works in one or more genres in English translation. May be a comparative study of works from several different original languages or a concentration on works from a single cultural/linguistic tradition.

Repeatability: Unlimited as topics vary.

COM LIT 160. World Cinema . 4 Units.
Comparative analysis of contemporary film in languages other than English.

Repeatability: May be taken for credit 2 times as topics vary.
COM LIT 190W. Advanced Seminar in Comparative Literature and Theory. 4 Units.
Capstone seminar for the Comparative Literature major. Deepens understanding of the field through investigation of a special topic and a substantial research and writing project.

Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.

Repeatability: Unlimited as topics vary.

Restriction: Comparative Literature Majors have first consideration for enrollment.

COM LIT 199. Independent Study in Comparative Literature. 1-4 Units.
To be taken only when the materials to be studied lie outside the normal run of departmental offerings.

Repeatability: May be repeated for credit unlimited times.

COM LIT 200A. History of Comparative Literature and Introduction to Methods and Theories of CL. 4 Units.
Seminar designed to introduce graduate students in Comparative Literature to the discipline of Comparative Literature. Issues and theories of comparative literary and cultural study are covered. Strongly recommended for first and second year students before the M.A. exam and review.

Restriction: Graduate students only.

COM LIT 200B. Theories of Translation. 4 Units.
The reproduction, translation, and transfer of literary and cultural, ideological and political, and symbolic codes and texts have long been the object of study in Comparative Literature. Addresses the diverse ways in which expressive systems interact and intersect.

Repeatability: Unlimited as topics vary.

COM LIT 200C. Theories of Globalization, Inter-Nationalism, and Postcolonialism. 4 Units.
Addresses both theories and the complex history of literary and cultural expression in a national, trans-, inter-, and post-national, global frame. Topics may include: globalism and nationhood, theories of citizenship and political subjecthood, postcolonial literature and theory.

Repeatability: Unlimited as topics vary.

COM LIT 200D. Cultural Rhetoric and Rhetorical Theory. 4 Units.
Surveys contemporary theories of cultural rhetoric and the cultural rhetoric of contemporary theory, and interrogates the intersection of rhetoric, critical theory, and cultural studies. Both historical and contemporary theories of rhetoric and cultural rhetorics are studied.

Repeatability: Unlimited as topics vary.

COM LIT 210. Comparative Studies . 4 Units.
Studies in selected areas of Comparative Literature. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

COM LIT 220. Translation Workshop. 2-4 Units.
Trains students in the methodologies and practice of translation. Students focus on the translating process in a series of case studies and individual projects.

Repeatability: May be taken for credit for 8 units.

COM LIT 290. Reading and Conference. 4-12 Units.
Studies in selected areas. Topics addressed vary each quarter.

Repeatability: May be repeated for credit unlimited times.

COM LIT 291. Guided Reading Course. 4 Units.
Studies in selected areas. Topics addressed vary each quarter.

Repeatability: May be repeated for credit unlimited times.
COM LIT 299. Dissertation Research. 4-12 Units.
A units-only course for students in the dissertation phase.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

COM LIT 399. University Teaching. 4 Units.
Limited to Teaching Assistants.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

Emphasis in Critical Theory

James Steintrager, Director
179 Humanities Instructional Building
949-824-6720
http://www.humanities.uci.edu/critical/

An emphasis in Critical Theory, under the supervision of the Committee on Critical Theory, is available for doctoral students in all departments at UCI upon approval of the student’s faculty advisor or associate dean in accordance with departmental policy. Ph.D. students may, with Committee approval, complete the emphasis in addition to the degree requirements of their graduate program. Although there is no change in the existing Ph.D. program requirements or procedures, if the student wishes to have a letter (signed by the Dean and by the Director of Critical Theory) testifying that the student has satisfactorily added this theoretical dimension to the graduate program, then additional requirements must be met. Critical theory at UCI is understood in the broad sense as the study of the shared assumptions, problems, and commitments of the various discourses in the humanities. The faculty regards critical theory not as an adjunct to the study of one of the traditional humanistic disciplines but as a necessary context for the study of any humanistic discipline.

Admission to the emphasis may be granted by the Critical Theory Committee in response to the student’s petition. The petition normally is submitted by the middle of the second year of graduate study, after completion of one HUMAN 270 seminar, and upon the recommendation of the Workshop’s instructor or a faculty representative of the student’s department.

Requirements
(1) a three-quarter Critical Theory Workshop, conducted preferably by a team of instructors, conceived as a reading group, and developed with the input of all participants, where significant texts are discussed and analyzed in class. No term papers are required, and the course is graded Satisfactory/Unsatisfactory only. Students receive credit for this course only in the spring quarter. For the first two quarters, the course is 0 units with IP grading; (2) three HUMAN 270 courses offered under the supervision of the Committee. At least three such courses will be offered each quarter; (3) participation in two mini-seminars (six–eight hours) offered by visiting scholars (and sponsored by the Committee) on the visiting scholar’s ongoing research; and (4) a dissertation that reflects the students’ preparation in critical theory; alternatively, a research paper written under the guidance of one or more of the Emphasis faculty and submitted to the Director.

Graduate Program in Culture and Theory

Please visit the Culture and Theory Program website (http://www.humanities.uci.edu/cultureandtheory) for contact and admissions information.

Overview
The Ph.D. program in Culture and Theory provides a strong theoretical and critical approach to race, gender, and sexuality studies. It is the Ph.D. graduate program that is constituted by several interdisciplinary units including African American Studies and Asian American Studies, and works integrally with the Critical Theory Emphasis. Interdisciplinary in nature and buttressed by the established strengths in critical theory at UCI, the program uses a problem-oriented approach to issues of race, gender, and sexuality in diasporic, transnational, and postcolonial contexts, as they are engaged broadly in the humanities, social sciences, and arts.

The Ph.D. program in Culture and Theory is designed to take full advantage of the combined expertise of the nationally and internationally prominent faculty at UCI whose work exemplifies the best in contemporary, critical, interdisciplinary studies in the humanities, social sciences, and the arts.

Admission
Applicants must have earned a bachelor’s, master’s, or equivalent degree in any discipline in the humanities, arts, or social sciences.
Applicants submit official transcripts, statement of purpose, personal history (U.S. citizens and permanent residents only), three letters of recommendation, aptitude scores from the Graduate Record Examination, and a sample of written work. In addition, an interview may be required. Incoming students are admitted for fall quarter only.

To be admitted formally into the doctoral program, students must satisfactorily pass an evaluation at the end of their first year of study; this includes students who entered with an M.A. from another institution.

NOTE: Ph.D. students will receive the M.A. after the satisfactory completion of specified requirements, as a step toward the Ph.D. Those students who complete the M.A., but whose committees assess their work as not meeting the standard for the Ph.D., will receive a terminal M.A. Students who enter the program with an M.A. from another institution may receive full or partial credit for the M.A., depending on the assessment of the Executive Committee at the time the student is admitted or on the assessment of the student’s faculty advisor and committee during the student’s first year. Students who receive full credit for the M.A. will be exempt from writing the master’s paper.

Requirements
1. CLT&THY 200A, CLT&THY 200B, CLT&THY 200C. Basic to the curriculum, this three-quarter core sequence provides a solid foundation in critical and cultural theories, their philosophical genealogies and institutional histories, and interdisciplinary methodologies. The core sequence also provides the space for an intellectual coherence and cohort building for Culture and Theory graduate students who will be taking most of their other courses in supporting departments and programs.

2. Seven additional theoretical courses selected, in consultation with the student’s faculty advisor, from CLT&THY 240-CLT&THY 260, sets of offerings in the core supporting interdisciplinary units, the Critical Theory Emphasis, and other course offerings by core and affiliated faculty, which may include HUMAN 260A-HUMAN 260B-HUMAN 260C and HUMAN 270. One of these courses must be focused on research methods. Typically the seven courses will revolve around a set of theoretical problems, e.g., feminist theory and practice, critical race studies, sexualities, postcolonialism, transnational circuits, globalization, theorizing the political, philosophical debates on ethics, the intersections of identity and textuality, to name a few. The theoretical problem courses are centered on the philosophical and theoretical approaches that form the basis of much work in critical, cultural, and social theory regarding race, gender, and sexuality studies.

3. Six courses on a focused area of study selected, in consultation with the student’s faculty advisor, from CLT&THY 215-CLT&THY 235, concentrations within and across a department, within the Critical Theory emphasis, or in one of the core supporting interdisciplinary units. The courses in a focused area of study address a particular field in which various forms of critical theory have been applied, as well as a focus on groups, nations, and regions: examples include globalization, racism and the welfare state, diasporas of particular kinds, human rights, anti-colonial resistance movements in particular regions, modernity, and race.

4. CLT&THY 280. In this independent study course taken during their second year, students expand and develop a seminar paper into the master’s paper, with the guidance of their faculty advisor.

5. Students must TA in a Humanities or Social Sciences department or program for a minimum of three quarters. They are also required to take the teaching seminar and workshops associated with the course in which they teach.

6. Additionally, students are expected to participate regularly in the Culture and Theory Colloquium, a series of events comprised of lectures, conferences, and performances sponsored by the program and allied units, particularly in the social sciences and the arts. Each year, the Colloquium will also include academic workshops (e.g., faculty and student works-in-progress, as well as on grant writing and on framing the dissertation project) and professionalization workshops (e.g., preparation for conferences and, later, for the job market). In addition to exposure to diverse ideas and development of practical techniques, participation in the Colloquium is intended to strengthen relations among students, and between students and faculty who are otherwise stretched across several units and schools.

Master’s Paper and M.A.: During their second year, students work with their faculty advisor to expand and develop a seminar paper into a master’s paper. A master’s paper expands a seminar paper to a version that is of near-publishable quality. Upon completion of the paper, the faculty advisor and two other core faculty members will participate in student’s work to date.

Ph.D. students will receive the M.A. after the satisfactory completion of the three core courses, seven theoretical problem courses, six courses on a focused area of study, and the master’s paper. Those students who complete the M.A. requirements, but whose committees assess their work as not meeting the standards for the Ph.D., will receive a terminal M.A.

Qualifying Examination: Students work with a committee comprised of five faculty members, including one outside member, to draw up reading lists and head notes on four topics, as well as a dissertation prospectus. Three of these topics should relate to the major areas of study outlined in the 200A, B, C core course sequence, and one should relate to the student’s area of disciplinary or focused study. The examination itself will be comprised of a written and oral exam. A student shall advance to candidacy upon successful passing of the Qualifying Exam and fulfillment of the language requirement, normally by the end of the third year.

Language Requirement: By the time they qualify for candidacy, students must demonstrate through course work or examination the ability to do research in one ancient or modern language (other than English).

Dissertation: The dissertation topic should be drawn from a focused area of study, chosen in consultation with the dissertation advisor and other committee members. Students will draw up their dissertation committee, which must consist of at least three members, at least two of whom must be drawn from the core faculty in the program whose interests match the topic chosen for the thesis. Dissertations must be approved by the student’s dissertation committee and submitted to the executive committee.
Time to Degree: The normative time for advancement to candidacy is four years. The normative time for completion of the Ph.D. is seven years, and the maximum time permitted is eight years.

Faculty

Jonathan Alexander, Ph.D. Louisiana State University, *Campus Writing Coordinator and Professor of English; Culture and Theory; Education; Gender and Sexuality Studies; Informatics* (writing studies, sexuality studies, queer theory, new media studies)

Christine Bacareza Balance, Ph.D. New York University, *Associate Professor of Asian American Studies; Culture and Theory* (Performance studies, popular music, critical race and ethnic studies, Filipino/Filipino American studies, queer & feminist theory)

Vinayak Chaturvedi, Ph.D. University of Cambridge, *Associate Professor of History; Culture and Theory; Religious Studies* (modern South Asia, social and intellectual history)

Bridget R. Cooks Cumbo, Ph.D. University of Rochester, *Associate Professor of African American Studies; Art History; Culture and Theory; Visual Studies* (African American art, museum studies, feminist and post-colonial theory)

Sora Han, Ph.D. University of California, Santa Cruz, *Associate Professor of Criminology, Law and Society; African American Studies; Culture and Theory; School of Law* (law and popular culture, critical race theory, philosophies of punishment, feminism and psychoanalysis)

Rodrigo Lazo, Ph.D. University of Maryland, College Park, *Associate Professor of English; Culture and Theory* (hemispheric American studies, nineteenth century, Latino studies and the Americas, Cuba, immigrant literature)

Mark A. LeVine, Ph.D. New York University, *Professor of History; Culture and Theory; Religious Studies* (modern Middle Eastern history, Islamic studies, histories of empire and globalization)

James K. Lee, Ph.D. University of California, Los Angeles, *Associate Professor of Asian American Studies; Culture and Theory; Religious Studies* (Asian American literature and culture, contemporary U.S. literature, race and ethnic studies, urban studies, religious studies)

Jerry Won Lee, Ph.D. University of Arizona, *Associate Professor of English; Anthropology; Culture and Theory*

Julia Hyoun Joo Lee, Ph.D. University of California, Los Angeles, *Associate Professor of Asian American Studies; Culture and Theory* (Asian American literature and culture, African American literature and culture, ethnic literature, twentieth-century American literature.)

Kevin E. Olson, Ph.D. Northwestern University, *Professor of Political Science; Culture and Theory* (contemporary European political theory, cultural politics, politics of diversity, popular sovereignty, citizenship, nineteenth- and twentieth-century political theory)

Rajagopalan Radhakrishnan, Ph.D. Binghamton University, State University of New York, *UCI Chancellor's Professor of English; African American Studies; Comparative Literature; Culture and Theory* (critical theory, postcoloniality, nationalisms and diasporas, poststructuralism, postmodernism, democracy and minority discourse, cultural studies, globalization and transnationalism)

Jared Charles Sexton, Ph.D. University of California, Berkeley, *Associate Professor of African American Studies; Culture and Theory; Film and Media Studies; Visual Studies* (race and sexuality, policing and imprisonment, contemporary U.S. cinema and political culture, multiracial coalition, critical theory)

Damien Sojoyner, Ph.D. University of Texas at Austin, *Assistant Professor of Anthropology; Culture and Theory*

Rei Terada, Ph.D. Boston University, *Professor of Comparative Literature; Culture and Theory* (theory, poststructuralism, nineteenth- and twentieth-century poetry)

Keith Topper, Ph.D. University of California, Los Angeles, *Associate Professor of Political Science; Culture and Theory* (political theory, critical theory, poststructuralism, theories of power, language and politics, theory and politics of interpretation, politics of culture, philosophy of the social sciences)

Frank B. Wilderson III, Ph.D. University of California, Berkeley, *Director of the Graduate Program in Culture and Theory and Department Chair and Professor of African American Studies; Culture and Theory* (Afro-Pessimism, film theory, Marxism, narratology)

Tiffany Willoughby-Herard, Ph.D. University of California, Santa Barbara, *Associate Professor of African American Studies; Comparative Literature; Culture and Theory; Political Science* (South Africa, poor whites, race in foreign policy, diaspora, comparative racial politics, third world feminisms, feminist pedagogy, black political thought)

Judy Tzu-Chun Wu, Ph.D. Stanford University, *Department Chair and Professor of Asian American Studies; Culture and Theory* (Asian American history; comparative racialization and immigration; empire and decolonization; gender and sexuality)
Affiliate Faculty

Catherine Benamou, Ph.D. New York University, Associate Professor of Film and Media Studies; Culture and Theory; Visual Studies (Hispanophone and Lusophone cinema and television, U.S. Latino media, Orson Welles and maverick cinema, transnational flows, spectatorship, cinematic memory and cultures of preservation)

Victoria Bernal, Ph.D. Northwestern University, Professor of Anthropology; Culture and Theory; Gender and Sexuality Studies; Religious Studies

Victoria E. Johnson, Ph.D. University of Southern California, Associate Professor of Film and Media Studies; African American Studies; Culture and Theory; Visual Studies (television, critical race theory, sound, media policy, sport)

Claire J. Kim, Ph.D. Yale University, Professor of Asian American Studies; Culture and Theory; Political Science

Jessica Millward, Ph.D. University of California, Los Angeles, Associate Professor of History; African American Studies; Culture and Theory (U.S., slavery, African diaspora, African American gender and women)

Fatimah Tobing Rony, Ph.D. Yale University, Associate Professor of Film and Media Studies; Culture and Theory; Visual Studies (ethnographic film, race and representation, film production)

Gabriele M. Schwab, Ph.D. University of Konstanz, UCI Chancellor's Professor of Comparative Literature; Anthropology; Culture and Theory; European Languages and Studies (modern literature, critical theory, psychoanalysis, comparative literature)

Roxanne Varzi, Ph.D. Columbia University, Associate Professor of Anthropology; Culture and Theory; Film and Media Studies; Religious Studies; Visual Studies (Iran, media, war, visual anthropology, film studies, ethnographic and fiction writing)

Linda T. Võ, Ph.D. University of California, San Diego, Professor of Asian American Studies; Culture and Theory; Sociology; Urban Planning and Public Policy (race and ethnic relations, immigrants and refugees, gender relations, community and urban studies)

Courses

CLT&THY 200A. Political Economy: Methods and Critique. 4 Units.
Introduction to canonical texts in Marxism coupled with an examination of the questions of race, gender, ethnicity, and sexuality that distend the calculus of the canon's assumptive logic. May be taken after CLT&THY 200B.

Same as CRITISM 200A.

Restriction: Graduate students only.

CLT&THY 200B. Libidinal Economy: Methods and Critique. 4 Units.
Introduction to canonical texts in psychoanalysis coupled with an examination of the questions of race, gender, ethnicity, and sexuality that distend the calculus of the canon's assumptive logic. May be taken before CLT&THY 200A.

Restriction: Graduate students only.

CLT&THY 200C. Theory from Below. 4 Units.
Introduction to systems of thought understudied or undervalued in academic canons--for instance, systems constituted in communities' practices or theories that do not seek permanence or generality.

Prerequisite: CLT&THY 200A and CLT&THY 200B

Restriction: Graduate students only.

CLT&THY 215. A Critical Theory of Subalternity. 4 Units.
Examines the importance of subaltern studies for the study of modern history, postcolonial studies, social theory, and cultural studies. Also considers subaltern studies within a larger set of debates in structuralism, post-structuralism, Marxism, and post-Marxism.

Restriction: Graduate students only.

CLT&THY 216. Crossing Borders: Empire and Immigration. 4 Units.
Utilizes historically-based intersectional analysis to explore the connections between U.S. empire and migration; border formation and incarceration; as well as identity and structural forms of hierarchy.

Restriction: Graduate students only.
CLT&THY 217. Freedom Dreams: Subaltern Forms of Resistance. 4 Units.
Explores how subjugated peoples have creatively and collectively resisted oppression. Explores how individuals and communities envision a more just society, experiment with political strategies, and create meaningful legacies.

Restriction: Graduate students only.

CLT&THY 240. Resistance Spaces. 4 Units.
Examines the relationship between the production of space and the operation of power in cultural studies and critical social theory.

Restriction: Graduate students only.

CLT&THY 241. Ethics, Erotics, and Will: Gendered Black Politics, Sexualized Racisms, and the Humanities. 4 Units.
Introduces doctoral students to an interdisciplinary conversation about black queer sexuality and black heteropatriarchy. Uses disciplinary formations as a tool for understanding knowledge formations about the shifting relations that constitute sexuality, gender, and racial blackness.

Restriction: Graduate students only.

CLT&THY 242. Afro-Pessimism and the Status of the Subject. 4 Units.
Afro-Pessimism theorizes the Black as a being against which all other beings become legible as human subjects. Focuses on either the subject of psychoanalysis or the subject of capital accumulation in their explorations of the antagonism between Blackness.

Restriction: Graduate students only.

CLT&THY 243. Introduction to Performance Studies. 4 Units.
Introduces students to key issues and critical methods within the field of performance studies. These include performance/performativity, liveness, everyday life, auto-ethnography, archive/repertoire, affect and performance, and disidentificatory practices.

Restriction: Graduate students only.

CLT&THY 280. Independent Study. 4 Units.
Limited to students who have not yet received the M.A. degree.

Repeatability: May be repeated for credit unlimited times.

CLT&THY 289. Topics in Culture and Theory. 4 Units.
Seminars on various topics in Culture and Theory.

Repeatability: Unlimited as topics vary.

CLT&THY 290. Research and Prospectus Seminar. 2 Units.
Bi-weekly seminar required for third- and/or fourth-year students. Students make presentations of dissertation prospectus for discussion. All graduate students welcome to attend and participate. Meant especially for students preparing for formal presentation of prospectus.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

CLT&THY 298. Directed Reading. 4-12 Units.
Directed readings on a specific topic agreed upon by students and their instructors. Limited to students who have completed their M.A. degree and are preparing for their qualifying exam.

Prerequisite: Completion of the M.A. degree.

Repeatability: May be repeated for credit unlimited times.

CLT&THY 299. Dissertation Research. 4-12 Units.
Dissertation research in Culture and Theory.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Department of East Asian Languages and Literatures

Michael Fuller, Department Chair
443 Humanities Instructional Building
949-824-2227
Overview
Contemporary East Asian societies are vibrant and complex, and they are heirs to rich cultural traditions that continue to inform the present. The four majors offered by the Department of East Asian Languages and Literatures provide students the opportunity to explore these societies and cultures in all their diversity, and to pursue their study of East Asia across national and regional boundaries. The Department houses both undergraduate and graduate (Ph.D.) programs.

Undergraduate Program
The Department offers four undergraduate majors: the B.A. program in Chinese Studies (with two emphases: Chinese Language and Literature (p. 846) and Chinese Culture and Society (p. 847)); the B.A. program in East Asian Cultures (p. 845); the B.A. program in Japanese Language and Literature (p. 850); and the B.A. program in Korean Literature and Culture (p. 850). In addition, minors are offered in Chinese Language and Literature, Chinese Studies, Japanese Language and Literature, Japanese Studies, and Korean Literature and Culture.

Major in Chinese Studies
The major in Chinese Studies offers two emphases: Chinese Language and Literature, and Chinese Culture and Society. The Language and Literature emphasis enables students to understand the extensive and rich literary, historical, social, and aesthetic achievements of China by studying its language, literature, film, religion, and other cultural accomplishments in depth. The Culture and Society emphasis stresses a multidisciplinary examination of modern Chinese culture and society that includes the perspectives of both the humanities and the social sciences. The major emphasizes the complementarity of these approaches in understanding the complexity of the forces that have shaped contemporary China.

Requirements for the B.A. in Chinese Studies
All students must meet the University Requirements (p. 91).
All students must meet the School Requirements (p. 788).
All students are subject to the Language Other Than English Placement and Progression (p. 789) policies.

Departmental Requirements for the Major in Chinese Studies

Emphasis in Chinese Language and Literature
A. Complete:
   CHINESE 3C Advanced Mandarin Chinese ¹

B. Complete:
   CHINESE 100A-100B-100C Classical Chinese
   and Classical Chinese
   and Classical Chinese

C. Complete:
   E ASIAN 15C Introductory Topics in Chinese Literature
   E ASIAN 190 Junior-Senior Colloquium

D. Select one upper-division course dealing with the literature or culture of another East Asian country.
E. Select five additional courses in Chinese literature, history, art history, linguistics, comparative literature, film and media, religion, gender studies, or philosophy, of which one may be a lower-division East Asian course offered by the Department.

¹ If a student is exempted from CHINESE 3C based on examination or equivalent, a course on a Chinese topic offered by the Department is required.

Emphasis in Chinese Culture and Society
A. Complete one of the following:
   CHINESE 2C Intermediate Mandarin Chinese
   CHINESE 2DC Intermediate Mandarin Chinese - Dialect Background Track
   CHINESE 2MC Intermediate Mandarin Chinese - Mandarin Background Track
   or equivalent.

B. Complete:
   HISTORY 171D-171E Chinese History to 1800
   and Chinese History: 1800-1949

C. Complete:
   E ASIAN 15C Introductory Topics in Chinese Literature
   E ASIAN 190 Junior-Senior Colloquium
D. Select three upper-division courses on China offered by the Department.
E. Select two approved upper-division courses dealing with the literature, religion, culture, history, or society of another East Asian country.
F. Select two approved upper-division courses in the School of Social Sciences dealing with China.
G. Select two additional courses in Chinese language, literature, history, art history, linguistics, comparative literature, film and media, religion, gender studies, or philosophy, of which one may be a lower-division East Asian course offered by the Department. (Courses from the School of Social Sciences may be substituted with departmental approval by petition.)

For a list of approved courses, please consult http://www.humanities.uci.edu/eastasian/chinese/course/acourses2.php

Residence Requirement for the Major: At least five upper-division courses required for the major must be completed successfully at UCI. Students are encouraged, however, to complete up to a year of their language study in approved programs of study abroad.

Major in East Asian Cultures

The curriculum for the major in East Asian Cultures focuses on the regional dynamics of cultural and social transformations in East Asia. Students benefit from a multidisciplinary approach to the study of intra-regional relationships between East Asian countries in order to situate them in their broader global contexts. By integrating the study of East Asia with theoretical issues that shape the study of world culture in general, students gain the dual perspectives derived from examining East Asian cultures on their own terms and from recognizing the affinities these civilizations share, and the conflicts they encounter in their interactions with the rest of the world.

Requirements for the B.A. in East Asian Cultures

All students must meet the University Requirements (p. 91).
All students must meet the School Requirements (p. 788).
All students are subject to the Language Other Than English Placement and Progression (p. 789) policies.

Departmental Requirements for the Major in East Asian Cultures

A. Complete one of the following:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>CHINESE 2C</td>
<td>Intermediate Mandarin Chinese</td>
</tr>
<tr>
<td>CHINESE 2DC</td>
<td>Intermediate Mandarin Chinese - Dialect Background Track</td>
</tr>
<tr>
<td>CHINESE 2MC</td>
<td>Intermediate Mandarin Chinese - Mandarin Background Track</td>
</tr>
<tr>
<td>JAPANSE 2C</td>
<td>Intermediate Japanese</td>
</tr>
<tr>
<td>KOREAN 2C</td>
<td>Intermediate Korean</td>
</tr>
<tr>
<td>KOREAN 2KC</td>
<td>Intermediate Korean for Students with a Previous Background in Korean</td>
</tr>
</tbody>
</table>

B. Select two quarters of:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>E ASIAN 155</td>
<td>Topics in Cultural Studies in East Asia</td>
</tr>
</tbody>
</table>

C. Complete:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>E ASIAN 190</td>
<td>Junior-Senior Colloquium</td>
</tr>
</tbody>
</table>

D. Select one of the following, corresponding to language of specialization:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>E ASIAN 15C</td>
<td>Introductory Topics in Chinese Literature</td>
</tr>
<tr>
<td>E ASIAN 15J</td>
<td>Introductory Topics in Japanese Literature</td>
</tr>
<tr>
<td>E ASIAN 15K</td>
<td>Introductory Topics in Korean Literature</td>
</tr>
</tbody>
</table>

E. Select eight additional upper-division courses in the areas of East Asian literature, culture, history, art history, linguistics, film and media, religion, philosophy, gender studies, or comparative literature, at least three of which must pertain to a country other than the one of language specialization. Up to four of these courses (or more by petition) may be taken outside the Department, with the approval of the undergraduate advisor.

Residence Requirement for the Major: At least five upper-division courses required for the major must be completed successfully at UCI. Students are encouraged, however, to complete up to a year of their language study in approved programs of study abroad.

Major in Japanese Language and Literature

The curriculum for Japanese Language and Literature enables students to understand the extensive and rich literary, historical, social, and aesthetic achievements of Japan by studying its language, literature, film, religion, and other cultural accomplishments in depth.
Requirements for the B.A. in Japanese Language and Literature
All students must meet the University Requirements (p. 91).
All students must meet the School Requirements (p. 788).
All students are subject to the Language Other Than English Placement and Progression (p. 789) policies.

Departmental Requirements for the Major in Japanese Language and Literature

A. Complete:
   JAPANSE 3C Advanced Japanese

B. Complete:
   E ASIAN 15J Introductory Topics in Japanese Literature
   E ASIAN 190 Junior-Senior Colloquium

C. Select one of the following:
   Two upper-division courses dealing with premodern Japanese literature or culture or
   JAPANSE 100A- 100B Classical Japanese
   and Classical Japanese

D. Select one of the following: 1
   JAPANSE 101A Fourth Year Japanese
   JAPANSE 101B Fourth Year Japanese

E. Select one upper-division course dealing with modern Japanese literature and culture
F. Select one upper-division course dealing with the literature or culture of another East Asian country
G. Select five additional courses in Japanese literature, culture, history, art history, linguistics, film and media, religion, philosophy, gender studies, or comparative literature, of which one may be a lower-division East Asian course offered by the Department.

1 If a student is exempted from 101, an upper-division course on a Japanese topic offered by the Department is required. JAPANSE 100A may be selected to fulfill this requirement only if the student has not selected JAPANSE 100A-JAPANSE 100B to satisfy requirement C.

Residence Requirement for the Major: At least five upper-division courses required for the major must be completed successfully at UCI. Students are encouraged, however, to complete up to a year of their language study in approved programs of study abroad.

Major in Korean Literature and Culture
The curriculum for Korean Literature and Culture enables students to understand the extensive and rich literary, historical, social, and aesthetic achievements of Korea by studying its language, literature, film, religion, and other cultural accomplishments in depth.

Requirements for the B.A. in Korean Literature and Culture
All students must meet the University Requirements (p. 91).
All students must meet the School Requirements (p. 788).
All students are subject to the Language Other Than English Placement and Progression (p. 789) policies.

Departmental Requirements for the Major in Korean Literature and Culture

A. Complete:
   KOREAN 3A Advanced Korean

B. Complete:
   E ASIAN 15K Introductory Topics in Korean Literature
   E ASIAN 130 Topics in Korean Society and Culture
   E ASIAN 140 Topics in Korean Literature and Society
   E ASIAN 190 Junior-Senior Colloquium

C. Select four courses in Korean literature, culture, history, art history, linguistics, film and media, religion, philosophy, gender studies, or comparative literature, of which one may be a lower-division East Asian course offered by the Department.
D. Select two upper-division courses dealing with the literature or culture of another East Asian country.
E. One upper-division course dealing with Korea either in Anthropology or History.
F. Select one course from either E ASIAN 155 or any upper-division course in translated literature and culture of foreign languages offered in Comparative Literature, European Languages and Studies, or Spanish and Portuguese, or courses in literature and culture offered by the English or Asian American Studies Departments.

Residence Requirement for the Major: At least five upper-division courses required for the major must be completed successfully at UCI. Students are encouraged, however, to complete up to a year of their language study in approved programs of study abroad.
Additional Information

Planning a Program of Study

The student should plan a coherent program that both fulfills the requirements of the major and covers the student’s areas of interest in allied fields outside East Asian Languages and Literatures.

Students who plan to enroll in a language course in Chinese, Japanese, or Korean will be placed on the basis of a written test and oral interview in the respective language, regardless of their language background or proficiency, unless they have taken previous course work in the same language at UCI. (The number of years of high school-level study is taken into account only as a reference.) The written tests for Japanese and Korean are typically administered through the Testing Office, while the Chinese test is online; the oral interview, by the appropriate faculty, who will evaluate students’ oral/aural abilities in the target language and consider results from the written placement test and any prior exposure to the language to determine their proper placement level. In Chinese and Korean, students in the first-year levels will be placed in either heritage classes (for students who have had exposure to the language in question through family ties) or non-heritage classes (for students with no exposure).

The faculty encourages students who are serious about improving their East Asian language ability in reading, writing, and speaking to take advantage of opportunities to immerse themselves in the relevant language by studying abroad through the University’s Education Abroad Program (UCEAP) or through the International Opportunities Program (IOP). Students can gain substantially from first-hand experience of the culture they have studied academically while still making progress toward their UCI degree. Programs are available for one quarter, one semester, or one year. More information is available from academic counselors or at the Study Abroad Program website (http://www.studyabroad.uci.edu).

Careers for the Majors

Studies in the East Asian programs will give students the preparation needed to pursue a career involving these important Pacific Rim nations. In an era in which the United States is seeking to come to grips with the challenges and opportunities presented by this vital area of the world, the training in language, literature, and culture offered by the departmental majors will serve students well in a variety of endeavors, such as international business, law, government service, journalism, teaching, and other careers involved with public affairs.

Focused undergraduate study in the language and literary and cultural traditions of an East Asian country is also a valuable preparation for those students intent upon pursuing graduate study in any field of East Asian language or culture.

The UCI Career Center provides services to students and alumni including career counseling, information about job opportunities, a career library, and workshops on resume preparation, job search, and interview techniques. See the Career Center (p. 145) section for additional information.

Requirements for the Chinese Language and Literature Minor

A. Three quarters of advanced Chinese language instruction, selected from the following:

<table>
<thead>
<tr>
<th>Course</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>CHINESE 3A</td>
<td>Advanced Mandarin Chinese</td>
</tr>
<tr>
<td>CHINESE 3B</td>
<td>Advanced Mandarin Chinese</td>

<tbody>
<tr>
<td>E ASIAN 55</td>
<td>Introduction to East Asian Cultures (when the course is on a Chinese topic)</td>
</tr>
</tbody>
</table>
C. One upper-division course in Chinese history
D. One upper-division course on China, offered by the School of Social Sciences
E. One upper-division course on China, offered by the School of Humanities
F. Select three upper-division courses selected from the East Asian Languages and Literatures offerings on Chinese topics

A list of approved courses can be viewed on the East Asian Languages and Literatures website (http://www.humanities.uci.edu/eastasian/japanese/course/acourses.php).

Residence Requirement for the Minor: A minimum of four upper-division courses required for the minor must be completed successfully at UCI. By petition, two of the four may be taken through the UC Education Abroad Program, providing course content is approved in advance by the appropriate department chair.

Requirements for the Japanese Language and Literature Minor
A. Three quarters of advanced Japanese language instruction, selected from the following:

<table>
<thead>
<tr>
<th>Course</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>JAPANSE 3A</td>
<td>Advanced Japanese</td>
</tr>
<tr>

<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>E ASIAN 55</td>
<td>Introduction to East Asian Cultures (when the course is on a Japanese topic)</td>
</tr>
</tbody>
</table>

C. One upper-division course in Japanese history
D. One upper-division course on Japan, offered by the School of Social Sciences
E. One upper-division course on Japan, offered by the School of Humanities
F. Select three upper-division courses from the East Asian Languages and Literatures offerings on Japanese topics

A list of approved courses can be viewed on the East Asian Languages and Literatures website (http://www.humanities.uci.edu/eastasian/japanese/course/acourses.php).

Residence Requirement for the Minor: A minimum of four upper-division courses required for the minor must be completed successfully at UCI. By petition, two of the four may be taken through the UC Education Abroad Program, providing course content is approved in advance by the appropriate department chair.

Requirements for the Korean Literature and Culture Minor
A. Complete:

<table>
<thead>
<tr>
<th>Course</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>KOREAN 2C</td>
<td>Intermediate Korean</td>
</tr>
<tr>

<tr>
<td>E ASIAN 130</td>
<td>Topics in Korean Society and Culture</td>
</tr>
<tr>
<td>E ASIAN 140</td>
<td>Topics in Korean Literature and Society</td>
</tr>
</tbody>
</table>

C. Select one course dealing with Korean visual culture (examples: Korean cinema, visual art)
D. Select four upper-division courses selected from the East Asian Languages and Literatures offerings on Korean topics.

**Residence Requirement for the Minor:** A minimum of four upper-division courses required for the minor must be completed successfully at UCI. By petition, two of the four may be taken through the UC Education Abroad Program, providing course content is approved in advance by the appropriate department chair.

### Graduate Program

The Department offers a Ph.D. program in East Asian Languages and Literatures, with concentrations in Chinese, Japanese, and East Asian Cultural Studies. The M.A. may be awarded to Ph.D. students in progress toward the doctoral degree.

The graduate program emphasizes rigorous training in language and textual analysis, with equal attention given to the historical, social, and cultural dimensions of literary study. In addition to more traditional vocabularies of criticism and theory, the curriculum encourages exploration of recent challenges to established conceptual and methodological frameworks. The program builds on the foundation of a faculty whose research interests engage major issues in Chinese, Japanese, and Korean literature and culture, while developing connections with the larger community of scholarship at UCI.

Because the graduate program is designed to prepare students for both college-level teaching and advanced research, each student will be required to serve, under direct faculty supervision, as a teaching assistant in an appropriate undergraduate course offered through the Department. As noted below, one quarter’s worth of this teaching may be counted as part of the required course work toward completion of the degree.

Assuming that a student is enrolled full-time and enters the program with no major deficiencies in background or training, the normative time needed to complete the Ph.D. is seven years from matriculation. The maximum time permitted is eight years. For students admitted with an M.A. or its equivalent from another institution, certain course requirements may be waived upon the approval of a faculty advisory committee, with a consequent reduction in normative time for completion of the Ph.D.

The following graduate emphases are available: Asian American (see the Asian American Studies section); Critical Theory (see the Humanities Special Programs section); Feminist Studies (see the Gender and Sexuality Studies section); Visual Studies (see the Visual Studies section); and Comparative Literature (see below, following the Ph.D. program requirements).

### Master of Arts in East Asian Languages and Literatures

Students are not admitted to an M.A.-only program but may be granted an M.A. in recognition of progress toward the Ph.D., normally after six quarters of course work and submission of two approved seminar papers, which will serve as the M.A. examination.

### Doctor of Philosophy in East Asian Languages and Literatures

**Requirements for Admission**

In addition to meeting the general requirements for admission to graduate study at UCI, specified by the Graduate Division, all students must present the following for review by an admissions committee composed of members of the faculty in East Asian Languages and Literatures: records of prior scholastic performance, including all college transcripts; three letters of recommendation; samples of written work; and aptitude scores from the Graduate Record Examination. Although the Department does not require entering students to have received an undergraduate degree comparable to its own, it recommends as much preparation in an East Asian language as possible. It also welcomes applications from students whose language training may not be as extensive but who have shown promise in the study of related disciplines. The study of appropriate European languages is encouraged as well.

**General Requirements**

Upon admission to the program, the student is assigned a graduate advisor, in consultation with whom an advisory committee consisting of two additional faculty members is constituted. The student and committee plan a program of study consisting of 15 graduate courses.

Before advancement to candidacy (normally after three years of graduate study), the student must have (1) completed required course work as detailed below; (2) prepared one paper of publishable quality; (3) completed language requirements as listed below; (4) prepared five research reports on current scholarly articles to be decided upon in consultation with the faculty advisor; and (5) passed the qualifying examinations on four topics to be selected in consultation with the faculty advisory committee no more than two quarters before the examinations are to be taken. At least one of the topics should be related directly to the student’s projected area of specialization in dissertation research.

Students who complete the qualifying examinations successfully are advanced to candidacy for the Ph.D. The normative time for advancement to candidacy is four years. They then write their doctoral dissertation on a topic developed in consultation with the faculty advisory committee. Some period of study abroad, for enhancement of language proficiency and/or dissertation research, is strongly encouraged.

### Concentration in Chinese Course Requirements

Select three courses from Chinese 201-204.

Select either:

or

CHINESE 213A-213B Studies in Modern Chinese Literature and Studies in Modern Chinese Literature

CHINESE 214 Studies in Chinese Literature and Cultural Theory

and select seven additional courses (of which one may be in the graduate teaching program) as determined upon consultation with faculty advisors. At least three of these additional courses must be taken outside the Department on a relevant topic in literary or cultural theory. Courses taken to fulfill language requirements may not be counted toward the course work requirement.

Language Requirements. Before advancement to candidacy, all students must have completed four years of modern Chinese, two years of classical Chinese, and three years of modern Japanese, and have demonstrated reading proficiency in another appropriate language. Much of this work may, of course, have been completed prior to admission. In addition, the requirement for a second year of classical Chinese may be fulfilled by taking three reading courses in classical literature.

Concentration in Japanese Course Requirements
Select three courses from Japanese 201-205.

Select either:

or

JAPANSE 212A-212B Studies in Traditional Japanese Poetry or Drama and Studies in Traditional Japanese Poetry or Drama

JAPANSE 213A-213B Studies in Modern Japanese Literature and Studies in Modern Japanese Literature

JAPANSE 214 Studies in Japanese Literary and Cultural Theory

and select seven additional courses (of which one may be in the graduate teaching program) as determined upon consultation with faculty advisors. At least three of these additional courses must be taken outside the Department on relevant topics in literary or cultural theory. Courses taken to fulfill language requirements may not be counted toward the course work requirement.

Language Requirements. Before advancement to candidacy, all students must have completed four years of modern Japanese and one year of classical Japanese, and have demonstrated reading proficiency in another appropriate language. In addition, students emphasizing classical Japanese are required to take one year of classical Chinese. Much of this work may, of course, have been completed prior to admission.

Concentration in East Asian Cultural Studies Course Requirements
Select four Theory and Cultural Studies graduate courses
Select four graduate courses in Chinese, Japanese, or Korean

and select seven additional courses (of which one may be in the graduate teaching program) as determined upon consultation with faculty advisors. At least three of these additional courses must be taken outside the Department on relevant topics. Courses taken to fulfill language requirements may not be counted toward the course work requirement.

Other Requirements. Before advancement to candidacy, all students must have completed examinations in four areas as determined upon consultation with faculty advisors. These areas will vary according to the interests of the student; examples might be Colonial and Postcolonial Theories; Modernity and East Asia; Critique of Asian Studies as a field; Gender, Class and East Asia; Visual Culture and Japan; and Theorizing Minority Status in East Asia. All students must have completed four years of Chinese, Japanese, or Korean, or the equivalent. Three years or the equivalent in a second East Asian language is recommended. Much of this work may, of course, have been completed prior to admission.

Graduate Emphasis in Comparative Literature Course Requirements
A student must submit an application for the emphasis to the Graduate Advisor in East Asian Languages and Literatures, and the Department tracks the student’s progress and fulfillment of requirements. Upon graduation, students receive a letter from the Graduate Advisor certifying completion of the emphasis.

Select at least five graduate courses in the Department of Comparative Literature: 1

One of the five courses should be:

COM LIT 200A History of Comparative Literature and Introduction to Methods and Theories of CL

or COM LIT 200B Theories of Translation
or COM LIT 200C
Theories of Globalization, Inter-Nationalism, and Postcolonialism

At least three of the courses should have a Comparative Literature (CL) designation.

One of the courses could be:

<table>
<thead>
<tr>
<th>Course</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>HUMAN 270</td>
<td>Advanced Critical Theory</td>
</tr>
</tbody>
</table>

Three of which may be counted toward the seven electives required for the Ph.D. in East Asian Languages and Literatures.

**Qualifying Examination and Dissertation.** One topic on the Ph.D. Qualifying Examination should be on a Comparative Literature topic and should be prepared with a professor from the Comparative Literature program who will serve as a member of the student's examination committee. The student should be able to demonstrate some expertise in comparative critical methodologies as well as knowledge of a literature and tradition other than those in East Asian. One member of the student's dissertation committee will normally be from the Comparative Literature program.

**Faculty**

Jessica Chen, M.A. California State University, Long Beach, Lecturer of Chinese

Hyunju Choe, M.A. University of Utah, Lecturer of Korean

Chungmoo Choi, Ph.D. Indiana University, Associate Professor of Korean Culture; Religious Studies (modern Korea, postcolonial and colonial discourse, popular culture, anthropology)

Ryuko Flores, M.A. University of California, Los Angeles, Lecturer of Japanese

Edward B. Fowler, Ph.D. University of California, Berkeley, Professor Emeritus of Japanese (modern Japanese literature, cultural studies, film)

James A. Fujii, Ph.D. University of Chicago, Associate Professor Emeritus of Japanese (modern Japanese literature, human-animal relations, cultural studies)

Michael A. Fuller, Ph.D. Yale University, Department Chair and Professor of East Asian Languages and Literature; Chinese; Religious Studies (Chinese poetry and poetics, the cultural and intellectual contexts for poetry, aesthetic theory, linguistic issues in classical Chinese)

Ruohmei Hsieh, M.A. State University of New York at Stony Brook, Academic Coordinator and Lecturer of Chinese

Margherita Long, Ph.D. Princeton University, Associate Professor of Japanese; Comparative Literature (Japanese literature and film; ecocriticism; peace activism; feminist theory; eco-documentary)

Ayako Nagai, Ph.D. University of Illinois at Urbana-Champaign, Lecturer of Japanese

Ying Y. Petersen, Ph.D. University of California, Berkeley, Lecturer of Chinese

Hidemi Riggs, Ph.D. University of California, Los Angeles, Academic Coordinator and Lecturer of Japanese

Bert Scruggs, Ph.D. University of Pennsylvania, Associate Professor of Chinese (Taiwan studies, environmental studies, postcolonial studies)

Eiko Sithi-Amnuai, M.A. University of Sydney, Lecturer of Japanese

Serk Bae Suh, Ph.D. University of California, Los Angeles, Associate Professor of Korean (modern Korean literature)
Chinese Courses

CHINESE 1A. Fundamental Mandarin Chinese. 5 Units.
Natural approach emphasizing four fundamental skills: listening, speaking, reading and writing. Specifically designed for students with no previous experience in any dialect of Chinese. Conducted in Mandarin Chinese using the Pinyin system of Romanization, traditional and simplified Chinese characters.

Prerequisite: Placement into CHINESE 1A is also accepted.

Overlaps with CHINESE S1AB, CHINESE 1MA, CHINESE 1DA.

Restriction: CHINESE 1A and CHINESE 1DA and CHINESE 1MA and CHINESE S1AB may not be taken for full credit.

CHINESE 1B. Fundamental Mandarin Chinese. 5 Units.
Natural approach emphasizing four fundamental skills: listening, speaking, reading and writing. Specifically designed for students with no previous experience in any dialect of Chinese. Conducted in Mandarin Chinese using the Pinyin system of Romanization, traditional and simplified Chinese characters.

Prerequisite: CHINESE 1A. CHINESE 1A with a grade of C or better. Placement into CHINESE 1B is also accepted.

Overlaps with CHINESE S1AB, CHINESE S1BC, CHINESE 1MB, CHINESE 1DB.

Restriction: CHINESE 1B and CHINESE 1DB and CHINESE 1MB and CHINESE S1AB and CHINESE S1BC may not be taken for full credit.

CHINESE 1C. Fundamental Mandarin Chinese. 5 Units.
Natural approach emphasizing four fundamental skills: listening, speaking, reading and writing. Specifically designed for students with no previous experience in any dialect of Chinese. Conducted in Mandarin Chinese using the Pinyin system of Romanization, traditional and simplified Chinese characters.

Prerequisite: CHINESE 1B or CHINESE S1AB. CHINESE 1B with a grade of C or better. CHINESE S1AB with a grade of C or better. Placement into CHINESE 1C is also accepted.

Overlaps with CHINESE 1DC, CHINESE 1MC, CHINESE S1BC.

Restriction: CHINESE 1C and CHINESE 1DC and CHINESE 1MC and CHINESE S1BC may not be taken for full credit.

(VI)

CHINESE 1DA. Fundamentals of Mandarin Chinese - Dialect Background Track. 5 Units.
Natural approach emphasizing four fundamental skills: listening, speaking, reading and writing. Specifically designed for students with previous background in a Chinese dialect other than Mandarin. Conducted in Mandarin Chinese using the Pinyin system of Romanization, traditional and simplified Chinese characters.

Prerequisite: Placement into CHINESE 1DA.

Overlaps with CHINESE 1A, CHINESE S1AB, CHINESE 1MA.

Restriction: CHINESE 1DA and CHINESE 1MA and CHINESE 1A and CHINESE S1AB may not be taken for full credit.

CHINESE 1DB. Fundamentals of Mandarin Chinese - Dialect Background Track. 5 Units.
Natural approach emphasizing four fundamental skills: listening, speaking, reading and writing. Specifically designed for students with previous background in a Chinese dialect other than Mandarin. Conducted in Mandarin Chinese using the Pinyin system of Romanization, traditional and simplified Chinese characters.

Prerequisite: CHINESE 1DA. CHINESE 1DA with a grade of C or better. Placement into CHINESE 1DB is also accepted.

Overlaps with CHINESE 1B, CHINESE S1AB, CHINESE S1BC, CHINESE 1MB.

Restriction: CHINESE 1DB and CHINESE 1MB and CHINESE 1B and CHINESE S1AB and CHINESE S1BC may not be taken for full credit.
CHINESE 1DC. Fundamentals of Mandarin Chinese - Dialect Background Track. 5 Units.
Natural approach emphasizing four fundamental skills: listening, speaking, reading and writing. Specifically designed for students with previous background in a Chinese dialect other than Mandarin. Conducted in Mandarin Chinese using the Pinyin system of Romanization, traditional and simplified Chinese characters.

Prerequisite: CHINESE 1DB. CHINESE 1DB with a grade of C or better. Placement into CHINESE 1DC is also accepted.

Overlaps with CHINESE S1BC, CHINESE 1MC, CHINESE 1C.

Restriction: CHINESE 1DC and CHINESE 1MC and CHINESE 1C and CHINESE S1BC may not be taken for full credit.

CHINESE 1MA. Fundamentals of Mandarin Chinese - Mandarin Background Track. 5 Units.
Natural approach emphasizing four fundamental skills: listening, speaking, reading and writing. Specifically designed for students with previous background in Mandarin Chinese. Conducted in Mandarin Chinese using the Pinyin system of Romanization, traditional and simplified Chinese characters.

Prerequisite: Placement into CHINESE 1MA.

Overlaps with CHINESE 1DA, CHINESE 1A, CHINESE S1AB.

Restriction: CHINESE 1MA and CHINESE 1DA and CHINESE 1A and CHINESE S1AB may not be taken for full credit.

CHINESE 1MB. Fundamentals of Mandarin Chinese - Mandarin Background Track. 5 Units.
Natural approach emphasizing four fundamental skills: listening, speaking, reading and writing. Specifically designed for students with previous background in Mandarin Chinese. Conducted in Mandarin Chinese using the Pinyin system of Romanization, traditional and simplified Chinese characters.

Prerequisite: CHINESE 1MA. CHINESE 1MA with a grade of C or better. Placement into CHINESE 1MB is also accepted.

Overlaps with CHINESE 1B, CHINESE 1DB, CHINESE S1AB, CHINESE S1BC.

Restriction: CHINESE 1MB and CHINESE 1DB and CHINESE 1B and CHINESE S1AB and CHINESE S1BC may not be taken for full credit.

CHINESE 1MC. Fundamentals of Mandarin Chinese - Mandarin Background Track. 5 Units.
Natural approach emphasizing four fundamental skills: listening, speaking, reading and writing. Specifically designed for students with previous background in Mandarin Chinese. Conducted in Mandarin Chinese using the Pinyin system of Romanization, traditional and simplified Chinese characters.

Prerequisite: CHINESE 1MB. CHINESE 1MB with a grade of C or better. Placement into CHINESE 1MC is also accepted.

Overlaps with CHINESE 1C, CHINESE 1DC, CHINESE S1BC.

Restriction: CHINESE 1MC and CHINESE 1DC and CHINESE 1C and CHINESE S1BC may not be taken for full credit.

CHINESE S1AB. Fundamentals of Mandarin Chinese. 7.5 Units.
First half of first-year Mandarin Chinese in an intensive setting using natural approach with emphasis on listening, speaking, reading, and writing.

Prerequisite: Placement into CHINESE 1A or CHINESE 1B or CHINESE 1MA or CHINESE 1MB or CHINESE 1DA or CHINESE 1DB.

Overlaps with CHINESE 1A, CHINESE 1B, CHINESE 1MA, CHINESE 1DA, CHINESE 1DB, CHINESE 1MB.

Restriction: CHINESE S1AB and CHINESE 1A and CHINESE 1B and CHINESE 1DA and CHINESE 1DB and CHINESE 1MA and CHINESE 1MB may not be taken for full credit.
CHINESE S1BC. Fundamentals of Mandarin Chinese. 7.5 Units.
Second half of first-year Mandarin Chinese in an intensive setting using natural approach with emphasis on listening, speaking, reading, and writing.

Prerequisite: CHINESE S1AB or CHINESE 1B or CHINESE 1DB or CHINESE 1MB, CHINESE S1AB with a grade of C or better. CHINESE 1B with a grade of C or better. CHINESE 1DB with a grade of C or better. CHINESE 1MB with a grade of C or better. Placement into CHINESE 1C or CHINESE 1DC or CHINESE 1MC is also accepted.

Overlaps with CHINESE 1C, CHINESE 1B, CHINESE 1DB, CHINESE 1DC, CHINESE 1MC.

Restriction: CHINESE S1BC, CHINESE 1B, CHINESE 1C, CHINESE 1DB or CHINESE 1DC, CHINESE 1MB or CHINESE 1MC and may not be taken for full credit.

(VI)

CHINESE 2A. Intermediate Mandarin Chinese. 5 Units.
Both authentic and pedagogically-prepared materials are used to further develop students’ ability to communicate in culturally, socially, and linguistically appropriate manners. Taught in Chinese using Pinyin romanization system and both traditional and simplified forms of Chinese.

Prerequisite: CHINESE 1C or CHINESE S1BC. CHINESE 1C with a grade of C or better. CHINESE S1BC with a grade of C or better. Placement into CHINESE 2A is also accepted.

Overlaps with CHINESE 2DA, CHINESE 2MA.

Restriction: CHINESE 2A and CHINESE 2DA and CHINESE 2MA may not be taken for full credit.

(VIII)

CHINESE 2B. Intermediate Mandarin Chinese. 5 Units.
Both authentic and pedagogically-prepared materials are used to further develop students’ ability to communicate in culturally, socially, and linguistically appropriate manners. Taught in Chinese using Pinyin romanization system and both traditional and simplified forms of Chinese.

Prerequisite: CHINESE 2A. CHINESE 2A with a grade of C or better. Placement into CHINESE 2B is also accepted.

Overlaps with CHINESE 2DB, CHINESE 2MB.

Restriction: CHINESE 2B and CHINESE 2DB and CHINESE 2MB may not be taken for full credit.

(VIII)

CHINESE 2C. Intermediate Mandarin Chinese. 5 Units.
Both authentic and pedagogically-prepared materials are used to further develop students’ ability to communicate in culturally, socially, and linguistically appropriate manners. Taught in Chinese using Pinyin romanization system and both traditional and simplified forms of Chinese.

Prerequisite: CHINESE 2B. CHINESE 2B with a grade of C or better. Placement into CHINESE 2C is also accepted.

Overlaps with CHINESE 2DC, CHINESE 2MC.

Restriction: CHINESE 2C and CHINESE 2DC and CHINESE 2MC may not be taken for full credit.

(VIII)

CHINESE 2DA. Intermediate Mandarin Chinese - Dialect Background Track. 5 Units.
Authentic and pedagogically prepared materials used to further develop communication in culturally, socially, and linguistically appropriate manners for students with experience in a dialect other than Mandarin. Conducted in Mandarin using the Pinyin Romanization system, traditional and simplified Chinese characters.

Prerequisite: CHINESE 1DC or CHINESE S1BC. CHINESE 1DC with a grade of C or better. CHINESE S1BC with a grade of C or better. Placement into CHINESE 2DA is also accepted.

Overlaps with CHINESE 2A, CHINESE 2MA.

Restriction: CHINESE 2DA and CHINESE 2MA and CHINESE 2A may not be taken for full credit.
CHINESE 2DB. Intermediate Mandarin Chinese - Dialect Background Track. 5 Units.
Authentic and pedagogically prepared materials used to further develop communication in culturally, socially, and linguistically appropriate manners for students with experience in a dialect other than Mandarin. Conducted in Mandarin using the Pinyin Romanization system, traditional and simplified Chinese characters.

Prerequisite: CHINESE 2DA. CHINESE 2DA with a grade of C or better. Placement into CHINESE 2DB is also accepted.

Overlaps with CHINESE 2B, CHINESE 2MB.

Restriction: CHINESE 2DB and CHINESE 2MB and CHINESE 2B may not be taken for full credit.

(VIII)

CHINESE 2DC. Intermediate Mandarin Chinese - Dialect Background Track. 5 Units.
Authentic and pedagogically prepared materials used to further develop communication in culturally, socially, and linguistically appropriate manners for students with experience in a dialect other than Mandarin. Conducted in Mandarin using the Pinyin Romanization system, traditional and simplified Chinese characters.

Prerequisite: CHINESE 2DB. CHINESE 2DB with a grade of C or better. Placement into CHINESE 2DC is also accepted.

Overlaps with CHINESE 2MC, CHINESE 2C.

Restriction: CHINESE 2DC and CHINESE 2MC and CHINESE 2C may not be taken for full credit.

(VIII)

CHINESE 2MA. Intermediate Mandarin Chinese - Mandarin Background Track. 5 Units.
Authentic and pedagogically prepared materials are used to further develop communication in culturally, socially, and linguistically appropriate manners for students with initial experience in Mandarin Chinese. Conducted in Mandarin using the Pinyin Romanization system, traditional and simplified Chinese characters.

Prerequisite: CHINESE 1MC or CHINESE S1BC. CHINESE 1MC with a grade of C or better. CHINESE S1BC with a grade of C or better. Placement into CHINESE 2MA is also accepted.

Overlaps with CHINESE 2A, CHINESE 2DA.

Restriction: CHINESE 2MA and CHINESE 2DA and CHINESE 2A may not be taken for full credit.

(VIII)

CHINESE 2MB. Intermediate Mandarin Chinese - Mandarin Background Track. 5 Units.
Authentic and pedagogically prepared materials are used to further develop communication in culturally, socially, and linguistically appropriate manners for students with initial experience in Mandarin Chinese. Conducted in Mandarin using the Pinyin Romanization system, traditional and simplified Chinese characters.

Prerequisite: CHINESE 2MA. CHINESE 2MA with a grade of C or better. Placement into CHINESE 2MB is also accepted.

Overlaps with CHINESE 2B, CHINESE 2DB.

Restriction: CHINESE 2MB and CHINESE 2DB and CHINESE 2B may not be taken for full credit.

(VIII)

CHINESE 2MC. Intermediate Mandarin Chinese - Mandarin Background Track. 5 Units.
Authentic and pedagogically prepared materials are used to further develop communication in culturally, socially, and linguistically appropriate manners for students with initial experience in Mandarin Chinese. Conducted in Mandarin using the Pinyin Romanization system, traditional and simplified Chinese characters.

Prerequisite: CHINESE 2MB. CHINESE 2MB with a grade of C or better. Placement into CHINESE 2MC is also accepted.

Overlaps with CHINESE 2C, CHINESE 2DC.

Restriction: CHINESE 2MC and CHINESE 2DC and CHINESE 2C may not be taken for full credit.

(VIII)
CHINESE 3A. Advanced Mandarin Chinese. 4 Units.
A continuation of CHINESE 2A-CHINESE 2B-CHINESE 2C emphasizing conceptualization, self-expression and academic skills in Chinese. Authentic texts from modern Chinese prose and newspapers are used. Taught in Mandarin Chinese using both traditional and simplified forms of Chinese characters.
Prerequisite: CHINESE 2C or CHINESE 2DC or CHINESE 2MC. CHINESE 2C with a grade of C or better. CHINESE 2DC with a grade of C or better. CHINESE 2MC with a grade of C or better. Placement into CHINESE 3A is also accepted.

(VIII)

CHINESE 3B. Advanced Mandarin Chinese. 4 Units.
A continuation of CHINESE 2A-CHINESE 2B-CHINESE 2C emphasizing conceptualization, self-expression, and academic skills in Chinese. Authentic texts from modern Chinese prose and newspapers are used. Taught in Mandarin Chinese using both traditional and simplified forms of Chinese characters.
Prerequisite: CHINESE 3A. CHINESE 3A with a grade of C or better

(VIII)

CHINESE 3C. Advanced Mandarin Chinese. 4 Units.
A continuation of CHINESE 2A-CHINESE 2B-CHINESE 2C emphasizing conceptualization, self-expression, and academic skills in Chinese. Authentic texts from modern Chinese prose and newspapers are used. Taught in Mandarin Chinese using both traditional and simplified forms of Chinese characters.
Prerequisite: CHINESE 3B. CHINESE 3B with a grade of C or better

(VIII)

CHINESE 10. Peer Tutoring Program. 1 Workload Unit.
Tutoring Program in which advanced Chinese students provide assistance to students at a lower level. One hour of tutoring per week.
Grading Option: Workload Credit P/NP Only.
Repeatability: May be taken for credit 4 times.

CHINESE 100A. Classical Chinese. 4 Units.
Introduction to classical Chinese grammar and vocabulary with emphasis on reading basic texts.
Prerequisite: CHINESE 3C or JAPANESE 3C or KOREAN 3C

CHINESE 100B. Classical Chinese. 4 Units.
Introduction to classical Chinese grammar and vocabulary with emphasis on reading basic texts.
Prerequisite: CHINESE 3C or JAPANESE 3C or KOREAN 3C

CHINESE 100C. Classical Chinese. 4 Units.
Introduction to classical Chinese grammar and vocabulary with emphasis on reading basic texts.
Prerequisite: CHINESE 3C or JAPANESE 3C or KOREAN 3C

CHINESE 101A. Fourth-Year Mandarin Chinese. 4 Units.
Continued emphasis on comprehension, grammar, and proficiency in reading, composition, and conversation through intensive study and analysis of specific literary texts.
Prerequisite: CHINESE 3C

CHINESE 101B. Fourth-Year Mandarin Chinese. 4 Units.
Continued emphasis on comprehension, grammar, and proficiency in reading, composition, and conversation through intensive study and analysis of specific literary texts.
Prerequisite: CHINESE 3C

CHINESE 101C. Fourth-Year Mandarin Chinese. 4 Units.
Continued emphasis on comprehension, grammar, and proficiency in reading, composition, and conversation through intensive study and analysis of specific literary texts.
Prerequisite: CHINESE 3C
CHINESE 115. Chinese Literature: Advanced Texts. 4 Units.
Designed for students with near-fluency in reading Chinese. Readings may include both literary and philosophical work by important writers, but the emphasis is on literary texts and writings that interpret those texts.
Prerequisite: CHINESE 101A or CHINESE 101B or CHINESE 101C
Repeatability: Unlimited as topics vary.

CHINESE 199. Independent Study. 1-4 Units.
Investigation of special topics through directed reading in Chinese. Paper required.
Repeatability: May be taken for credit for 12 units.

CHINESE 201. Readings in Traditional Chinese Narrative and Prose. 4 Units.
Close reading of selected premodern prose texts such as historical narratives, novels, short stories, and essays.
Prerequisite: CHINESE 101C
Repeatability: Unlimited as topics vary.

CHINESE 202. Readings in Traditional Chinese Poetry. 4 Units.
Close readings of selected premodern poetic texts.
Prerequisite: CHINESE 100C
Repeatability: Unlimited as topics vary.

CHINESE 203. Readings in Modern Chinese Literature. 4 Units.
Close readings of selected modern literary texts.
Prerequisite: CHINESE 101C
Repeatability: Unlimited as topics vary.

CHINESE 204. Readings in Chinese Literary and Cultural Theory. 4 Units.
Close readings of selected texts in premodern criticism and theory.
Prerequisite: CHINESE 100C
Repeatability: Unlimited as topics vary.

CHINESE 211A. Studies in Traditional Chinese Narrative and Prose. 4 Units.
Two-quarter seminar in traditional Chinese narrative and prose, with topics varying from year to year.
Prerequisite: CHINESE 100C
Repeatability: Unlimited as topics vary.

CHINESE 211B. Studies in Traditional Chinese Narrative and Prose. 4 Units.
Two-quarter seminar in traditional Chinese narrative and prose, with topics varying from year to year.
Prerequisite: CHINESE 211A
Repeatability: Unlimited as topics vary.

CHINESE 212A. Studies in Traditional Chinese Poetry. 4 Units.
Two-quarter seminar in traditional Chinese poetry, with topics varying from year to year.
Prerequisite: CHINESE 100C
Repeatability: Unlimited as topics vary.

CHINESE 212B. Studies in Traditional Chinese Poetry. 4 Units.
Two-quarter seminar in traditional Chinese poetry, with topics varying from year to year.
Prerequisite: CHINESE 212A
Repeatability: Unlimited as topics vary.
CHINESE 213A. Studies in Modern Chinese Literature. 4 Units.
Two-quarter seminar in modern Chinese literature, with topics varying from year to year. Research paper required.
Prerequisite: CHINESE 100C
Repeatability: Unlimited as topics vary.

CHINESE 213B. Studies in Modern Chinese Literature. 4 Units.
Two-quarter seminar in modern Chinese literature, with topics varying from year to year. Research paper required.
Prerequisite: CHINESE 213A
Repeatability: Unlimited as topics vary.

CHINESE 214. Studies in Chinese Literature and Cultural Theory. 4 Units.
Seminar in Chinese literature and cultural theory, with topics varying from year to year. Research paper required.
Prerequisite: CHINESE 100C or CHINESE 101C
Repeatability: Unlimited as topics vary.

CHINESE 230. Topics in Chinese Literature and Culture. 4 Units.
Seminar in Chinese literature and culture, with topics varying from year to year. Research paper required.
Prerequisite: CHINESE 100C or CHINESE 101A
Repeatability: Unlimited as topics vary.

CHINESE 290. Independent Study. 4 Units.
Directed research on topic determined in consultation with faculty member. A term paper or project is required.
Repeatability: May be repeated for credit unlimited times.

CHINESE 299. Dissertation Research. 4-12 Units.
Dissertation research with Chinese faculty.
Prerequisite: Advancement to Ph.D. candidacy.
Grading Option: Satisfactory/unsatisfactory only.
Repeatability: May be repeated for credit unlimited times.

East Asian Languages and Lit Courses

E ASIAN 1A. Introduction to Classical Chinese Literature. 4 Units.
Introduces students to major genres and themes in the Classical Chinese literary tradition from the early Zhou Dynasty (1200 BCE) to the end of the Song Dynasty (1300 CE). Course is taught in English.
(IV, VIII)

Introduces students to the three main philosophical traditions of China from the Zhou Dynasty (1200 BCE) to the end of the Song Dynasty (1300 CE). Taught in English.
(IV and VIII).

E ASIAN 10. Introductory Topics in Chinese Literature and Society. 4 Units.
Introductory studies in Chinese texts in their social and cultural context(s). Conducted in English.
Repeatability: May be taken for credit 3 times as topics vary.

E ASIAN 15C. Introductory Topics in Chinese Literature. 4 Units.
Introduces students to major themes in Chinese literature and culture through the close reading, discussion, and analysis of selected texts in English translation.
Repeatability: Unlimited as topics vary.
E ASIAN 15J. Introductory Topics in Japanese Literature. 4 Units.
Introduces students to major themes in Japanese literature and culture through the close reading, discussion, and analysis of selected texts in English translation.

Repeatability: Unlimited as topics vary.

E ASIAN 15K. Introductory Topics in Korean Literature. 4 Units.
Introduces students to major themes in Korean literature and culture through the close reading, discussion, and analysis of selected texts in English translation.

Repeatability: Unlimited as topics vary.

E ASIAN 20. Asian Religions. 4 Units.
An introduction to Asian religions (Hinduism, Buddhism, Confucianism, Taoism, Shamanism) including both elite doctrinal aspects and forms of more popular religiosity.

Repeatability: May be taken for credit 3 times as topics vary.

E ASIAN 25. Introductory Topics in East Asian Philosophy. 4 Units.
Selected introductory topics in the philosophies of East Asia, e.g., Yoga, Buddhism, Vedanta, Confucianism, Taoism, and Shinto.

Repeatability: May be taken for credit 3 times as topics vary.

E ASIAN 40. Topics in East Asian Popular Culture. 4 Units.
Selected topics in the popular cultural traditions of East Asia designed to introduce students both to problems in situating culture in a specific time and place and to contemporary theories of popular culture and their application to East Asian contexts.

Repeatability: Unlimited as topics vary.

E ASIAN 55. Introduction to East Asian Cultures. 4 Units.
Interdisciplinary courses organized each year around a broad theme designed to introduce students to the cultures of East Asia. Topical organization of courses addresses issues that have been of importance historically and are reshaping East Asia today.

Repeatability: May be taken for credit 3 times as topics vary.

E ASIAN 110. Topics in Chinese Literature and Society. 4 Units.
Studies in Chinese texts in their social and cultural contexts(s). Conducted in English.

Repeatability: May be taken for credit 3 times as topics vary.

E ASIAN 116. Topics in East Asian Religions. 4 Units.
Selected topics in the religions of East Asia, e.g., Buddhism, Daoism, Shintō, Christianity, popular religions.

Repeatability: May be taken for credit 3 times as topics vary.

E ASIAN 117. Topics in East Asian Philosophy. 4 Units.
Selected topics in the philosophies of East Asia, e.g., Yoga, Buddhism, Vedanta, Confucianism, Taoism, and Shinto.

Repeatability: Unlimited as topics vary.

E ASIAN 120. Topics in Japanese Literature and Society. 4 Units.
Studies in Japanese texts in their social and cultural contexts(s). Conducted in English.

Repeatability: May be taken for credit 3 times as topics vary.

E ASIAN 125. Topics in East Asian Applied Linguistics. 4 Units.
In-depth examination of selected topics in applied linguistics, with a particular emphasis on language acquisition and language pedagogy.

Repeatability: May be taken for credit 3 times as topics vary.

Concurrent with E ASIAN 225.
E ASIAN 126. Topics in East Asian Linguistics. 4 Units.
In-depth examination of selected topics in the linguistics of East Asian languages, including Chinese, Japanese, Korean, and Vietnamese.
Repeatability: May be taken for credit 3 times as topics vary.

E ASIAN 130. Topics in Korean Society and Culture. 4 Units.
Studies of the social and cultural forces that affect the lives of the Koreans, including those in the United States. Considers traditional values and contemporary issues within a historical framework.
Repeatability: May be taken for credit 3 times as topics vary.

E ASIAN 140. Topics in Korean Literature and Society. 4 Units.
Studies in Korean texts in their social and cultural context(s). Conducted in English.
Repeatability: May be taken for credit 3 times as topics vary.

E ASIAN 150. Topics in East Asian Literature in Translation. 4 Units.
East Asian literary works in translation. Taught in English.
Repeatability: Unlimited as topics vary.

E ASIAN 155. Topics in Cultural Studies in East Asia. 4 Units.
Interdisciplinary and theoretical introduction to issues in cultural studies that are pertinent to the study of East Asia. All readings in English.
Repeatability: Unlimited as topics vary.

E ASIAN 160. Topics in East Asian Cinema. 4 Units.
Study of East Asian cinema from historical, theoretical, and comparative perspectives. Taught in English.
Repeatability: Unlimited as topics vary.

E ASIAN 170. Topics in Gender in East Asia . 4 Units.
Explores the construction of gender in East Asian cultures and literatures. Pays close attention to the specificity of historical, cultural, and literary contexts of East Asia as it investigates various theoretical and critical perspectives on gender and sexuality.
Repeatability: Unlimited as topics vary.

E ASIAN 190. Junior-Senior Colloquium. 4 Units.
Specialized courses dealing with primary sources; required reports and papers. Each colloquium reflects the instructor's intellectual interest and is conducted as a discussion group. Limited to 15 students.
Repeatability: May be taken for credit 3 times as topics vary.
Restriction: Upper-division students only. East Asian Cultures Majors only. Chinese Studies Majors only. Japanese Language Literature Majors only. Korean Literature and Culture Majors only.

E ASIAN 192W. Junior-Senior Seminar. 4 Units.
Analysis of a literary or cultural topic or problem through research and writing of two short and one long original research paper for a total of 4,000 words minimum. Seminar follows E ASIAN 190; related to the colloquium's subject.
Prerequisite: E ASIAN 190. Satisfactory completion of the Lower-Division Writing requirement.
Repeatability: May be taken for credit 3 times as topics vary.

E ASIAN 198. Directed Group Study. 1-4 Units.
Directed group study on special topics.
Repeatability: May be repeated for credit unlimited times.

E ASIAN 199. Independent Study. 1-4 Units.
Investigation of special topics through directed reading in translation. Paper required.
Repeatability: May be taken for credit for 12 units.

E ASIAN 216. Topics in East Asian Religions . 4 Units.
Selected topics in the religions of East Asia, e.g., Buddhism, Daoism, Shintō, Islam, shamanism.
Repeatability: May be taken for credit 3 times as topics vary.
E ASIAN 220. Topics in East Asian Cultural Studies. 4 Units.
Seminar, with topics varying from year to year. Research paper required.
Repeatability: Unlimited as topics vary.
Restriction: Graduate students only.

E ASIAN 225. Topics in East Asian Applied Linguistics. 4 Units.
In-depth examination of selected topics in applied linguistics, with a particular emphasis on language acquisition and language pedagogy.
Repeatability: May be taken for credit 3 times as topics vary.
Concurrent with E ASIAN 125.

E ASIAN 260. Topics in East Asian Cinema. 4 Units.
An examination of the possibilities of East Asian cinematic narrative. Possible topics: cinematic history; cinema in popular culture; comparisons with literary texts; major auteurs. Emphasis on technical as well as on thematic aspects. Includes readings in film theory.
Prerequisite: E ASIAN 160
Repeatability: Unlimited as topics vary.

E ASIAN 290. Independent Study. 2-4 Units.
Directed research on topic determined in consultation with faculty member. A term paper or project is required.
Repeatability: May be repeated for credit unlimited times.

E ASIAN 299. Dissertation Research. 4-12 Units.
Dissertation research for students who are advanced to doctoral candidacy.
Grading Option: Satisfactory/unsatisfactory only.
Repeatability: May be repeated for credit unlimited times.

E ASIAN 399. University Teaching. 4 Units.
Limited to Teaching Assistants.
Grading Option: Satisfactory/unsatisfactory only.
Repeatability: May be repeated for credit unlimited times.
Restriction: Graduate students only.

Japanese Courses
JAPANSE 1A. Fundamental Japanese. 5 Units.
Students develop listening, speaking, reading, and writing abilities in Japanese for meaningful communication. Content deals with daily life, society, and culture in Japan. Approximately 180 kanji (Chinese characters) are introduced in addition to the hiragana and katakana orthography.
Prerequisite: Placement into JAPANSE 1A is accepted.
Overlaps with JAPANSE S1AB.
Restriction: JAPANSE 1A and JAPANSE S1AB may not be taken for full credit.

JAPANSE 1B. Fundamental Japanese. 5 Units.
Students develop listening, speaking, reading, and writing abilities in Japanese for meaningful communication. Content deals with daily life, society, and culture in Japan. Approximately 180 kanji (Chinese characters) are introduced in addition to the hiragana and katakana orthography.
Prerequisite: JAPANSE 1A or JAPANSE S1AB. JAPANSE 1A with a grade of C or better. JAPANSE S1AB with a grade of C or better. Placement into JAPANSE 1B is also accepted.
Overlaps with JAPANSE S1AB, JAPANSE S1BC.
Restriction: JAPANSE 1B and JAPANSE S1AB and JAPANSE S1BC may not be taken for full credit.
JAPANSE 1C. Fundamental Japanese. 5 Units.
Students develop listening, speaking, reading, and writing abilities in Japanese for meaningful communication. Content deals with daily life, society, and culture in Japan. Approximately 180 kanji (Chinese characters) are introduced in addition to the hiragana and katakana orthography.

Prerequisite: JAPANSE 1B or JAPANSE S1AB. JAPANSE 1B with a grade of C or better. JAPANSE S1AB with a grade of C or better. Placement into JAPANSE 1C is also accepted.

Overlaps with JAPANSE S1BC.

Restriction: JAPANSE 1C and JAPANSE S1BC may not be taken for full credit.

(VI)

JAPANSE S1AB. Fundamentals of Japanese. 7.5 Units.
First half of first-year Japanese in an intensified form.

Prerequisite: Placement into JAPANSE 1A.

Overlaps with JAPANSE 1A, JAPANSE 1B.

Restriction: JAPANSE S1AB and JAPANSE 1A and JAPANSE 1B may not be taken for full credit.

JAPANSE S1BC. Fundamentals of Japanese. 7.5 Units.
Second half of first-year Japanese in an intensified form.

Prerequisite: JAPANSE S1AB or JAPANSE 1B. JAPANSE S1AB with a grade of C or better. JAPANSE 1B with a grade of C or better. Placement into JAPANSE 1C is also accepted.

Overlaps with JAPANSE 1C, JAPANSE 1B.

Restriction: JAPANSE S1BC and JAPANSE 1B and JAPANSE 1C may not be taken for full credit.

(VI)

JAPANSE 2A. Intermediate Japanese. 5 Units.
Japanese listening, speaking, reading, and writing abilities developed for meaningful communication. Content deals with daily life, society, and culture, including social issues in Japan. Approximately 180 kanji (Chinese characters) are introduced in addition to the 180 characters learned in 1A-B-C.

Prerequisite: JAPANSE 1C or JAPANSE S1BC. JAPANSE 1C with a grade of C or better. JAPANSE S1BC with a grade of C or better. Placement into JAPANSE 2A is also accepted.

Overlaps with JAPANSE S2AB.

Restriction: JAPANSE 2A and JAPANSE S2AB may not be taken for full credit.

(VIII)

JAPANSE 2B. Intermediate Japanese. 5 Units.
Japanese listening, speaking, reading, and writing abilities developed for meaningful communication. Content deals with daily life, society, and culture, including social issues in Japan. Approximately 180 kanji (Chinese characters) are introduced in addition to the 180 characters learned in 1A-B-C.

Prerequisite: JAPANSE 2A. JAPANSE 2A with a grade of C or better. Placement into JAPANSE 2B is also accepted.

Overlaps with JAPANSE S2AB.

Restriction: JAPANSE 2B and JAPANSE S2AB and JAPANSE S2BC may not be taken for full credit.

(VIII)
JAPANSE 2C. Intermediate Japanese. 5 Units.
Japanese listening, speaking, reading, and writing abilities developed for meaningful communication. Content deals with daily life, society, and culture, including social issues in Japan. Approximately 180 kanji (Chinese characters) are introduced in addition to the 180 characters learned in 1A-B-C.

Prerequisite: JAPANSE 2B or JAPANSE S2AB. JAPANSE 2B with a grade of C or better. JAPANSE S2AB with a grade of C or better. Placement into JAPANSE 2C is also accepted.

Overlaps with JAPANSE S2BC.

Restriction: JAPANSE 2C and JAPANSE S2BC may not be taken for full credit.

(VIII)

JAPANSE S2AB. Intermediate Japanese. 7.5 Units.
First half of second-year Japanese in an intensified form.

Prerequisite: JAPANSE 1C or JAPANSE S1BC. JAPANSE 1C with a grade of C or better. JAPANSE S1BC with a grade of C or better. Placement into JAPANSE 2A is also accepted.

Overlaps with JAPANSE 2A, JAPANSE 2B.

Restriction: JAPANSE S2AB and JAPANSE 2A and JAPANSE 2B may not be taken for full credit.

(VIII)

JAPANSE S2BC. Intermediate Japanese. 7.5 Units.
Second half of second-year Japanese in an intensified form.

Prerequisite: JAPANSE S2AB or JAPANSE 2B. JAPANSE S2AB with a grade of C or better. JAPANSE 2B with a grade of C or better. Placement into JAPANSE 2C is also accepted.

Overlaps with JAPANSE 2C, JAPANSE 2B.

Restriction: JAPANSE S2BC and JAPANSE 2B and JAPANSE 2C may not be taken for full credit.

(VIII)

JAPANSE 3A. Advanced Japanese. 4 Units.
Students are taught to conceptualize in Japanese as they learn to understand, read, write, and speak. Authentic Japanese texts are used. Approximately 360 kanji (Chinese characters) in addition to the 270 characters learned in 1A-B-C and 2A-B-C are introduced.

Prerequisite: JAPANSE 2C or JAPANSE S2BC or placement into JAPANSE 3A. JAPANSE 2C with a grade of C or better. JAPANSE S2BC with a grade of C or better.

(VIII)

JAPANSE 3B. Advanced Japanese. 4 Units.
Students are taught to conceptualize in Japanese as they learn to understand, read, write, and speak. Authentic Japanese texts are used. Approximately 360 kanji (Chinese characters) in addition to the 270 characters learned in 1A-B-C and 2A-B-C are introduced.

Prerequisite: JAPANSE 3A. JAPANSE 3A with a grade of C or better. Placement into JAPANSE 3B is also accepted.

(VIII)

JAPANSE 3C. Advanced Japanese. 4 Units.
Students are taught to conceptualize in Japanese as they learn to understand, read, write, and speak. Authentic Japanese texts are used. Approximately 360 kanji (Chinese characters) in addition to the 270 characters learned in first and second year are introduced.

Prerequisite: JAPANSE 3B. JAPANSE 3B with a grade of C or better. Placement into JAPANSE 3C is also accepted.

Restriction: Japanese Language Literature Majors have first consideration for enrollment.

(VIII)

JAPANSE 100A. Classical Japanese. 4 Units.
Introduction to classical Japanese grammar and vocabulary with emphasis on reading and analysis of basic texts.

Prerequisite: JAPANSE 3C. JAPANSE 3C with a grade of C or better
JAPANESE 100B. Classical Japanese. 4 Units.
Introduction to classical Japanese grammar and vocabulary with emphasis on reading and analysis of basic texts.
Prerequisite: JAPANSE 100A. JAPANSE 100A with a grade of C or better

JAPANESE 101A. Fourth Year Japanese. 4 Units.
Continued emphasis on comprehension, grammar, and proficiency in reading, composition, and conversation through intensive study and analysis of a variety of texts.
Prerequisite: JAPANSE 3C

JAPANESE 101B. Fourth Year Japanese. 4 Units.
Continued emphasis on comprehension, grammar, and proficiency in reading, composition, and conversation through intensive study and analysis of a variety of texts.
Prerequisite: JAPANSE 3C

JAPANESE 115. Japanese Literature: Advanced Texts. 4 Units.
Designed for students with near-fluency in reading Japanese. Texts include both fiction and nonfiction by important writers, and may be supplemented and contextualized where needed by literary criticism and cultural-studies texts in English.
Prerequisite: JAPANSE 101A or JAPANSE 101B or JAPANSE 101C
Repeatability: Unlimited as topics vary.

JAPANESE 180. Topics in Japanese Literature. 4 Units.
Special topics through directed reading in Japanese. Paper required.
Prerequisite: JAPANSE 3C. JAPANSE 3C with a grade of C or better
Repeatability: May be taken for credit 3 times as topics vary.

JAPANESE 199. Independent Study. 1-4 Units.
Investigation of special topics through directed reading in Japanese. Paper required.
Repeatability: May be taken for credit for 12 units.

JAPANESE 201. Readings in Traditional Japanese Prose. 4 Units.
Close reading of selected premodern prose texts, including tales, journals, travel journals, essays.
Prerequisite: JAPANSE 100B
Repeatability: Unlimited as topics vary.

JAPANESE 202. Readings in Traditional Japanese Poetry or Drama. 4 Units.
Close reading of selected premodern poetic or dramatic texts.
Prerequisite: JAPANSE 100B
Repeatability: Unlimited as topics vary.

JAPANESE 203. Readings in Modern Japanese Literature. 4 Units.
Texts include both fiction and nonfiction by important writers, and may be supplemented where needed by literary criticism and cultural-studies texts in English.
Prerequisite: JAPANSE 101C
Repeatability: Unlimited as topics vary.

JAPANESE 204. Readings in Traditional Japanese Literary and Cultural Theory. 4 Units.
Close reading of selected texts involving literary criticism and/or aesthetics.
Prerequisite: JAPANSE 100B
Repeatability: Unlimited as topics vary.
JAPANSE 205. Readings in Japanese Religion. 4 Units.
Close readings of selected Japanese religious texts.

Prerequisite: JAPANSE 101C
Repeatability: Unlimited as topics vary.

JAPANSE 211A. Studies in Traditional Japanese Prose. 4 Units.
Studies in selected areas of traditional Japanese prose. Topics addressed vary each quarter. Research paper required.

Prerequisite: JAPANSE 100B
Repeatability: Unlimited as topics vary.

JAPANSE 211B. Studies in Traditional Japanese Prose. 4 Units.
Studies in selected areas of traditional Japanese prose. Topics addressed vary each quarter. Research paper required.

Prerequisite: JAPANSE 100B and JAPANSE 211A
Repeatability: Unlimited as topics vary.

JAPANSE 212A. Studies in Traditional Japanese Poetry or Drama. 4 Units.
Studies in selected areas of traditional Japanese poetry or drama. Topics addressed vary each quarter. Research paper required.

Prerequisite: JAPANSE 100B
Repeatability: Unlimited as topics vary.

JAPANSE 212B. Studies in Traditional Japanese Poetry or Drama. 4 Units.
Studies in selected areas of traditional Japanese poetry or drama. Topics addressed vary each quarter. Research paper required.

Prerequisite: JAPANSE 212A
Repeatability: Unlimited as topics vary.

JAPANSE 213A. Studies in Modern Japanese Literature. 4 Units.
A two-quarter, in-depth look at a major author and/or issue in modern Japanese literature. Seminar format. The first quarter is devoted to reading of the requisite texts; the second quarter, to the writing of a research paper.

Prerequisite: JAPANSE 203
Repeatability: Unlimited as topics vary.

JAPANSE 213B. Studies in Modern Japanese Literature. 4 Units.
A two-quarter, in-depth look at a major author and/or issue in modern Japanese literature. Seminar format. The first quarter is devoted to reading of the requisite texts; the second quarter, to the writing of a research paper.

Prerequisite: JAPANSE 203 and JAPANSE 213A
Repeatability: May be repeated for credit unlimited times.

JAPANSE 214. Studies in Japanese Literary and Cultural Theory. 4 Units.
Studies in selected areas of Japanese literary and cultural theory. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

JAPANSE 215. Studies in Japanese Religion. 4 Units.
Studies in selected areas of Japanese religion. Topics addressed vary each quarter. Research paper required.

Prerequisite: JAPANSE 101C
Repeatability: Unlimited as topics vary.
JAPANSE 230. Topics in Japanese Literature and Culture. 4 Units.
A topical study that addresses important issues in Japanese literature and culture. May focus on a specific writer or writers, or on a specific issue or set of related issues.
Prerequisite: JAPANSE 203
Repeatability: Unlimited as topics vary.

JAPANSE 290. Independent Study. 4 Units.
Directed research on topic determined in consultation with faculty member. A term paper or project is required.
Repeatability: May be repeated for credit unlimited times.

JAPANSE 299. Dissertation Research. 4-12 Units.
For Students who have been admitted to doctoral candidacy.
Grading Option: Satisfactory/unsatisfactory only.
Repeatability: May be repeated for credit unlimited times.

Korean Courses

KOREAN 1A. Fundamental Korean. 5 Units.
Natural approach with emphasis on the four fundamental skills of listening, speaking, reading, and writing for students with no previous background in Korean. Conducted in both English and Korean.
Prerequisite: Placement into KOREAN 1A.
Overlaps with KOREAN 1KA, KOREAN S1AB.
Restriction: KOREAN 1A and KOREAN 1KA and KOREAN S1AB may not be taken for full credit.

KOREAN 1B. Fundamental Korean. 5 Units.
Natural approach with emphasis on the four fundamental skills of listening, speaking, reading, and writing for students with no previous background in Korean. Conducted in both English and Korean.
Prerequisite: KOREAN 1A. KOREAN 1A with a grade of C or better. Placement into KOREAN 1B is also accepted.
Overlaps with KOREAN S1BC, KOREAN 1KB, KOREAN S1AB.
Restriction: KOREAN 1B and KOREAN 1KB and KOREAN S1AB and KOREAN S1BC may not be taken for full credit.

KOREAN 1C. Fundamental Korean. 5 Units.
Natural approach with emphasis on the four fundamental skills of listening, speaking, reading, and writing for students with no previous background in Korean. Conducted in both English and Korean.
Prerequisite: KOREAN 1B or KOREAN S1AB. KOREAN 1B with a grade of C or better. KOREAN S1AB with a grade of C or better. Placement into KOREAN 1C is also accepted.
Overlaps with KOREAN 1KC, KOREAN S1BC.
Restriction: KOREAN 1C and KOREAN 1KC and KOREAN S1BC may not be taken for full credit.

KOREAN 1KA. Fundamental Korean for Students with a Previous Background in Korean. 5 Units.
Natural approach with emphasis on the four fundamental skills of listening, speaking, reading, and writing for students with a previous background in Korean. Conducted in both English and Korean.
Prerequisite: Placement into KOREAN 1KA.
Overlaps with KOREAN 1A, KOREAN S1AB.
Restriction: KOREAN 1KA and KOREAN 1A and KOREAN S1AB may not be taken for full credit.
KOREAN 1KB. Fundamental Korean for Students with a Previous Background in Korean. 5 Units.
Natural approach with emphasis on the four fundamental skills of listening, speaking, reading, and writing for students with a previous background in Korean. Conducted in both English and Korean.

Prerequisite: KOREAN 1KA. KOREAN 1KA with a grade of C or better. Placement into KOREAN 1KB is also accepted.

Overlaps with KOREAN 1B, KOREAN S1AB, KOREAN S1BC.

Restriction: KOREAN 1KB and KOREAN 1B and KOREAN S1AB and KOREAN S1BC may not be taken for full credit.

KOREAN 1KC. Fundamental Korean for Students with a Previous Background in Korean. 5 Units.
Natural approach with emphasis on the four fundamental skills of listening, speaking, reading, and writing for students with a previous background in Korean. Conducted in both English and Korean.

Prerequisite: KOREAN 1KB. KOREAN 1KB with a grade of C or better. Placement into KOREAN 1KC is also accepted.

Overlaps with KOREAN 1C, KOREAN S1BC.

Restriction: KOREAN 1KC and KOREAN 1C and KOREAN S1BC may not be taken for full credit.

KOREAN S1AB. Fundamentals of Korean. 7.5 Units.
First half of first-year Korean in an intensified form.

Prerequisite: Placement into KOREAN 1A or KOREAN 1KA or KOREAN 1B or KOREAN 1KB.

Overlaps with KOREAN 1A, KOREAN 1B, KOREAN 1KA, KOREAN 1KB.

Restriction: KOREAN S1AB and KOREAN 1A and KOREAN 1KA and KOREAN 1B and KOREAN 1KB may not be taken for full credit.

KOREAN S1BC. Fundamentals of Korean. 7.5 Units.
Second half of first-year Korean in an intensified form.

Prerequisite: KOREAN S1AB or KOREAN 1B or KOREAN 1KB. KOREAN S1AB with a grade of C or better. KOREAN 1B with a grade of C or better. KOREAN 1KB with a grade of C or better. Placement into KOREAN 1C or KOREAN 1KC is also accepted.

Overlaps with KOREAN 1C, KOREAN 1KB, KOREAN 1KC, KOREAN 1B.

Restriction: KOREAN S1BC and KOREAN 1B and KOREAN 1KB and KOREAN 1C and KOREAN 1KC may not be taken for full credit.

KOREAN 2A. Intermediate Korean. 5 Units.
Designed to develop writing and reading skills as well as communicative skills in authentic situations for students without previous initial background in Korean. Students also introduced to aspects of Korean culture as related to lesson topics and basic Chinese characters.

Prerequisite: KOREAN 1C or KOREAN S1BC. KOREAN 1C with a grade of C or better. KOREAN S1BC with a grade of C or better. Placement into KOREAN 2A is also accepted.

Overlaps with KOREAN 2KA, KOREAN S2AB.

Restriction: KOREAN 2A and KOREAN 2KA and KOREAN S2AB may not be taken for full credit.

KOREAN 2B. Intermediate Korean. 5 Units.
Designed to develop writing and reading skills as well as communicative skills in authentic situations for students without previous initial background in Korean. Students also introduced to aspects of Korean culture as related to lesson topics and basic Chinese characters.

Prerequisite: KOREAN 2A. KOREAN 2A with a grade of C or better. Placement into KOREAN 2B is also accepted.

Overlaps with KOREAN 2KB, KOREAN S2AB, KOREAN S2BC.

Restriction: KOREAN 2B and KOREAN 2KB and KOREAN S2AB and KOREAN S2BC may not be taken for full credit.
KOREAN 2C. Intermediate Korean. 5 Units.
Designed to develop writing and reading skills as well as communicative skills in authentic situations for students without previous initial background in Korean. Students also introduced to aspects of Korean culture as related to lesson topics and basic Chinese characters.

Prerequisite: KOREAN 2B. KOREAN 2B with a grade of C or better. Placement into KOREAN 2C is also accepted.

Overlaps with KOREAN 2KC, KOREAN S2AB, KOREAN S2BC.

Restriction: KOREAN 2C and KOREAN 2KC and KOREAN S2BC may not be taken for full credit.

(VIII)

KOREAN 2KA. Intermediate Korean for Students with a Previous Background in Korean. 5 Units.
Designed to develop writing and reading skills as well as communicative skills in authentic situations for students with previous background in Korean. Students also introduced to aspects of Korean culture as related to lesson topics and basic Chinese characters.

Prerequisite: KOREAN 1KC or KOREAN S1BC. KOREAN 1KC with a grade of C or better. KOREAN S1BC with a grade of C or better. Placement into KOREAN 2KA is also accepted.

Overlaps with KOREAN 2A, KOREAN S2AB.

Restriction: KOREAN 2KA and KOREAN 2A and KOREAN S2AB may not be taken for full credit.

(VIII)

KOREAN 2KB. Intermediate Korean for Students with a Previous Background in Korean. 5 Units.
Designed to develop writing and reading skills as well as communicative skills in authentic situations for students with previous background in Korean. Students also introduced to aspects of Korean culture as related to lesson topics and basic Chinese characters.

Prerequisite: KOREAN 2KA. KOREAN 2KA with a grade of C or better. Placement into KOREAN 2KB is also accepted.

Overlaps with KOREAN 2B, KOREAN S2BC, KOREAN S2AB.

Restriction: KOREAN 2KB and KOREAN 2B and KOREAN S2AB and KOREAN S2BC may not be taken for full credit.

(VIII)

KOREAN 2KC. Intermediate Korean for Students with a Previous Background in Korean. 5 Units.
Designed to develop writing and reading skills as well as communicative skills in authentic situations for students with previous background in Korean. Students also introduced to aspects of Korean culture as related to lesson topics and basic Chinese characters.

Prerequisite: KOREAN 2KB. KOREAN 2KB with a grade of C or better. Placement into KOREAN 2KC is also accepted.

Overlaps with KOREAN 2C, KOREAN S2BC.

Restriction: KOREAN 2KC and KOREAN 2C and KOREAN S2BC may not be taken for full credit.

(VIII)

KOREAN 3A. Advanced Korean. 4 Units.
Focuses on developing advanced reading/writing and translation skills with additional instruction in Chinese characters.

Prerequisite: KOREAN 2C or KOREAN 2KC or KOREAN S2BC. KOREAN 2C with a grade of C or better. KOREAN 2KC with a grade of C or better. KOREAN S2BC with a grade of C or better. Placement into KOREAN 3A is also accepted.

(VIII)

KOREAN 3B. Advanced Korean. 4 Units.
Focuses on developing advanced reading, writing, and translation skills.

Prerequisite: KOREAN 3A. KOREAN 3A with a grade of C or better. Placement into KOREAN 3B is also accepted.

(VIII)
KOREAN 3C. Advanced Korean. 4 Units.
Focuses on developing advanced reading, writing, and translation skills.

Prerequisite: KOREAN 3B. KOREAN 3B with a grade of C or better. Placement into KOREAN 3C is also accepted.

(VIII)

KOREAN 101A. Fourth Year Korean. 4 Units.
Continued emphasis on comprehension, grammar, and proficiency in reading, composition, and conversation through intensive study and analysis of a variety of modern texts.

Prerequisite: KOREAN 3C

KOREAN 115. Korean Literature: Advanced Texts. 4 Units.
Designed for students with near-fluency in reading Korean. Readings include modern Korean literary works (poetry, prose, and drama) by important writers. Emphasis is on the interpretation of the texts and writings that interpret those texts in the original language.

Prerequisite: KOREAN 101A or KOREAN 101B or KOREAN 101C

Repeatability: Unlimited as topics vary.

KOREAN 180. Topics in Korean Literature. 4 Units.
Special topics through directed readings in Korean. Paper required.

Repeatability: May be taken for credit 3 times.

KOREAN 199. Independent Study. 1-4 Units.
Investigation of special topics through directed reading in Korean. Paper required.

Repeatability: May be taken for credit for 12 units.

Department of English

Michael F. Szalay, Department Chair
435 Humanities Instructional Building
949-824-6712
http://www.humanities.uci.edu/english/

Overview
The Department of English comprises undergraduate and graduate programs in literature in English; the M.F.A. Program in Writing; Literary Journalism; and Composition. Among our faculty members are theorists and literary historians, scholars of rhetoric and experts in composition, journalists, writers of fiction, and poets.

Students in the Department explore a variety of models for literary analysis. They write stories and poems. They produce journalism. In every case, our students think about writing: its history, its changing functions, and its place in today’s culture. The major prepares students for a world in which informed analysis of language and forceful writing continue to be crucial.

Undergraduate Program
All of the Department’s areas of study emphasize a variety of critical approaches in the reading and criticism of literature. Two majors, as well as an emphasis in Creative Writing, are offered. The Department also offers English majors a specialization in English for Future Teachers for those interested in a teaching career.

English. This major seeks to introduce students to the entire range of literatures written in English, from British and American to African, Asian, and Australasian literatures. The major emphasizes the differences among historical periods and various genres, and encourages exploration of a broad range of literary theories. It also offers students the opportunity to do significant work in Creative Writing.

Creative Writing. This emphasis within the English major provides a setting in which students write original work and subject it to critique in peer workshops led by instructors who are themselves writers. The disciplines of close reading and practical criticism are taken up in the lecture classes.

Literary Journalism. This major was created to meet the needs of a growing number of students who wish to read, study, and write nonfiction prose that has transcended the limits of daily journalism. This is prose that has evolved into a distinct branch of literature, prose that adopts the aims and techniques of the finest fiction. The program provides majors with a solid foundation in nonfiction writing and an equally solid background in areas such as literary history, which together will help make students more informed writers. A Literary Journalism minor is also offered.
Literary Journalism majors take three intensive writing seminars, and are expected to develop a portfolio of work by graduation which they can present as evidence of their skill for purposes of employment or future education. At the same time, majors are asked to take a comprehensive look at the theory, history, and context of literary journalism. Among other forms, they study and write narratives, memoirs, profiles, histories, and personal essays, in subject areas as varied as science, politics, justice, travel, sports, food, and popular culture.

While it differs from an applied journalism major that focuses primarily on newspaper writing, the major in Literary Journalism is excellent preparation for students planning to enter graduate programs in journalism, as well as for those interested in the many careers requiring sophisticated writing and communication skills.

Requirements for the B.A. in English

All students must meet the University Requirements (p. 91).

All students must meet the School Requirements (p. 788).

A. Select two of the following:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>ENGLISH 8</td>
<td>Multicultural American Literature</td>
</tr>
<tr>
<td>ENGLISH 9</td>
<td>Shakespeare</td>
</tr>
<tr>
<td>ENGLISH 10</td>
<td>Topics in English and American Literature</td>
</tr>
<tr>
<td>ENGLISH 11</td>
<td>Society, Law, and Literature</td>
</tr>
<tr>
<td>ENGLISH 12</td>
<td>Young Adult Fiction</td>
</tr>
<tr>
<td>ENGLISH 16</td>
<td>The Craft of Poetry</td>
</tr>
<tr>
<td>ENGLISH 17</td>
<td>The Craft of Fiction</td>
</tr>
</tbody>
</table>

B. Complete the following:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>ENGLISH 15</td>
<td>Introductory Seminar in English: Topics in Literary Studies</td>
</tr>
</tbody>
</table>

C. Complete the following:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>ENGLISH 100</td>
<td>Introduction to Literary Theory</td>
</tr>
<tr>
<td>ENGLISH 101W</td>
<td>Undergraduate Seminar in Critical Writing: Topics in Literary History</td>
</tr>
</tbody>
</table>

D. Complete the following:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>ENGLISH 102A</td>
<td>Topics in Medieval and Renaissance Literature</td>
</tr>
<tr>
<td>ENGLISH 102B</td>
<td>Topics in Restoration and 18th-Century Literature</td>
</tr>
<tr>
<td>ENGLISH 102C</td>
<td>Topics in Romantic and 19th-Century Literature</td>
</tr>
<tr>
<td>ENGLISH 102D</td>
<td>Topics in 20th-Century Literature</td>

<td>Psychology of Learning, Abilities, and Intelligence</td>
</tr>
</tbody>
</table>

H. Complete at least two units of field work from EDUC 100, WRITING 197, or other relevant experience with prior departmental approval.

¹ Foreign literature-in-translation courses are offered in Classics, Comparative Literature, East Asian Languages and Literatures, French and Italian, German, and Spanish and Portuguese. COM LIT 150 and COM LIT 160, E ASIAN 160, FLM&MDA 160, FRENCH 160, GERMAN 160, JAPANSE 180, KOREAN 180, and SPANISH 160 when appropriate, also qualify as foreign language literature-in-translation courses.

Requirements for the B.A. in Literary Journalism
All students must meet the University Requirements (p. 91).
All students must meet the School Requirements (p. 788).
A. Complete:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>LIT JRN 20</td>
<td>Introduction to Literary Journalism</td>
</tr>
<tr>
<td>LIT JRN 21</td>
<td>Reporting for Literary Journalism</td>
</tr>
<tr>
<td>LIT JRN 100</td>
<td>Advanced Reporting</td>
</tr>
</tbody>
</table>

B. Select one course from the following:¹

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>ENGLISH 8</td>
<td>Multicultural American Literature</td>
</tr>
<tr>
<td>ENGLISH 9</td>
<td>Shakespeare</td>
</tr>
<tr>
<td>ENGLISH 10</td>
<td>Topics in English and American Literature</td>
</tr>
</tbody>
</table>

¹ Foreign literature-in-translation courses are offered in Classics, Comparative Literature, East Asian Languages and Literatures, French and Italian, German, and Spanish and Portuguese. COM LIT 150 and COM LIT 160, E ASIAN 160, FLM&MDA 160, FRENCH 160, GERMAN 160, JAPANSE 180, KOREAN 180, and SPANISH 160 when appropriate, also qualify as foreign language literature-in-translation courses.
### Additional Information

#### Planning a Program of Study

Students should plan coherent programs of study with their faculty advisors, including undergraduate seminars, workshops and seminars in writing (for students choosing a Literary Journalism major or Creative Writing emphasis), and courses in allied areas outside the Department. It is possible to combine a cluster of courses in literature with other majors in the sciences and social sciences, and to use an English or Literary Journalism major as preprofessional training in government, law, or medicine. Students who wish advice in planning such programs should consult both the Department and people in their prospective professional areas.

A student who intends to continue with graduate work is urged to study a second foreign language before graduation.

Students are also encouraged to take advantage of the opportunity to study abroad through the UC Education Abroad Program. Visit the Study Abroad Center website (http://www.studyabroad.uci.edu) or an academic counselor for additional information.

#### Careers for the English or Literary Journalism Major

The study of literature helps students express their ideas clearly, do independent research, and think analytically and imaginatively. These capabilities will help qualify majors for careers in education, law, technical writing, communications, journalism, public relations, business, marketing, and management. Departmental advisors encourage their students to investigate various career options before completing their undergraduate educations.

The UCI Career Center provides services to students and alumni including career counseling, information about job opportunities, a career library, and workshops on resume preparation, job search, and interview techniques. See the Career Center (p. 145) section (p. 145) for additional information.

### Departmental Requirements for the English Minor

#### A. Select three of the following:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>ENGLISH 8</td>
<td>Multicultural American Literature</td>
</tr>
<tr>
<td>ENGLISH 9</td>
<td>Shakespeare</td>
</tr>
<tr>
<td>ENGLISH 10</td>
<td>Topics in English and American Literature</td>
</tr>
<tr>
<td>ENGLISH 11</td>
<td>Society, Law, and Literature</td>
</tr>
<tr>
<td>ENGLISH 12</td>
<td>Young Adult Fiction</td>
</tr>
<tr>
<td>ENGLISH 15</td>
<td>Introductory Seminar in English: Topics in Literary Studies</td>
</tr>
<tr>
<td>ENGLISH 16</td>
<td>The Craft of Poetry</td>
</tr>
<tr>
<td>ENGLISH 17</td>
<td>The Craft of Fiction</td>
</tr>
</tbody>
</table>

#### B. Select at least five Departmental (English, Literary Journalism, Writing) courses numbered 102 or above, excluding ENGLISH 150, LIT JRN 197, LIT JRN 198, LIT JRN 199, WRITING 139W, WRITING 179W, and WRITING 197. Two courses from the following may be substituted:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>ENGLISH 100</td>
<td>Introduction to Literary Theory</td>
</tr>
<tr>
<td>ENGLISH 101W</td>
<td>Undergraduate Seminar in Critical Writing: Topics in Literary History</td>
</tr>
</tbody>
</table>
Residence Requirement for the English Minor: Four upper-division courses must be completed successfully at UCI. By petition, two of the four may be taken through the UC Education Abroad Program, providing course content is approved in advance by the department undergraduate chair.

Departmental Requirements for the Literary Journalism Minor

A. Complete:
- LIT JRN 20: Introduction to Literary Journalism
- LIT JRN 21: Reporting for Literary Journalism

B. Select one of the following: ¹

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>ENGLISH 8</td>
<td>Multicultural American Literature</td>
</tr>
<tr>
<td>ENGLISH 9</td>
<td>Shakespeare</td>

<tr>
<td>ENGLISH 10</td>
<td>Topics in English and American Literature</td>
</tr>
<tr>
<td>ENGLISH 11</td>
<td>Society, Law, and Literature</td>
</tr>
<tr>
<td>ENGLISH 12</td>
<td>Young Adult Fiction</td>
</tr>
<tr>
<td>ENGLISH 15</td>
<td>Introductory Seminar in English: Topics in Literary Studies</td>
</tr>
<tr>
<td>ENGLISH 16</td>
<td>The Craft of Poetry</td>
</tr>
<tr>
<td>ENGLISH 17</td>
<td>The Craft of Fiction</td>
</tr>
</tbody>
</table>

C. Complete:
- LIT JRN 100: Advanced Reporting
- LIT JRN 101A: Studies in the History, Theory, and Ethics of Literary Journalism

D. Complete:
- LIT JRN 103: Lectures on Topics in Literary Journalism (three times, on various topics.)

¹ Students can substitute COM LIT 60A or COM LIT 60C for the lower-division English course requirement.

Residence Requirement for the Literary Journalism Minor: LIT JRN 20, LIT JRN 21, LIT JRN 100, and LIT JRN 101A must be completed successfully at UCI. By petition, two of the three LIT JRN 103 courses may be taken through the UC Education Abroad Program, providing course content is approved in advance by the Literary Journalism program.

Graduate Program

The Department’s three principal undergraduate offerings—English and American Literature, the English major with a Creative Writing emphasis, and Literary Journalism—are reflected in the graduate programs, which at this level, may also involve collaboration with the Department of Comparative Literature: M.A. and Ph.D. in English, M.F.A. in English (fiction/poetry), and an emphasis in Creative Nonfiction within the Ph.D. in English. The faculty is particularly equipped to guide students with special interests in criticism and theory, an area which candidates for the Ph.D. in English may stress by adding the Schoolwide Critical Theory emphasis. Applicants for graduate degrees in English must submit scores for the Graduate Record Examination (GRE). Ordinarily students are not admitted to the English program unless they plan to continue, and are qualified to continue, to the Ph.D. Students are admitted to the M.F.A. program chiefly on the basis of submitted creative work.

Specific requirements for the graduate degrees will be established by consultation between members of the faculty and the candidate. First-year graduate students or candidates for the Master of Fine Arts in English (fiction/poetry) plan a program with an assigned advisor; candidates for the Ph.D. plan with an advisor and three-person committee. At the time of the M.A. examination, the Graduate Committee evaluates the student’s graduate career up to that point and offers advice about future prospects. Candidates for literary degrees are also encouraged to study philosophy, history, foreign languages and literatures, and the fine arts.

Only in exceptional circumstances will students be permitted to undertake programs of less than six full courses during the academic year. The normal expectation is enrollment in three courses each quarter; Teaching Assistants take two courses in addition to earning credit for University Teaching. Students who are not teaching should be able to complete course work in two years. The Ph.D. qualifying examination should be taken within a couple of quarters after courses are finished. The normative time for completion of the Ph.D. in English is seven years.

The Murray Krieger Fellowship in Literary Theory is intended for an outstanding entering graduate student who is pursuing the Ph.D. in English or Comparative Literature and who demonstrates a primary interest in theory as theory relates to literary texts. A range of other fellowships is also available to students in the Department.
Emphasis in Creative Nonfiction

Students admitted to the emphasis in Creative Nonfiction must meet all course, language, and examination requirements for the Ph.D. in English. Their course work must include: (1) three writing workshops in nonfiction; (2) three courses in nonfictional literature or rhetoric; and (2) if needed for the projected dissertation, one course outside the Department.

Students must also conduct a dissertation defense.

School Emphases

Schoolwide graduate emphases are available in Asian American Studies, Critical Theory, Feminist Studies, and Visual Studies. Refer to the appropriate sections of the Catalogue for information.

English

Master of Arts in English

Program Details

Each candidate for the M.A. will be assigned to a graduate advisor who will supervise the student’s program.

The M.A. plan of study includes: (1) the completion of course work, as advised, for three quarters or the equivalent; (2) demonstrated proficiency in reading a designated foreign language, modern or classical; and (3) the submission of materials (including a statement about work accomplished and plans for future study, and a sample essay) to the Graduate Committee, who will review and assess the student’s progress, recommend whether further study toward the Ph.D. is advisable, and, if so, give advice about areas for further study.

The Department of English sponsors a Summer M.A. Program in English designed for teachers and returning students. The M.A. in English is awarded to candidates who complete 36 units of graduate course work through three summers in the program and submit an acceptable Master’s essay.

The M.A. plan of study includes: (1) the completion of 32 units of course work for two summers; (2) the completion of 4 units of dissertation research course work in the third summer, and (3) the completion of the Master’s essay by the end of the third summer.

Master of Fine Arts in English

The Master of Fine Arts (M.F.A.) is a degree in fiction writing or poetry. The M.F.A. is normally conferred upon the completion of a three-year residence.

Program Details

Each quarter the candidate will be enrolled in either the poetry or fiction section of the Graduate Writers’ Workshop, which will constitute two-thirds of a course load, the other course to be selected in consultation with the student’s advisor. It is expected that M.F.A. candidates will complete at least one supervised teaching seminar.

In addition to course work, the candidate is required to present as a thesis an acceptable book-length manuscript of poetry or short stories or a novel. The normative time for completion of the M.F.A. is three years, and the maximum time permitted is four years.

Doctor of Philosophy in English

Program Details

The program for the Ph.D. in English requires about two years of full-time enrollment in regular courses beyond the B.A.; proficiency in the reading of one acceptable foreign language, modern or classical; satisfactory performance on designated examinations; and the dissertation.

The languages acceptable depends upon the nature of the student’s program as determined by the student’s advisors. Reading competence in this language must be established in the first year of residence. Competence in the language required for the Ph.D. is verified through examination.

Upon completion of course work the student is examined in three areas: (1) a primary field; (2) a secondary field; and (3) theory and/or criticism.

Upon satisfactorily completing this Qualifying Examination, the student is admitted to candidacy for the degree. As soon after completion of the Qualifying Examination as is practical, the student presents a dissertation prospectus for the approval of the doctoral committee. After submitting a full dissertation to their committee members, students will be required to pass an oral dissertation defense with their doctoral committee prior to filing the dissertation and graduating. All work for the Ph.D. degree must be in courses limited to graduate students. The normative time for advancement to candidacy is four years. The normative time for completion of the Ph.D. is seven years, and the maximum time permitted is nine years.

Faculty

Jonathan Alexander, Ph.D. Louisiana State University, Campus Writing Coordinator and Professor of English; Culture and Theory; Education; Gender and Sexuality Studies; Informatics (writing studies, sexuality studies, queer theory, new media studies)

Bobbie J. Allen, Ph.D. University of Washington, Lecturer of English
Elizabeth G. Allen, Ph.D. University of Michigan, *Associate Professor of English; Comparative Literature; Religious Studies* (Chaucer, Gower, 15th century poetry; exemplary literature, romance, chronicle, episodic form; intersections between ethics and politics, politics and religion; hospitality, sovereignty, legal and constitutional history of England)

Michael Andreasen, M.F.A. University of California, Irvine, *Lecturer of English*

Stephen A. Barney, Ph.D. Harvard University, *Professor Emeritus of English*

Jami Bartlett, Ph.D. University of California, Berkeley, *Associate Professor of English* (The 19th-Century Novel, literature and philosophy, narrative theory)

Alice C. Berghof, Ph.D. University of California, Irvine, *Lecturer of Humanities; English*

Emily M. Brauer, M.A. University of Southern California, *Lecturer of English*

Carol M. Burke, Ph.D. University of Maryland, College Park, *Professor of English; Religious Studies* (literary and cultural theory, literary journalism, new media studies)

Ellen S. Burt, Ph.D. Yale University, *Professor Emerita of English* (eighteenth-century French literature and nineteenth-century poetry)

James L. Calderwood, Ph.D. University of Washington, *Professor Emeritus of English*

Ronald Carlson, M.A. University of Utah, *Professor of English* (creative writing, fiction, contemporary literature, short stories)

Chieh L. Chieng, M.F.A. University of California, Irvine, *Lecturer of English*

Jerome C. Christensen, Ph.D. Cornell University, *Professor Emeritus of English* (Hollywood motion pictures, corporate authorship, romantic literature)

Michael P. Clark, Ph.D. University of California, Irvine, *Professor Emeritus of English*

Rachael L. Collins, Ph.D. University of California, Irvine, *Lecturer of English*

Miles Corwin, M.A. University of Missouri-Columbia, *Professor of English* (law enforcement, the criminal justice system, homicide, inner-city education, affirmative action)

Keith Danner, Ph.D. University of California, Riverside, *Lecturer of English*

Rebecca Davis, Ph.D. University of Notre Dame, *Associate Professor of English; Religious Studies* (Old and Middle English literature, Piers Plowman, medieval religious culture, women’s writing, medieval philosophy)

Susan E. Davis, M.F.A. University of California, Irvine, *Lecturer of English*

Lorene D. Delany-Ullman, M.F.A. University of California, Irvine, *Lecturer of English*

Amy Depaul, B.A. Boston University, *Lecturer of English*

Jaya Dubey, M.A. University of California, Irvine, *Lecturer of English*

Kathryn Eason, M.A. University of Colorado Boulder, *Lecturer of English*

Loren P. Eason, Ph.D. University of California, Irvine, *Lecturer of English*

Christopher Fan, Ph.D. University of California, Berkeley, *Assistant Professor of English* (transnational Asia American, 20th, and 21st century literature, speculative fiction, political economy)

Anita W. Fischer, M.A. Loyola Marymount University, *Lecturer of English*

Robert Folkenflik, Ph.D. Cornell University, *Edward A. Dickson Emeriti Professorship and Professor Emeritus of English*

Linda M. Georgianna, Ph.D. Columbia University, *Professor Emerita of English*

Amy Gerstler, M.F.A Bennington College, *Professor of English* (poetry, creative writing, fiction, creative nonfiction, hybrid literature, visual art, lyric essay, art and science, women writers)

Richard Godden, Ph.D. University of Kent, *Professor of English* (20th century and contemporary American literature, Faulkner)

Daniel Gross, Ph.D. University of California, Berkeley, *Professor of English* (emotion studies, history and theory of rhetoric, early modern literature and culture, Heidegger and rhetoric)
Alberto D. Gullaba, M.F.A. University of California, Irvine, Lecturer of English
Linda G. Haas, Ph.D. University of South Florida, Lecturer of English
Martin Harries, Ph.D. Yale University, Professor of English (20th century theater, critical theory)
Erika Hayasaki, B.A. University of Illinois at Urbana–Champaign, Associate Professor of English (literary journalism in the digital age, narrative nonfiction, immersion journalism, youth, culture, crime, poverty, health, science, education, urban affairs, death)
Rebeca Louise Helffer, Ph.D. Columbia University, Associate Professor of English (Renaissance literature and culture, memory, Spenser)
Andrea K. Henderson, Ph.D. University of Pennsylvania, Professor of English (19th century literature, literature and visual arts, literature and science)
John W. Hollowell, Ph.D. University of Michigan, Senior Lecturer with Security of Employment Emeritus of English
Oren J. Izenberg, Ph.D. Johns Hopkins University, Associate Professor of English (poetics, modern and contemporary poetry, 20th century literature and culture, philosophy and literature)
Virginia W. Jackson, Ph.D. Princeton University, Chair in Rhetoric and Communication and Associate Professor of English; Comparative Literature (poetics, 19th, 20th and 21st century American poetry, 19th century American literature and culture, the history of literary theory)
Joseph Jonghyun Jeon, Ph.D. University of California, Berkeley, Professor of English (Asian-American literature, film modernism)
Leah C. Kaminski, M.F.A. University of California, Irvine, Lecturer of English
Laura H. Kang, Ph.D. University of California, Santa Cruz, Professor of Gender and Sexuality Studies; English (feminist epistemologies and theories, cultural studies, ethnic studies)
Charlene J. Keeler, M.A. California State University, Fullerton, Lecturer of English
Jonathan I. Keeperman, M.F.A. University of California, Irvine, Lecturer of English
Tarah M. Keeperman, M.A. University of California, Irvine, Lecturer of English
Arlene Keizer, Ph.D. University of California, Berkeley, Associate Professor of English; Comparative Literature (African American and Caribbean literature, critical race and ethnic studies, feminist and psychoanalytic theory, cultural studies)
Douglas V. Kiklowicz, M.F.A. University of California, Irvine, Lecturer of English
Peter O. Krapp, Ph.D. University of California, Santa Barbara, Department Chair and Professor of Film and Media Studies; English; Informatics; Music; Visual Studies (digital culture, media history, cultural memory)
P. Michelle Latiolais, M.F.A. University of California, Irvine, Professor of English (creative writing, fiction, contemporary literature)
Karen R. Lawrence, Ph.D. Columbia University, Professor Emerita of English
Rodrigo Lazo, Ph.D. University of Maryland, College Park, Associate Professor of English; Culture and Theory (hemispheric American studies, nineteenth century, Latino studies and the Americas, Cuba, immigrant literature)
Jerry Won Lee, Ph.D. University of Arizona, Associate Professor of English; Anthropology; Culture and Theory
Jayne Elizabeth Lewis, Ph.D. Princeton University, Director of Humanities Honors Program and Professor of English; Religious Studies (literature and medicine, restoration and 18th century British literature, literature of the supernatural and gothic fiction, history and/or fiction, atmosphere as literary concept and construct within natural philosophy)
Julia R. Lupton, Ph.D. Yale University, Associate Dean for Research and Professor of English; Comparative Literature; Education; Religious Studies (Renaissance literature, literature and psychology)
Juliet F. MacCannell, Ph.D. Cornell University, Professor Emerita of English
Steven J. Mailloux, Ph.D. University of Southern California, Professor Emeritus of English; Comparative Literature (rhetoric, critical theory, American literature, law and literature)
Theodore Martin, Ph.D. University of California, Berkeley, Associate Professor of English (Contemporary literature, genre fiction, literary history, crime, and the novel)
Annie McClanahan, Ph.D. University of California, Berkely, Associate Professor of English (U.S. culture, the novel, political and economic theory)
Gregory J. McClure, M.F.A. University of California, Irvine, Lecturer of English

**Criticism/English Courses**

**CRITISM 200A. Political Economy: Methods and Critique. 4 Units.**
Introduction to canonical texts in Marxism coupled with an examination of the questions of race, gender, ethnicity, and sexuality that distend the calculus of the canon's assumptive logic. May be taken after CLT&THY 200B.

Same as CLT&THY 200A.

Restriction: Graduate students only.

**CRITISM 220B. Studies in Literary Theory and Its History. 4 Units.**
Introduction to criticism and aesthetics for beginning graduate students. Readings from continental, English, and American theorists.

Same as HUMAN 220B.

Restriction: Graduate students only.

**CRITISM 240. Advanced Theory Seminar. 4 Units.**
Studies in selected areas of Criticism Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

**English Courses**

**ENGLISH 8. Multicultural American Literature. 4 Units.**
Writings from at least two historically underrepresented groups in California and the United States with particular attention to historical conditions of literary production. Considers in-depth how literary works relate to racial constructions, economic conditions, and/or social movements.

(IV and VII)

**ENGLISH 9. Shakespeare. 4 Units.**
Plays by William Shakespeare are used to explore the playwright's poetic gifts, theatrical imagination, and inquiry into human relationships and the human condition.

(IV)

**ENGLISH 10. Topics in English and American Literature. 4 Units.**
Explores the diversity of human expression manifested in selected works of literature. By engaging with substantial literary texts, students will think critically about how meaning is created and how experience is interpreted in literary language.

Repeatability: May be taken for credit 3 times as topics vary.

(IV)
ENGLISH 10B. Topics in English and American Literature. 4 Units.
Linked with Writing 39B. Explores the diversity of human expression manifested in selected works of literature. By engaging with substantial literary texts, students think critically about how meaning is created and how experience is interpreted in literary language.
Corequisite: WRITING 39B
Repeatability: May be taken for credit 3 times as topics vary.
Overlaps with ENGLISH 10.

(IV)

ENGLISH 11. Society, Law, and Literature. 4 Units.
Examines how works of literature represent and influence the relation between law and society. The primary readings will be works of literature, but selections of works of law, politics, and sociology may also be assigned.

(III or IV).

ENGLISH 11C. Society, Law, and Literature. 4 Units.
Linked with Writing 39C. Explores how works of literature represent and influence the relation between law and society. The primary readings are works of literature, but selections of works of law, politics, and sociology may also be assigned.
Corequisite: WRITING 39C
Overlaps with ENGLISH 11.

(III or IV).

ENGLISH 12. Young Adult Fiction. 4 Units.
Young adult fiction studied in historical context, including the publishing industry and mass marketing, as well as education and literacy. Primary readings will focus on young adult fiction, but works of history, advertising, and film will also be included.

(IV)

ENGLISH 15. Introductory Seminar in English: Topics in Literary Studies. 4 Units.
Discussion-based seminar on a faculty-chosen topic that introduces majors and those considering a major in English to interpretive methodologies and critical frameworks that characterize the field of English studies.
Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.
Repeatability: May be taken for credit 2 times as topics vary.
Restriction: English Majors have first consideration for enrollment.

ENGLISH 16. The Craft of Poetry. 4 Units.
Reading of selected texts to explore the ways in which these modes formulate experience. Students write several short analytic papers. Requires creative writing.
Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.

(IV)

ENGLISH 17. The Craft of Fiction. 4 Units.
Reading of selected texts to explore the ways in which these modes formulate experience. Students write several short analytic papers. Requires creative writing.
Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.

(IV)

ENGLISH 100. Introduction to Literary Theory. 4 Units.
Using Plato and Aristotle as points of departure, addresses a range of perspectives and problems in literary theory. To be taken by English majors in the junior year.
Prerequisite: Three courses selected from ENGLISH 8, ENGLISH 10, ENGLISH 11, ENGLISH 12, ENGLISH 15, ENGLISH 16, ENGLISH 17, ENGLISH 28A, ENGLISH 28B, ENGLISH 28C, ENGLISH 28D, ENGLISH 28E, LIT JRN 20, LIT JRN 21.
ENGLISH 101W. Undergraduate Seminar in Critical Writing: Topics in Literary History. 4 Units.
Each instructor identifies a topic within literary history; special attention is given to mastering the conventions of academic argument and expression. To be taken as early as possible in the junior year.
Prerequisite: Three courses selected from ENGLISH 8, ENGLISH 10, ENGLISH 11, ENGLISH 12, ENGLISH 15, ENGLISH 16, ENGLISH 17, ENGLISH 28A, ENGLISH 28B, ENGLISH 28C, ENGLISH 28D, or ENGLISH 28E; or LIT JRN 20 and LIT JRN 21 and one course selected from the above list. Satisfactory completion of the Lower-Division Writing requirement.
Repeatability: Unlimited as topics vary.
Restriction: Upper-division students only. English Majors have first consideration for enrollment.

ENGLISH 102A. Topics in Medieval and Renaissance Literature. 4 Units.
Studies of works representative of Medieval and Renaissance literature in English, with attention to literary history, treating at a minimum more than one author and more than one genre.
Prerequisite: Three courses selected from ENGLISH 8, ENGLISH 10, ENGLISH 11, ENGLISH 12, ENGLISH 15, ENGLISH 16, ENGLISH 17, ENGLISH 28A, ENGLISH 28B, ENGLISH 28C, ENGLISH 28D, or ENGLISH 28E; or LIT JRN 20 and LIT JRN 21 and one course selected from the above list.
Repeatability: Unlimited as topics vary.
Restriction: Upper-division students only. English Majors have first consideration for enrollment.

ENGLISH 102B. Topics in Restoration and 18th-Century Literature. 4 Units.
Studies of works representative of Restoration and 18th-century literature in English, with attention to literary history, treating at a minimum more than one author and more than one genre.
Prerequisite: Three courses selected from ENGLISH 8, ENGLISH 10, ENGLISH 11, ENGLISH 12, ENGLISH 15, ENGLISH 16, ENGLISH 17, ENGLISH 28A, ENGLISH 28B, ENGLISH 28C, ENGLISH 28D, or ENGLISH 28E; or LIT JRN 20 and LIT JRN 21 and one course selected from the above list.
Repeatability: Unlimited as topics vary.
Restriction: Upper-division students only. English Majors have first consideration for enrollment.

ENGLISH 102C. Topics in Romantic and 19th-Century Literature. 4 Units.
Studies of works representative of Romantic and 19th-century literature in English, with attention to literary history, treating at a minimum more than one author and more than one genre.
Prerequisite: Three courses selected from ENGLISH 8, ENGLISH 10, ENGLISH 11, ENGLISH 12, ENGLISH 15, ENGLISH 16, ENGLISH 17, ENGLISH 28A, ENGLISH 28B, ENGLISH 28C, ENGLISH 28D, or ENGLISH 28E; or LIT JRN 20 and LIT JRN 21 and one course selected from the above list.
Repeatability: Unlimited as topics vary.
Restriction: Upper-division students only. English Majors have first consideration for enrollment.

ENGLISH 102D. Topics in 20th-Century Literature. 4 Units.
Studies of works representative of 20th-century literature in English, with attention to literary history, treating at a minimum more than one author and more than one genre.
Prerequisite: Three courses selected from ENGLISH 8, ENGLISH 10, ENGLISH 11, ENGLISH 12, ENGLISH 15, ENGLISH 16, ENGLISH 17, ENGLISH 28A, ENGLISH 28B, ENGLISH 28C, ENGLISH 28D, or ENGLISH 28E; or LIT JRN 20 and LIT JRN 21 and one course selected from the above list.
Repeatability: Unlimited as topics vary.
Restriction: Upper-division students only. English Majors have first consideration for enrollment.

ENGLISH 103. Topics in Literature, Theory, and Criticism. 4 Units.
A series of lectures on and discussions of announced topics in literary criticism, theory, history, genres, modes, major authors.
Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.
Repeatability: Unlimited as topics vary.
Restriction: Recommended: Upper-division students only.
ENGLISH 105. Multicultural Topics in Literatures in English. 4 Units.
Focuses on ethnic or minority literatures, or treats issues related to race and cultural identity.
Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.
Repeatability: Unlimited as topics vary.
Restriction: Recommended: Upper-division students only.

ENGLISH 106. Advanced Seminar: Topics in English Literature. 4 Units.
Capstone course. Provides intensive work on a topic within the area of literatures in English with particular attention to the theoretical, critical, or conceptual issues it raises, with the goal of producing a substantive research paper.
Prerequisite: (ENGLISH 101W or WRITING 101W) and (ENGLISH 100 and 102A) or (ENGLISH 100 and 102B) or (ENGLISH 100 and 102C) or (ENGLISH 100 and 102D) or (ENGLISH 102A and 102B) or (ENGLISH 102A and 102C) or (ENGLISH 102A and 102D) or (ENGLISH 102B and 102C) or (ENGLISH 102B and 102D) or (ENGLISH 103 and 102A) or (ENGLISH 103 and 102B) or (ENGLISH 103 and 102C) or (ENGLISH 103 and 102D) or (ENGLISH 105 and 102A) or (ENGLISH 105 and 102B) or (ENGLISH 105 and 102C) or (ENGLISH 105 and 102D) or (ENGLISH 100 and 103) or (ENGLISH 100 and 105) and (ENGLISH 100 and 103) or (ENGLISH 103 and 105).
Repeatability: Unlimited as topics vary.
Restriction: Seniors only. English Majors have first consideration for enrollment.

ENGLISH 150. Topics in Literature for Nonmajors. 4 Units.
Major texts in English, American, and Comparative Literature explored for basic humanistic issues and themes, on announced topics. Primarily for upper-division students, but not requiring previous training in literature.
Repeatability: Unlimited as topics vary.
Restriction: Recommended: Upper-division students only.

ENGLISH 160. Topics in English Language Film and TV. 4 Units.
Focuses on the analysis of film and/or television traditions in the English-speaking world, from a historical, theoretical, or comparative perspective.
Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.
Repeatability: May be taken for credit 2 times as topics vary.
Restriction: Upper-division students only.

ENGLISH 198. Special Topics. 4 Units.
Directed group study of selected topics as arranged by instructor.
Repeatability: May be repeated for credit unlimited times.

ENGLISH 199. Independent Study. 1-4 Units.
To be taken only when the materials to be studied lie outside the normal run of departmental offerings, and when the student will have no formal chance to pursue the subject. Research paper required.
Repeatability: May be repeated for credit unlimited times.

ENGLISH 210. Studies in Literary History. 4 Units.
Studies in selected areas of literary history. Topics addressed vary each quarter.
Repeatability: Unlimited as topics vary.

ENGLISH 225. Studies in Literary Genres. 4 Units.
Studies in selected areas of literary genres. Topics addressed vary each quarter.
Repeatability: Unlimited as topics vary.

ENGLISH 230. Studies in Major Writers. 4 Units.
Studies in selected areas of major writers. Topics addressed vary each quarter.
Repeatability: Unlimited as topics vary.
ENGLISH 255. Graduate Workshop in Academic Publishing. 4 Units.
Reading and critique of student-authored essays with the goal of producing a publishable essay. Instructor leads discussion, meets with students individually, and provides an introduction to appropriate venues for publication and the process of submission, peer review, and revision.

Grading Option: Satisfactory/unsatisfactory only.

ENGLISH 290. Reading and Conference. 4-12 Units.
Studies in selected areas. Topics addressed vary each quarter.

Repeatability: May be repeated for credit unlimited times.

ENGLISH 291. Guided Reading Course. 4 Units.
Studies in selected areas. Topics addressed vary each quarter.

ENGLISH 299. Dissertation Research. 4-12 Units.
A units-only course for students in the dissertation phase.

Grading Option: Satisfactory/unsatisfactory only.

Restriction: Graduate students only.

ENGLISH 398. Rhetoric/Teaching of Composition. 4 Units.
Readings, lectures, and internship designed to prepare graduate students to teach composition. Formal instruction in rhetoric and practical work in teaching methods and grading.

ENGLISH 399. University Teaching. 4 Units.
A units-only course for students appointed as teaching assistants or associates.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

Literary Journalism Courses

LIT JRN 20. Introduction to Literary Journalism. 4 Units.
Reading of selected texts to explore the ways in which literary journalism and related nonfiction modes formulate experience. Students complete a range of writing projects.

Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.

Restriction: Literary Journalism Majors have first consideration for enrollment.

LIT JRN 21. Reporting for Literary Journalism. 4 Units.
Instruction and hands-on training in how to interview, report, research, and collect the types of information needed to write literary journalism.

Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.

Restriction: Literary Journalism Majors have first consideration for enrollment.

LIT JRN 100. Advanced Reporting. 4 Units.
Practical engagement with advanced reporting techniques of Literary Journalism, emphasizing the importance of thorough and effective research in the production of high-quality journalistic writing. Prepares students to make good decisions about where and how to publish their writing.

Prerequisite: LIT JRN 21

LIT JRN 101A. Studies in the History, Theory, and Ethics of Literary Journalism. 4 Units.
Lectures and discussion on topics that explore the historical and theoretical dimensions of literary journalism, with particular emphasis on the evolution of ethics in the field.

Prerequisite: LIT JRN 21 and LIT JRN 20 and (ENGLISH 28A or ENGLISH 28B or ENGLISH 28C or ENGLISH 28D or ENGLISH 28E or COM LIT 60A or COM LIT 60B or COM LIT 60C or ENGLISH 8 or ENGLISH 10 or ENGLISH 11 or ENGLISH 12 or ENGLISH 15 or ENGLISH 16 or ENGLISH 17)
LIT JRN 101BW. Literary Journalism Core Writing Workshop. 4 Units.
Writing workshops in announced specialized genres that students will both study and practice. Examples include "The Memoir," "Review Writing," "The Editorial," "Writing Biography," "The Profile," and "Political Writing."

Prerequisite: LIT JRN 101A. Satisfactory completion of the Lower-Division Writing requirement.

Repeatability: May be taken for credit 3 times as topics vary.

Restriction: Upper-division students only. Students may enroll in one LITJ 101BW course per quarter.

LIT JRN 103. Lectures on Topics in Literary Journalism. 4 Units.
A series of lectures on, and discussions of, announced topics in literary journalism and the literature of fact. Examples include "Travel Literary Journalism"; "Literature of True Crime"; "Narratives in the Digital Age"; "Journalism on the Edge."

Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.

Repeatability: Unlimited as topics vary.

Restriction: Recommended: Upper-division students only.

LIT JRN 197. Community Reporting. 4 Units.
Directed group study in which students work with an instructor to report and write about community news in a newsroom-style format. Students will partner with local publications to pitch, market, and publish their stories.

Prerequisite: Satisfactory completion of lower-division writing requirement.

Repeatability: May be repeated for credit unlimited times.

LIT JRN 198. Special Topics. 4 Units.
Directed group study of selected topics.

Repeatability: Unlimited as topics vary.

LIT JRN 199. Reading and Conference. 1-4 Units.
To be taken only when the materials to be studied lie outside the normal run of departmental offerings.

Repeatability: May be repeated for credit unlimited times.

Writing Courses
WRITING 30. The Art of Writing: Poetry. 4 Units.
Beginners' workshop in the writing of poetry, evaluation of student manuscripts, and parallel readings.

Prerequisite: Satisfaction of the UC Entry Level Writing requirement.

Repeatability: May be taken for credit 2 times.

(Ia)

WRITING 31. The Art of Writing: Prose Fiction. 4 Units.
Beginners' workshop in fiction writing, evaluation of student manuscripts, and parallel readings.

Prerequisite: Satisfaction of the UC Entry Level Writing requirement.

Repeatability: May be taken for credit 2 times.

(Ia)

WRITING 37. Intensive Writing. 6 Units.
Critical reading and analysis conducted through literary, academic, journalistic, and fictional genres with additional instruction in paragraph development and sentence-level mechanics. Students analyze and apply rhetorical principles in a range of writing assignments.

Prerequisite: Students must have taken the UC Analytical Writing Placement Examination.

Overlaps with WRITING 39A, WRITING 39B.

(Ia)
WRITING 39A. Introduction to Writing and Rhetoric. 4 Units.
Introduction to the principles of rhetoric through readings and writing assignments across a range of genres, including fiction, non-fiction, journalism and academic essays. Rigorous instruction in composition and style, including organization, paragraph development, and sentence-level mechanics.

Prerequisite: Placement via the UC Analytical Writing Placement Examination is required.

Grading Option: Letter Grade only.

Overlaps with WRITING 37, WRITING 39AP.

WRITING 39AP. Introduction to Writing and Rhetoric with Lab. 6 Units.
Introduces the principles of rhetoric through readings and writing assignments across a range of genres. Rigorous instruction in composition and style. Designed for students seeking additional English language support.

Prerequisite: Students must have taken the UC Analytical Writing Placement Examination and the Academic English Placement Test.

Overlaps with WRITING 39A, WRITING 37.

WRITING 39B. Critical Reading and Rhetoric. 4 Units.
Critical reading and analysis conducted through literary, academic, journalistic, and fictional genres. Students analyze and apply rhetorical principles in a range of writing assignments.

Prerequisite: Satisfaction of the UC Entry Level Writing requirement.

Overlaps with WRITING 37.

(la)

WRITING 39C. Argument and Research. 4 Units.
Intensive instruction in research methods, argumentation, and rhetorical invention. Readings selected from current nonfiction and materials located by students from the University library’s holdings, to include databases across a range of disciplines.

Prerequisite: WRITING 37 or WRITING 39B

(la)

WRITING 90. Intermediate Poetry Writing. 4 Units.
Intermediate workshop in the writing of poetry, evaluation of student manuscripts, and parallel readings.

Prerequisite: WRITING 30

Repeatability: May be taken for credit 2 times.

WRITING 91. Intermediate Fiction Writing. 4 Units.
Intermediate workshop in the writing of fiction, evaluation of student manuscripts, and parallel readings.

Prerequisite: WRITING 31

Repeatability: May be taken for credit 2 times.

WRITING 101W. Undergraduate Seminar: Applications in Literary Theory and Criticism for Creative Writing. 4 Units.
Substitute for ENGLISH 101 for Creative Writing emphasis students.

Prerequisite: ENGLISH 100 or LIT JRN 100. Satisfactory completion of the lower-division writing requirement.

Repeatability: Unlimited as topics vary.

Restriction: English Majors only. Literary Journalism Majors only.

(lb)

WRITING 110. Short Story Writing. 4 Units.
Three-hour workshop in short fiction; discussion of student writing and of relevant literary texts.

Repeatability: May be taken for credit 2 times.
WRITING 111. Poetry Writing. 4 Units.
Three-hour advanced poetry writing workshop; discussion of student writing and of relevant literary texts.

Repeatability: May be taken for credit 2 times.

WRITING 113. Novel Writing. 4 Units.
Three-hour advanced workshop in fiction writing; discussion of student writing and of relevant literary texts.

WRITING 139W. Advanced Expository Writing. 4 Units.
Study of rhetoric, disciplinary genres, and modes of knowledge production; practice in writing effective prose. Essays of varying lengths, totaling at least 4,000 words. Course may be offered online.

Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.

Restriction: Upper-division students only.

(lb)

WRITING 179W. Advanced Writing for Education Sciences. 4 Units.
Writing for multiple audiences and purposes about central concepts in education sciences, such as schools as organizations; social structures in education and stratification; individual decision making, government regulation and markets; human development and learning.

Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.

Same as EDUC 179W.

Restriction: Upper-division students only.

(lb)

WRITING 197. Writing Internship. 2-4 Units.
Internships focused on writing. In consultation with a faculty advisor, students create a course from response essays, research essays, and assessment project data. Internships may include editing and publication projects, supervised teaching and tutoring assignments, community literacy projects.

Prerequisite: Satisfactory completion of the lower-division writing requirement.

Grading Option: Pass/no pass only.

Repeatability: May be taken for credit 3 times.

WRITING 250A. Graduate Writers’ Workshop (Fiction). 4 Units.
Graduate fiction workshop open to students enrolled in the MFA program in Writing.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be taken for credit 3 times.

Restriction: Graduate students only.

WRITING 250B. Graduate Writers’ Workshop (Fiction). 4 Units.
Graduate fiction workshop open to students enrolled in the MFA program in Writing.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be taken for credit 3 times.

Restriction: Graduate students only.

WRITING 250C. Graduate Writers’ Workshop (Poetry). 8 Units.
Graduate poetry workshop open to students enrolled in the M.F.A. Programs in Writing.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be taken for credit 3 times.

Restriction: Graduate students only.
WRITING 251A. Writing in Conference (Fiction). 4 Units.
Graduate fiction workshop open to students enrolled in the MFA program in Writing.
Grading Option: Satisfactory/unsatisfactory only.
Repeatability: May be taken for credit 3 times.
Restriction: Graduate students only.

WRITING 251B. Writing in Conference (Fiction). 4 Units.
Graduate fiction workshop open to students enrolled in the MFA program in Writing.
Grading Option: Satisfactory/unsatisfactory only.
Repeatability: May be taken for credit 3 times.
Restriction: Graduate students only.

WRITING 251C. Writing in Conference (Poetry). 8 Units.
Graduate poetry workshop open to students enrolled in the M.F.A. Programs in Writing.
Grading Option: Satisfactory/unsatisfactory only.
Repeatability: May be taken for credit 3 times.
Restriction: Graduate students only.

Department of European Languages and Studies

David T. Pan, Department Chair
243 Humanities Instructional Building
949-824-6406
http://www.humanities.uci.edu/els/

Overview
The Department of European Languages and Studies provides undergraduates with the opportunity to study Europe in its geographical, linguistic, historical, literary, artistic, and cultural diversity. The literatures, histories, and cultures of European nation-states have always been closely interconnected, even before the individual regions became nation-states. It is nearly impossible to study any era—the Renaissance, the Early Modern period, the Enlightenment, the Romantic period, or the Modern period—without taking into account the influence of one European nation on other European nations. Almost all significant European literary and artistic movements have been cross-cultural and transnational. The current configuration of Europe—the European Union—is merely the most recent socio-political and economic realization of the intense cross-pollination of ideas and institutions that defines—and has always defined—the continent. Immigration and the displacement of populations throughout the continent are constants of European history and have long inflected literary and artistic production in ways scholars continually explore. The history of European colonial enterprises and their afterlives have had a profound impact on the shape of the world in which we live; the Department is committed to a critical engagement with these legacies.

The Department offers majors in European Studies, French, and German Studies; minors in European Studies, French, German Studies, Italian Studies, and Russian Studies; as well as a graduate program (M.A., Ph.D.) in German. The Department also offers language training in French, German, Italian, and Russian with emphasis on the communicative and interpretive aspects of language learning. The goal is the achievement of translingual and transcultural competency. University language study is the critical investigation of a foreign linguistic system and the cultures defined by it. It is also an investigation of one’s own native language(s): it is nearly impossible for us to scrutinize and analyze something we know as intimately as our native language and yet this is the order by which we formulate our thoughts and the order which may sometimes formulate our thoughts for us. The “foreignness” of a foreign language allows us to objectify an entire linguistic system, to observe its structure and its usage, and then to make comparisons with our own linguistic situation. This kind of knowledge of one’s own languages is the foundation of critical reflection on texts of any nature—historical, philosophical, literary, political, legal, journalistic, and others. Thus serious study of a language other than English is crucial to a university education. The Department teaches its language courses with this principle in mind and seeks to provide its students with a framework for critical linguistic and cultural learning.

UCI Career Center
The UCI Career Center provides services to students and alumni including career counseling, information about job opportunities, a career library, and workshops on resume preparation, job search, and interview techniques. For additional information, see the Career Center section (p. 145).
Undergraduate Program in European Studies

The European Studies program focuses on the study of Europe from the vantage points of several disciplines in the humanities and social sciences. Because Europe is both a geographical place and an idea that changes throughout history, it has had different meanings at different times and in different places. The study of Europe thus requires an open, pluralistic, and interdisciplinary curriculum that takes a critical approach to the idea (or ideas) of Europe.

The program provides a multidisciplinary view of Europe as a whole and of its historical, political, and cultural formation and global implications and encounters with the non-European world. It also provides a focus on a specific area of European experience that cuts across traditional disciplinary and national boundaries. Participation in the UC Education Abroad Program in a European country is strongly recommended for all European Studies majors.

Requirements for the B.A. in European Studies

All students must meet the University Requirements (p. 91).

All students must meet the School Requirements (p. 788).

Requirements for the Major

Completion of two years of language (through the 2C level or equivalent) in French, German, classical Greek, Italian, Latin, Portuguese, Russian, or Spanish.

Twelve courses:

A. Select one of the following:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>HISTORY 70B</td>
<td>Problems in History: Europe</td>
</tr>
<tr>
<td>EURO ST 10</td>
<td>Topics in Historical Foundations</td>
</tr>
<tr>
<td>EURO ST S10</td>
<td>Historical Foundations: Europe and the Foundations of the Modern World</td>
</tr>
<tr>
<td>EURO ST 11</td>
<td>Contemporary Issues and Institutions</td>
</tr>
<tr>
<td>EURO ST S11</td>
<td>Europe's Futures: 1755-Present</td>
</tr>
<tr>
<td>EURO ST 12</td>
<td>What is the Origin of Language?</td>
</tr>
</tbody>
</table>

B. Complete:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>EURO ST 101A- 101B</td>
<td>European Studies Core I - Early Europe (Pre-1789) and European Studies Core II: Modern Europe (1789-Present)</td>
</tr>
</tbody>
</table>

C. Six courses from an approved specialization list (see sample below), four of which must be upper-division.

D. Two multidisciplinary electives: one course in European History or Political Science or Social Science outside the student’s specialization, and one course in European Literature or Arts outside the student’s specialization.

E. Complete:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>EURO ST 190W</td>
<td>Senior Seminar in European Studies</td>
</tr>
</tbody>
</table>

NOTE: One course from either the approved specialization list or the elective category must be from the Encounters with the Non-European World specialization.

NOTE: Courses are sometimes approved in more than one specialization. Any course that appears on the approved list for a student’s specialization cannot be used as a course outside the specialization even if it also appears on other lists.

Residence Requirement for the Major: At least five upper-division courses required for the major must be completed successfully at UCI.

Specializations and Approved Courses: The following specializations are available in the major in European Studies:

- British Studies
- Early Modern Europe (1450–1789)
- Encounters with the Non-European World
- French Studies
- German Studies
- Italian Studies
- Medieval Studies
- Modern Europe (1789–present)
- Russian Studies
- Spanish/Portuguese Studies
- The Mediterranean World: Past and Present
The list of approved courses is extensive and varies from quarter to quarter, depending upon course scheduling. For complete up-to-date information about approved courses, students are advised to consult the European Languages and Studies website (http://www.humanities.uci.edu/els).

Requirements for the Minor

A. Select one of the following:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>HISTORY 70B</td>
<td>Problems in History: Europe</td>
</tr>
<tr>
<td>EURO ST 10</td>
<td>Topics in Historical Foundations</td>
</tr>
<tr>
<td>EURO ST S10</td>
<td>Historical Foundations: Europe and the Foundations of the Modern World</td>
</tr>
<tr>
<td>EURO ST 11</td>
<td>Contemporary Issues and Institutions</td>
</tr>
<tr>
<td>EURO ST S11</td>
<td>Europe's Futures: 1755-Present</td>
</tr>
<tr>
<td>EURO ST 12</td>
<td>What is the Origin of Language?</td>
</tr>
</tbody>
</table>

B. Complete:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>EURO ST 101A-101B</td>
<td>European Studies Core I - Early Europe (Pre-1789) and European Studies Core II: Modern Europe (1789-Present)</td>
</tr>
</tbody>
</table>

In addition to requirements A and B, European Studies minors take:

C. Three courses selected from a single specialization.

D. Two electives outside the specialization: One course must be in European History and one course must be in European Literature or Culture.

NOTE: Courses are sometimes approved in more than one specialization. Any course that appears on the approved list for a student’s specialization cannot be used as a course outside the specialization even if it also appears on other lists.

Residence Requirement for the Minor: At least four upper-division courses required for the minor must be completed successfully at UCI. By petition, two of the four may be taken through the UC Education Abroad Program, providing course content is approved in advance by the appropriate department Undergraduate Director.

Additional Information

Career Opportunities

A degree in European Studies prepares its graduates to enter advanced degree programs in international business, history, law, and political science. The strong academic skills and professional orientation acquired by European Studies majors are necessary to pursue successful careers in such fields as international banking, law, journalism, management, public relations, publishing, and government service, as well as social justice and non-governmental organization (NGO) work both in the United States and abroad. Humanities graduates in general learn to express ideas clearly, do independent research, and think analytically and imaginatively—the required tools for success beyond the undergraduate career.

Graduate Program in European Studies

4+1 M.A. in European Thought and Culture

The M.A. in European Thought and Culture draws on expertise from faculty in the Schools of Humanities and Social Sciences in order to take an interdisciplinary approach to this area of study. The degree provides students with a rigorous course of study in the foundational philosophical texts and cultural products in literature and the arts produced in Europe from the Middle Ages to the present, locating them in their historical contexts.

Students may enter the program from two different tracks: the 4+1 B.A./M.A. program for current UCI undergraduates and the stand-alone M.A. track for students from outside UCI.

Admission

The M.A. program in European Thought and Culture has two tracks for admission, the UCI 4+1 B.A./M.A. and the stand-alone M.A. Standards of admissibility are specific to each track and are as follows:

4+1 B.A./M.A. Track

- Completed graduate application
- Official transcript
- One letter of recommendation from an ETC faculty member or faculty member in a related field
- Writing sample
- Current UCI undergraduate student status
- Cumulative 3.0 GPA
- Cumulative 3.3 GPA in major
- Completion of EURO ST 200A, EURO ST 200B, and EURO ST 200C with a grade of B or higher
• Completion of two additional European Studies courses as defined by the European Studies Generally Approved Courses (http://www.humanities.uci.edu/els/euro/approved.php) and/or the Quarterly Approved Courses (http://www.humanities.uci.edu/els/euro/quarterly.php) list.
• Demonstrated reading knowledge in one European language other than English. See Language Requirement.

Applications are accepted on a rolling basis during the final year of undergraduate study.

Stand-Alone M.A. Track
• Completed graduate application
• Official transcript
• Three letters of recommendation from faculty in related fields
• Writing sample
• Cumulative 3.0 GPA
• Cumulative 3.3 GPA in B.A. major
• GRE scores
• Completion of one European language other than English. See Language Requirement.

Applications are accepted for fall admission only.

Course Requirement
All M.A. students must complete a total of nine courses (36 units) for the degree:

A. Complete:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>EURO ST 200A</td>
<td>Core Seminar I: Foundations of European Thought and Culture</td>
</tr>
<tr>
<td>EURO ST 200B</td>
<td>Core Seminar II: Theorizing Periods and Movements in European Thought and Culture</td>
</tr>
<tr>
<td>EURO ST 200C</td>
<td>Core Seminar III: European Thought and Culture Beyond Europe</td>
</tr>
<tr>
<td>EURO ST 201</td>
<td>Topics in European Studies (four courses)</td>
</tr>
<tr>
<td>EURO ST 299</td>
<td>Independent Research (two courses)</td>
</tr>
</tbody>
</table>

Language Requirement
Students are required to demonstrate reading knowledge in one European language other than English. For all students, this prerequisite requirement is expected to be completed by the time they receive their B.A. through completion of two years of a European language (2C level or equivalent).

Degree Conferral
All M.A. students must complete one of the following options as their degree capstone:

Plan I – Thesis
The thesis, approximately 25 pages in length, is a piece of independent research reviewed and approved by the faculty advisor and thesis committee.

Plan II – Comprehensive Exam
In this examination, students will have a 48-hour period to answer and submit a total of three essays; one 10-page essay on a specialized topic of research, and two five-page essays related to topics covered throughout degree coursework.

Time to Degree
Students are expected to complete all degree requirements and the Master’s thesis/comprehensive exam within one year (three quarters). Maximum time to degree is two years.

Undergraduate Program in French
The Undergraduate Program in French offers a broad humanistic course of study designed for students in the liberal arts. The orientation of the program is multidisciplinary, where the study of literature is linked to critical, historical, and political concerns. Courses reflect the faculty’s interest in the related disciplines of history, philosophy, anthropology, visual studies, gender and sexuality studies, political science, postcolonial studies, and comparative literature.

Lower-division language courses encourage students to participate in the creative process of language, to think in French as they learn to understand, speak, read, and write. These courses are taught entirely in French, and the approach to teaching stresses the interdependence of the four basic language skills and makes them mutually reinforcing.
At the intermediate lower-division level, texts of contemporary literary and social interest provide the focus for advanced conversation, reading, and composition. After the second year, advanced courses in conversation and writing enable students to attain a greater degree of proficiency, preparing them for study in the upper-division program.

A series of more advanced grammar and composition courses are generally taken in the third year of language study. FRENCH 60 carries on the work of the intermediate levels; FRENCH 61, FRENCH 62, FRENCH 63, and FRENCH 64 all focus attention on particular issues and themes.

Upper-division offerings are taught either in the seminar mode or in small group settings. Because classes are limited in size, they promote and encourage participation and discussion and facilitate direct contact with professors. In recent years, courses have been offered in Literature and the Enlightenment, the Surrealist Imagination, Autobiography, Francophone Literature, Political Fictions, Women of Paris, Tales of the Fantastic, the French New Wave, the Body in Renaissance Literature and Art, Paris as Art Capital, Literature by Women, Black Paris/Paris Noir, French Critical Theory, France and Algeria, and Marcel Proust. The content of courses changes yearly according to the interests of both faculty and students.

The program strongly encourages its students to take advantage of the study-abroad programs in French-speaking countries to improve their language skills and gain invaluable cultural experience in a foreign university setting. The program recommends the UC Education Abroad Program, which runs programs of differing lengths in France (Lyon, Bordeaux, and Paris). Credit for courses taken through study-abroad programs is available. Students are advised to discuss their course of study with the Undergraduate Director before their departure and to arrange to bring home proof of their work.

Language placement examinations are not required, although an optional placement examination is available. Students will be placed in French language courses according to their years of previous study. See Language Other Than English Placement and Progression (p. 789).

Transfer students who have had a previous course (or courses) in French from another college or university who want to enroll in any French 1A through 2C course at UCI must take a copy of their transcript to their academic counseling office in order to receive authorization to enroll in the appropriate course. In exceptional cases, students may be advised to replace FRENCH 2C with FRENCH 60 in order to move more quickly through the major.

Requirements for the B.A. in French

All students must meet the University Requirements (p. 91).

All students must meet the School Requirements (p. 788).

Departmental Requirements for the Major

A. Select two courses from the following:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>FRENCH 60</td>
<td>Grammar and Composition</td>
</tr>
<tr>
<td>FRENCH 61</td>
<td>Topics in Issues in French and Francophone Culture</td>
</tr>
<tr>
<td>FRENCH 62</td>
<td>Translation</td>
</tr>
<tr>
<td>FRENCH 63</td>
<td>Topics in the Work World in French</td>
</tr>
<tr>
<td>FRENCH 64</td>
<td>Advanced French Language and Style</td>
</tr>
</tbody>
</table>

B. Complete 10 additional upper-division French courses: 1

A maximum of four courses may be taught entirely in English.

At least one course must be completed in each of the following historical periods:

- Pre-18th century literature and culture
- 18th or 19th century literature and culture
- 20th or 21st century literature and culture

A third course from FRENCH 60, 61, 62, 63, or 64 may be substituted for an upper-division course by petition.

Residence Requirement for the Major: Five upper-division courses must be successfully completed at UCI, of which a maximum of three may be taught entirely in English.

Education Abroad Option: A maximum of four upper-division courses taken during study abroad may be counted toward the major requirement. All such courses must be approved by the Undergraduate Director and students are advised to consult with the Undergraduate Director before and after their stay abroad. Course approval typically involves the following: 1) Presentation of syllabi and other pertinent course materials (term papers, exams, etc.) from the host university, and 2) approval from the Undergraduate Director and the Humanities Office of Undergraduate Study. In planning their undergraduate career, all students should keep in mind the Residence Requirement (stated above).

Planning a Program of Study

Students should consult with the faculty to plan a coherent program of courses to fulfill the major requirements. Students also should consult with faculty members concerning career plans in areas such as teaching, business, journalism, law, public service, as well as social justice and international non-governmental organization (NGO) work.

Requirements for the French Minor

A. Select two courses from the following:
FRENCH 60  Grammar and Composition
FRENCH 61  Topics in Issues in French and Francophone Culture
FRENCH 62  Translation
FRENCH 63  Topics in the Work World in French
FRENCH 64  Advanced French Language and Style

B. Complete at least five upper-division French courses: ¹
A maximum of three courses may be taught entirely in English.
At least one course must be completed in each of the following historical periods:
- Pre-18th century literature and culture
- 18th or 19th century literature and culture
- 20th or 21st century literature and culture

¹ A third course from FRENCH 60, 61, 62, 63, or 64 may be substituted for an upper-division course by petition.

Residence Requirement for the Minor: At least four upper-division courses required for the minor must be completed successfully at UCI, of which a maximum of two may be taught entirely in English. By petition, two of the four may be taken through the UC Education Abroad Program, providing course content is approved in advance by the appropriate department Undergraduate Director.

Additional Information

Career Opportunities
The great majority of students who major in French pursue careers in business and commerce, where they can take advantage not only of their proficiency in French language but also of their knowledge of French and Francophone literature and culture. Students also go on to law school, to medical school, and to careers in the diplomatic service and education. The multidisciplinary approach to the study of literature and culture teaches students to think critically and develops analytical skills that can be applied to a wide range of problems. It also helps students develop the interpretive and writing skills necessary to express their own ideas clearly and persuasively. Whether they enter business or professions such as law, education, or government, French majors acquire the intellectual and communicative skills requisite for success.

- Doctor of Philosophy in German (p. 897)
- Career Opportunities (p. 898)

Undergraduate and Graduate Programs in German Studies
The German Studies programs emphasize the humanistic endeavor of understanding and evaluating culture. Courses are focused on language, literature, and film in context, that is, within the historical, social, philosophical, linguistic, intellectual, and political circumstances of their production and continuing reception. Courses on German, Austrian, and Swiss literature, film, and culture offer a variety of critical perspectives from historical, social, or politically engaged readings to feminist analysis and cultural studies. Topics range from authors, periods, and genres to the history of German-language literature and film, philosophy, theory and criticism, European cultural relations, and cultural artifacts in a globalized social and political context.

The German Studies major can be combined as a double major with any other UCI course of study, and the minor may be taken in tandem with any UCI major.

Courses in the program are taught in German to the extent compatible with the aim of the course. In the lower-division language courses students develop skills in speaking, listening, reading, and writing through an engaging, collaborative, task-based curriculum. The courses place a great deal of emphasis on meaningful cultural literacy in German, employing a diverse range of authentic texts and materials from the beginning. During the second year (intermediate), students benefit from a curriculum based on authentic literary and cultural content (theatre, media) and simulation of “real world” situations. These courses have the additional goal of contributing to students’ education in the humanities and developing their skills in critical thinking.

After completion of the intermediate level, students enroll in the GERMAN 101–GERMAN 105 series, which emphasizes advanced reading, writing, and speaking skills while providing an introduction to a variety of German topics and texts in literature, culture, film, linguistics, and business. These courses are taken either in preparation for, or concurrently with GERMAN 115, GERMAN 117, GERMAN 118, GERMAN 119, GERMAN 120, GERMAN 130, which provide advanced instruction in periods ranging historically from the Reformation to the present and cover a variety of topics and approaches. A further series of courses (GERMAN 140, GERMAN 150, GERMAN 160, GERMAN 170) is taught in English for both German Studies students and
those who do not speak the language, and covers topics in German, Austrian, and Swiss literature and culture, literary theory, philosophy, linguistics, and criticism as well as German-language cinema.

Students are encouraged to participate in work- and study-abroad programs in German-speaking countries. The Department recommends the UC Education Abroad Program (EAP) in Berlin where students may enroll at any of the city universities (Free University, Humboldt University, Berlin Technical University) and take courses at others as desirable. UCEAP students complete an advanced language program before enrolling in university courses.

German placement tests are recommended for students who have successfully completed foreign language classes in high school or elsewhere. To obtain information about the German placement test, contact the UCI Academic Testing Office at 949-824-6207. Students with college-level course work should present their transcript to their academic counseling office, for assistance in determining which UCI course to take.

Requirements for the B.A. in German Studies
All students must meet the University Requirements (p. 91).
All students must meet the School Requirements (p. 788).

Comparative Literature 2

German history 2

German philosophy 2

German political science 2

1 GERMAN 140, GERMAN 150, GERMAN 160, GERMAN 170 are variable topics courses and may be repeated for credit as topics vary; one of which can be taken in satisfaction of the upper-division writing requirement.

2 Must be approved by the advisor for the major.

Residence Requirements for the Major: Five upper-division courses must be taken in residence at UCI for the major. However, if a student participates in the Education Abroad Program, two of those can be taken abroad, pending approval from the department.

Education Abroad Option: Up to a maximum of six upper-division courses taken during study abroad may be counted toward the major requirement. All such courses must be approved by the Undergraduate Director and students are advised to consult with the Undergraduate Director both before and
after their stay abroad. Course approval typically involves the following: (1) presentation of syllabi and other pertinent course materials (term papers, exams, etc.) from the foreign host university, and (2) approval by the Undergraduate Director and the Humanities Office of Undergraduate Study. In planning their undergraduate career, all students should keep in mind the Residence Requirement (see above).

- Comparative Literature
- German history
- German philosophy
- German political science

1 Must be approved by the advisor for the minor.

**Residence Requirement for the Minor:** Four upper-division courses required for the minor must be completed successfully at UCI. By petition, two of the four may be taken through the UC Education Abroad Program, provided that course content is approved in advance by the German Undergraduate Director and the Humanities Office of Undergraduate Study.
Graduate Program

The graduate programs in German at UCI combine innovation with a solid foundation in traditional approaches. The course of study focuses on both the German literary tradition and foreign language pedagogy, with the goal of integrating works of literature, philosophy, and art into pertinent cultural, theoretical, and historical contexts in teaching and research. UC Irvine has a decades-long reputation for excellence in the study of Critical Theory, having placed first in most rankings, and the campus provides a learning context that encourages students to push the boundaries of thinking in their discipline.

Students may apply to either the M.A. program or the Ph.D. program, but only students applying to the Ph.D. program can be admitted with fellowship funding. Students with a B.A. may apply directly to the Ph.D. program and receive fellowship support, but their official advancement into the Ph.D. program is contingent upon successful completion of the M.A. before or during the second year of study. Students who already hold the M.A. degree are also encouraged to apply to the Ph.D. program.

The Ph.D. program is organized to encourage completion within five years, and there is special funding and potential employment available for those who do finish in five years. A student arriving with a B.A. normally will require three years to complete course work for the Ph.D. and qualify for advancement to candidacy. A student arriving with an M.A. will normally require two years to advance to candidacy. Most of the course work is done within the Department, but students are encouraged to broaden their studies by taking related courses in other departments in the School of Humanities, such as comparative literature, critical theory, feminist theory, or visual studies; other combinations of courses may be selected in consultation with the graduate advisor. Our innovative exam structure (involving course-syllabus development) and post-exam timeline are designed both to expedite progress to degree and to enhance the professional training of our students.

For students who enter with normal academic preparation and pursue a full-time program of study, the normative time to degree for the Ph.D. is six years or less.

Teaching German

Since the majority of German Ph.D. candidates choose careers that involve teaching, the faculty recognizes its obligation to offer them both outstanding pedagogical training and real-world preparatory experience. Therefore, all candidates for the German M.A. and Ph.D. are required to pass HUMAN 398A and HUMAN 398B - Foreign Language Teaching: Approaches and Methods - which together comprise one graduate seminar taught over two quarters. In addition, all candidates for the German M.A. and Ph.D. program are required to teach under the supervision of a faculty member one course in each of at least three quarters (for which they will receive credit as GERMAN 399). Three of these courses may be counted toward the 22 courses required for the Ph.D. HUMAN 398A and HUMAN 398B will not count toward the 22 courses required for the Ph.D.

Faculty Mentors

Each graduate student will be assigned a faculty mentor to consult at least once each quarter about progress, the program, academic questions, or any other issues pertaining to the student’s graduate career. A student may change mentors for any reason (indeed, without giving a reason) at any time after meeting with either the graduate advisor or chair.

First-Year Review

Students ending their first year of study at UCI must undergo a more comprehensive review procedure. This applies to students entering with either a B.A. or an M.A. After the review, students will be apprised of the faculty’s evaluation and advised on a future course of study or recommended for discontinuation of the program.

Annual Review

All students will undergo an annual review by the faculty of the program. Each spring the faculty will meet to discuss students’ progress in the program. Annual review and evaluation of student performance and progress assure both the student and the faculty that each student is meeting the academic standards, teaching standards (for teaching assistants and associates, readers, and “ABD” lecturers), and professional standards of conduct expected of graduate students in the program. The review process provides an opportunity to assess and make recommendations regarding any deficiencies in student performance and progress. The following factors will be considered in determining graduate student performance and progress: grade point average, time to degree, foreign language requirement, and teaching performance.

Grade Point Average

All graduate students in German, including those in both the master’s program and the doctoral program, are expected to maintain a 3.3 GPA. A GPA below 3.3 in any quarter falls below the academic standard expected by the program. Pursuant to the terms of appointment, a student whose GPA falls below 3.3 in any given quarter and whose cumulative GPA is not 3.3 by the end of the academic year may be ineligible for funding, and faculty may recommend the student be disqualified from the program.

Foreign Language Requirements

Students must possess reading knowledge of one language other than German or English. This can be demonstrated by completing one year or the equivalent of University-level language study (1C), or passing one of the 97 graduate reading courses, or passing a translation examination administered by the Department. In the two-hour examination, the student translates selections from a scholarly book or article in the target language into English. A dictionary may be used during the examination. Full-time students must demonstrate near-native speaking abilities in German and English. Students with significant deficiencies in language competency that will adversely affect their academic progress normally will not be admitted to doctoral candidacy. Students in the doctoral program will meet language requirements on a schedule established by their doctoral committees, but in all
cases the requirements must be met prior to taking the Ph.D. qualifying examination. If these requirements are not met in a timely manner, faculty may recommend disqualification from the program.

**Master of Arts in German**

Before entering the program, a candidate is expected to have the equivalent of the UCI undergraduate German Studies major. Students with a bachelor's degree in another subject may be considered for admission. Normally their course of study will have to be extended in order to make up for the deficiency. However, each case is considered individually by the faculty. The minimum course requirement for the M.A. is nine courses, eight of which must be taken from offerings of the German graduate program. Reading knowledge of a foreign language other than German also is required for the M.A. Whenever possible, a candidate is urged to complete this requirement before entering the program. Further requirements follow.

Students entering with a B.A. must complete their requirements for the M.A. by the end of the second year of study (six quarters) at the latest.

**Preparation of a Reading List**

All candidates should prepare as early as possible a list of works read in the field of German literature, both primary texts and critical works. This list should be augmented by critical texts and by works from other literatures which, in the candidate’s opinion, relate to the German works on the list. Since it should ultimately contain representative selections from various eras of German literature and some works of criticism, a tentative list must be discussed with the graduate advisor before the end of the fall quarter of the year in which the candidate expects to receive the M.A. Candidates should indicate on the list a number of works with which they are especially familiar. In its final form (including works read during the course of study both in and outside of class), the list will be submitted together with the master’s essay two weeks before the oral examination. It is the student’s responsibility to keep the reading list current. On the basis of this list, the candidate should design one course as an Introduction to German Literature and Culture. The course must include reading lists of required and optional texts, main and secondary literature, a written justification/course description, and a basic syllabus for a 13-week semester course. The course must be submitted to the committee at least two weeks prior to the oral exam date.

**M.A. Comprehensive Examination (consists of two parts)**

1. **The Master’s Essay.** The purpose of the written part of the M.A. comprehensive examination is to show the candidate’s methodological progress in interpreting German literature and film. It consists of an essay in which a text is elucidated and related to (a) pertinent works by the same author, (b) its social and historical context, and (c) other works of German or other literatures with which the candidate is familiar. The level of the discussion will normally be enhanced by the candidate’s knowledge of the relevant secondary literature. The topic of the essay should be tentatively formulated and reported to the graduate advisor before the end of the second quarter of the student’s residence.

2. **The Oral Examination.** During the oral examination the following items will be discussed: (a) the essay, and (b) the reading list, focusing on the course description. The discussion based on the reading list will focus on works which the student knows well, but may broaden into other areas.

**One Year of Residence.**

**Doctor of Philosophy in German**

The program requires a minimum of 22 approved courses from students entering with a bachelor's degree. These may include courses in philosophy, history, comparative literature, and others suitable for the individual student's program of study. The student also will participate in each of the German Program’s colloquia. The student will augment the reading list and keep it current during the whole course of study. At least two years of residence are required.

Students entering with the master’s degree will be advised individually as to remaining course requirements.

**Qualifying Examination**

In order to advance to candidacy, the student must take and pass a qualifying examination. At least two months prior to the planned date of the exam, students must submit a comprehensive reading list, prepared in consultation with their committee chair, to the examination committee. The committee may make recommendations to the list. On the basis of that list, students must design three courses, drafted in consultation with the student’s committee chair. These courses should be graduate seminars organized around topics, genres, authors, or periods. At least one of these courses must comprise the student’s intended area of dissertation research. The three courses must be clearly distinct and have minimal overlap. These courses must include reading lists of required and optional texts, main secondary literature, a written justification/course description, and a basic syllabus (for a 13-week semester course). No more than one course may be a modification of a seminar taken in the program. These courses must be submitted to the committee members at least two weeks prior to an oral examination date. Students must submit a dissertation prospectus to their advisor and, following approval by the advisor, circulate it to the entire committee. The oral exam will be a three-hour exploration of the reading list, focusing on the courses. In addition, part of the qualifying exam will involve a discussion of the student's dissertation prospectus. Upon successful completion of the qualifying examination, the candidate will have advanced to Ph.D. candidacy.

**Dissertation Prospectus**

Students must submit a dissertation prospectus to their advisor and, following approval by the advisor, circulate it to the entire committee.

**Dissertation Chapter Review**

Students must submit a substantial piece of writing (approximately 45 pages) from their dissertation ordinarily in the form of a chapter and a comprehensive bibliography. In consultation with their dissertation committee chair, they schedule a date and time for the oral review with the committee,
which lasts approximately two-three hours. Prior to the oral review the student will make a public presentation, open to the UCI community and guests, in the form of a lecture with questions and answers.

**Doctoral Colloquium**

Students who have advanced to candidacy and are in residence must attend a colloquium for doctoral candidates. The colloquium will be held at least two times per quarter. Students will be expected to present sections of their prospectus or dissertation.

**Dissertation Defense**

The oral defense of the dissertation focuses on the adequacy of the student’s research and thesis.

**Normative Time to Degree and Expected Programs of Study**

*For students entering with a B.A.:*

Year 1: Course work;

Year 2: Course work; M.A. completed;

Year 3: Course work; Qualifying Examination and Dissertation Prospectus (latest, fall of year four); advance to candidacy;

Year 4: Dissertation chapter review and public presentation;

Year 5: Completion of dissertation; defense.

*For students entering with an M.A.:*

Year 1: Course work;

Year 2: Course work; Qualifying Examination and Dissertation Prospectus (latest, fall of year three); advance to candidacy;

Year 3: Dissertation chapter review and public presentation;

Year 4: Completion of dissertation; defense.

**Career Opportunities**

The ability to speak and write German can open up opportunities in communications, international business and banking, transportation, government, science and technology, tourism, library services, and teaching, as well as in social justice and non-governmental organization (NGO) work. Because German plays an important role in modern technology, employers in international law, business, the film industry, the airline and travel industry, journalism, professional translating, and all levels of education increasingly seek students with a knowledge of German. German is excellent preparation for professional schools. It can be combined successfully with work in the natural sciences, business and management, and computer sciences, and it is invaluable for advanced work in the humanities and the arts.

**Undergraduate Minor in Italian Studies**

The minor in Italian Studies is an interdisciplinary curriculum that allows students to go beyond second-year Italian and engage in various aspects of Italian culture by taking courses in Italian literature and other courses related to Italian history and culture in the Departments of Art History, Comparative Literature, English, Film and Media Studies, History, and Philosophy.

**Requirements for the Italian Studies Minor**

A. Complete the following:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>ITALIAN 2C</td>
<td>Intermediate Italian</td>
</tr>
</tbody>
</table>

B. Seven courses selected from the following two groups, when topics are appropriate. At least five of the seven courses must be from Group 1. Also in Group 1, no more than two courses may be taken from any one department, with the exception of Italian courses.

**Group 1**

<table>

Residence Requirement for the Minor: At least four upper-division courses must be completed successfully at UCI. By petition, two of the four may be taken at an Italian university through the UC Education Abroad Program, provided they are approved in advance by the Director of the minor.

The Department strongly encourages its students to take advantage of the study-abroad programs in Italy to improve their language skills and gain invaluable cultural experience in a foreign university setting. The Department recommends the UC Education Abroad Program in Italy.

Credit for courses taken through study-abroad programs is available. Students are advised to discuss their course of study with the Undergraduate Director before their departure and to arrange to bring home proof of their work.

Undergraduate Minor in Russian Studies

Spanning both Europe and Asia, Russia is one of the world’s dominant political entities. Its rich cultural traditions have enhanced world literature, theatre, art, film, and dance. As the world’s first socialist state, it became a major political rival of the United States after the Second World War. In the past decade, Russians have abandoned their socialist system and are now in the process of making a rocky transition to capitalism. Although Russia lost sizeable amounts of territory in this transition, the Russian language now serves as the lingua franca throughout many areas formerly controlled by the Soviet Union.

While the demand for specialists in various sectors of government has eased, relationships between our countries at other levels of society are growing more active and business opportunities are exciting and rewarding. Other areas in which the need for Russian language competence is evident right now include trade, environmental protection, social services, law, medicine, and technology.

All students in Russian language courses are encouraged to take part in the UC Education Abroad Program and spend a portion of their junior or senior year studying in Russia. Visit the Study Abroad Center website (http://www.studyabroad.uci.edu) for additional information.

The Russian Studies minor is a multidisciplinary curriculum combining the Humanities and Social Sciences. It is designed to introduce students to the rich history and culture of Russia and provide them with the intellectual and linguistic tools necessary for sustained engagement with this area of the world.

Requirements for the Russian Studies Minor

A. Complete:

RUSSIAN 2C  
Intermediate Russian (or equivalent)

B. Complete:

RUSSIAN 50  
Russian Culture (three different topics)

C. Select sixteen units of upper-division courses from the following:

RUSSIAN 150  
Topics in Russian Literature

RUSSIAN 190  
Topics in Russian Language Through Film

HISTORY 124B  
Twentieth-Century Russia

HISTORY 190  
Colloquium (when topics are related to Russia)

POL SCI 154F/ANTHRO 164P  
Peoples and Cultures of Post-Soviet Eurasia

POL SCI 159  
Special Topics in Comparative Politics (when topics are related to Russia)

A maximum of four units may be chosen from the following courses devoted in part to Russian themes: HISTORY 114, HISTORY 126A, HISTORY 126B, POL SCI 142D, and POL SCI 142E.

Students may petition other relevant courses.

Residence Requirement for the Minor: At least four upper-division courses required for the minor must be completed successfully at UCI. By petition, two of the four may be taken through the UC Education Abroad Program, provided course content is approved in advance by the appropriate department chair.

European Languages and Studies Courses

EURO ST 10. Topics in Historical Foundations. 4 Units.
Offers an overview of the European experience from its social, political, and cultural foundations to modern European issues and institutions in a globalized world. Topics include social, political, and cultural history up to the founding of the European Union.

Repeatability: Unlimited as topics vary.
Overlaps with EURO ST S10.

Encompasses a variety of perspectives in the social sciences and the humanities involving crucial developments coming out of Europe from roughly 1500 to 1800, (the Protestant Reformation through the French Revolution), that helped shape the modern (western) world.

Overlaps with EURO ST 10.

EURO ST 11. Contemporary Issues and Institutions. 4 Units.
Offers an overview of contemporary European societies in social, political, and cultural terms. Topics include shifting geopolitical borders, social movements, and various forms of cultural expression (film, art, literature) as they intersect with and shape contemporary issues and events.

Repeatability: Unlimited as topics vary.

EURO ST S11. Europe's Futures: 1755-Present. 4 Units.
Introduces students to competing approaches from humanities and social sciences to conceptualizing the future in politics, art, and literature. From the enlightenment to today, investigates the cultural and political context of moments when new ideas emerged to secure Europe's futures.

Overlaps with EURO ST 11.

EURO ST 12. What is the Origin of Language?. 4 Units.
Teaches symbol-based logic and universal grammar in human language as tools to investigate the origin of language. Does language originate with reason? Is language inherently universal or diverse? Does it begin as something literal or figurative.

((III or IV) and Vb ).

EURO ST 101A. European Studies Core I - Early Europe (Pre-1789). 4 Units.
Introduction to multidisciplinary approaches to important themes in European society, culture, art, literature, and politics; encourages students to explore intersections among disciplines. Possible themes: Concept of Europe in Renaissance, Self and Other: Europe and Islam, Hybrid Cultures in Medieval Europe.

Repeatability: Unlimited as topics vary.

EURO ST 101B. European Studies Core II: Modern Europe (1789-Present). 4 Units.
Multidisciplinary approaches to important themes in modern European society, culture, art, literature, and politics, encouraging students to see points of intersection among disciplines. Possible themes: Subjects, Citizens, and Representation; Europe in the World; European Revolutions in Art and Society.

Repeatability: Unlimited as topics vary.

EURO ST 102. Topics in Early European History and Culture: Pre-1789. 4 Units.
Addresses historical and cultural events, issues, and texts (art, literature, music, political theory) from the pre-1789 period in more than one European country.

Repeatability: Unlimited as topics vary.

EURO ST 103. Topics in Modern European History and Culture: Post-1789. 4 Units.
Addresses historical and cultural events, issues, and texts (art, literature, music, political theory) from 1789 to present in more than one European country.

Repeatability: Unlimited as topics vary.
EURO ST 190W. Senior Seminar in European Studies. 4 Units.
Capstone research seminar. Students engage in rigorous, in-depth, interdisciplinary exploration of specific topics, periods, or themes, investigating and analyzing the intersection of material and discursive culture in different historical periods and geographical locations.

Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.

EURO ST 199. Independent Study. 1-4 Units.
Directed reading and research in consultation with a faculty advisor. Substantial written work required.

Repeatability: May be repeated for credit unlimited times.

Restriction: Upper-division students only.

EURO ST 200A. Core Seminar I: Foundations of European Thought and Culture. 4 Units.
Provides a historical, geographical, and methodological overview of foundational texts and issues in European thought and culture. Covering several historical periods between the Middle Ages and the present, students will see how ideas and institutions change over time.

EURO ST 200B. Core Seminar II: Theorizing Periods and Movements in European Thought and Culture. 4 Units.
Periods and movements still form basic units for organizing European thought and theory, even as such categories are problematized. This course will allow for greater focus on a specific time period or constellation of issues around a period or movement.

EURO ST 200C. Core Seminar III: European Thought and Culture Beyond Europe. 4 Units.
Studies the intersection and afterlives of European thought and culture with and in non-European contexts, the way European thought and culture has been translated and transformed, taken up and challenged, in colonial, postcolonial, and other global situations.

EURO ST 201. Topics in European Studies. 4 Units.
Seminars on various topics related to European Studies.

Repeatability: Unlimited as topics vary.

EURO ST 299. Independent Research. 4 Units.
For students to do independent research with advisors on their master's thesis or master's examination reading lists.

Restriction: Graduate students only. School of Humanities students only.

French Courses

FRENCH 1A. Fundamentals of French. 5 Units.
Students are taught to conceptualize in French as they learn to understand, read, write, and speak. Classes are conducted entirely in French and meet daily. Language laboratory attendance is required.

Overlaps with FRENCH S1AB, FRENCH 1AB.

Restriction: FRENCH 1A and FRENCH 1AB and FRENCH S1AB may not be taken for full credit.

FRENCH 1AB. Intensive Fundamentals of French. 7.5 Units.
Accelerated first half of first-year French. Students are taught to conceptualize in French as they learn to read, write, and speak. Students develop an awareness of and sensibility to French and Francophone life and culture through reading, viewing, and discussion.

Overlaps with FRENCH 1A, FRENCH 1B, FRENCH S1AB.

Restriction: FRENCH 1AB and FRENCH 1A and FRENCH 1B and FRENCH S1AB may not be taken for full credit.

FRENCH 1B. Fundamentals of French. 5 Units.
Students are taught to conceptualize in French as they learn to understand, read, write, and speak. Classes are conducted entirely in French and meet daily. Language Laboratory attendance is required.

Prerequisite: FRENCH 1A. FRENCH 1A with a grade of C or better

Overlaps with FRENCH S1AB, FRENCH S1BC, FRENCH 1AB, FRENCH 1BC.

Restriction: FRENCH 1B and FRENCH 1AB and FRENCH 1BC and FRENCH S1AB and FRENCH S1BC may not be taken for full credit
FRENCH 1BC. Intensive Fundamentals of French. 7.5 Units.
Accelerated second half of first-year French. Students are taught to conceptualize in French as they learn to read, write, and speak. Students develop an awareness of and sensibility to French and Francophone life and culture through reading, viewing, and discussion.

Prerequisite: FRENCH 1AB or FRENCH 1B or FRENCH S1AB. FRENCH 1AB with a grade of C or better. FRENCH 1B with a grade of C or better. FRENCH S1AB with a grade of C or better. Placement into FRENCH 1BC is also accepted.

Overlaps with FRENCH 1B, FRENCH 1C, FRENCH S1BC.

Restriction: FRENCH 1BC and FRENCH 1B and FRENCH 1C and FRENCH S1AB may not be taken for full credit.

(VI)

FRENCH 1C. Fundamentals of French. 5 Units.
Students are taught to conceptualize in French as they learn to understand, read, write, and speak. Classes are conducted entirely in French and meet daily. Language Laboratory attendance is required.

Prerequisite: FRENCH 1B. FRENCH 1B with a grade of C or better

Overlaps with FRENCH S1BC, FRENCH 1BC.

Restriction: FRENCH 1C and FRENCH 1BC and FRENCH S1BC may not be taken for full credit.

(VI)

FRENCH S1AB. Fundamentals of French. 7.5 Units.
First half of first-year French in an intensified form. Students are taught to conceptualize in French as they learn to understand, read, write, and speak. Classes are conducted entirely in French.

Overlaps with FRENCH 1A, FRENCH 1B, FRENCH 1AB.

Restriction: FRENCH S1AB and FRENCH 1A and FRENCH 1B and FRENCH 1AB may not be taken for full credit.

FRENCH S1BC. Fundamentals of French. 7.5 Units.
First half of first-year French in an intensified form. Students are taught to conceptualize in French as they learn to understand, read, write, and speak. Classes are conducted entirely in French.

Prerequisite: FRENCH S1AB or FRENCH 1B or FRENCH 1AB. FRENCH S1AB with a grade of C or better. FRENCH 1B with a grade of C or better. FRENCH 1AB with a grade of C or better

Overlaps with FRENCH 1B, FRENCH 1C, FRENCH 1BC.

Restriction: FRENCH S1BC and FRENCH 1B and FRENCH 1C and FRENCH 1BC may not be taken for full credit.

(VI)

FRENCH 2A. Intermediate French. 4 Units.
Texts of contemporary literary or social interest provide the focus for more advanced conversation, reading, and composition. Classes are conducted entirely in French.

Prerequisite: FRENCH 1C or FRENCH 1BC or FRENCH S1BC. FRENCH 1C with a grade of C or better. FRENCH 1BC with a grade of C or better. FRENCH S1BC with a grade of C or better. Placement into FRENCH 2A is also accepted.

Overlaps with FRENCH S2AB.

Restriction: School of Humanities students have first consideration for enrollment. International Studies Majors have first consideration for enrollment. FRENCH 2A and FRENCH S2AB may not be taken for full credit.

(VIII)
FRENCH 2B. Intermediate French. 4 Units.
Texts of contemporary literary or social interest provide the focus for more advanced conversation, reading, and composition. Classes are conducted entirely in French.
Prerequisite: FRENCH 2A. FRENCH 2A with a grade of C or better
Overlaps with FRENCH S2AB, FRENCH S2BC.
Restriction: School of Humanities students have first consideration for enrollment. International Studies Majors have first consideration for enrollment. FRENCH 2B and FRENCH S2AB and FRENCH S2BC may not be taken for full credit.

(VIII)

FRENCH 2C. Intermediate French. 4 Units.
Texts of contemporary literary or social interest provide the focus for more advanced conversation, reading, and composition. Classes are conducted entirely in French.
Prerequisite: FRENCH 2B or FRENCH S2AB. FRENCH 2B with a grade of C or better. FRENCH S2AB with a grade of C or better
Overlaps with FRENCH S2BC.
Restriction: School of Humanities students have first consideration for enrollment. International Studies Majors have first consideration for enrollment. FRENCH 2C and FRENCH S2BC may not be taken for full credit.

(VIII)

FRENCH S2AB. Intermediate French. 6 Units.
First half of second-year French in an intensified form. Texts of contemporary literary or social interest provide the focus for more advanced conversation, reading, and composition. Classes are conducted entirely in French. Prior high school or college French recommended.
Prerequisite: FRENCH 1C or FRENCH 1BC or FRENCH S1BC. FRENCH 1C with a grade of C or better. FRENCH 1BC with a grade of C or better. FRENCH S1BC with a grade of C or better. Placement into FRENCH S2AB is also accepted.
Overlaps with FRENCH 2A, FRENCH 2B.
Restriction: FRENCH S2AB and FRENCH 2A and FRENCH 2B may not be taken for full credit.

(VIII)

FRENCH S2BC. Intermediate French. 6 Units.
Second half of second-year French in an intensified form. Texts of contemporary literary or social interest provide the focus for more advanced conversation, reading, and composition. Classes are conducted entirely in French. Prior high school or college French recommended.
Prerequisite: FRENCH S2AB or FRENCH 2B. FRENCH S2AB with a grade of C or better. FRENCH 2B with a grade of C or better
Overlaps with FRENCH 2C, FRENCH 2B.
Restriction: FRENCH S2BC and FRENCH 2B and FRENCH 2C may not be taken for full credit.

(VIII)

FRENCH 10. French Peer Tutoring. 1 Unit.
Tutoring Program in which advanced French students provide assistance to students at a lower level. One hour of tutoring per week.
Grading Option: Pass/no pass only.
Repeatability: May be taken for credit 4 times.

FRENCH 13. Conversation. 4 Units.
Helps students increase their fluency and enrich their vocabulary. Taught in French.
Prerequisite or corequisite: FRENCH 2C or FRENCH S2BC
FRENCH 50. French Culture and the Modern World. 4 Units.
Introductory course for non-majors. Focuses on France’s role in the modern world and its cultural connections to Asia, the Middle East, Africa, Europe, and the Americas. Taught in English.

Repeatability: May be taken for credit 3 times as topics vary.

(F, IV, VIII)

FRENCH 60. Grammar and Composition. 4 Units.
Review of grammar taught in FRENCH 2A-B-C. Students gain facility in writing French and increase reading comprehension. Short texts and films are introduced to generate substantive discussion, and multiple short writing exercises are assigned to solidify skills.

Prerequisite: FRENCH 2C or FRENCH 2BC or FRENCH S2BC. FRENCH 2C with a grade of C or better. FRENCH 2BC with a grade of C or better.

FRENCH S2BC with a grade of C or better

Overlaps with FRENCH 100A, FRENCH 100B.

FRENCH 61. Topics in Issues in French and Francophone Culture. 4 Units.
Investigation of an issue of cultural significance in the francophone world through readings drawn from historical documents, literary works, and newspaper articles. Supplemented with films and/or other elements of popular culture. Multiple short writing assignments to solidify writing skills.

Prerequisite: FRENCH 2C or FRENCH 2BC or FRENCH S2BC. FRENCH 2C with a grade of C or better. FRENCH 2BC with a grade of C or better.

FRENCH S2BC with a grade of C or better

Repeatability: Unlimited as topics vary.

Overlaps with FRENCH 100A, FRENCH 100B.

FRENCH 62. Translation. 4 Units.
Introduction to the theory and practice of translation from French to English and English to French. Many opportunities provided to improve skills in writing and comprehension.

Prerequisite: FRENCH 2C or FRENCH 2BC or FRENCH S2BC. FRENCH 2C with a grade of C or better. FRENCH 2BC with a grade of C or better.

FRENCH S2BC with a grade of C or better

Overlaps with FRENCH 100A, FRENCH 100B.

FRENCH 63. Topics in the Work World in French. 4 Units.
Provides students with a view into the world of work in French. Areas of study include international relations; French administration; and tensions between management and workers. Attention given to vocabulary and grammar of professional interactions in French.

Prerequisite: FRENCH 2C or FRENCH 2BC or FRENCH S2BC. FRENCH 2C with a grade of C or better. FRENCH 2BC with a grade of C or better.

FRENCH S2BC with a grade of C or better

Repeatability: Unlimited as topics vary.

Overlaps with FRENCH 100A, FRENCH 100B.

FRENCH 64. Advanced French Language and Style. 4 Units.
Intended for advanced students who wish to improve their expressive capabilities in French. Review of more nuanced grammar points. Emphasis placed on rhetoric, syntax, and precision. Advanced readings increase comprehension.

Prerequisite: FRENCH 2C or FRENCH 2BC or FRENCH S2BC. FRENCH 2C with a grade of C or better. FRENCH 2BC with a grade of C or better.

FRENCH S2BC with a grade of C or better

Overlaps with FRENCH 100A, FRENCH 100B.

FRENCH 97. Fundamentals of French (with Emphasis on Reading). 4 Units.
Designed primarily for students interested in acquiring a solid reading knowledge of French, and to facilitate the understanding and translating of French texts dealing with a variety of disciplines.

Restriction: No French Majors.

FRENCH 101A. Introduction to Nineteenth-Century French Literature. 4 Units.
Fiction, nonfiction, drama, and poetry of the nineteenth-century studied in relationship to a specific literary or historical problem.

Prerequisite: FRENCH 2C or FRENCH S2BC. Recommended as prerequisite or corequisite: FRENCH 100A and FRENCH 100B.
FRENCH 101B. Introduction to Eighteenth-Century French Literature. 4 Units.
Literature and philosophy of the eighteenth century studied in relationship to a specific literary or historical problem.
Prerequisite: FRENCH 2C or FRENCH S2BC. Recommended as prerequisite or corequisite: FRENCH 100A and FRENCH 100B.

FRENCH 101C. Introduction to Twentieth-Century French Literature. 4 Units.
Literatures of the French-speaking world studied in relationship to a specific literary or historical problem.
Prerequisite: FRENCH 2C or FRENCH S2BC. Recommended as prerequisite or corequisite: FRENCH 100A and FRENCH 100B.

FRENCH 110. Topics in Problems in French Culture. 4 Units.
Examines a controversial or critical issue in French culture of different ages through a variety of genres and media.
Prerequisite: FRENCH 2C or FRENCH S2BC. Recommended as prerequisite or corequisite: FRENCH 101A and FRENCH 101B and FRENCH 101C.
Repeatability: Unlimited as topics vary.

FRENCH 116. Topics in Sixteenth-Century French Literature. 4 Units.
Examines the diverse literature of the Renaissance and the Age of Exploration.
Prerequisite: FRENCH 2C or FRENCH S2BC. Recommended as prerequisite or corequisite: FRENCH 101A and FRENCH 101B and FRENCH 101C.
Repeatability: Unlimited as topics vary.

FRENCH 117. Topics in Seventeenth-Century French Literature. 4 Units.
Examines the age of drama and other vibrant forms in French literature of the period.
Prerequisite: FRENCH 2C or FRENCH S2BC. Recommended as prerequisite or corequisite: FRENCH 101A and FRENCH 101B and FRENCH 101C.
Repeatability: Unlimited as topics vary.

FRENCH 118. Topics in Eighteenth-Century French Literature. 4 Units.
Examines the literature and philosophy of the Enlightenment, the Ancient Régime, Classicism, and/or Revolution.
Prerequisite: FRENCH 2C or FRENCH S2BC. Recommended as prerequisite or corequisite: FRENCH 101A and FRENCH 101B and FRENCH 101C.
Repeatability: Unlimited as topics vary.

FRENCH 119. Topics in Nineteenth-Century French Literature. 4 Units.
Focuses on the literature of an era that experienced many modernist transformations.
Prerequisite: FRENCH 2C or FRENCH S2BC. Recommended as prerequisite or corequisite: FRENCH 101A and FRENCH 101B and FRENCH 101C.
Repeatability: Unlimited as topics vary.

FRENCH 120. Topics in Twentieth-Century French and Francophone Literature. 4 Units.
A study of modern and contemporary literature and culture.
Prerequisite: FRENCH 2C or FRENCH S2BC. Recommended as prerequisite or corequisite: FRENCH 101A and FRENCH 101B and FRENCH 101C.
Repeatability: Unlimited as topics vary.

FRENCH 125. Topics in African Literature of French Expression. 4 Units.
Introduction to the principal African and Caribbean works written in French. Offers opportunity to study literature and culture in French in a non-European context. Lectures and papers in French.
Prerequisite: FRENCH 2C or FRENCH S2BC. Recommended as prerequisite or corequisite: FRENCH 101A and FRENCH 101B and FRENCH 101C.
Repeatability: Unlimited as topics vary.

FRENCH 127. Topics in Francophone Literature and Culture. 4 Units.
Literature and cultures of the francophone world.
Prerequisite: FRENCH 2C or FRENCH S2BC. Recommended as prerequisite or corequisite: FRENCH 101A and FRENCH 101B and FRENCH 101C.
Repeatability: Unlimited as topics vary.
FRENCH 139W. Literature and Society. 4 Units.
In English. Readings of masterpieces of French literature in their social, political, and historical contexts. Requires at least 4,000 words of assigned composition based on French works. Several essays required.

Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.

Restriction: Upper-division students only. French Majors have first consideration for enrollment.

FRENCH 140. Topics in French Literary Genre. 4 Units.
Examines the development and transformation of a single genre, such as the poem or the novel.

Prerequisite: FRENCH 2C or FRENCH S2BC. Recommended as prerequisite or corequisite: FRENCH 101A and FRENCH 101B and FRENCH 101C.

Repeatability: Unlimited as topics vary.

FRENCH 150. Topics in French Literature and Culture. 4 Units.
Study of a theme, movement, or problem crucial to understanding French Literature and Culture.

Repeatability: Unlimited as topics vary.

FRENCH 160. French Cinema. 4 Units.
Study of a period, movement, or theme in French or Francophone cinema.

Repeatability: May be taken for credit 2 times as topics vary.

FRENCH 170. Topics in History and Literature. 4 Units.
Examines the dialogue between historical events and literary texts.

Repeatability: Unlimited as topics vary.

FRENCH 171. Politics and Literature. 4 Units.
Examines the role played by politics and ethics in French literature, film, and culture.

Repeatability: Unlimited as topics vary.

FRENCH 180. Junior/Senior Seminar: Topics in Theory and Criticism. 4 Units.
Advanced study of theoretical and critical texts.

Prerequisite: FRENCH 2C or FRENCH S2BC. Recommended prerequisite or corequisite: FRENCH 101A and FRENCH 101B and FRENCH 101C.

Repeatability: May be taken for credit 1 times as topics vary.

FRENCH 185. Junior/Senior Seminar in French Literature and Culture. 4 Units.
Required intensive writing course for French majors to explore in depth selected topic in French literature and culture. Students complete major independent research project on topic studied, making use of literary and critical materials in their capstone essay. In French.

Prerequisite: FRENCH 100A and FRENCH 100B and FRENCH 101A and FRENCH 101B and FRENCH 101C. One course from FRENCH 101A, FRENCH 101B, or FRENCH 101C may be taken as a corequisite.

FRENCH 199. Special Studies in French. 1-4 Units.
A project proposal is prepared by the student and approved by the faculty member who directs the project. Procedure must be completed by the end of the first week of classes.

Repeatability: Unlimited as topics vary.

Restriction: Repeatability: once for M.A. candidates; twice for Ph.D. candidates.

FRENCH 216. Studies in Renaissance Literature. 4 Units.
Advanced study of a topic in the Renaissance period.

Repeatability: Unlimited as topics vary.
FRENCH 217. Studies in Seventeenth-Century Literature. 4 Units.
Advanced study of a topic in the 17th century.

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.

FRENCH 218. Studies in Eighteenth-Century Literature. 4 Units.
Advanced study of a topic in the 18th century.

Repeatability: Unlimited as topics vary.

FRENCH 219. Studies in Nineteenth-Century Literature. 4 Units.
Advanced study of a topic in the 19th century.

Repeatability: Unlimited as topics vary.

FRENCH 220. Studies in Twentieth-Century Literature. 4 Units.
Advanced study of a topic in the 20th and 21st century.

Repeatability: May be taken for credit 9 times as topics vary.

Restriction: Graduate students only.

FRENCH 225. Francophone Literature and Culture. 4 Units.
Studies in different francophone literatures and cultures (of Canada, the Caribbean, West and North Africa, and Southeast Asia).

Repeatability: Unlimited as topics vary.

FRENCH 231. Studies in Fiction. 4 Units.
Examines the art of fiction.

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.

FRENCH 232. Studies in Nonfictional Prose. 4 Units.
Examines non-fictional genres such as the essay and the memoir.

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.

FRENCH 233. Studies in Poetry and Poetics. 4 Units.
Examines the genre of poetry and theories of poetry.

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.

FRENCH 240. Studies on a Major Writer. 4 Units.
Focused study of one author.

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.

FRENCH 250. Studies in Theory and Criticism. 4 Units.
Advanced study of a topic in theory and/or criticism.

Repeatability: Unlimited as topics vary.

FRENCH 254. History and Literature. 4 Units.
Advanced study of literary works in their historical context.

Repeatability: Unlimited as topics vary.
FRENCH 272. Cultural Studies . 4 Units.
Examines the theoretical paradigm of cultural studies.
Repeatability: Unlimited as topics vary.

FRENCH 290. Research in French Language and Literature. 4 Units.
A project proposal is prepared by the student and approved by the faculty member who directs the project. Procedure must be completed by the end of the first week of classes. Limit: Once for M.A. candidates; twice for Ph.D. candidates.
Repeatability: May be taken for credit 2 times.
Restriction: Graduate students only. French Majors only.

FRENCH 299. Dissertation Research. 4-12 Units.
For graduate students writing a dissertation with a faculty member in French.
Repeatability: May be repeated for credit unlimited times.
Restriction: Graduate students only. School of Humanities students only.

FRENCH 399. University Teaching. 4 Units.
For graduate students completing a course on foreign language pedagogy.
Grading Option: Satisfactory/unsatisfactory only.
Repeatability: May be repeated for credit unlimited times.
Restriction: Graduate students only. School of Humanities students only.

German Courses

GERMAN 1A. Fundamentals of German. 5 Units.
Emphasizes the development of meaningful communicative skills in German for the purposes of interaction with German speakers and beginning study of German. With a learner-centered approach, the courses help students develop speaking, listening, reading, writing, and cultural skills and knowledge.
Overlaps with GERMAN S1AB, GERMAN 1AB.
Restriction: GERMAN 1A and GERMAN 1AB and GERMAN S1AB may not be taken for full credit.

GERMAN 1AB. Intensive German Fundamentals . 7.5 Units.
First half of first-year German in a time-intensive form. Development of meaningful communicative skills for the purposes of interaction with German speakers and beginning study of German. Learner-centered approach develops speaking, listening, reading, writing, and cultural skills and knowledge. Materials fee.
Prerequisite: Placement into GERMAN 1AB.
Overlaps with GERMAN S1AB, GERMAN 1A, GERMAN 1B.
Restriction: GERMAN 1AB and GERMAN 1A and GERMAN 1B and GERMAN S1AB may not be taken for full credit.

GERMAN 1B. Fundamentals of German. 5 Units.
Emphasizes the development of meaningful communicative skills in German for the purposes of interaction with German speakers and beginning study of German. With a learner-centered approach, students develop speaking, listening, reading, writing, and cultural skills and knowledge.
Prerequisite: GERMAN 1A. GERMAN 1A with a grade of C or better. Placement into GERMAN 1B is also accepted.
Overlaps with GERMAN S1AB, GERMAN S1BC, GERMAN 1AB, GERMAN 1BC.
Restriction: GERMAN 1B and GERMAN 1AB and GERMAN S1AB and GERMAN 1BC and GERMAN S1BC may not be taken for full credit.
GERMAN 1BC. Intensive German Fundamentals. 7.5 Units.
Second half of first-year German in a time-intensive form. Development of meaningful communicative skills for the purposes of interaction with German speakers and beginning study of German. Learner-centered approach develops speaking, listening, reading, writing, and cultural skills and knowledge. Materials fee.

Prerequisite: GERMAN 1AB or GERMAN 1B or GERMAN S1AB. GERMAN 1AB with a grade of C or better. GERMAN 1B with a grade of C or better. GERMAN S1AB with a grade of C or better. Placement into GERMAN 1BC is also accepted.

Overlaps with GERMAN 1B, GERMAN 1C, GERMAN S1BC.

Restriction: GERMAN 1BC and GERMAN 1B and GERMAN 1C and GERMAN S1AB may not be taken for full credit.

(VI)

GERMAN 1C. Fundamentals of German. 5 Units.
Emphasizes the development of meaningful communicative skills in German for the purposes of interaction with German speakers and beginning study of German. With a learner-centered approach, students develop speaking, listening, reading, writing, and cultural skills and knowledge.

Prerequisite: GERMAN 1B. GERMAN 1B with a grade of C or better. Placement into GERMAN 1C is also accepted.

Overlaps with GERMAN 1BC, GERMAN S1BC.

Restriction: GERMAN 1BC and GERMAN 1C and GERMAN S1BC may not be taken for full credit.

(VI)

GERMAN S1AB. Fundamentals of German. 7.5 Units.
First half of first-year German in a time-intensive form. Development of meaningful communicative skills for the purposes of interaction with German speakers and beginning study of German. Learner-centered approach develops speaking, listening, reading, writing, and cultural skills and knowledge.

Overlaps with GERMAN 1A, GERMAN 1B, GERMAN 1AB.

Restriction: GERMAN S1AB and GERMAN 1A and GERMAN 1B and GERMAN 1AB may not be taken for full credit.

GERMAN S1BC. Fundamentals of German. 7.5 Units.
Second half of first-year German in a time-intensive form. Development of meaningful communicative skills for the purposes of interaction with German speakers and beginning study of German. Learner-centered approach develops speaking, listening, reading, writing, and cultural skills and knowledge.

Prerequisite: GERMAN 1AB or GERMAN 1B or GERMAN S1AB. GERMAN 1AB with a grade of C or better. GERMAN 1B with a grade of C or better. GERMAN S1AB with a grade of C or better. Placement into GERMAN S1BC is also accepted.

Overlaps with GERMAN 1B, GERMAN 1C, GERMAN S1BC.

Restriction: GERMAN 1BC and GERMAN S1BC and GERMAN 1B and GERMAN 1C may not be taken for full credit.

(VI)

GERMAN 2A. Intermediate German. 4 Units.
Emphasizes communicative skills for the purposes of interaction with German speakers and intermediate study of German. With a learner-centered approach, helps students develop reading, writing, speaking, listening, grammatical, and cultural skills and knowledge. First-year grammar is reviewed and expanded.

Prerequisite: GERMAN 1BC or GERMAN 1C or GERMAN S1BC. GERMAN 1BC with a grade of C or better. GERMAN 1C with a grade of C or better. GERMAN S1BC with a grade of C or better. Placement into GERMAN 2A is also accepted.

Overlaps with GERMAN S2AB.

Restriction: School of Humanities students have first consideration for enrollment. International Studies Majors have first consideration for enrollment.

(VIII)
GERMAN 2B. Intermediate German. 4 Units.
Emphasizes communicative skills for the purposes of interaction with German speakers and intermediate study of German. With a learner-centered approach, helps students develop reading, writing, speaking, listening, grammatical, and cultural skills and knowledge. First-year grammar is reviewed and expanded.

Prerequisite: GERMAN 2A. GERMAN 2A with a grade of C or better. Placement into GERMAN 2B is also accepted.

Overlaps with GERMAN S2AB, GERMAN S2BC.

Restriction: School of Humanities students have first consideration for enrollment. International Studies Majors have first consideration for enrollment.

(VIII)

GERMAN 2C. Intermediate German. 4 Units.
Emphasizes communicative skills for the purposes of interaction with German speakers and intermediate study of German. With a learner-centered approach, helps students develop reading, writing, speaking, listening, grammatical, and cultural skills and knowledge. First-year grammar is reviewed and expanded.

Prerequisite: GERMAN 2B. GERMAN 2B with a grade of C or better. Placement into GERMAN 2C is also accepted.

Overlaps with GERMAN S2BC.

Restriction: School of Humanities students have first consideration for enrollment. International Studies Majors have first consideration for enrollment.

(VIII)

GERMAN S2AB. Intermediate German. 6 Units.
First half of second-year German in a time-intensive form. Emphasizes communicative skills for the purposes of interaction with German speakers and intermediate study of German. Learner-centered approach develops reading, writing, speaking, listening, grammatical, and cultural skills and knowledge.

Prerequisite: GERMAN 1C or GERMAN S1BC

Overlaps with GERMAN 2A, GERMAN 2B.

Restriction: GERMAN S2AB and GERMAN 2A and GERMAN 2B may not be taken for full credit.

(VIII)

GERMAN S2BC. Intermediate German. 6 Units.
Second half of second-year German in a time-intensive form. Emphasizes communicative skills for the purposes of interaction with German speakers and intermediate study of German. Learner-centered approach develops reading, writing, speaking, listening, grammatical, and cultural skills and knowledge.

Prerequisite: GERMAN 2B or GERMAN S2AB. GERMAN 2B with a grade of C or better. GERMAN S2AB with a grade of C or better

Overlaps with GERMAN 2B, GERMAN 2C.

Restriction: GERMAN S2BC and GERMAN 2B and GERMAN 2C may not be taken for full credit.

(VIII)

GERMAN 50. Science, Society, and Mind. 4 Units.
Historical, philosophical, and literary reflections by German writers on the rise of the modern sciences. In English. Designed primarily for nonmajors.

Repeatability: May be taken for credit 3 times as topics vary.

(VIII)

GERMAN 53. Advanced Conversation. 2 Units.
Includes reading of political and cultural material. Conducted in German.

Prerequisite or corequisite: GERMAN 2C

Repeatability: May be repeated for credit unlimited times.
GERMAN 97. Fundamentals of German (with Emphasis on Reading). 4 Units.
Primarily for students interested in acquiring a solid reading knowledge of German. Facilitates comprehension and translation of texts in various disciplines. Does not serve as prerequisite for any higher-level German courses or fulfill any undergraduate foreign language requirement.

Repeatability: May be taken for credit 3 times.

Restriction: No German Studies Majors.

GERMAN 101. Topics in Introduction to German Literature and Culture. 4 Units.
Sample interpretations of texts in their cultural and historical contexts. Introduction to critical language in German.

Prerequisite or corequisite: GERMAN 2C. GERMAN 2C with a grade of C or better

Repeatability: Unlimited as topics vary.

GERMAN 102. Topics in German Culture and Society. 4 Units.
Interdisciplinary introduction to German culture from the perspective of its aesthetic, social, and political aspects. Methodological problems arising from an analysis of culture in its historical context.

Prerequisite or corequisite: GERMAN 2C. GERMAN 2C with a grade of C or better

Repeatability: Unlimited as topics vary.

GERMAN 103. Topics in German Film. 4 Units.
Introduction to the history and interpretation of German film within its cultural and social contexts. Enhances German grammar knowledge and vocabulary and develops sophisticated speaking, writing, and reading skills.

Prerequisite or corequisite: GERMAN 2C. GERMAN 2C with a grade of C or better

Repeatability: Unlimited as topics vary.

GERMAN 104. Topics in German Linguistics. 4 Units.
Introduces German or other Germanic-language linguistic, sociolinguistic, or ethnography-of-communication topics. Taught in German.

Prerequisite or corequisite: GERMAN 2C. GERMAN 2C with a grade of C or better

Repeatability: Unlimited as topics vary.

GERMAN 105. German for Professions. 4 Units.
Explores the structure of German business practices, including in scientific fields and engineering, while developing verbal and written skills important for professional life in Germany. Taught in German.

Prerequisite or corequisite: GERMAN 2C. GERMAN 2C with a grade of C or better

GERMAN 115. Topics in Advanced German for Business and Economics. 4 Units.
Explores the structure of the German economy and business practices while developing advanced verbal and written skills important for professional life in Germany. Taught in German.

Prerequisite or corequisite: GERMAN 101 or GERMAN 102 or GERMAN 103 or GERMAN 104 or GERMAN 105

Repeatability: Unlimited as topics vary.

GERMAN 117. Topics in German Literature and Culture 750-1750. 4 Units.
Specific course content determined by individual faculty members. Example: Luther and the European Renaissance.

Prerequisite or corequisite: GERMAN 101 or GERMAN 102 or GERMAN 103 or GERMAN 104 or GERMAN 105

Repeatability: Unlimited as topics vary.

GERMAN 118. Topics in Studies in the Age of Goethe. 4 Units.
Individual authors such as Lessing, Goethe, Schiller, Kleist, and Hölderlin, or the drama of the "angry young men" of the German 1770s.

Prerequisite or corequisite: GERMAN 101 or GERMAN 102 or GERMAN 103 or GERMAN 104 or GERMAN 105

Repeatability: Unlimited as topics vary.
GERMAN 119. Topics in 19th Century German Literature and Culture. 4 Units.
Individual authors such as Büchner, Grillparzer, Keller, and Nietzsche, or broader social-literary phenomena.
Prerequisite or corequisite: GERMAN 101 or GERMAN 102 or GERMAN 103 or GERMAN 104 or GERMAN 105
Repeatability: Unlimited as topics vary.

GERMAN 120. Topics in 20th Century German Literature and Culture. 4 Units.
Individual authors such as Thomas Mann, Brecht, and Kafka, or topics addressing questions of genre and/or social-literary problems.
Prerequisite or corequisite: GERMAN 101 or GERMAN 102 or GERMAN 103 or GERMAN 104 or GERMAN 105
Repeatability: Unlimited as topics vary.

GERMAN 130. Topics in German Literature and Culture. 4 Units.
Literary and cultural topics not fully contained within the periods listed above, such as “German Comedy” and “Turn-of-the-Century Vienna.”.
Prerequisite or corequisite: GERMAN 101 or GERMAN 102 or GERMAN 103 or GERMAN 104 or GERMAN 105
Repeatability: Unlimited as topics vary.

GERMAN 140. Topics in Literary Theory and Criticism. 4 Units.
In English. Theoretical dimensions of literary criticism and the German philosophical tradition. Topics have included Marxism, Freudian thought, German Idealist aesthetics, Historicism, twentieth-century hermeneutics, Frankfurt School, and Rezeptionsästhetik.
Repeatability: Unlimited as topics vary.

In English. Theoretical dimensions of literary criticism and the German philosophical tradition. Topics have included Marxism, Freudian thought, German Idealist aesthetics, Historicism, twentieth-century hermeneutics, Frankfurt School, and Rezeptionsaesthetik.
Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.
Repeatability: Unlimited as topics vary.
Restriction: Upper-division students only.

(lb)

GERMAN 150. German Literature and Culture in Translation. 4 Units.
In English. Major works in Germanic literature and culture in context.
Repeatability: Unlimited as topics vary.

GERMAN 150W. German Literature and Culture in Translation. 4 Units.
In English. Major works in Germanic literature and culture in context.
Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.
Repeatability: Unlimited as topics vary.
Restriction: Upper-division students only.

(lb)

GERMAN 160. German Cinema.
Historical, theoretical, and comparative perspectives on German cinema.
Repeatability: Unlimited as topics vary.
GERMAN 160W. German Cinema. 4 Units.
Historical, theoretical, and comparative perspectives on German cinema.

Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.

Repeatability: Unlimited as topics vary.

Restriction: Upper-division students only.

GERMAN 170. Topics in German Linguistics. 4 Units.
Explores linguistic, sociolinguistic, or ethnography-of-communication topics of German or other Germanic languages (Swedish, Icelandic, Yiddish, and others). Taught in English.

Repeatability: Unlimited as topics vary.

GERMAN 170W. Topics in German Linguistics. 4 Units.
Explores linguistic, sociolinguistic, or ethnography-of-communication topics of German or other Germanic languages (Swedish, Icelandic, Yiddish, and others). Taught in English.

Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.

Repeatability: Unlimited as topics vary.

Restriction: Upper-division students only.

GERMAN 197. German Internship . 4 Units.
In this internship course, students will engage in professional practice (e.g., Engineering, Business Administration, government) in a German setting and thereby increase their knowledge of German language and culture in a setting beyond the academic classroom.

Prerequisite: GERMAN 2C

Grading Option: Pass/no pass only.

GERMAN 199. Independent Study. 1-4 Units.
Independent research with German faculty.

Repeatability: May be repeated for credit unlimited times.

GERMAN 200. Literary Criticism . 4 Units.
Topics in literary criticism.

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.

GERMAN 210. Literary Theory . 4 Units.
Topics in literary theory.

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.

GERMAN 220. Selected Topics in German Linguistics . 4 Units.
Topics in German linguistics.

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.

GERMAN 230. Literary and Cultural History. 4 Units.
Topics in literary and cultural history.

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.
GERMAN 290. Independent Study. 4 Units.
Counted toward course requirements for the M.A. or Ph.D. A term paper or project is required.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only. School of Humanities students only.

GERMAN 298. Independent Directed Reading. 4-12 Units.
For students preparing for doctoral examination.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

GERMAN 299. Dissertation Research. 4-12 Units.
For students who have been admitted to doctoral candidacy.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only. School of Humanities students only.

GERMAN 399. University Teaching. 4 Units.
Limited to Teaching Assistants.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

Italian Courses

ITALIAN 1A. Fundamentals of Italian. 5 Units.
Students are taught to conceptualize in Italian as they learn to understand, read, write, and speak. Classes are conducted entirely in Italian and meet daily.

Overlaps with ITALIAN S1AB, ITALIAN 1AB.

Restriction: ITALIAN 1A and ITALIAN 1AB and ITALIAN S1AB may not be taken for full credit.

ITALIAN 1AB. Intensive Italian Fundamentals. 7.5 Units.
First half of first-year Italian in a time-intensive form. Development of meaningful communicative skills for the purposes of interaction with Italian speakers and beginning study of Italian. Learner-centered approach develops speaking, listening, reading, writing, and cultural skills and knowledge.

Overlaps with ITALIAN 1A, ITALIAN 1B, ITALIAN S1AB.

Restriction: ITALIAN 1AB and ITALIAN 1A and ITALIAN 1B and ITALIAN S1AB may not be taken for full credit.

ITALIAN 1B. Fundamentals of Italian. 5 Units.
Students are taught to conceptualize in Italian as they learn to understand, read, write, and speak. Classes are conducted entirely in Italian and meet daily.

Prerequisite: ITALIAN 1A or placement into ITALIAN 1B. ITALIAN 1A with grade of C or better.

Overlaps with ITALIAN S1AB, ITALIAN S1BC, ITALIAN 1AB, ITALIAN 1BC.

Restriction: ITALIAN 1B and ITALIAN 1AB and ITALIAN 1BC and ITALIAN S1AB and ITALIAN S1BC may not be taken for full credit.
ITALIAN 1BC. Intensive Italian Fundamentals. 7.5 Units.
Second half of first-year Italian in a time-intensive form. Development of meaningful communicative skills for the purposes of interaction with Italian speakers and beginning study of Italian. Learner-centered approach develops speaking, listening, reading, writing, and cultural skills and knowledge.

Prerequisite: ITALIAN 1AB or ITALIAN S1AB or ITALIAN 1B. ITALIAN 1AB with a grade of C or better. ITALIAN S1AB with a grade of C or better. ITALIAN 1B with a grade of C or better. Placement into ITALIAN 1BC is also accepted.

Overlaps with ITALIAN 1B, ITALIAN 1C, ITALIAN S1BC.

Restriction: ITALIAN 1AB and ITALIAN 1A and ITALIAN 1B and ITALIAN S1AB may not be taken for full credit.

(VI)

ITALIAN 1C. Fundamentals of Italian. 5 Units.
Students are taught to conceptualize in Italian as they learn to understand, read, write, and speak. Classes are conducted entirely in Italian and meet daily.

Prerequisite: ITALIAN 1B or ITALIAN 1AB or ITALIAN S1AB. ITALIAN 1B with a grade of C or better. ITALIAN 1AB with a grade of C or better. ITALIAN S1AB with a grade of C or better. Placement into ITALIAN 1C is also accepted.

Overlaps with ITALIAN S1BC, ITALIAN 1BC.

Restriction: ITALIAN 1C and ITALIAN 1BC and ITALIAN S1BC may not be taken for full credit.

(VI)

ITALIAN S1AB. Italian Fundamentals. 7.5 Units.
First-year Italian in an intensified form. Students are taught to conceptualize in Italian as they learn to understand, read, write, and speak. Classes are conducted entirely in Italian and meet daily three hours for five weeks each session.

Overlaps with ITALIAN 1A, ITALIAN 1B, ITALIAN 1AB.

Restriction: ITALIAN S1AB and ITALIAN 1A and ITALIAN 1B and ITALIAN 1AB may not be taken for full credit.

ITALIAN S1BC. Italian Fundamentals. 7.5 Units.
First-year Italian in an intensified form. Students are taught to conceptualize in Italian as they learn to understand, read, write, and speak. Classes are conducted entirely in Italian and meet daily three hours for five weeks each session.

Prerequisite: ITALIAN S1AB or ITALIAN 1B or ITALIAN 1AB. ITALIAN S1AB with a grade of C or better. ITALIAN 1B with a grade of C or better. ITALIAN 1AB with a grade of C or better

Overlaps with ITALIAN 1B, ITALIAN 1C, ITALIAN 1BC.

Restriction: ITALIAN S1BC and ITALIAN 1B and ITALIAN 1C and ITALIAN 1BC may not be taken for full credit.

(VI)

ITALIAN 2A. Intermediate Italian. 4 Units.
Texts of contemporary literary or social interest provide the focus for more advanced conversation, reading, and composition. Classes are conducted entirely in Italian.

Prerequisite: ITALIAN 1C or ITALIAN 1BC or ITALIAN S1BC. ITALIAN 1C with a grade of C or better. ITALIAN 1BC with a grade of C or better. ITALIAN S1BC with a grade of C or better. Placement into ITALIAN 2A is also accepted.

Restriction: School of Humanities students have first consideration for enrollment. International Studies Majors have first consideration for enrollment.

(VIII)

ITALIAN 2B. Intermediate Italian. 4 Units.
Texts of contemporary literary or social interest provide the focus for more advanced conversation, reading, and composition. Classes are conducted entirely in Italian.

Prerequisite: ITALIAN 2A. ITALIAN 2A with a grade of C or better. Placement into ITALIAN 2B is also accepted.

Restriction: School of Humanities students have first consideration for enrollment. International Studies Majors have first consideration for enrollment.

(VIII)
ITALIAN 2C. Intermediate Italian. 4 Units.
Texts of contemporary literary or social interest provide the focus for more advanced conversation, reading, and composition. Classes are conducted entirely in Italian.

Prerequisite: ITALIAN 2B. ITALIAN 2B with a grade of C or better. Placement into 2C is also accepted.

Restriction: School of Humanities students have first consideration for enrollment. International Studies Majors have first consideration for enrollment.

ITALIAN 99. Special Studies in Italian. 4 Units.
Both student and instructor arrive at the theme of the course and the critical approach to be followed in consultation. Intended to offer courses in Italian otherwise unavailable.

Repeatability: May be repeated for credit unlimited times.

ITALIAN 101A. Introduction to Italian Literature. 4 Units.
Introduction to all of the genres of a narrowly defined period in relationship to a specific literary problem. In Italian.

Prerequisite: ITALIAN 2C

ITALIAN 150. Topics in Italian Literature and Culture. 4 Units.
Major themes, periods, and/or movements in Italian literature and culture. Taught in English.

Repeatability: Unlimited as topics vary.

ITALIAN 199. Tutorial in Italian Literature and Culture. 4 Units.
The student must submit a written description of the proposed course to the instructor and the Chair prior to the beginning of the course.

Repeatability: Unlimited as topics vary.

Russian Courses

RUSSIAN 1A. Fundamentals of Russian. 5 Units.
Focuses on reading, comprehension, basic composition, and conversation skills, and gives the student an initial exposure to the Russian cultural scene.

Prerequisite: Placement into RUSSIAN 1A.

Overlaps with RUSSIAN 1AB.

Restriction: RUSSIAN 1A and RUSSIAN 1AB may not be taken for full credit.

RUSSIAN 1B. Fundamentals of Russian. 5 Units.
Focuses on reading, comprehension, basic composition, and conversation skills, and gives the student an initial exposure to the Russian cultural scene.

Prerequisite: RUSSIAN 1A. RUSSIAN 1A with a grade of C or better. Placement into RUSSIAN 1B is also accepted.

Overlaps with RUSSIAN 1AB, RUSSIAN 1BC.

Restriction: RUSSIAN 1B and RUSSIAN 1AB and RUSSIAN 1BC may not be taken for full credit.

RUSSIAN 1C. Fundamentals of Russian. 5 Units.
Focuses on reading, comprehension, basic composition, and conversation skills, and gives the student an initial exposure to the Russian cultural scene.

Prerequisite: RUSSIAN 1AB or RUSSIAN 1B. RUSSIAN 1AB with a grade of C or better. RUSSIAN 1B with a grade of C or better. Placement into RUSSIAN 1C is also accepted.

Overlaps with RUSSIAN 1BC.

Restriction: RUSSIAN 1BC and RUSSIAN 1C may not be taken for full credit.
RUSSIAN 2A. Intermediate Russian. 4 Units.
Students read simple passages from contemporary Russian literary texts and newspapers. Development of oral skills and exposure to Russian culture continue.

Prerequisite: RUSSIAN 1BC or RUSSIAN 1C. RUSSIAN 1BC with a grade of C or better. RUSSIAN 1C with a grade of C or better. Placement into RUSSIAN 2A is also accepted.

Restriction: School of Humanities students have first consideration for enrollment. International Studies Majors have first consideration for enrollment.

(VIII)

RUSSIAN 2B. Intermediate Russian. 4 Units.
Students read simple passages from contemporary Russian literary texts and newspapers. Development of oral skills and exposure to Russian culture continue.

Prerequisite: RUSSIAN 2A. RUSSIAN 2A with a grade of C or better. Placement into RUSSIAN 2B is also accepted.

Restriction: School of Humanities students have first consideration for enrollment. International Studies Majors have first consideration for enrollment.

(VIII)

RUSSIAN 2C. Intermediate Russian. 4 Units.
Students read simple passages from contemporary Russian literary texts and newspapers. Development of oral skills and exposure to Russian culture continue.

Prerequisite: RUSSIAN 2B. RUSSIAN 2B with a grade of C or better. Placement into RUSSIAN 2C is also accepted.

Restriction: School of Humanities students have first consideration for enrollment. International Studies Majors have first consideration for enrollment.

(VIII)

RUSSIAN 50. Russian Culture . 4 Units.
Study of varied topics in Russian culture, area studies, and society, both in the present and in historical perspective.

Repeatability: May be taken for credit 4 times as topics vary.

(IV, VIII)

RUSSIAN 99. Special Studies Russian. 1-5 Units.
Special studies under faculty supervision.

Repeatability: May be taken for credit 2 times.

RUSSIAN 150. Topics in Russian Literature. 4 Units.
Examines major themes in Russian literature, film, and other media from the eighteenth to twenty-first centuries. Taught in English.

Repeatability: Unlimited as topics vary.

RUSSIAN 190. Topics in Russian Language Through Film. 4 Units.
Uses Russian films of the late 20th century to enhance students’ language skills and deepen their cultural knowledge. Work involves intensive conversation, reading and listening comprehension, and the acquisition of written skills and grammatical accuracy. Conducted primarily in Russian.

Prerequisite or corequisite: RUSSIAN 2C

Repeatability: Unlimited as topics vary.

RUSSIAN 199. Independent Study. 1-4 Units.
Independent study under direct faculty supervision.

Repeatability: May be taken for credit 2 times.

Department of Film and Media Studies

Peter Krapp, Chair
2000 Humanities Gateway
949-824-3532
www.humanities.uci.edu/filmandmediastudies
Overview

The Department of Film and Media Studies at UC Irvine offers students a liberal arts education in the film, broadcast, and digital media landscape. Our majors acquire skills in theoretical and historical cultural analysis, and broad knowledge of the history of moving images. Students strengthen their writing through active engagement with all aspects of cinematic, broadcast, and digital culture. The department also teaches courses in screenwriting and production, with the goal of deepening the understanding of media through some hands-on training.

Film and Media Studies focuses on nurturing our diverse student body and our students’ varied backgrounds and interests. Courses reflect an interdisciplinary and historically grounded approach to the study of moving images, on big and small screens alike. From parsing the history of television policy to writing for video games, our students get a unique interdisciplinary education in the historical and social background of the study of film, television, and new media. Our outstanding faculty are engaged in innovative research on topics like globalization, gender studies, queer theory, broadcast studies, intellectual history, new media and critical game studies, history of photography, and national cinema approaches to the analysis of Film and Media Studies, and our courses give our students access to this cutting-edge research. In our production and screenwriting courses, students get hands-on experience creating short films, television pilots, webisodes, computer games, and other visual media.

Film and Media Studies students join their professors and industry professionals in attending some of the most important film festivals in our area. The department regularly invites film directors, scholars, and industry professionals to offer a rich array of programming including screening original films and media and hosting production-based workshops. UC Irvine’s location in the heart of Southern California, close to studios and some of the most important film and television archives in the United States, makes outstanding internship opportunities and serious research possible for our majors. Our location makes it convenient for our students to do internships for credit at some of the leading companies in the entertainment industry. Students also have the opportunity to collaborate on filmmaking through our student-run club, the Film-Arts-Drama Alliance (FADA). FADA members write, direct, produce, and craft short films through the Zotfilm program in fall and winter quarters. In spring quarter, FADA screens these and other student-created films at Zotfest, one of the longest-running student-organized film festivals in the United States.

Film and Media Studies encourages students to take advantage of the many opportunities that UC Irvine offers to study abroad. Our students have studied in UCEAP programs all over the world and regularly earn credit towards their degrees. Information on these programs is available through the UCI Study Abroad Center (http://www.cie.uci.edu).

In order to cover the extra costs generated by the purchase and rental of media demanded by the specialized Film and Media Studies curriculum, the School of Humanities charges a laboratory fee to students taking Film and Media Studies courses.

Career Opportunities

Film and Media Studies at UC Irvine prepares students for graduate study and professional life in the Film and Media Studies areas. Our students have been admitted to Ph.D. and M.F.A. programs at UCLA, USC, New York University, and the University of Texas at Austin. Film and Media studies majors have gone on to law school and to get Ph.D.s in a variety of fields. Alumni also make careers in all aspects of the entertainment industry, finding work in the film, television, and game industries in Southern California and beyond. Film and Media Studies students find careers in directing, cinematography, editing, journalism, advertising, marketing, and distribution. Our students’ diverse backgrounds have enabled them to work in bilingual or global media outlets. The Department encourages all qualified students to do professional internships. Visit the internship page on our website (http://www.humanities.uci.edu/filmandmediastudies/undergraduate/interns.php) for more information about these opportunities.

The UCI Career Center provides services to students and alumni including career counseling, information about job opportunities, a career library, and workshops on resume preparation, job search, and interview techniques. See the Career Center section (p. 145) for additional information.

Requirements for the B.A. in Film and Media Studies

All students must meet the University Requirements (p. 91).
All students must meet the School Requirements (p. 788).

Departmental Requirements for the Major

A. Complete the following:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>FLM&amp;MDA 85A</td>
<td>Introduction to Film and Visual Analysis</td>
</tr>
<tr>
<td>FLM&amp;MDA 85B</td>
<td>Broadcast Media History and Analysis</td>
</tr>
<tr>
<td>FLM&amp;MDA 85C</td>
<td>New Media and Digital Technologies</td>
</tr>
<tr>
<td>FLM&amp;MDA 101A</td>
<td>History of Film I: The Silent Era</td>
</tr>
<tr>
<td>FLM&amp;MDA 101B</td>
<td>History of Film II: The Studio Era</td>
</tr>
<tr>
<td>FLM&amp;MDA 101C</td>
<td>History of Film III: The Contemporary Era</td>
</tr>
<tr>
<td>FLM&amp;MDA 139W</td>
<td>Writing on Film and Media</td>
</tr>
</tbody>
</table>

B. Complete either:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>FLM&amp;MDA 110</td>
<td>Film and Media Theory</td>
</tr>
<tr>
<td>FLM&amp;MDA 111</td>
<td>Film and Media Theory and Practice</td>
</tr>
</tbody>
</table>
C. Select one of the following:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>FLM&amp;MDA 117A</td>
<td>Introduction to Screenwriting</td>
</tr>
<tr>
<td>FLM&amp;MDA 118A</td>
<td>Writing Television I</td>
</tr>
<tr>
<td>FLM&amp;MDA 120A</td>
<td>Basic Production</td>
</tr>
</tbody>
</table>

D. Select four of the following:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>FLM&amp;MDA 112</td>
<td>Genre Study</td>
</tr>
<tr>
<td>FLM&amp;MDA 113</td>
<td>Narrative/Image</td>
</tr>
<tr>
<td>FLM&amp;MDA 114</td>
<td>Film, Media, and the Arts</td>
</tr>
<tr>
<td>FLM&amp;MDA 115</td>
<td>Authorship</td>
</tr>
<tr>
<td>FLM&amp;MDA 117B</td>
<td>Intermediate Screenwriting</td>
</tr>
<tr>
<td>FLM&amp;MDA 117C</td>
<td>Screenwriting Workshop</td>
</tr>
<tr>
<td>FLM&amp;MDA 118B</td>
<td>Writing Television II</td>
</tr>
<tr>
<td>FLM&amp;MDA 120B</td>
<td>Intermediate Production</td>
</tr>
<tr>
<td>FLM&amp;MDA 120C</td>
<td>Production Workshop</td>
</tr>
<tr>
<td>FLM&amp;MDA 130</td>
<td>Multicultural Topics in the Media</td>
</tr>
<tr>
<td>FLM&amp;MDA 143</td>
<td>Critical Theory of Television</td>
</tr>
<tr>
<td>FLM&amp;MDA 144</td>
<td>Studies in New Media</td>
</tr>
<tr>
<td>FLM&amp;MDA 145</td>
<td>Popular Culture and Media</td>
</tr>
<tr>
<td>FLM&amp;MDA 146</td>
<td>Sound Studies</td>
</tr>
<tr>
<td>FLM&amp;MDA 150</td>
<td>Audiences and Reception</td>
</tr>
<tr>
<td>FLM&amp;MDA 151</td>
<td>Documentary and Experimental Film and Media</td>

<td>FLM&amp;MDA 192</td>
<td>Special Topics in Advanced Film Production</td>
</tr>
<tr>
<td>FLM&amp;MDA 193</td>
<td>Special Topics in Advanced Screenwriting</td>
</tr>
</tbody>
</table>

1 Only two of the courses marked may be applied toward this requirement.

Residence Requirement for the Major: At least five upper-division courses required for the major must be completed successfully at UCI.

Requirements for the Minor in Film and Media Studies

Departmental Requirements

A. Complete:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>FLM&amp;MDA 85A</td>
<td>Introduction to Film and Visual Analysis</td>
</tr>
</tbody>
</table>

B. Select three of the following:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>FLM&amp;MDA 85B</td>
<td>Broadcast Media History and Analysis</td>
</tr>
<tr>
<td>FLM&amp;MDA 85C</td>
<td>New Media and Digital Technologies</td>
</tr>
<tr>
<td>FLM&amp;MDA 101A</td>
<td>History of Film I: The Silent Era</td>
</tr>
<tr>
<td>FLM&amp;MDA 101B</td>
<td>History of Film II: The Studio Era</td>

<tr>
<td>FLM&amp;MDA 130</td>
<td>Multicultural Topics in the Media</td>
</tr>
<tr>
<td>FLM&amp;MDA 143</td>
<td>Critical Theory of Television</td>
</tr>
</tbody>
</table>
Residence Requirement for the Minor: Four upper-division courses must be completed successfully at UCI. By petition, two of the four may be taken through the UC Education Abroad Program, providing course content is approved in advance by the appropriate department chair.

Graduate Study
In conjunction with the Department of Art History, the Department of Film and Media Studies offers a graduate program in Visual Studies. A description may be found in the Program in Visual Studies section (p. 1012).

Faculty
Eyal Amiran, Ph.D. University of Virginia, Professor of Comparative Literature; Film and Media Studies; Visual Studies (digital media theory, twentieth-century literature, narrative and textual theory, psychoanalysis, modern and postmodern intellectual history)

Catherine Benamou, Ph.D. New York University, Associate Professor of Film and Media Studies; Culture and Theory; Visual Studies (Hispanophone and Lusophone cinema and television, U.S. Latino media, Orson Welles and maverick cinema, transnational flows, spectatorship, cinematic memory and cultures of preservation)

Elizabeth M. Cane, M.F.A. University of California, Los Angeles, Lecturer of Film and Media Studies

Marie Cartier, Ph.D. Claremont Graduate University, Lecturer of Film and Media Studies

Desha Dauchan, M.F.A. University of California, Los Angeles, Lecturer of Film and Media Studies

Sohail Daulatzai, Ph.D. University of Southern California, Associate Professor of Film and Media Studies; African American Studies; Visual Studies (African American studies, postcolonial theory, race, hip hop, Muslim diasporas)

Aglaya Glebova, Ph.D. University of California, Berkeley, Assistant Professor of Art History; Film and Media Studies; Visual Studies (history and theory of photography and film, European avant-garde, Russian and Soviet art)

Bambi Haggins, Ph.D. University of California, Los Angeles, Associate Professor of Film and Media Studies; Visual Studies (Black [African American] comedy in film, television, digital media and performance, television history, comedy as social and political discourse, African-American studies, American studies)

Kristen L. Hatch, Ph.D. University of California, Los Angeles, Director of the Graduate Program in Visual Studies and Associate Professor of Film and Media Studies; Visual Studies (American film history; stardom; histories of race, gender, and sexuality; childhood; melodrama)

Lucas Hilderbrand, Ph.D. New York University, Professor of Film and Media Studies; Visual Studies (Queer cultures and media, cultural studies, documentary, pornography, popular culture, video art, histories of technology)

Victoria E. Johnson, Ph.D. University of Southern California, Associate Professor of Film and Media Studies; African American Studies; Culture and Theory; Visual Studies (television, critical race theory, sound, media policy, sport)

Peter O. Krapp, Ph.D. University of California, Santa Barbara, Department Chair and Professor of Film and Media Studies; English; Informatics; Music; Visual Studies (digital culture, media history, cultural memory)

Felicidad (Bliss) Lim, Ph.D. New York University, Associate Professor of Film and Media Studies; Visual Studies (Philippine cinema, temporality, postcolonial and feminist film theory, transnational horror and the fantastic, film archives)

Catherine Liu, Ph.D. Yale University, Professor of Film and Media Studies; Comparative Literature; Visual Studies (Hou Hsiao-hsien, culture wars, Frankfurt School, historiography of critical theory/cultural studies, surveillance, cold war culture and neoliberalism)
Glen M. Mimura, Ph.D. University of California, Santa Cruz, Associate Professor of Film and Media Studies; Visual Studies (minoritarian and political film; media and race; popular culture and social movements)

Allison J. Perlman, Ph.D. University of Texas at Austin, Associate Professor of History; Film and Media Studies; Visual Studies (history of broadcasting, American social movements, media law and policy, media activism, popular memory)

Fatimah Tobing Rony, Ph.D. Yale University, Associate Professor of Film and Media Studies; Culture and Theory; Visual Studies (ethnographic film, race and representation, film production)

Braxton Soderman, Ph.D. Brown University, Assistant Professor of Film and Media Studies; Visual Studies (digital and new media studies, video games, networks, digital art and electronic literature)

Affiliate Faculty

M. Ackbar Abbas, M.Phil. University of Hong Kong, Professor of Comparative Literature; Film and Media Studies; Visual Studies (Hong Kong culture and postcolonialism, visual culture, architecture and cinema, cultural theory, globalization)

Kyung Hyun Kim, Ph.D. University of Southern California, Professor of Korean Culture; Asian American Studies; Film and Media Studies; Visual Studies (East Asian cinema, modern Korea, critical theory)

Jared Charles Sexton, Ph.D. University of California, Berkeley, Associate Professor of African American Studies; Culture and Theory; Film and Media Studies; Visual Studies (race and sexuality, policing and imprisonment, contemporary U.S. cinema and political culture, multiracial coalition, critical theory)

Michael F. Szalay, Ph.D. Johns Hopkins University, Department Chair and Professor of English; Film and Media Studies; Visual Studies (contemporary television and literature)

Roxanne Varzi, Ph.D. Columbia University, Associate Professor of Anthropology; Culture and Theory; Film and Media Studies; Religious Studies; Visual Studies (Iran, media, war, visual anthropology, film studies, ethnographic and fiction writing)

Courses

FLM&MDA 85A. Introduction to Film and Visual Analysis. 4 Units.
Introduces the language and techniques of visual and film analysis. Teaches students to analyze the moving image, emphasizing the ways framing, camera movement, sound, and editing produce meaning, reproduce historical ideologies, foster or disrupt narrative, and cue spectators.

(IV)

FLM&MDA 85B. Broadcast Media History and Analysis. 4 Units.
History of broadcast media from the radio era to the present day, including social, political, institutional, and audience analysis as well as methods of visual and aural analysis of these media.

(IV)

FLM&MDA 85C. New Media and Digital Technologies. 4 Units.
The study of digital media, computer-mediated communication, and Internet cultures, from historical and theoretical perspectives.

(IV)

FLM&MDA 101A. History of Film I: The Silent Era. 4 Units.
The aesthetic, industrial, and socio-historical developments of cinema in the U.S. and internationally from its invention to the adoption of synchronous sound. Includes early exhibition, developments in narrative and editing, the formation of the studio system, and avant-garde film movements.
Prerequisite: FLM&MDA 85A

FLM&MDA 101B. History of Film II: The Studio Era. 4 Units.
The aesthetic, industrial, and socio-historical developments of cinema in the U.S. and internationally from the 1930s through the 1960s. Includes the Hollywood studio system, propaganda films, Italian neorealism, post-war Japanese cinema, and the French New Wave.
Prerequisite: FLM&MDA 85A

FLM&MDA 101C. History of Film III: The Contemporary Era. 4 Units.
The aesthetic, industrial, and socio-historical developments of cinema in the U.S. and internationally from the late 1960s to the present. Includes New Hollywood and independent U.S. films, ethnic cinemas, postcolonial cinemas, East-Asian new waves, and digital filmmaking.
Prerequisite: FLM&MDA 85A and FLM&MDA 101B
FLM&MDA 110. Film and Media Theory. 4 Units.
Survey of major directions in film and media theory. Various theories of mass culture, realism, auteurism, semiotics, feminism, cultural studies, and theories of other media, with an emphasis on developing the student's ability to analyze and articulate a theoretical argument.
Prerequisite: FLM&MDA 85A and FLM&MDA 85B and FLM&MDA 85C and (FLM&MDA 101A or FLM&MDA 101B or FLM&MDA 101C)

FLM&MDA 111. Film and Media Theory and Practice. 4 Units.
Seminar focusing on issues in film and media production and editing. Reading and exercises to understand aspects of film and media production (montage, sound, film movement, directing, and mise en scène), and how ideology works in tandem with style.
Prerequisite: FLM&MDA 85A and FLM&MDA 85B and FLM&MDA 85C and FLM&MDA 120A and (FLM&MDA 101A or FLM&MDA 101B or FLM&MDA 101C)

FLM&MDA 112. Genre Study . 4 Units.
Critical approaches to the serial productions we call "genre" films such as westerns, weepies, musicals, horror films, and others; televisual genres, such as sitcoms, drama, comedy, news, docudrama, police; Internet categories, such as chat-rooms, listservs, Web pages.
Prerequisite: FLM&MDA 85A
Repeatability: Unlimited as topics vary.

FLM&MDA 113. Narrative/Image . 4 Units.
What relations do sound, image, and story assume in film, television, video, and Internet narratives? In what ways do these media interact with and borrow from each other and traditional story-telling media? How have the new media explored non-narrative strategies.
Prerequisite: FLM&MDA 85A
Repeatability: Unlimited as topics vary.

FLM&MDA 114. Film, Media, and the Arts. 4 Units.
A synthetic entity, film draws on both established and popular arts. Looks at visual media's exchanges with "high" and "low" culture, exploring its relation to areas such as photography, music, painting, and architecture.
Prerequisite: FLM&MDA 85A
Repeatability: Unlimited as topics vary.

FLM&MDA 115. Authorship . 4 Units.
Theoretical and analytical discussions of visual media authorship, focusing on case studies of directors, producers, scriptwriters, and film, video, and digital artists.
Prerequisite: FLM&MDA 85A
Repeatability: Unlimited as topics vary.

FLM&MDA 117A. Introduction to Screenwriting. 4 Units.
Introduction to the technique and format of the screenplay, with a particular focus on its three act structural elements: coverage, treatment, and 60 beat outline.
Prerequisite: FLM&MDA 85A

FLM&MDA 117B. Intermediate Screenwriting. 4 Units.
Exercises in the development of screenplays, with emphasis on formal and structural considerations of character development. Students work with the hero structure and other character development methodologies, such as method acting.
Prerequisite: FLM&MDA 117A

FLM&MDA 117C. Screenwriting Workshop. 4 Units.
Continuation and intensification of work initiated in 117B. Students complete a full-length screenplay. Concentrates on both practical and technical concerns, addressing pragmatic and aesthetic questions in intensive small-group discussions.
Prerequisite: FLM&MDA 117B
FLM&MDA 118A. Writing Television I. 4 Units.
Introduction to the technique and format of the television screenplay. Focuses on character, storytelling, structure, and scene development; culminating in a one-hour drama series treatment and first act of the pilot.

Prerequisite: FLM&MDA 85B

FLM&MDA 118B. Writing Television II. 4 Units.
Intermediate-level screenwriting class exploring the one-hour television drama format. Students write and workshop an original pilot, continuing work started in 118A, and finish a complete draft of the pilot script.

Prerequisite: FLM&MDA 118A

FLM&MDA 120A. Basic Production. 4 Units.
Introduction to the basic apparatus of video/film production. The elementary essentials of production, including the use of camera and lenses, lighting, editing, and sound.

Prerequisite: FLM&MDA 85A

FLM&MDA 120B. Intermediate Production. 4 Units.
Students work on individual and group projects, utilizing skills and insights introduced in Film and Media Studies 120A.

Prerequisite: FLM&MDA 120A

FLM&MDA 120C. Production Workshop. 4 Units.
As film and video are collaborative media, students form production groups and ultimately produce final 10-15 minute film/video projects.

Prerequisite: FLM&MDA 120B

FLM&MDA 130. Multicultural Topics in the Media. 4 Units.
Investigation of media representations of gender, race, and sexuality in the United States. Topics include media images of and by one or more minority groups in the United States, including African Americans, Asian Americans, Chicano/Latinos, Native Americans, gays and lesbians.

Repeatability: Unlimited as topics vary.

FLM&MDA 139W. Writing on Film and Media. 4 Units.
Writing on cinema, television, and/or digital culture, emphasizing identification of reliable sources, close readings, addressing academic, professional, and/or popular audiences. Requires at least 4,000 words of assigned composition.

Prerequisite: FLM&MDA 85A or FLM&MDA 85B or FLM&MDA 85C. Satisfactory completion of the Lower-Division Writing requirement.

Restriction: Film and Media Studies Majors only.

FLM&MDA 143. Critical Theory of Television. 4 Units.
Introduction to critical, theoretical, scholarly understandings and analyses of television, which offer in-depth analyses of television programming, audience reception practices, and industry strategies of address.

Prerequisite: FLM&MDA 85B

FLM&MDA 144. Studies in New Media. 4 Units.
Advanced analysis of the technologies, texts, theories, and cultures of computers, videogames, networks, or platforms.

Prerequisite: FLM&MDA 85C

Repeatability: Unlimited as topics vary.

FLM&MDA 145. Popular Culture and Media. 4 Units.
Considers the forms, ideologies, consumption, and marketing of popular entertainment and technologies. May focus on cultural studies methods, transnational approaches, and synergy between media.

Prerequisite: FLM&MDA 85A

Repeatability: Unlimited as topics vary.
FLM&MDA 146. Sound Studies. 4 Units.
Focuses on the production, theories, and meanings of sound recordings, music, and/or audio technologies. Topics may include the cultures of popular music and audio devices, music television, and theories of film sound.

Prerequisite: FLM&MDA 85A

Repeatability: Unlimited as topics vary.

FLM&MDA 150. Audiences and Reception. 4 Units.
Explores the dynamics of address, interpretation, and appropriation between film and media texts and their viewers. Topics may include reception studies, fandom, audience-defined modes of production, demographics, spectatorial pleasure, and historical approaches to audiences.

Prerequisite: FLM&MDA 85A

Repeatability: Unlimited as topics vary.

FLM&MDA 151. Documentary and Experimental Film and Media. 4 Units.
Examines nonfiction and/or experimental cinemas and media, such as documentary, the historical avant-garde, video art, and activist media. Students consider the specific aesthetics and ideologies of forms distinct from narrative feature films.

Prerequisite: FLM&MDA 85A

Repeatability: Unlimited as topics vary.

FLM&MDA 160. National/Regional Cinemas and Media. 4 Units.
National schools, period styles, or cultural movements beyond U.S. cinema, as defined by national borders or by geographic regions, such as Latin America. May be approached from a comparative perspective.

Repeatability: Unlimited as topics vary.

FLM&MDA 161. Global/Transnational Cinemas and Media. 4 Units.
Analyzes the multinational production, circulation, and reception of film and media texts beyond singular national borders or specific geographic regions. Topics may include transnational co-productions, exports, and diasporic reception.

Repeatability: Unlimited as topics vary.

FLM&MDA 162. U.S. Cinema. 4 Units.
Explores the modes of production and distribution, aesthetics, and contexts that have shaped cinema in the United States. Topics may include Classical Hollywood, American Independent Cinema, or periods such as 1970s Cinema.

Prerequisite: FLM&MDA 85A

Repeatability: Unlimited as topics vary.

FLM&MDA 185. Television and New Media. 4 Units.
Advanced seminar focusing on special topics in television and new media. Past examples have included courses on Media Marketing and Brand Identity; Television and Sound; Game Theory; and other issues related to popular culture, broadcast media, and new media technologies.

Prerequisite: FLM&MDA 85B or FLM&MDA 85C

Repeatability: Unlimited as topics vary.

FLM&MDA 190. Special Topics in Film and Modern Media. 4 Units.
Special issues concerned with film and media history, theory, and criticism.

Prerequisite: FLM&MDA 85A

Repeatability: Unlimited as topics vary.

FLM&MDA 191. Special Topics in Critical Practice. 4 Units.
Integrates critical analysis, historical, and theoretical methods with creative projects to illuminate film and media production and industries. May include courses in adaptation, writing television, media activism, writing the short film, performance studies, and movie title sequences.

Prerequisite: FLM&MDA 85A

Repeatability: Unlimited as topics vary.
FLM&MDA 192. Special Topics in Advanced Film Production. 4 Units.
Advanced course focused on special topics in production. Course results in final 6-10-minute group film projects. Topics include producing, acting, and/or directing in short films, experimental films, documentaries, television, and other media.
Prerequisite: FLM&MDA 120A
Repeatability: Unlimited as topics vary.

FLM&MDA 193. Special Topics in Advanced Screenwriting. 4 Units.
Advanced course focused on special topics in screenwriting. Topics include adaptation, alternative screenwriting, writing the first feature, act two construction, andrewriting.
Prerequisite: FLM&MDA 117A or FLM&MDA 118A
Repeatability: Unlimited as topics vary.

FLM&MDA 197. Professional Internship. 2-4 Units.
Professional internship in the film, broadcast, and/or digital media industries designed to provide students with closely supervised professional experience to enhance their understanding of media from industrial, historical, and critical perspectives. Journal and final report required.
Grading Option: Pass/no pass only.
Repeatability: May be taken for credit 3 times.
Restriction: Upper-division students only.

FLM&MDA 198. Creative Project. 2-4 Units.
Creative project in screenwriting, filmmaking, videomaking, or Web or Internet design intended to provide advanced production and creative writing training beyond the Film and Media Studies 117A-B-C or 120A-B-C series. Final project required.
Prerequisite: (FLM&MDA 85A and FLM&MDA 117A and FLM&MDA 117B and FLM&MDA 117C) or (FLM&MDA 120A and FLM&MDA 120B and FLM&MDA 120C). Recommended: FLM&MDA 101A.
Repeatability: May be taken for credit 2 times as topics vary.
Restriction: Upper-division students only.

FLM&MDA 199. Directed Research. 4 Units.
Directed reading and research under supervision of a faculty member in topic areas not covered by regular course offerings. Final research paper required.
Restriction: Upper-division students only.

FLM&MDA 399. University Teaching. 4 Units.
Limited to Teaching Assistants.
Grading Option: Satisfactory/unsatisfactory only.
Repeatability: May be repeated for credit unlimited times.

Department of Gender and Sexuality Studies
Jennifer Terry, Department Chair
3000 Humanities Gateway
949-824-2376
http://www.humanities.uci.edu/genderandsexualitystudies/

Overview
UCI’s Department of Gender and Sexuality Studies is dedicated to the study of women, gender, and sexuality in their complex articulation with race, ethnicity, class, religion, and nationality. The Department’s goal is to foster critical and creative analysis of the various disciplinary perspectives—historical, political, economic, representational, technological, and scientific—that have constituted women, gender, and sexuality as objects of study. By emphasizing a rigorous interdisciplinary perspective in their teaching and research, the Gender and Sexuality Studies faculty seek to produce new knowledge about the social meanings of gender, race, class, and sexuality, and to equip students with a range of analytical and methodological skills.

The field of women’s studies has developed at a phenomenal rate from a handful of student-initiated courses in the early 1970s to more than 600 programs in colleges and universities across the United States offering degrees at the B.A., M.A., and Ph.D. levels. UCI’s Department of Women’s Studies was founded as a program in 1975 and has grown significantly since that time. To reflect its expanding scope of inquiry, the department...
changed its name in 2014 to the Department of Gender and Sexuality Studies. The Department offers a B.A. degree in Gender and Sexuality Studies, a minor in Gender and Sexuality Studies, a minor in Queer Studies, and a graduate emphasis in Feminist Studies.

Gender and Sexuality Studies provides a unique intellectual community for undergraduate and graduate students, where faculty and students share a commitment to interactive teaching and learning. Students work closely with faculty to plan a coherent program of study and to anticipate work toward advanced degrees and a wide variety of career options.

Career Opportunities
A degree in Gender and Sexuality Studies prepares students for the expanding opportunities available in graduate programs and in numerous careers in both the public and private sectors. Businesses and corporations increasingly find the need for increased knowledge about gender and sexuality, and the growth of organizations and agencies that deal with women's and LGBT rights issues—at the local, national, and global levels—is creating new opportunities for graduates with specializations in Gender and Sexuality Studies. Graduates bring unique skills and knowledge to the professions of law, medicine, social work, education, counseling, and to government service, all of which increasingly require expertise on issues concerning gender and sexuality. Students of Gender and Sexuality Studies develop critical and analytical skills which prove valuable in the full range of life choices.

The UCI Career Center provides services to students and alumni including career counseling, information about job opportunities, a career library, and workshops on resume preparation, job search, and interview techniques.

Undergraduate Program

Requirements for the B.A. in Gender and Sexuality Studies
All students must meet the University Requirements (p. 91).
All students must meet the School Requirements (p. 788).

Departmental Requirements for the Major
A. Three introductory core courses:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>GEN&amp;SEX 50A</td>
<td>Gender and Feminism in Everyday Life</td>
</tr>
</tbody>
</table>

and select two of the following:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>GEN&amp;SEX 20</td>
<td>Queer Studies</td>
</tr>
<tr>
<td>GEN&amp;SEX 50B</td>
<td>Gender and Power</td>
</tr>
<tr>
<td>GEN&amp;SEX 50C</td>
<td>Gender and Popular Culture</td>
</tr>
<tr>
<td>GEN&amp;SEX 60A</td>
<td>Gender and Science</td>
</tr>
<tr>
<td>GEN&amp;SEX 60B</td>
<td>Gender and Law</td>
</tr>
<tr>
<td>GEN&amp;SEX 60C</td>
<td>Gender and Religion</td>
</tr>
</tbody>
</table>

B. Five advanced core courses from:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>GEN&amp;SEX 100A</td>
<td>Feminism and Social Change</td>
</tr>
<tr>
<td>GEN&amp;SEX 100B</td>
<td>Feminist Theory</td>
</tr>
<tr>
<td>GEN&amp;SEX 100C</td>

Graduate Emphasis in Feminist Studies

The Department of Gender and Sexuality Studies offers an emphasis in Feminist Studies, which is available to all graduate students at UCI. Satisfactory completion of the emphasis is certified by the Graduate Director of Gender and Sexuality Studies.

Admission

Students may apply for admission to the emphasis following successful completion of either GEN&SEX 200A or GEN&SEX 200B. For complete information about application policies and procedures, refer to the Gender and Sexuality Studies website (http://www.humanities.uci.edu/genderandsexualitystudies/graduate) or contact the Graduate Director.

Emphasis Requirements

Minimum course work for the graduate emphasis in Feminist Studies consists of four courses: two core courses, GEN&SEX 200A-GEN&SEX 200B, a coherent sequence normally taken in consecutive quarters; one elective graduate seminar in the Department of Gender & Sexuality Studies; and one additional graduate seminar in feminist scholarship taught outside of the department and chosen from a list of courses approved by the Graduate Director of the Graduate Emphasis in Feminist Studies. The course requirements for Ph.D., M.A., and M.F.A. candidates are the same.

For doctoral students, the qualifying examination and dissertation topic should incorporate Feminist Studies in a meaningful way. One member of the candidate’s qualifying examination committee and of the candidate’s dissertation committee must be a member of the Gender and Sexuality Studies core or affiliate faculty. There are no requirements concerning qualifying examinations or theses for M.A. or M.F.A. students.

Requirements for Completion

During the final year of their graduate program, students apply and submit a sample of work related to Feminist Studies (e.g. a dissertation chapter or substantive paper, a video, or other creative work). Upon receipt, the Graduate Director will verify completion of four required graduate courses related to Feminist Studies.

NOTE: The dissertation may be accepted in fulfillment of the sample of work when Feminist Studies is incorporated in a substantive way.

Faculty

Jonathan Alexander, Ph.D. Louisiana State University, Campus Writing Coordinator and Professor of English; Culture and Theory; Education; Gender and Sexuality Studies; Informatics (writing studies, sexuality studies, queer theory, new media studies)

Christine Bacareza Balance, Ph.D. New York University, Associate Professor of Asian American Studies; Culture and Theory; Gender and Sexuality Studies (Performance studies, popular music, critical race and ethnic studies, Filipino/Filipino American studies, queer & feminist theory)

Victoria Bernal, Ph.D. Northwestern University, Professor of Anthropology; Culture and Theory; Gender and Sexuality Studies; Religious Studies

Michele B. Goodwin, J.D. Boston College, Director, Center for Biotechnology and Global Health Policy and UCI’s Chancellor’s Professor of School of Law; Criminology, Law and Society; Gender and Sexuality Studies; Program in Public Health

Laura H. Kang, Ph.D. University of California, Santa Cruz, Professor of Gender and Sexuality Studies; English (feminist epistemologies and theories, cultural studies, ethnic studies)

Nasrin Rahimieh, Ph.D. University of Alberta, Department Chair and Professor of Comparative Literature; Gender and Sexuality Studies (Modern Persian literature and culture, diaspora studies, women’s writing.)

Catherine Z. Sameh, Ph.D. Rutgers, The State University of New Jersey, Assistant Professor of Gender and Sexuality Studies (Iranian feminism, human rights, transnational feminisms, gender and social movements in the Middle East and Muslim world, Islam, women of color feminisms)

Jeanne Schepet, Ph.D. University of California, Santa Barbara, Associate Professor of Gender and Sexuality Studies (feminist performance studies and visual culture, cultural studies, theories of race, gender and sexuality, trans-Atlantic modernism)

Jennifer Terry, Ph.D. University of California, Santa Cruz, Department Chair and Professor of Gender and Sexuality Studies; Comparative Literature (cultural studies, social theory; science and technology studies, formations of gender and sexuality, critical approaches to modernity, American studies in transnational perspective, processes of militarization)
Emily Thuma, Ph.D. New York University, Assistant Professor of Gender and Sexuality Studies (gender, race, and sexuality in 20th-century U.S. history; feminist studies; queer studies; social movements and the state; criminalization and imprisonment)

Heidi E. Tinsman, Ph.D. Yale University, Professor of History; Gender and Sexuality Studies (Latin America, gender and sexuality, world history)

Courses

GEN&SEX 20. Queer Studies. 4 Units.
Study of sexuality from the perspective of lesbian, gay, queer, transgender scholarship spanning humanities, social sciences, arts.

(IV, VII)

GEN&SEX 50A. Gender and Feminism in Everyday Life. 4 Units.
What is gender? Why does studying it matter? Explores how feminism has understood not only gender as a category of social analysis, but how gender structures personal identities, family, citizenship, work and leisure, social policy, sexuality, and language.

(IV, VII)

GEN&SEX 50B. Gender and Power. 4 Units.
From workplace to home to schools to prisons, how are societal institutions and politics “gendered”? Examines power and inequalities around gender, race, class, and sexuality in national and transnational contexts.

(IV, VII)

GEN&SEX 50C. Gender and Popular Culture. 4 Units.
An investigation of gender, race, and sexuality in film, TV, video, music, and advertising, with attention to the ways that popular culture shapes understandings of technology, national identities, leisure and work, historical memory, international communication, and multicultural representation.

(IV, VII)

GEN&SEX 60A. Gender and Science. 4 Units.
Examines science from a variety of feminist viewpoints in order to explore how science influences everyday life. Special attention is given to the ways science shapes our understanding of gender, race, and sexuality.

(III)

GEN&SEX 60B. Gender and Law. 4 Units.
Introduction to the relationship between gender, race, sexuality, and the law. Critical thinking about how law defines citizenship, political representation, and democracy, focusing on the history of legal reform undertaken in the name of women as a social group.

(III)

GEN&SEX 60C. Gender and Religion. 4 Units.
Introduces the topic of religion in a feminist context by performing cross-cultural exploration of gender, authority, and faith in various traditions. Study includes (but is not limited to) writings of contemporary Jewish, Christian, and Muslim feminists.

(III, VIII)

GEN&SEX 70. Special Topics in Gender. 4 Units.
Topics cover issues which relate to women or gender, or which are taught from a feminist methodological perspective.

Repeatability: Unlimited as topics vary.

GEN&SEX 100A. Feminism and Social Change. 4 Units.
Explores feminist modes of knowledge production in relation to histories and activist practices of various social movements. Examines the kinds of information, research, ideas, theories, and concepts that underlie feminist cultural analysis and social movement organizing.

GEN&SEX 100B. Feminist Theory. 4 Units.
Introduction to historical traditions in theory and various conceptual frameworks informing scholarship in gender studies, sexuality studies, and women’s studies as a field of critical inquiry.

GEN&SEX 100C. Feminist Cultural Studies. 4 Units.
Investigation of the theories and methods that inform the feminist study of culture. Focuses on the interpretation of the visual arts and literature created by, and predominately for, women.
GEN&SEX 110A. Gender, State, and Nation. 4 Units.
Examination of gender and sexuality in relation to the production of identities created through participation in state and nation. Examines complexity of relationship between feminism and nationalism, feminism and the state.

GEN&SEX 110B. Money, Sex, and Power. 4 Units.
Examination of gender and sexuality in relation to the emergence of the modern world, modernity, and capitalism; commodification, circulation, and transnational exchanges relating to race, gender, class, sexuality, religion, and nationality.

GEN&SEX 110C. Histories of Sexuality. 4 Units.
Examines the historical production of non-normative sexual and gender identities, bodies, practices, and communities. Explores how past formations inform and shape the present and future.

GEN&SEX 120A. Modern Pleasures. 4 Units.
Examination of the theory and history of pleasure within academic disciplines as well as in social and cultural processes and networks.

GEN&SEX 120B. Image Problems. 4 Units.
Examination of scholarly approaches to gender stereotypes and politics of representation as they present possibilities for critical analysis and produce problems and limitations; how powerful ideas of gender intersect with other forms of social differentiation such as race and class.

GEN&SEX 120C. Practices of Embodiment. 4 Units.
Explores how science, medicine, and law have shaped the understanding of differentiated bodies; examines shifting norms and ideals about producing, shaping, adorning, and dressing gendered bodies across diverse historical, cultural, social, economic, and spatial contexts.

GEN&SEX 139. Topics in Gender Studies. 4 Units.
Various topics in gender studies. Encompasses issues of gender, culture, race and class, including issues of sexualities and social justice.
Repeatability: Unlimited as topics vary.

GEN&SEX 139W. Topics in Gender Studies. 4 Units.
Various topics in gender studies. Encompasses issues of gender, culture, race and class, including issues of sexualities and social justice.
Prerequisite: Satisfactory completion of the Lower-Division writing requirement.
Repeatability: Unlimited as topics vary.

GEN&SEX 155. Topics in Gender and Sexuality Studies. 4 Units.
Designed to provide students with an opportunity to conduct advanced work in Gender and Sexuality Studies.
Repeatability: Unlimited as topics vary.

GEN&SEX 157A. Topics in Queer Studies. 4 Units.
Explores issues in queer studies from one or more of the following perspectives: theoretical, historical, legal, economic, political, sociological, and representation in the arts.
Repeatability: Unlimited as topics vary.

GEN&SEX 157B. Topics in Queer Lives and Knowledge. 4 Units.
Explores the emergence of historical elaboration of non-normative sexual identities, practices, and communities; focuses on medical, legal, literary, aesthetic, scientific, and religious notions about homosexuality and appropriations and subversions of these notions by queer people.
Repeatability: Unlimited as topics vary.

GEN&SEX 165B. Sexuality, Health and Medicine. 4 Units.
Focuses on cultural and political-economic analysis and representations of disease both within the U.S. and globally.

GEN&SEX 165F. Gender and Technology. 4 Units.
Using a variety of disciplinary methods, examines how various technological processes and products produce culturally complex meanings associated with gender and technology.

GEN&SEX 167A. Militarism and Gender. 4 Units.
Examination of feminist approaches to militarism, war, and political violence; drawing on representations of women as both victims of and participants in military violence; effects of militarism on formations of gender; effects of military industrial complex on nationalism and identity.
Same as INTL ST 153F.
GEN&SEX 168B. The Politics of Style. 4 Units.
Examination of the emergence of style and lifestyle in relation to gender and sexuality; analysis of subcultures, politics, and representation of style in relation to formation of social identities.

GEN&SEX 170. Topics in Gender, Feminism, Literature, and Language. 4 Units.
Topics cover issues in language and literature which relate to women or gender, or which are taught from a feminist methodological perspective.
Repeatability: Unlimited as topics vary.

GEN&SEX 171. Topics in Gender, Feminism, and History. 4 Units.
Topics cover issues in history which relate to women or gender, or which are taught from a feminist methodological perspective.
Repeatability: Unlimited as topics vary.

GEN&SEX 171A. Sex and Conquest in Latin America. 4 Units.
Competing ideas of masculinity and femininity, sexual violence, sexual identities, and gendered hierarchies informed how the Spanish engaged in military and religious domination of Mexican and Andean communities, as well as the forms of native resistance throughout colonial Latin America.
Same as HISTORY 160.

GEN&SEX 172. Gender, Race, and Nation in Latin America. 4 Units.
Addresses the importance of gender and race to nation-making in Latin America during the 19th and 20th centuries (1810-1945). Considers how hierarchies between men and women shaped ideas about family, the state, and modernity.
Same as HISTORY 166A, INTL ST 177H.

GEN&SEX 174. Topics in Gender, Feminism, and the Arts. 4 Units.
Topics cover issues in the arts which relate to women or gender, or which are taught from a feminist methodological perspective.
Repeatability: Unlimited as topics vary.

GEN&SEX 175. Topics in Gender, Feminism, and the Media. 4 Units.
Topics cover issues in the media which relate to women or gender, or which are taught from a feminist methodological perspective.
Repeatability: Unlimited as topics vary.

GEN&SEX 180. Topics in Gender, Feminism, and Anthropology. 4 Units.
Topics cover issues in Anthropology which relate to women or gender, or which are taught from a feminist methodological perspective.
Repeatability: Unlimited as topics vary.

GEN&SEX 181. Topics in Gender, Feminism, and Cognitive Psychology. 4 Units.
Topics cover issues in cognitive psychology which relate to women or gender, or which are taught from a feminist methodological perspective.
Repeatability: Unlimited as topics vary.

GEN&SEX 182. Topics in Gender, Feminism and Economics. 4 Units.
Topics cover issues in economics which relate to women and gender or which are taught from a feminist methodological perspective.
Repeatability: Unlimited as topics vary.

GEN&SEX 183. Topics in Gender, Feminism, and Sociology. 4 Units.
Topics cover issues in sociology which relate to women or gender, or which are taught from a feminist methodological perspective.
Repeatability: Unlimited as topics vary.

GEN&SEX 184. Topics in Gender, Feminism, and Political Science. 4 Units.
Topics cover issues in political science which relate to women or gender, or which are taught from a feminist methodological perspective.
Repeatability: Unlimited as topics vary.

GEN&SEX 185. Topics in Gender, Feminism, and Social Sciences. 4 Units.
Topics cover issues in social sciences which relate to women or gender, or which are taught from a feminist methodological perspective.
Repeatability: Unlimited as topics vary.
GEN&SEX 187. Topics in Gender, Feminism, and Social Ecology. 4 Units.
Topics cover issues in social ecology which relate to women or gender, or which are taught from a feminist methodological perspective.
Repeatability: Unlimited as topics vary.

GEN&SEX 188. Topics in Gender, Feminism, and Science. 4 Units.
Topics cover issues in science which relate to women or gender, or which are taught from a feminist methodological perspective.
Repeatability: Unlimited as topics vary.

GEN&SEX 189. Topics in Gender, Feminism, and Interdisciplinary Studies. 4 Units.
Topics cover issues in interdisciplinary studies which relate to women or gender, or which are taught from a feminist methodological perspective.
Repeatability: Unlimited as topics vary.

GEN&SEX 190. Topics in Sexualities Studies. 4 Units.
Topics cover issues in the humanities, social sciences, sciences, and arts that relate to critical inquiry of sexualities.
Repeatability: Unlimited as topics vary.

GEN&SEX 197. Senior Seminar in Gender and Sexuality Studies. 4 Units.
Students read advanced scholarship in Gender and Sexuality Studies and complete a major seminar paper.
Prerequisite: Satisfactory completion of the Upper-Division Writing requirement.
Restriction: Gender and Sexuality Studies Majors only.

GEN&SEX 198. Directed Group Study. 4 Units.
Special topics through directed reading. Paper required.
Repeatability: Unlimited as topics vary.

GEN&SEX 199. Independent Study. 1-4 Units.
Directed reading and research in consultation with a faculty member. Substantial written work required. Includes independent study, involving 3-12 hours a week.
Repeatability: May be repeated for credit unlimited times.

GEN&SEX 200A. Feminist Knowledge and Social Change. 4 Units.
Provides a broad and introductory overview of Women’s Studies and feminist knowledge, including key concepts, theoretical frameworks, disciplinary approaches and methods, and critical debates that have shaped the field.
Repeatability: May be taken for credit 2 times.

GEN&SEX 200B. Problems in Feminist Research. 4 Units.
Colloquium on analytic approaches to interdisciplinary feminist research in Women’s Studies and exploration of how feminist knowledges are produced in different academic disciplines.
Repeatability: May be taken for credit 2 times.

GEN&SEX 201. Special Topics in Feminist Studies. 4 Units.
Seminars on various topics in feminist studies.
Repeatability: Unlimited as topics vary.

GEN&SEX 210A. Topics in Graduate Feminist Theory. 4 Units.
In-depth introduction to various theoretical frameworks that have and continue to inform scholarship in Women’s Studies including (but not limited to) identity, representation, and political economy.
Repeatability: Unlimited as topics vary.

GEN&SEX 260A. Advanced Seminar in Feminist Studies. 4 Units.
Graduate seminar covering various areas of research within Gender and Sexuality Studies as an interdisciplinary field. Recommended for advanced graduate students.
Repeatability: May be taken for credit 3 times.
Restriction: Graduate students only.
GEN&SEX 290. Directed Research. 2-12 Units.
Directed graduate study/research in Gender and Sexuality Studies.

Repeatability: May be taken for credit for 24 units.

Restriction: Graduate students only.

GEN&SEX 399. University Teaching. 4 Units.
Limited to Teaching Assistants.
Grading Option: Satisfactory/unsatisfactory only.
Repeatability: Unlimited as topics vary.
Restriction: Graduate students only.

Undergraduate Program in Global Cultures

Yong Chen, Director
322 Humanities Hall; 949-824-6901
http://www.humanities.uci.edu/global_cultures/

Overview
Global Cultures is an innovative undergraduate major and minor in the School of Humanities with an exciting mission: to explore the problems and processes of globalization from a humanistic perspective. The major provides students with 21st century analytical skills and knowledge that is critical to understanding the complexities of the diverse world in which we live. In the process, Global Cultures equips students with the knowledge and tools that lead to successful careers in a wide range of professions and fields.

Global Cultures faculty offer high-quality lectures and, in advanced courses, interactive small group seminars. The major favors a multidisciplinary approach that draws on multiple departments and programs, housed in both the Humanities (including Art History, English, Film and Media Studies, History, Philosophy, Religious Studies, Spanish and Portuguese, and many more) and the Social Sciences (Anthropology, Chicano/Latino Studies, Political Science, Sociology, among others).

Up-to-date examples of the highly diverse courses taught in the major may be found at the Global Cultures website (http://www.humanities.uci.edu/global_cultures). The curricular offerings of Global Cultures are extraordinarily broad. With this intellectually stimulating learning environment, the major attracts students from a wide range of backgrounds. Global Cultures faculty provide these students with a critical understanding and a strong foundation for practice in a variety of occupations, both domestic and international.

Students majoring or minoring in Global Cultures must choose a primary emphasis and a secondary emphasis from the list that can be found by clicking the major tab. Each emphasis essentially consists of a geographic focus. Students may also design their own emphasis in consultation with a program advisor and with the approval of the Global Cultures Committee. All emphases are chosen in consultation with a faculty advisor and/or the approval of the Global Cultures Committee. Examples of how current students are combining their primary and secondary emphases are available at the Global Cultures website. (http://www.humanities.uci.edu/global_cultures)

Core Faculty
Sharon B. Block, Department of History
Yong Chen, Department of History
James Fujii, Departments of East Asian Languages and Literatures and of Comparative Literature
David Theo Goldberg, Departments of Comparative Literature and of Criminology, Law and Society
Douglas M. Haynes, Department of History
Laura H. Y. Kang, Departments of Gender and Sexuality Studies and Comparative Literature
Ketu H. Katrak, Departments of Drama, Comparative Literature, and English
Rodrigo Lazo, Department of English
Liron Mor, Department of Comparative Literature
Keith L. Nelson, Department of History
Undergraduate Major in Global Cultures

The major requires a total of 14 courses. Six of these courses are specific, and eight are electives (see below). Students are encouraged to augment their foreign language competence beyond the School minimum. Participation in the UC Education Abroad Program is strongly recommended for all Global Cultures majors.

Requirements for the B.A. in Global Cultures

All students must meet the University Requirements (p. 91).

All students must meet the School Requirements (p. 78).

Requirements for the Major

A. Complete the following:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>HISTORY 21A</td>
<td>World: Innovations</td>
</tr>
<tr>
<td>HISTORY 21B</td>
<td>World: Empires and Revolutions</td>
</tr>
<tr>
<td>HISTORY 21C</td>
<td>World: Nation, War, and Rights</td>
</tr>
</tbody>
</table>

B. Complete the following:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>GLBLCLT 103A</td>
<td>Global Cultures I</td>
</tr>
<tr>
<td>GLBLCLT 103B</td>
<td>Global Cultures II</td>
</tr>
<tr>
<td>GLBLCLT 191</td>
<td>Senior Seminar: Topics in Global Cultures</td>
</tr>
</tbody>
</table>

C. Complete the following:

D. Select seven upper-division courses from an approved list.  

E. Select one additional upper- or lower-division course from an approved list.  

1. Five of the courses must focus on one emphasis and two on a second emphasis chosen from the approved course lists on the Global Cultures website (http://www.humanities.uci.edu/global_cultures). Quarterly consultation with a faculty advisor is also required.

2. The selected course must focus on the primary or secondary emphasis chosen from the approved course lists on the Global Cultures website (http://www.humanities.uci.edu/global_cultures).

Students are encouraged to augment their language other than English competence beyond the School minimum. Participation in the UC Education Abroad Program is strongly recommended for all Global Cultures majors.

Residence Requirement for the Major: At least five upper-division courses required for the major must be completed successfully at UCI. By petition, two of the five may be taken through the UC Education Abroad Program, provided that course content is approved—usually in advance—by the Director of the Global Cultures Program.

Emphases

Hispanic, U.S. Latino/Latina, and Luso-Brazilian Cultures: Examines the historical, political, and cultural formations of regions where Spanish and Portuguese are spoken, including Spain, Portugal, Spanish- and Portuguese-speaking countries in the Western Hemisphere, and the Latino/Latina population in the United States.

Africa (Nation, Culture) and Its Diaspora: Examines Africa as a diverse geographical and political expression, including its historical, political, and cultural formation locally, regionally, and globally.

Asia (Nation, Culture) and Its Diaspora: Examines Asia as a diverse geographical and political expression, including its historical and cultural formation locally, regionally, and globally.

Europe and Its Former Colonies: Examines Europe and its former colonies as a diverse geographical and political expression, including its historical and cultural formation locally, regionally, and globally.
Global Middle East: Examines the people and cultures of North Africa and the Arab world, Turkey and Iran, as well as their relationship with other regions such as sub-Saharan Africa, Central and South Asia, and the broader Muslim diaspora in Europe and the Americas.

Atlantic Rim: Explores the movement of people and cultures in relationship to the historical and contemporary experience of societies that are adjacent to the Atlantic Ocean, including, among others, west Africa, the Americas, the Caribbean, and western and northern Europe, as well as the British archipelago.

Pacific Rim: Explores the movement of people and cultures in relationship to the historical and contemporary experience of societies that are adjacent to the Pacific Ocean, including, among others, India, China, Japan, Korea, Vietnam, the United States, Central and South America, and Malaysia.

Inter-Area Studies: Includes comparative studies of the geographical regions outlined in the above six emphases, for instance, the analysis of Africans in Asia, or the cultural, historical, and political connections between the Atlantic and the Pacific Rim.

Students may also design their own emphasis by combining two or more regional emphases in a non-traditional fashion. For instance, a student may wish to study what is known as “Creole” (oral) literatures, found in multiple locations in Africa, Asia, and the Americas.

Additional Information

Study Abroad Option
Students are encouraged to study abroad, and may be able to satisfy a significant portion of their major requirements abroad. For maximum number of courses allowed and other pertinent details, visit the Global Cultures website. (http://www.humanities.uci.edu/global_cultures)

All courses taken abroad must be approved. Course approval typically involves the following: (1) presentation of syllabi and other pertinent course materials (term papers, exams, etc.) from the foreign host university, and (2) submission of a UCI Humanities Petition form (available online, and to be completed after student’s return to UCI) to the Undergraduate Director of the Program in Global Cultures, and to the Office of Undergraduate Study. Students are advised to consult with the Humanities Office of Undergraduate Study (HIB 143) and the Global Cultures Director both before and after their stay abroad. NOTE: See also the residence requirement in the major and minor.

Career Opportunities
The major prepares students particularly well for careers in all fields in which analysis, judgment, argument, and a wide (global) rather than narrow perspective are important. The Global Cultures major equips students with a knowledge that is critical to understanding the complexities of the diverse world in which we live.

The following careers are especially well-suited for Global Cultures majors: business (national as well as international), law, management, education (primary and secondary teaching), politics, public policy, academia, print media, television, foreign service, tourism, travel industry, and graduate studies in a wide variety of fields (business, law, education, public policy, and others).

The UCI Career Center provides services to students and alumni including career counseling, information about job opportunities, a career library, and workshops on resume preparation, job search, and interview techniques. See the Career Center section (p. 145) for additional information.

Requirements for the Minor in Global Cultures

Departmental Requirements
A. Select two of the following:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>HISTORY 21A</td>
<td>World: Innovations</td>
</tr>
<tr>
<td>HISTORY 21B</td>
<td>World: Empires and Revolutions</td>
</tr>
<tr>
<td>HISTORY 21C</td>
<td>World: Nation, War, and Rights</td>
</tr>
</tbody>
</table>

B. Complete the following:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>GLBLCLT 103A</td>
<td>Global Cultures I</td>
</tr>
<tr>
<td>GLBLCLT 103B</td>
<td>Global Cultures II</td>
</tr>
</tbody>
</table>

C. Select three upper-division courses from one emphasis.

D. Select one upper-division course from a second emphasis.

Residence Requirement for the Minor: A minimum of four upper-division courses required for the minor must be completed successfully at UCI. Two of the four may be taken through the UC Education Abroad Program, providing course content is approved in advance by the appropriate department chair.

Emphases and Approved Courses: The lists of approved courses are extensive and vary from quarter to quarter, depending upon course scheduling. For complete up-to-date information, consult the Global Cultures website. (http://www.humanities.uci.edu/global_cultures)
Courses

GLBLCLT 103A. Global Cultures I. 4 Units.
Introduction to the processes by which economies, cultural practices, national entities, groups, individuals, and personal identities have undergone globalization. General background and methodological tools for understanding problems and processes of globalization.

Repeatability: Unlimited as topics vary.

GLBLCLT 103B. Global Cultures II. 4 Units.
Introduction to the processes by which economies, cultural practices, national entities, groups, individuals, and personal identities have undergone globalization. Explores how globalization has manifested itself in specific topics, periods, or societies.

Repeatability: Unlimited as topics vary.

GLBLCLT 105. Language Origins: Evolution, Genetics, and the Brain. 4 Units.
Examines how human language(s) may have originated. Studies pertinent techniques (reconstruction) and addresses related questions, including Is our language faculty inborn (i.e., genetically encoded)? Can brain imaging and population genetics research help to unlock this mystery of human evolution?.

Same as HISTORY 135G, ANTHRO 152A, LINGUIS 175.

GLBLCLT 191. Senior Seminar: Topics in Global Cultures. 4 Units.
Students explore a topic(s) concerning processes and/or problems of globalization from an interdisciplinary perspective and build on their critical and analytical skills when investigating cultural and other phenomena that cut across national borders. Research assignments, class presentations, final seminar paper.

Repeatability: Unlimited as topics vary.

Restriction: Upper-division students only.

GLBLCLT 199. Independent Study. 1-4 Units.
Directed reading and research in consultation with a faculty advisor. Substantial written work required.

Repeatability: May be repeated for credit unlimited times.

Undergraduate Program in Global Middle East Studies

Mark LeVine, Director
400 Murray Krieger Hall
949-824-6735
gmes@uci.edu (gmes@uci.edu)

The Global Middle East Studies major and minor offer students an in-depth, interdisciplinary grounding in the histories and present-day realities of the Middle East in a global context. The goal is to ensure students have a well-developed and competitive foundation to continue their studies at the graduate level in the U.S. and globally, and/or begin a career in law, business, consulting, foreign affairs, humanitarian affairs, medicine, science, or security studies, in which both theoretical and practical/first-hand knowledge of the regions we study are equally important.

Global Middle East Studies is both an attractive program and the perfect complement to numerous other programs on campus, particularly those with a disciplinary focus such as history, comparative literature, anthropology, political science, sociology, art history, international studies, global cultures, business, pre-law and criminology, pre-med, computer and information sciences, engineering, and other physical sciences. The Global Middle East Studies minor can be combined with any major.

Requirements for the B.A. in Global Middle East Studies

All students must meet the University Requirements (p. 91).
All students must meet the School Requirements (p. 788).

Requirements for the Major

A. Complete the following:

<table>
<thead>
<tr>
<th>GLBL ME 60A-60B-60C</th>
<th>Humanities and Arts: Problems and Methods for Global Middle East Studies</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>and Social Sciences: Problems and Methods for Global Middle East Studies</td>
</tr>
<tr>
<td></td>
<td>and Social Ecology and Sciences: Problems and Methods for Global Middle East Studies</td>
</tr>
</tbody>
</table>
GLBL ME 100W  
Research and Writing for Global Middle East Studies

B. Complete course work equivalent to UCI's sixth quarter of study (2C level) in one of the following single languages: Arabic, Persian, or Hebrew. Students may also petition to complete the requirement in other languages.

C. Complete four upper-division courses, selected from two of the following emphases (eight total): ¹
   1. Environment, Economies, and Conflicts
   2. Histories, Cultures, and Identities
   3. Geographies, Migrations, and Politics

¹ Courses must be selected from the approved lists published on the Global Middle East Studies website (http://www.humanities.uci.edu/gmes).

Residence Requirement for the Major: A minimum of five upper-division courses required for the major must be completed successfully at UCI.

Requirements for the Minor in Global Middle East Studies

A. Complete:

   GLBL ME 60A- 60B- 60C
   Humanities and Arts: Problems and Methods for Global Middle East Studies and Social Sciences: Problems and Methods for Global Middle East Studies and Social Ecology and Sciences: Problems and Methods for Global Middle East Studies

B. Complete four upper-division courses selected from an approved list. ¹

¹ Courses must be selected from the approved lists published on the Global Middle East Studies website. (http://www.humanities.uci.edu/gmes)

Residence Requirement for the Minor: Four upper-division courses required for the minor must be completed successfully at UCI. Two of the four may be taken through the UC Education Abroad Program, provided course content is approved in advance by the appropriate program director.

Courses

GLBL ME 60A. Humanities and Arts: Problems and Methods for Global Middle East Studies. 4 Units.
Introduces students to the broad set of humanities and arts approaches to studying the Middle East as a global zone of cultural, political, and economic interaction.
(IV and VIII).

GLBL ME 60B. Social Sciences: Problems and Methods for Global Middle East Studies. 4 Units.
Introduces students to the broad set of social sciences approaches to studying the Middle East as a global zone of cultural, political, and economic interaction.
(III and VIII).

GLBL ME 60C. Social Ecology and Sciences: Problems and Methods for Global Middle East Studies. 4 Units.
Introduces students to the broad set of approaches to studying the Middle East as a global zone of cultural, political, and economic interaction, focusing on the disciplines related to Social Ecology.
(III and VIII).

GLBL ME 100W. Research and Writing for Global Middle East Studies. 4 Units.
Research and writing course for Global Middle East Studies majors. The primary focus is to refine the skills necessary for students to engage in independent research and writing in Global Middle East Studies.
Prerequisite or corequisite: GLBL ME 60A or GLBL ME 60B or GLBL ME 60C. Satisfactory completion of the Lower-Division Writing requirement.
Restriction: Global Middle East Studies Majors have first consideration for enrollment.
(Ib)

Department of History

Jeff Wasserstrom, Department Chair
200 Murray Krieger Hall
949-824-6521
http://www.humanities.uci.edu/history/
Overview

The undergraduate program in History is designed to develop critical intelligence and to foster an awareness of ourselves and our world through the study of the past. The Department presents a variety of approaches to history, and each emphasizes basic disciplinary skills: weighing evidence, constructing logical arguments, and exploring the role of theory in historical analysis and human action.

The Department offers a number of lower-division courses open to majors as well as non-majors, most of which fulfill part of the UCI general education requirements.

Students who are interested in the study of history but are majoring in other disciplines may minor in History. The minor incorporates elements of the Department’s program for majors but allows students enough flexibility to pursue programs in other departments and schools.

Upper-division courses range from the examination of individual nation-states (e.g., Chinese history), to studies of the relations among nation-states (e.g., Emergence of the Modern Middle East), to historical analyses of political, socio-economic, and cultural factors (e.g., Women in the United States). Students are also provided the opportunity for small-group learning experiences through colloquia. The colloquia are conducted as discussion groups, involve close reading and analysis of primary and secondary texts, and require writing.

In addition, History students have the option of pursuing advanced study through programs offered by the Department, the School of Humanities, and the University. Within the Department of History, students have the opportunity to complete an advanced research seminar series or to design their own research project with a faculty advisor through Independent Study.

Specialization in History for Future Teachers

The Specialization in History for Future Teachers is designed to prepare history majors who aspire to earn a post-baccalaureate teaching credential. Through specific history course requirements, courses in the School of Education, and a field work requirement, students will be well positioned for admission to teaching credential programs.

Phi Alpha Theta

Phi Alpha Theta is a charter member of the Association of College Honor Societies for undergraduates, graduates, and faculty within the discipline of history. Becoming a member to the society will grant you honor cords for graduation and allow eligibility for several national and regional scholarships. To become eligible for initiation, students must have achieved junior standing, have completed seven or more history courses in residence at UCI, and have acquired a minimum 3.5 GPA in the major and a minimum 3.3 GPA overall. For more information, please contact the History Undergraduate Program Coordinator.

Study Abroad

The department strongly encourages majors and minors to take advantage of the University’s study abroad programs and to experience a different culture, for a quarter or longer, while making progress toward their UCI degree. Moreover, students who are particularly interested in the history of a specific country or region would greatly benefit from direct study and cultural interaction within that country or region. Information about studying abroad can be found at UCI’s Study Abroad Center website. (http://www.studyabroad.uci.edu)

Requirements for the B.A. in History

All students must meet the University Requirements (p. 91).

All students must meet the School Requirements (p. 788).

Departmental Requirements for the Major

Twelve courses are required:

A. Select two of the following:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>HISTORY 70A</td>
<td>Problems in History: Asia</td>
</tr>
<tr>
<td>HISTORY 70B</td>
<td>Problems in History: Europe</td>
</tr>
<tr>
<td>HISTORY 70C</td>
<td>Problems in History: United States</td>
</tr>
<tr>
<td>HISTORY 70D</td>
<td>Problems in History: Latin America</td>
</tr>
<tr>
<td>HISTORY 70E</td>
<td>Problems in History: Middle East and Africa</td>
</tr>
<tr>
<td>HISTORY 70F</td>
<td>Problems in History: Transregional History</td>
</tr>
</tbody>
</table>

B. Two additional lower-division History courses

C. Four upper-division History courses

D. Complete the following:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>HISTORY 100W</td>
<td>Writing About History</td>
</tr>
<tr>
<td>HISTORY 190</td>
<td>Colloquium</td>
</tr>
</tbody>
</table>

E. Two additional lower- or upper-division History courses

F. At least one of the twelve required courses must be devoted to the period prior to 1800.
Residence Requirement for the History Major: One course from the History 70 series, HISTORY 100W, HISTORY 190, and three upper-division History courses must be completed successfully at UCI. By petition, two of the six may be taken through the UC Education Abroad Program, provided that course content is approved in advance by the Chair of the History Undergraduate Program Committee.

Requirements for the B.A. in History with a Specialization in History for Future Teachers

All students must meet the University Requirements (p. 91).

All students must meet the School Requirements (p. 788).

Fifteen courses are required:

A. Select one of the following series:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>HISTORY 21A-21B-21C</td>
<td>World: Innovations and World: Empires and Revolutions and World: Nation, War, and Rights</td>
</tr>
<tr>
<td>or</td>
<td></td>
</tr>
</tbody>
</table>

B. Complete the following:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>HISTORY 70C</td>
<td>Problems in History: United States</td>
</tr>
<tr>
<td>HISTORY 100W</td>
<td>Writing About History</td>
</tr>
<tr>
<td>HISTORY 190</td>
<td>Colloquium</td>
</tr>
</tbody>
</table>

C. Select two courses from the following:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>HISTORY 70A</td>
<td>Problems in History: Asia</td>
</tr>
<tr>
<td>HISTORY 70B</td>
<td>Problems in History: Europe</td>
</tr>
<tr>
<td>HISTORY 70D</td>
<td>Problems in History: Latin America</td>
</tr>
<tr>
<td>HISTORY 70E</td>
<td>Problems in History: Middle East and Africa</td>
</tr>
<tr>
<td>HISTORY 70F</td>
<td>Problems in History: Transregional History</td>
</tr>
</tbody>
</table>

D. Select one course in California History.

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>HISTORY 142A</td>
<td>California Dreaming: Conquest, Conflict, and Globalization in the Golden State</td>
</tr>
<tr>
<td>HISTORY 151A</td>
<td>Chicana/Chicano History: Pre-Colonial to 1900</td>
</tr>
<tr>
<td>HISTORY 151B</td>
<td>Chicana/Chicano History: Twentieth Century</td>
</tr>
</tbody>
</table>

E. Two upper-division U.S. History courses.

F. Two upper-division non-U.S. History courses.

G. Select one course from the School of Education.

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>EDUC 108</td>
<td>Adolescent Development and Education</td>
</tr>
<tr>
<td>EDUC 124</td>
<td>Multicultural Education in K-12 Schools</td>
</tr>
<tr>
<td>EDUC 128</td>
<td>Exceptional Learners</td>
</tr>
<tr>
<td>EDUC 131</td>
<td>Educational Technology</td>
</tr>
<tr>
<td>EDUC 173</td>
<td>Cognition and Learning in Educational Settings</td>
</tr>
</tbody>
</table>

H. Complete at least two units of field work from EDUC 100 or other relevant experience with prior departmental approval.

Residence Requirement for the History Major with a Specialization in History for Future Teachers: HISTORY 70C, HISTORY 100W, HISTORY 190, and three upper-division History courses must be completed successfully at UCI. By petition, two of the six may be taken through the UC Education Abroad Program, provided that course content is approved in advance by the Chair of the History Undergraduate Program Committee.

Additional Information

Career Opportunities

The training and discipline derived from historical studies provide a valuable experience for all educated persons seeking to understand themselves and their world. Many students who complete undergraduate degrees in the Department of History go on to graduate school in a variety of fields, including history, law, business, international relations, and education.

The study of history is valuable preparation for many other careers as well. The strong academic and professional orientation acquired by History majors is necessary to pursue successful careers in such diverse fields as advertising, the non-profit sector, journalism, management, public relations, publishing, international relations, and government service.
The UCI Career Center provides services to students on resume preparation, job search, and interview techniques. See the Career Center (p. 145) for additional information.

Requirements for the Minor in History

Departmental Requirements

Seven courses are required:

A. Select three lower-division History courses.
B. Select four upper-division History courses.

Residence Requirement for the Minor: All four upper-division History courses must be completed successfully at UCI. By petition, two of the four may be taken through the UC Education Abroad Program, providing course content is approved in advance by the Chair of the History Undergraduate Program Committee.

Department of History Graduate Program

The Department of History at the University of California, Irvine emphasizes graduate training in regional areas, world and transnational history, and thematic specialties as elaborated in the graduate handbook. Whatever the student’s chosen emphasis, the History Graduate Program encourages students to think across national and regional borders and to have a solid understanding of how the discipline of History contributes to debates about global and local transformation.

The Master of Arts Program

Program of Study

Masters students receive similar opportunities as those offered doctoral students to train in the history of area regions and thematic emphases. A total of nine courses are required: three in a first field (either area-based or thematic), two in a second field (area-based or thematic), the two-quarter first-year research seminar (HISTORY 202A and HISTORY 202B), and two electives that may be taken outside the Department. It is strongly recommended that at least one of these electives be a directed readings course (HISTORY 291) with the advisor to either work on the thesis or prepare for the comprehensive exam. Upon entering the program, M.A. students must choose a department faculty member to serve as their advisor.

Time Limits

The M.A. is a one-year program in academic residence as a full-time student. However, it is understood that many M.A. students are employed and need to enroll on a part-time basis. Students are allowed up to three years of graduate study to complete the degree.

Degree Conferral

Degree Conferral Plan I- Thesis: The master’s thesis represents a revision of the first-year research paper, equivalent to a scholarly article, under the supervision of the faculty advisor. The project is reviewed and approved by the advisor and the thesis committee.

Degree Conferral Plan II- Comprehensive Exam: At the end of the final quarter, the M.A. candidate must pass a comprehensive oral exam administered by the faculty advisor and one other faculty member. Students are examined on their first field.

Language Requirement

Students in the M.A. program whose major field requires use of foreign language sources must demonstrate competence in a foreign language in the process of writing the first-year research paper and thesis. Other M.A. students do not have to meet a foreign language or alternative skills requirement.

Admission

Requirements for Admission to the M.A. Program: It is desirable that an applicant have the equivalent of an undergraduate major in History; however, the Department also considers students who have previously specialized in other subject areas and who have strong analytical and writing skills. The Department’s required grade-point minimums and requested exams (GRE/TOEFL) are consistent with university policy. Students are accepted for fall admission only.

The Doctoral Program

The Doctoral Program in History is designed to provide students with advanced historical research skills and a solid grounding in the theory and methodology of history. This combination reflects the Department’s conviction that scholars should approach significant questions about the past with rigor and sophistication. The Department requires that students develop critical abilities in dealing with primary sources, secondary syntheses, and the interrelationship of history and theory. Candidates for the Ph.D. in History are expected to gain teaching experience as an integral part of their graduate training. This is accomplished through work as a teaching assistant.

Coursework

Doctoral students take a minimum of 15 formal courses to be completed during the first two years of the program. Ten courses must be taken within the History Department.
History and Theory
Required coursework for doctoral students includes a mandatory two-quarter sequence in History and Theory, during the first year. These courses explore a variety of theoretical issues and methodological concerns that have sparked debate in the humanities and social sciences in the past decades and which remain pertinent to 21st century historical writing. Topics may include the relationship between materialist approaches and cultural analysis; subjectivity and governance; gender and sexuality; ethnicity and racial formation; the politics of religion; "the archive" and archival practice; nationalism and postcolonialism; world history and transnational studies.

Field Emphases
Doctoral students are required to take a total of six courses satisfying requirements for specialization in two historical fields, in either area studies or thematic fields. Students take three courses in each field. The Department offers area studies fields in Asian History, European History, Latin American History, Middle East and African History, U.S. History, and World History. Thematic fields vary depending on demand. Students may take courses satisfying field requirements in any order.

Research Seminars
Doctoral students are required to take a two-quarter course sequence in research and writing both their first and second year in the graduate program. In the first year, students take a proseminar on historical methodology (HISTORY 202A) followed by a second quarter (HISTORY 202B) in which they write a research paper that engages the methodologies and questions explored in the previous quarter. Students who enter the doctoral program with a master's may petition to be exempt from the first-year research sequence, pending acceptance of the M.A. thesis as an equivalent to the final research paper of the sequence.

In the second year of study, Ph.D. students take a two-course sequence (HISTORY 204A and HISTORY 204B) in which they research and write a paper on a topic of their choice. The second year research paper is required of all doctoral students.

Language Requirement
All students must demonstrate a proficiency in one language other than English prior to taking the Ph.D. candidacy qualifying exam. Competency in a language may be established either by passing a departmental examination (proctored in the department office) or through extensive language use in one of the research seminars. The language used to satisfy this requirement is subject to their advisors' approval.

Summary of Required Course of Study:
1. History and Theory - two courses
2. Research Seminars – four courses
3. First Field - three courses
4. Second Field – three courses
5. Electives - three courses
6. Foreign Language Proficiency

First-Year Review
To be admitted formally into the doctoral program, students must satisfactorily pass a departmental evaluation at the end of their first year of study; this includes students who entered with a M.A. from another institution. Doctoral students can be awarded an M.A. from UCI after fulfilling requirements for residence, one language, and successfully completing 36 units, including 28 units in required courses.

The Candidacy Qualifying Exam and Dissertation Prospectus
In the third year of the doctoral program, students prepare for their candidacy qualifying exam and write the dissertation prospectus. Most third year students enroll in the intensive readings course (HISTORY 298) or directed readings (HISTORY 291) to work closely with faculty in preparing for exams and writing their prospectus.

The candidacy qualifying exam is an oral, two-hour meeting during which a student is examined in their first and second field by a committee of four faculty members, plus an additional faculty referee. Upon successful completion of the exam, the student is officially advance to doctoral candidacy (all but dissertation) and presents the dissertation prospectus in a colloquium including all members of the dissertation committee for formal approval. Both the exam and prospectus colloquium should be completed by the end of the third year.

Dissertation Research and Writing
The dissertation is the most important part of the Department's doctoral program. The dissertation is an original piece of historical scholarship, involving extensive primary research and original analysis of secondary source material. Students spend a year or more engaged in intensive research, and another year or more writing the dissertation. Throughout this period, students work closely with the advisor and the dissertation committee members. The finished dissertation must be approved by all members of the dissertation committee.

Teaching
Most graduate students begin work as a teaching assistant for the Department or School courses during their second year and continue throughout their tenure in the program, except when dissertation research or writing require their residency away from the university. Students have the opportunity
to apply to teach their own courses during summer session once they have advanced to doctoral candidacy. Students beyond their second year are
required to also apply for teaching positions outside the department, e.g. in Composition or Humanities Core.

**Time to Degree for the Ph.D.**
Normative time to degree for the doctoral program is seven years. Maximum time to degree permitted is nine years.

**Requirements for Admission to the Ph.D. Program**
It is desirable that an applicant have the equivalent of an undergraduate major in History; however, the Department also considers students who have previously specialized in other subject areas and who have strong analytical and writing skills. Many students entering the program hold a Masters degree in History, or an associated field. The Department's required grade-point minimums and requested exams (GRE/TOEFL) are consistent with university policy. Students are accepted for fall admission only.

**Faculty**
Emily L. Baum, Ph.D. University of California, San Diego, Associate Professor of History; Religious Studies (modern Chinese history, history of medicine)
Houri Berberian, Ph.D. University of California, Los Angeles, Director of the Armenian Studies Program and Meghrouni Family Chair in Armenian Studies and Professor of History (modern Armenian history, Middle East history)
Sharon B. Block, Ph.D. Princeton University, Professor of History (digital humanities, early American, race and sexuality)
Alex Borucki, Ph.D. Emory University, Associate Professor of History; African American Studies (African diaspora, early modern Atlantic world, slave trade, colonial Latin America)
Anita Casavantes Bradford, Ph.D. University of California, San Diego, Associate Professor of Chicano/Latino Studies; History (20th century U.S., U.S. in the world, Cuba and the Caribbean; history of childhood; history of immigration, race and ethnicity; transnational and comparative Latina/o history; religion, politics and social movements)
Vinayak Chaturvedi, Ph.D. University of Cambridge, Associate Professor of History; Culture and Theory; Religious Studies (modern South Asia, social and intellectual history)
Yong Chen, Ph.D. Cornell University, Associate Dean of Curriculum and Student Services and Professor of History: Asian American Studies; Religious Studies (Asian American history and immigration, food and culture, U.S./China economic and cultural interactions)
Simon A. Cole, Ph.D. Cornell University, Professor of Criminology, Law and Society; History; School of Law (science, technology, law, criminal justice)
Ian Collier, Ph.D. University of Melbourne, Associate Professor of History (Europe and the Muslim world, the French Revolution and the global history of the Revolutionary age)
Touraj Daryaee, Ph.D. University of California, Los Angeles, UCI Endowed Chair in Persian Studies and Culture and Professor of History; Religious Studies (Iran, Zoroastrianism, Ancient Medieval World)
Alice Fahs, Ph.D. New York University, Professor Emerita of History (Civil War America, American cultural history, gender)
Sarah Bennett Farmer, Ph.D. University of California, Berkeley, Associate Professor of History; European Languages and Studies (modern French history, twentieth-century Europe, social and cultural history)
David Fedman, Ph.D. Stanford University, Assistant Professor of History (Japan and Korea, environmental history, historical geography, global history, modern war)
Richard I. Frank, Ph.D. University of California, Berkeley, Professor Emeritus of History; Classics (Roman history, Classical tradition)
Dorothy B. Fujita-Rony, Ph.D. Yale University, Associate Professor of Asian American Studies; History (U.S. history, Asian American studies)
Howard A. Gillman, Ph.D. University of California, Los Angeles, Chancellor and Professor of Political Science; Criminology, Law and Society; History; School of Law
James B. Givens, Ph.D. Stanford University, Professor Emeritus of History
Simcha Gross, Ph.D. Yale University, Assistant Professor of History (Judaism, Christianity, Jews, Christians, Sasanian Empire, Persian, Hebrew, Aramaic, Syriac, Arabic, historiography)
Qitao Guo, Ph.D. University of California, Berkeley, Associate Professor of History; Religious Studies (social, cultural, and religious history of pre-modern China (the Ming and Qing dynasties))
Douglas M. Haynes, Ph.D. University of California, Berkeley, *Vice Provost for Equity and Diversity and Professor of History; African American Studies; European Languages and Studies* (social and cultural history of modern Britain, social history of modern medicine)

Andrew Highsmith, Ph.D. University of Michigan, *Associate Professor of History* (United States history since 1865; cities and suburbs in American life; public policy history; political history; social inequality; land-use policy)

Lamar M. Hill, Ph.D. University of London, *Professor Emeritus of History*

Karl G. Hufbauer, Ph.D. University of California, Berkeley, *Professor Emeritus of History*

David B. Igler, Ph.D. University of California, Berkeley, *Professor of History* (U.S., American West, environmental, and Pacific history)

Adria Imada, Ph.D. New York University, *Associate Professor of History* (indigenous and Pacific Islands studies, race, gender and medicine, visual studies)

Jon S. Jacobson, Ph.D. University of California, Berkeley, *Professor Emeritus of History*

Winston A. James, Ph.D. University of London, *Professor of History* (Caribbean, African American, African diaspora)

Michael P. Johnson, Ph.D. Stanford University, *Professor Emeritus of History*

Mark A. LeVine, Ph.D. New York University, *Professor of History; Culture and Theory; Religious Studies* (modern Middle Eastern history, Islamic studies, histories of empire and globalization)

Matthias Lehmann, Ph.D. Freie Universität Berlin, *Director of the Interdisciplinary Minor in Jewish Studies and Teller Family Chair in Jewish History and Professor of History; European Languages and Studies; Religious Studies* (early modern and modern Jewish history, Sephardic studies)

Joan Malczewski, Ph.D. Columbia University, *Associate Professor of History* (American political development, education, progressivism, philanthropy, and American south)

Lynn Mally, Ph.D. University of California, Berkeley, *Professor Emerita of History*

Joseph H. McKenna, Ph.D. Fordham University, *Lecturer of History; Religious Studies* (history of religious ideas)

Nancy Ann McLoughlin, Ph.D. University of California, Santa Barbara, *Associate Professor of History; European Languages and Studies; Religious Studies* (late Medieval Europe, intellectual history, gender)

Jessica Millward, Ph.D. University of California, Los Angeles, *Associate Professor of History; African American Studies; Culture and Theory* (U.S., slavery, African diaspora, African American gender and women)

Laura J. Mitchell, Ph.D. University of California, Los Angeles, *Associate Professor of History* (social and cultural history of South Africa, Africa, and the world)

Robert G. Moeller, Ph.D. University of California, Berkeley, *Professor Emeritus of History* (modern European history)

Susan Katharine Morrissey, Ph.D. University of California, Berkeley, *Professor of History* (Russia, terrorism and political violence, suicide)

Keith L. Nelson, Ph.D. University of California, Berkeley, *UCI Endowed Chair and Edward A. Dickson Emeritus of History; Religious Studies*

Rachel S. O'Toole, Ph.D. University of North Carolina at Chapel Hill, *Associate Professor of History* (Colonial Latin America, African Diaspora, colonialisms, race, racism, indigenous histories, gender, Atlantic worlds)

Spencer C. Olin, Ph.D. Claremont Graduate University, *Professor Emeritus of History*

Alka Patel, Ph.D. Harvard University, *Associate Professor of Art History; History; Religious Studies; Visual Studies* (South Asian and Islamic art and architecture, historiographies, Islamic diasporas in Cuba)

Allison J. Perlman, Ph.D. University of Texas at Austin, *Associate Professor of History; Film and Media Studies; Visual Studies* (history of broadcasting, American social movements, media law and policy, media activism, popular memory)

Kavita S. Philip, Ph.D. Cornell University, *Associate Professor of History; Informatics* (history of modern South Asia, science and technology, political ecology, critical theoretical studies of race, gender, colonialism, new media, and globalization)

Kathryn Ragsdale, Ph.D. University of Chicago, *Lecturer of History* (Japan: Meiji to present; Asia-Pacific War; Japanese film and popular culture)

Renee J. Raphael, Ph.D. Princeton University, *Assistant Professor of History* (early modern Europe, history of science, intellectual history)

Jaime E. Rodriguez, Ph.D. University of Texas at Austin, *Professor Emeritus of History*
Courses

HISTORY 10. The Holocaust. 4 Units.
Introduction to the history of European Jewish communities before the Holocaust; the origins of Nazi antisemitism; the implementation of the "Final Solution"; Jewish resistance to the Nazis; and attempts in film and literature to represent the Holocaust since 1945.

(IV, VIII)

HISTORY 11. Genocide and Crimes Against Humanity Since WWII. 4 Units.
Investigates instances of genocide since 1945 (including Cambodia, Bosnia, Rwanda, and others); explores the history behind these mass murders; considers why people kill, how victims survive, and questions whether international agreements are enough to prevent crimes against humanity.

(III, VIII)

HISTORY 12. Introductory Topics in History . 4 Units.
Introduces methods and premises of historical study. Topics include introductions to cultural, political, economic, social, and religious history.

Repeatability: Unlimited as topics vary.

(IV)

HISTORY 15A. Native American History. 4 Units.
An overview of major developments in Indian-white relations from the American Revolution to the present with an emphasis on political and legal history. How tribal sovereignty has been redefined over time is a central theme of the course.

(IV, VII)

HISTORY 15C. Asian American Histories. 4 Units.
Examines and compares diverse experiences of major Asian American groups since the mid-nineteenth century. Topics include origins of emigration; the formation and transformation of community; gender and family life; changing roles of Asian Americans in American society. Formerly ASIANAM 60A.

Same as ASIANAM 50, SOC SCI 78A.

((III or IV) and VII).
HISTORY 15D. History of Sexuality in the US. 4 Units.
Explores intertwined histories of sexuality, race, and gender in the US. By examining how different cultures and times viewed sexuality, race and gender, it analyzes relationships between regulation of bodies/behaviors and construction of cultural, economic, and political norms.

(IV, VII)

HISTORY 15E. Memory and Migration: American Families on the Move. 4 Units.
Examines family migration stories as a tool for understanding the intertwined histories of international and domestic migration that have shaped the lives of the diverse peoples of the United States.

(IV, VII)

HISTORY 15F. What to Eat? Immigrants and the Development of American Cuisines. 4 Units.
Relationship between immigration and changing American foodways; impact of several major culinary traditions of immigrants and racial minorities, such as African Americans, Asian Americans, Mexican Americans, Italian Americans, Irish Americans, and Jewish Americans, on America’s gastronomical and socioeconomic landscape.

((III or IV) and VII).

HISTORY 15G. Racial Segregation in Modern U.S.. 4 Units.
Explores the history of racial segregation in the United States from the late 19th century to the present.

( VII ).

HISTORY 16A. World Religions I. 4 Units.
An introduction to the history, doctrine, culture, and writing of Judaism, Christianity, and Islam.

Same as REL STD 5A.

(IV and VIII).

HISTORY 16B. World Religions II. 4 Units.
An introduction to various religious traditions in selected areas of the world—including India and South Asia, East Asia, Africa, and the Americas.

Same as REL STD 5B.

(IV and VIII).

HISTORY 16C. Religious Dialogue. 4 Units.
Lectures and discussion on controversial topics in religion: sexual morality; religious violence; science; treatment of women and girls; religious truth, American Constitutional matters; secularization; the future of religion, and other topics.

Same as REL STD 5C.

(IV, VIII)

HISTORY 18A. Introduction to Jewish Cultures. 4 Units.
Introduction to the diversity of Jewish cultures from ancient to modern times. Surveys the Jewish experience in various societies and civilizations: ancient Mediterranean, Middle East and North Africa, Europe, and the Americas.

(IV, VIII)

HISTORY 21A. World: Innovations. 4 Units.
Treats major themes of world historical development through the mid-seventeenth century, focusing on the Eurasian world, but with secondary emphasis on Africa and the Americas.

(IV, VIII)

HISTORY 21B. World: Empires and Revolutions. 4 Units.
Examines three major transformations that made the world of 1870 dramatically different from that of 1650: e.g., the scientific revolution, industrialization, and the formation of modern states and nations.

(IV, VIII)
HISTORY 21C. World: Nation, War, and Rights. 4 Units.
Considers several major currents of modern history: technological change and its social effects; changes in gender relations; totalitarianism; peasant revolutions and the crisis of colonization; international migration; and ecological problems.

(IV and VIII).

HISTORY 36A. The Formation of Ancient Greek Society: Early Greece. 4 Units.
A survey of ancient Greek civilization from its origins in the Bronze Age to the mid-Archaic period. Examines political and social history, as well as literature, art, religion, and archaeological remains.

Same as CLASSIC 36A.

(IV)

HISTORY 36B. The Formation of Ancient Greek Society: Late Archaic and Classical Greece. 4 Units.
A survey of ancient Greek civilization from the Late Archaic period to the Classical period. Focuses on major institutions and cultural phenomena as seen through the study of ancient Greek literature, history, archaeology, and religion.

Same as CLASSIC 36B.

(IV)

HISTORY 36C. The Formation of Ancient Greek Society: Fourth-Century and Hellenistic Greece. 4 Units.
A survey of ancient Greek civilization from the fourth century BCE through to the Hellenistic period. Focuses on major institutions and cultural phenomena as seen through the study of ancient Greek literature, history, archaeology, and religion.

Same as CLASSIC 36C.

(IV)

A survey of the development of Roman civilization from its eighth century BCE beginnings to the civil wars of the first century BCE. Examines political and social history, as well as literature, art, architecture, and religion.

Same as CLASSIC 37A.

(IV)

HISTORY 37B. The Formation of Ancient Roman Society: Roman Empire. 4 Units.
A survey of Roman civilization from Augustus’s consolidation of power following the civil wars of the first century BCE to the crisis of the third century CE. Includes social history, literature, art, architecture, and religion.

Same as CLASSIC 37B.

(IV)

HISTORY 37C. The Formation of Ancient Roman Society: The Fall of Rome. 4 Units.
A survey of Roman civilization from the crisis of the third century CE to the so-called “fall of Rome” in 476 CE. Examines political and social history, as well as literature, art, architecture, and religion.

Same as CLASSIC 37C.

(IV)

HISTORY 40A. Colonial America: New Worlds. 4 Units.
Important themes in the social, economic, political, and cultural development in North America that transformed part of the geographical space into the U.S. Topics include Native Americans, European colonization, African enslavement, borderlands, gender, economic stratification, the American Revolution, the Constitution.

Prerequisite: Satisfaction of the UC Entry Level Writing requirement.

(IV)
HISTORY 40B. Nineteenth-Century U.S.: Crisis and Expansion. 4 Units.
Explores the transformation of American society, economy, and politics during the nineteenth century. Topics include industrial revolution, slavery, antislavery, women's rights, reform movements, Civil War and Reconstruction, immigration and ethnicity, and cultural and social transformation.

Prerequisite: Satisfaction of the UC Entry Level Writing requirement.

(IV)

HISTORY 40C. Modern America: Culture and Power. 4 Units.
Important themes in U.S. history in the twentieth and early twenty-first centuries. Topics include corporate capitalism, empire, immigration, race, gender, consumer society, World Wars, Progressiveness, New Deal, Great Society, civil rights, women's movements, Vietnam War, conservative politics, and economic stratification.

Prerequisite: Satisfaction of the UC Entry Level Writing requirement.

(IV)

HISTORY 50. Crises and Revolutions. 4 Units.
Study of turning points in world history, illustrating themes and methods of historical analysis.

Repeatability: May be taken for credit 3 times as topics vary.

(IV, VIII)

HISTORY 60. The Making of Modern Science. 4 Units.
Surveys the history of science and mathematics since the Scientific Revolution, examining central developments both chronologically and thematically, as well as investigating their significance for contemporary philosophical debates about the role and status of current scientific theories.

Same as LPS 60.

(GE II or GE IV).

HISTORY 70A. Problems in History: Asia. 4 Units.
An introduction to the historical problems, the issues of interpretation, the primary sources, and the historical scholarship of the history of Asia, with an emphasis on developing skills in historical essay-writing.

Repeatability: Unlimited as topics vary.

(IV, VIII)

HISTORY 70B. Problems in History: Europe. 4 Units.
An introduction to the historical problems, the issues of interpretation, the primary sources, and the historical scholarship of the history of Europe, with an emphasis on developing skills in historical essay-writing.

Repeatability: Unlimited as topics vary.

(IV, VIII)

HISTORY 70C. Problems in History: United States. 4 Units.
An introduction to the historical problems, the issues of interpretation, the primary sources, and the historical scholarship of the history of the United States, with an emphasis on developing skills in historical essay-writing.

Repeatability: Unlimited as topics vary.

(IV)

HISTORY 70D. Problems in History: Latin America. 4 Units.
An introduction to the historical problems, the issues of interpretation, the primary sources, and the historical scholarship of the history of Latin America, with an emphasis on developing skills in historical essay-writing.

Repeatability: Unlimited as topics vary.

(IV, VIII)
HISTORY 70E. Problems in History: Middle East and Africa. 4 Units.
An introduction to the historical problems, the issues of interpretation, the primary sources, and the historical scholarship of the history of the Middle East and Africa, with an emphasis on developing skills in historical essay-writing.

Repeatability: Unlimited as topics vary.

(IV, VIII)

HISTORY 70F. Problems in History: Transregional History. 4 Units.
An introduction to the historical problems, the issues of interpretation, the primary sources, and the historical scholarship of transregional history, with an emphasis on developing skills in historical essay-writing.

Repeatability: Unlimited as topics vary.

(IV, VIII)

HISTORY 100W. Writing About History. 4 Units.
Specialized courses focusing on history writing and research skills. Each class reflects the instructor's intellectual interests and is conducted as a discussion group. Limited to 18 students. Several short writing assignments and one longer project meeting the upper-division writing requirement.

Prerequisite: HISTORY 12 or HISTORY 15A or HISTORY 15C or HISTORY 15D or HISTORY 16A or HISTORY 16B or HISTORY 16C or HISTORY 18A or HISTORY 21A or HISTORY 21B or HISTORY 21C or HISTORY 40A or HISTORY 40B or HISTORY 40C or HISTORY 60 or HISTORY 70A or HISTORY 70B or HISTORY 70C or HISTORY 70D or HISTORY 70E or HISTORY 70F. Satisfactory completion of the Lower-Division Writing requirement.

Repeatability: Unlimited as topics vary.

Restriction: History Majors have first consideration for enrollment.

(Ib)

HISTORY 102B. Topics in Environmental History. 4 Units.
Explores the many historical interfaces between climate change, modes of production, and culture. Topics include the environmental history of warfare, imperialism, and famine in the nineteenth century and the history of environmental thought.

Repeatability: Unlimited as topics vary.

HISTORY 110A. Europe in the Early Middle Ages. 4 Units.
Survey of Europe between 300 A.D. and 900 A.D. Topics include the breakup of the Roman Empire, barbarian invasions, spread of Christianity, rise of Islam, the Carolingian Empire, and the Vikings.

HISTORY 110D. Topics in Medieval Europe. 4 Units.
Studies of the topics in Medieval Europe.

Repeatability: Unlimited as topics vary.

HISTORY 112D. Topics in Early Modern Europe. 4 Units.
Theme-based approach to the main social, political, and cultural developments in Europe between the fifteenth and eighteenth centuries. Topics included Renaissance humanism, Reformation and Counter-Reformation, scientific revolution, court culture and nation building, interactions with non-European peoples, cities and commerce.

Repeatability: Unlimited as topics vary.

HISTORY 114. Topics in Modern European History. 4 Units.
Course content changes with instructor. Topics include the Inquisition; science and religion in modern Europe; sex and society in modern Europe; French revolutions; culture in interwar Europe; the Holocaust; the fall of communism in Eastern Europe.

Repeatability: Unlimited as topics vary.

HISTORY 120D. War and Empire: France and the World in the 20th Century. 4 Units.
Examines French experience of World War I, the defeat and occupation by Germany in World War II, the violent struggles that came with the loss of the French empire in the 1950s and 1960s, immigration, French responses to globalization.

Focuses on Hitler's rise to power and Nazi society. Examines Germany's defeat in World War I; the political and cultural experimentation of the 1920s; the causes of Hitler's success; and life in Germany under the Nazis.
HISTORY 123D. Topics in Spanish History. 4 Units.
Topics include Spain in the nineteenth century, the Spanish Civil War, and dictatorship and democracy in modern Spain.

Repeatability: Unlimited as topics vary.

HISTORY 124B. Twentieth-Century Russia. 4 Units.
Political and social developments in Twentieth-Century Russia.

HISTORY 126A. The Era of World War I: 1900-1939. 4 Units.
The era of World War I and its political, social and economic history.

HISTORY 126B. The Era of World War II: 1933-45. 4 Units.
The era of World War II and its political, social and economic history.

HISTORY 128C. Topics in the History of Women in Europe. 4 Units.
Studies in selected areas of history of European women. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

HISTORY 130B. Modern Jewish History. 4 Units.
History of the Jews in Europe, the Middle East, North Africa, and the United States from the early-eighteenth century to recent times. Emancipation, assimilation, religious reform, antisemitism, Zionism, socialism, the Holocaust, and modern Israel are the major themes.

Repeatability: Unlimited as topics vary.

HISTORY 130F. Jews and Power. 4 Units.
Examines the relationship between the Jewish people and political power over a 3500 year period. How have Jews preserved their communal interests and personal safety? How have they defined the proper relationship of the people to political authority.

Same as POL SCI 154J, REL STD 130F.

HISTORY 131B. Ancient Persia. 4 Units.
Survey of the history of Persia in antiquity.

HISTORY 131C. Medieval Persia. 4 Units.
A survey of Persian history in the context of Late Antique and Medieval Islamic history.

HISTORY 131D. Modern Iran. 4 Units.
The history of Iran from the end of the Safavid Empire in the eighteenth century to the present.

HISTORY 132B. The Emergence of the Modern Middle East. 4 Units.
Offers a survey of the history of the Middle East from the nineteenth century to the present time. Formerly History 133A.

HISTORY 132C. Women and Gender in the Middle East. 4 Units.
Focuses on women and gender in the Middle East from the pre-modern to the contemporary.

HISTORY 132D. Armenians and Armenia in Ancient to Early Modern World History. 4 Units.
A history of Armenia and Armenians from ethnogenesis to the early modern period at the end of the 1700s within a regional and global context. Takes into account interactions and encounters with the empires, and peoples that encompassed their orbit.

HISTORY 132E. Armenians and Armenia in Modern World History. 4 Units.
Covers the most important themes in the history of Armenians and Armenia in the 19th, 20th, and 21st centuries within a regional (i.e., Middle East and Caucasus) and global context.

HISTORY 132G. Topics in Islamic History. 4 Units.
The evolution of Islam as a religion within the social, political, and economic histories of various Muslim societies throughout its 14 centuries. Introduces major concepts, practices, and texts of Islam, and key historical events associated with them. Formerly History 131.

Repeatability: Unlimited as topics vary.

HISTORY 132H. Topics in Middle Eastern History. 4 Units.
Topics include the cultural, political, intellectual, social, and/or economic histories of one or many regions of the Middle East.

Repeatability: Unlimited as topics vary.
HISTORY 134A. Africa: Societies and Cultures. 4 Units.
Introduction to the variety of cultures, political organizations, social structures, and artistic expressions created by Africans over a broad time span. Indigenous development of African societies in distinct regions of the continent. Issues, themes, processes for understanding history of Africa.

HISTORY 134C. Topics in the History of Africa. 4 Units.
Studies in selected areas of African history. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

HISTORY 134D. Topics in South African History. 4 Units.
Introduction to important historical events and processes in Southern Africa. Focuses on particular themes and explores how those themes change over time. Topics include: changing ideas about race, the development of class structures, identity formation, the role of gender.

Repeatability: Unlimited as topics vary.

HISTORY 134E. History of the African Diaspora. 4 Units.
Examines the causes and consequences of the multiple diasporas of African peoples since the sixteenth century in the Atlantic world, especially the Americas and Europe.

Same as AFAM 137.

HISTORY 135B. Crossing the World's Oceans: From Sail to Steam. 4 Units.
Explores the basics of oceanography, the evolution of ships and sailing in the ancient Mediterranean world, the North Atlantic, Polynesia, the South China Sea, the Arab Indian Ocean, the global oceanic world, and the discovery of celestial and terrestrial navigation.

HISTORY 135D. Maps from Prehistory to the Present. 4 Units.
Examines how technology has assisted in creating visual representations of place, space, and time beginning in ancient Babylonia to the present day.

HISTORY 135E. Topics in the History of Science and Technology. 4 Units.
Studies in selected areas of science and technological history. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

HISTORY 135G. Language Origins: Evolution, Genetics, and the Brain. 4 Units.
Examines how human language(s) may have originated. Studies pertinent techniques (reconstruction) and addresses related questions, including Is our language faculty inborn (i.e., genetically encoded)? Can brain imaging and population genetics research help to unlock this mystery of human evolution?.

Same as GLBLCLT 105, ANTHRO 152A, LINGUIS 175.

HISTORY 136D. Topics in the History of Medicine and Health Care. 4 Units.
Studies in selected areas of Medicine and Health Care history. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

HISTORY 140B. Revolutionary America: 1740-1790. 4 Units.
An exploration of why 13 continental colonies, whose commercial and cultural connections with Britain far exceed their interaction with one another, resisted imperial reform after 1763 to the point of war in 1775 and independence the following year.

HISTORY 142A. California Dreaming: Conquest, Conflict, and Globalization in the Golden State. 4 Units.
California as a case study of national trends and as a unique setting: its specific problems and culture. Major themes include: colonization, immigration, race relations, agricultural development, industrialization, urbanization, working class movements, social conflict, and political reform.

HISTORY 142B. Topics in American Social and Economic History. 4 Units.
Studies in selected areas of American social and economic history. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

HISTORY 144G. Topics in American Cultural and Intellectual History. 4 Units.
Studies in selected areas of American cultural and intellectual history. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

HISTORY 146H. Topics in Women and Gender Relations in the United States. 4 Units.
Studies in selected areas of women and gender relations in the United States. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.
HISTORY 148B. Topics in Multicultural U.S. History. 4 Units.
Examines the variety of cultural expressions through which the people who came to inhabit the United States historically signify their collective identities.

Repeatability: Unlimited as topics vary.

HISTORY 150. Topics in African American History. 4 Units.
Studies in selected areas of African American history. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

Same as AFAM 138.

HISTORY 151A. Chicana/Chicano History: Pre-Colonial to 1900. 4 Units.
Examines social history of the southwest region from antiquity to 1900. Discusses major questions, theory and research methods pertinent to Chicanas/Chicanos. Themes include: indigenous empires, conquest, colonialism, social stratification, ideology, marriage, sexuality, industrial capitalism, accommodation and resistance.

Same as CHC/LAT 132A.

HISTORY 151B. Chicana/Chicano History: Twentieth Century. 4 Units.
Examines social history of the Southwest with emphasis on Mexican-origin people. Discusses major questions, theory and research methods pertinent to Chicana/Chicano history. Themes explored include: immigration, xenophobia, class struggle, leadership, generational cohorts, unionization, education, barrioization, ethnicity, patriarchy, sexuality.

Same as CHC/LAT 132B.

HISTORY 151C. Latinas in the Twentieth Century U.S.. 4 Units.
Latinas in the U.S. from 1900 to present, offering a diversity of their cultures, regional histories, sexualities, generations, and classes.

Same as CHC/LAT 135.

HISTORY 152. Topics in Asian-American History. 4 Units.
Introduction to important themes in the history of people of Asian ancestry in the United States from the nineteenth century to the present.

Repeatability: Unlimited as topics vary.

HISTORY 152A. Asian American Labor. 4 Units.
Explores history of Asian Americans and work from the nineteenth century to the present. Areas of study include migration, colonialism, family, social organization, and work culture.

Same as ASIANAM 137.

HISTORY 152B. Asian American and African American Relations. 4 Units.
Addresses relationships of Asian American and African American communities in the United States. Topics include race, class, gender, labor, economic systems, political mobilization, community, civil rights, activism, cultural expression.

Same as AFAM 117, ASIANAM 167.

HISTORY 154. American Urban History. 4 Units.
A study of urban communities in the United States, from colonial times to the present. Traces the impact of industrialization and urbanization on social and cultural life, and investigates the significance of urban life for U.S. democratic culture.

HISTORY 160. Sex and Conquest in Latin America. 4 Units.
Competing ideas of masculinity and femininity, sexual violence, sexual identities, and gendered hierarchies informed how the Spanish engaged in military and religious domination of Mexican and Andean communities, as well as the forms of native resistance throughout colonial Latin America.

Same as GEN&SEX 171A.

HISTORY 162. Topics in Brazilian History. 4 Units.
Studies in selected areas of Brazilian history. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.
HISTORY 163. World of Coffee . 4 Units.
History of consumption and production of coffee over the centuries, and coffee's cultural, economic, social, political consequences. Coffee's social life as a drug, symbol of hospitality, religious rite, sociability and bourgeois lifestyle, commodity, source of livelihoods, imperial revenues, corporate profits.
Same as INTL ST 111B.

Same as POL SCI 142J, INTL ST 177D, CHC/LAT 150.

HISTORY 166A. Gender, Race, and Nation in Latin America. 4 Units.
Addresses the importance of gender and race to nation-making in Latin America during the 19th and 20th centuries (1810-1945). Considers how hierarchies between men and women shaped ideas about family, the state, and modernity.
Same as GEN&SEX 172, INTL ST 177H.

HISTORY 166B. Revolution and Reaction in Cold War Latin America. 4 Units.
Explores Latin American experiences of revolutionary change and military dictatorship during the Cold War (1945-1990). Pays particular attention to the lives of women, peasants, workers, and the urban middle classes. Case studies include Guatemala, Cuba, Chile, Argentina, Nicaragua, and Mexico.
Same as INTL ST 177G.

HISTORY 166C. Cuban Society and Revolution. 4 Units.
Explores the causes, development, and legacy of the 1959 Revolution. Themes include economic dependency, democracy, race, gender, culture, and the always volatile relations between Cuba and the United States.
Same as POL SCI 153G, INTL ST 177E, CHC/LAT 157.

HISTORY 166D. Revolution in Latin America. 4 Units.
Presents a comparative analysis of the causes, development, and consequences of selected revolutionary movements, focusing on outbreaks in Mexico, Bolivia, Cuba, Chile, Nicaragua, and Grenada. Explores topics of state formation, economic nationalism, social justice, ethnicity, and role of international affairs.
Same as CHC/LAT 151B, SOC SCI 173N, INTL ST 177C.

HISTORY 169. Topics in Latin American History. 4 Units.
Studies in selected areas of Latin American history. Topics addressed vary each quarter.
Repeatability: Unlimited as topics vary.
HISTORY 170A. Ancient India. 4 Units.
Examines the visual and religious history of the region defined as “India” today, but necessarily encompassing modern Bangladesh and Pakistan. Culminates with the supposed Golden Age of the Gupta empire and its far-reaching legacies.

Same as ART HIS 155A, REL STD 122.

HISTORY 170B. Medieval India. 4 Units.
Begins with the Gupta period’s aesthetic legacies in South Asia's architecture, sculpture, and painting. Explores the dispersal of Islam throughout South Asia, including the Muslim communities of southern India.

Same as ART HIS 155B, REL STD 123.

HISTORY 170G. Topics in the History of Asia. 4 Units.
Topics include the cultural, political, economic, social, intellectual, and religious history of Asia.

Repeatability: Unlimited as topics vary.

HISTORY 171D. Chinese History to 1800. 4 Units.
A survey of the history of China to 1800.

HISTORY 171E. Chinese History: 1800-1949. 4 Units.
An examination of Chinese society and thought from the late-eighteenth century to the 1949 revolution. Focuses on the role of intellectuals; popular culture; women in Chinese society; developments in commerce and urban life; rebellion; foreign imperialism.

HISTORY 171G. Topics in the History of China. 4 Units.
Topics include the cultural, political, economic, social, intellectual, and religious history of China.

Repeatability: Unlimited as topics vary.

HISTORY 172E. Imperial Japan. 4 Units.
Topics in the rise of modern Japan include the relationship between centralization and imperialism, democracy and fascism, industrialization and feminism in the context of the complex and competing forces that shaped Japan's experience in the modern world.

HISTORY 172G. Topics in the History of Japan. 4 Units.
Topics include the cultural, political, economic, social, intellectual and religious history of Japan.

Repeatability: Unlimited as topics vary.

HISTORY 173G. Topics in the History of Korea. 4 Units.
Topics include the cultural, political, economic, social, intellectual, and religious history of Korea.

Repeatability: Unlimited as topics vary.

HISTORY 174G. Topics in the History of South Asia. 4 Units.
Topics include the cultural, political, economic, social, intellectual, and religious history of South Asia.

Repeatability: Unlimited as topics vary.

HISTORY 175G. Topics in the History of Southeast Asia. 4 Units.
Topics include the cultural, political, economic, social, intellectual, and religious history of Southeast Asia.

Repeatability: Unlimited as topics vary.

HISTORY 180. Special Studies in Social History. 4 Units.
Studies in selected areas of social history. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

HISTORY 181. Special Studies in Economic History. 4 Units.
Studies in selected areas of economic history. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

HISTORY 182. Special Studies in Intellectual-Cultural History. 4 Units.
Studies in selected areas of intellectual-cultural history. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.
HISTORY 183. Special Studies in International History. 4 Units.
Studies in selected areas of international history. Topics addressed vary each quarter.
Repeatability: Unlimited as topics vary.

HISTORY 184. Special Studies in Comparative History. 4 Units.
Studies in selected areas of comparative history. Topics addressed vary each quarter.
Repeatability: Unlimited as topics vary.

HISTORY 185. Special Studies in Social Theory. 4 Units.
Studies in selected areas of social theory. Topics addressed vary each quarter.
Repeatability: Unlimited as topics vary.

HISTORY 190. Colloquium. 4 Units.
Specialized courses dealing primarily with close reading and analysis of primary and secondary works; required reports and papers. Each colloquium reflects the instructor's intellectual interests and is conducted as a discussion group. Limited to 18 students.
Repeatability: Unlimited as topics vary.
Restriction: Upper-division students only. History Majors have first consideration for enrollment.

HISTORY 193. Advanced Research Seminar I. 4 Units.
The first course in a two-quarter advanced research sequence, this course allows upper-division history majors to undertake significant research and writing under close faculty supervision.
Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.
Restriction: History majors only. Upper-division students only.

HISTORY 194. Advanced Research Seminar II. 4 Units.
Second course in a two-quarter advanced research sequence. Allows upper division history majors to undertake significant research and writing under close faculty supervision.
Prerequisite: HISTORY 193. Satisfactory completion of the Lower-Division Writing requirement.
Restriction: Upper-division students only. History Majors only.

HISTORY 197. Internships in Public History. 4 Units.
Students will sharpen their abilities to research, critically interpret, and present history by “doing history” beyond the formal classroom. Internships, which introduce students to the field of “public history,” include working as archivists, oral historians, project advisers, and exhibit curators.
Grading Option: Pass/no pass only.
Restriction: Upper-division students only. History Majors only.

HISTORY 198. Directed Group Study. 4 Units.
Special topics through directed reading. Paper required.
Repeatability: Unlimited as topics vary.

HISTORY 199. Independent Reading. 1-4 Units.
Investigation of special topics through directed reading. Paper required.
Repeatability: May be repeated for credit unlimited times.

HISTORY 202A. First-Year Research Seminar. 4 Units.
Introduction to historical methodologies and preparation for the first-year research paper. Required of all first-year doctoral students and M.A. students.
Repeatability: Unlimited as topics vary.
Restriction: Graduate students only. History Majors only.
HISTORY 202B. First-Year Research Seminar. 4 Units.
Research and writing of a paper demonstrating command of historical methods explored in HISTORY 202A. Required of all first-year Ph.D. students and M.A. students.
Prerequisite: HISTORY 202A
Repeatability: May be taken for credit 1 times as topics vary.

HISTORY 204A. Second-Year Research Seminar. 4 Units.
Part one of a two-quarter sequence required of all Ph.D. students during the second year of the program; not required for M.A. students. Includes primary research and writing a research paper, often related to a future dissertation topic.
Restriction: Graduate students only. History Majors only.

HISTORY 204B. Second-Year Research Seminar. 4 Units.
Part two of a two-quarter sequence required of all Ph.D. students. Taken during the second year of the Ph.D. program; not required for M.A. students. Includes primary research and writing a research paper, often related to a future dissertation topic.
Prerequisite: HISTORY 204A
Restriction: Graduate students only. History Majors only.

HISTORY 230. Topics in European History. 4 Units.
Studies in selected themes and time periods in European history. Topics and period vary.
Repeatability: Unlimited as topics vary.

HISTORY 230A. The Literature and Interpretations of Modern European History: Europe, 1789-1848. 4 Units.
Studies in selected areas of Europe, 1789-1848. Topics addressed vary each quarter.
Repeatability: Unlimited as topics vary.

HISTORY 230B. The Literature and Interpretations of Modern European History: Europe, 1850-1914. 4 Units.
Studies in selected areas of Europe, 1850-1914. Topics addressed vary each quarter.
Repeatability: Unlimited as topics vary.

HISTORY 230C. The Literature and Interpretations of Modern European History: Europe, 1914-1989. 4 Units.
Studies in selected areas of Europe, 1914-1989. Topics addressed vary each quarter.
Repeatability: Unlimited as topics vary.

HISTORY 240. Topics in World History. 4 Units.
Studies in selected themes and time periods in world history. Topics and period vary.
Repeatability: Unlimited as topics vary.

HISTORY 240A. The Literature and Interpretations of World History: Approaches to World History. 4 Units.
Overview of major directions of inquiry in world history and their implications for teaching and research. Topics will include cultural, sociological, economic, and political frameworks.
Repeatability: Unlimited as topics vary.
Restriction: Graduate students only. History Majors only.

HISTORY 240B. The Literature and Interpretations of World History: Topics in World History. 4 Units.
Selected historical issues and periods viewed from a global perspective. Examples include: environmental history, media studies, political economy. May be repeated two times for graduate credit other than fulfillment of field requirement.
Repeatability: Unlimited as topics vary.
Restriction: Graduate students only. History Majors only.
HISTORY 240C. The Literature and Interpretations of World History: Advanced Research in World History. 4 Units.
Studies in selected areas of advanced research in world history. Topics addressed vary each quarter.
Repeatability: Unlimited as topics vary.
Restriction: Graduate students only. History Majors only.

HISTORY 250. Topics in Latin American History . 4 Units.
Studies in selected themes and time periods in Latin American history. Topics and period vary.
Repeatability: Unlimited as topics vary.

HISTORY 250A. The Literature and Interpretations of Latin American History: Colonial Period. 4 Units.
Studies in selected areas of the Colonial Period. Topics addressed vary each quarter.
Repeatability: Unlimited as topics vary.

HISTORY 250B. The Literature and Interpretations of Latin American History: Nineteenth Century. 4 Units.
Studies in selected areas of nineteenth century. Topics addressed vary each quarter.
Repeatability: Unlimited as topics vary.

HISTORY 250C. The Literature and Interpretations of Latin American History: Twentieth Century. 4 Units.
Studies in selected areas of twentieth century. Topics addressed vary each quarter.
Repeatability: Unlimited as topics vary.

HISTORY 260. Topics in American History. 4 Units.
Studies in selected themes and time periods in U.S. history. Topics and period vary.
Repeatability: Unlimited as topics vary.

HISTORY 260A. The Literature and Interpretations of American History: Seventeenth & Eighteenth Centuries. 4 Units.
Studies in selected areas of seventeenth and eighteenth centuries. Topics addressed vary each quarter.
Repeatability: Unlimited as topics vary.

HISTORY 260B. The Literature and Interpretations of American History: Nineteenth Century. 4 Units.
Studies in selected areas of the nineteenth century. Topics addressed vary each quarter.
Repeatability: Unlimited as topics vary.

HISTORY 260C. The Literature and Interpretations of American History: Twentieth Century. 4 Units.
Studies in selected areas of the twentieth century. Topics addressed vary each quarter.
Repeatability: Unlimited as topics vary.

HISTORY 270C. Seminar in Japanese History: 1600-Present. 4 Units.
Studies in Japanese history since 1600. Topics addressed vary each quarter.

HISTORY 273. Research Methods in Chinese History. 4 Units.
Introduces major tools for research in Qing and twentieth-century Chinese history as well as an introduction to research tools for earlier periods.

HISTORY 274A. Seminar in Chinese History: 1100-1750. 4 Units.
The development of Chinese society and culture from 1100-1750. May be used to fulfill the First-Year Research requirement.
Repeatability: Unlimited as topics vary.

HISTORY 274B. Seminar in Chinese History: 1600-1937. 4 Units.
The development of Chinese society and culture from 1600-1937. May be used to fulfill the First-Year Research requirement.
Repeatability: Unlimited as topics vary.

HISTORY 274C. Seminar in Chinese History: 1850-Present. 4 Units.
The development of Chinese society and culture from 1850 to the present. May be used to fulfill the First-Year Research requirement.
Repeatability: Unlimited as topics vary.
HISTORY 280. Topics in Asian History. 4 Units.
Studies in selected themes and time periods in Asian history. Topics and period vary.

Repeatability: Unlimited as topics vary.

HISTORY 280A. China. 4 Units.
Studies in literatures and interpretations of Chinese history.

HISTORY 280C. Korea. 4 Units.
Studies in literatures and interpretations of Korean history.

HISTORY 280D. South Asia . 4 Units.
Studies in literatures and interpretations of South Asian history.

HISTORY 280. Special Topics . 4 Units.
Lectures, readings, and discussion on subjects more limited in scope than those included in the year-long colloquium series.

Repeatability: Unlimited as topics vary.

HISTORY 291. Directed Reading. 4-12 Units.
Reading courses focused on specialized topics.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only. History Majors only.

HISTORY 295. Special Methods. 4 Units.
Development of particular research skills.

HISTORY 298. Experimental Group Study. 4-12 Units.
Open to four or more students.

Repeatability: May be repeated for credit unlimited times.

HISTORY 299. Dissertation Research. 4-12 Units.
Specifically designed for students researching and writing their dissertations.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Restriction: Advancement to Ph.D. candidacy.

HISTORY 399. University Teaching. 4 Units.
Limited to Teaching Assistants.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

Humanities Language Learning Program

Andrew Paul Zissos, Director
400 Murray Krieger Hall
949-824-6735
http://www.humanities.uci.edu/hllp/

Overview

The learning of languages other than English is a crucial component of humanistic inquiry, global literacy, and academic diversity. The mission of the Humanities Language Learning Program (HLLP) is to support the learning and teaching of languages other than English on the UCI campus, provide instruction in languages not associated with undergraduate or graduate degree programs, foster intellectual and pedagogical connections between the fields of applied linguistics and the humanities, and provide local and national leadership in raising the profile and prominence of language learning as part of a university education in a rapidly changing, globally interconnected world.
The following languages are offered through the HLLP: Arabic, Persian, Hebrew, and Vietnamese. Students who would like to enroll in a HLLP language class should complete a language background questionnaire. This questionnaire is available on the HLLP Language Placement Information website (http://www.humanities.uci.edu/hllp/resources) and should be submitted online. Students with previous exposure to Arabic, Hebrew, Persian, or Vietnamese may also need to take a placement test. These tests are administered by the UCI Academic Testing Center by appointment. Please contact the Testing Center at 949-824-6207 to schedule a time to take a placement test. Send any questions about placement to the HLLP Director.

See Language Other Than English Placement and Progression.

**Humanities Language Learning Program Peer-to-Peer Language Mentor Program**

The HLLP Peer-to-Peer Language Mentor Program is designed both as a supplement to more formal language learning within the classroom and as a means for students not enrolled in language classes to maintain their language skills. Each language mentor will be paired with one to three mentees. Mentor and mentee(s) will meet for at least one hour each week and will engage in various activities conducted in the target language. These activities may include (but are not limited to) conversations in the target language; watching a film, television show, or news program in the target language; cooking a meal or snack that is typical of the culture of the target language; attending an appropriate cultural event, museum exhibition, or performance; producing a creative work (including dance) that is appropriate to the target culture; presentation of specialized vocabulary by the mentor (e.g., medical vocabulary); listening to music of the target culture; going to an ethnic grocery store or restaurant, etc. All conversation revolving around these activities should be in the target language to the greatest degree possible. Both the mentor and the mentee(s) will keep a journal and will reflect on each week’s meeting and activities. Mentor and mentee(s) will also be required to attend two whole group meetings each quarter, one at the beginning of the quarter and one at the end.

Students must submit an application in order to participate in the program and the applications will be evaluated by the faculty of the Humanities Language Learning Program. Once chosen, mentors and mentees will be instructed to enroll in a 1 unit P/NP class corresponding to their language and level of participation.

**Selection Requirements for Mentors (ARABIC 10A, HEBREW 10A, PERSIAN 10A, VIETMSE 10A):**

- High-Intermediate to Advanced-level language skills (particularly oral language skills) in target language
- Sophomore to senior standing
- 2.7 (B-) G.P.A.
- Sincere interest in fostering the development of language skills of mentee(s)
- Leadership skills
- Active participation in planning of weekly activities
- Ability to meet with mentee(s) on a weekly basis and to attend whole group meetings

**Selection Requirements for Mentees (ARABIC 10B, HEBREW 10B, PERSIAN 10B, VIETMSE 10B):**

- Enrollment in an HLLP language is desirable, but not required
- Freshman to senior standing
- Commitment to improving speaking skills in target language
- Active participation in weekly activities
- Ability to meet with mentor on a weekly basis and to attend whole group meetings

**Faculty**

Soheila Kian, Ph.D. University of California, Los Angeles, Lecturer of Persian

Raheela Maniar, M.A. University of California, Los Angeles, Lecturer of Arabic

Miriam Parks, Ph.D. University of Wisconsin-Madison, Lecturer of Hebrew

Tri Chan Tran, Ph.D. University of California, Los Angeles, Lecturer of Vietnamese; Vietnamese

**Arabic Courses**

**ARABIC 1A. Fundamentals of Arabic. 5 Units.**

Designed for students with little or no exposure to Arabic. Using real world texts, provides a firm foundation in the orthography, grammar, syntax, and vocabulary of Modern Standard Arabic. Introduces students to Arab world cultures.

Prerequisite: Placement into ARABIC 1A.

Overlaps with ARABIC S1AB.

Restriction: ARABIC 1A and ARABIC S1AB may not be taken for full credit.
ARABIC 1B. Fundamentals of Arabic. 5 Units.
Designed for students with little or no exposure to Arabic. Using real world texts, provides a firm foundation in the orthography, grammar, syntax, and vocabulary of Modern Standard Arabic. Introduces students to Arab world cultures.

Prerequisite: ARABIC 1A. ARABIC 1A with a grade of C or better. Placement into ARABIC 1B is also accepted.

Overlaps with ARABIC S1AB, ARABIC S1BC.

Restriction: ARABIC 1B and ARABIC S1AB and ARABIC S1BC may not be taken for full credit.

ARABIC 1C. Fundamentals of Arabic. 5 Units.
Designed for students with little or no exposure to Arabic. Using real world texts, provides a firm foundation in the orthography, grammar, syntax, and vocabulary of Modern Standard Arabic. Introduces students to Arab world cultures.

Prerequisite: ARABIC 1B or ARABIC S1AB. ARABIC 1B with a grade of C or better. ARABIC S1AB with a grade of C or better. Placement is also accepted.

Overlaps with ARABIC S1BC.

(VI)

ARABIC 2A. Intermediate Arabic Language and Culture. 4 Units.
Designed for students to advance their Arabic language skills to intermediate level. Students will develop their understanding of grammar and syntax to a more sophisticated level. Facilitates intermediate-level reading, writing, and speaking skills. Fosters college-level cultural literacy.

Prerequisite: ARABIC 1C or ARABIC S1BC. ARABIC 1C with a grade of C or better. ARABIC S1BC with a grade of C or better. Placement into ARABIC 2A is also accepted.

Restriction: School of Humanities students have first consideration for enrollment. International Studies Majors have first consideration for enrollment.

(VIII)

ARABIC 2B. Intermediate Arabic Language and Culture. 4 Units.
Designed for students to advance their Arabic language skills to intermediate level. Students will develop their understanding of grammar and syntax to a more sophisticated level. Facilitates intermediate-level reading, writing, and speaking skills. Fosters college-level cultural literacy.

Prerequisite: ARABIC 2A. ARABIC 2A with a grade of C or better. Placement into ARABIC 2B is also accepted.

Restriction: School of Humanities students have first consideration for enrollment. International Studies Majors have first consideration for enrollment.

(VIII)

ARABIC 2C. Intermediate Arabic Language and Culture. 4 Units.
Designed for students to advance their Arabic language skills to intermediate level. Students will develop their understanding of grammar and syntax to a more sophisticated level. Facilitates intermediate-level reading, writing, and speaking skills. Fosters college-level cultural literacy.

Prerequisite: ARABIC 2B. ARABIC 2B with a grade of C or better. Placement into ARABIC 2C is also accepted.

Restriction: School of Humanities students have first consideration for enrollment. International Studies Majors have first consideration for enrollment.

(VIII)

ARABIC 10A. Arabic Peer-to-Peer Language Mentor Program. 1 Unit.
Peer-to-Peer Language Mentor Program in which student mentors work with student mentees to increase the language skills of both participants. One hour weekly meetings. ARABIC 10A is for language mentors.

Grading Option: Pass/no pass only.

Repeatability: May be taken for credit 4 times.

ARABIC 10B. Arabic Peer-to-Peer Language Mentor Program. 1 Unit.
Peer-to-Peer Language Mentor Program in which student mentors work with student mentees to increase the language skills of both participants. One hour weekly meetings. ARABIC 10B is for language mentees.

Grading Option: Pass/no pass only.

Repeatability: May be taken for credit 4 times.
ARABIC 51. Introduction to the Koran. 4 Units.
An introduction to understanding the Koran and its significance to Muslim life, culture, and history. An overview of scholarly traditions related to the Koran, and its critics. Close readings of the Koran in English translation.

(IV, VIII)

ARABIC 150. Modern Arabic Literature in Translation. 4 Units.
In English. Major works in Arabic literature and culture in context.

Repeatability: Unlimited as topics vary.

ARABIC 199. Independent Study. 4 Units.
Research paper required.

Repeatability: May be repeated for credit unlimited times.

Hebrew Courses

HEBREW 1A. Fundamentals of Hebrew. 5 Units.
Designed for students with little or no exposure to Hebrew. May focus on Biblical Hebrew and/or modern Hebrew. Students learn the writing system and basics of grammar via latest pedagogical materials. Topics in Jewish culture are also included.

Prerequisite: Placement into HEBREW 1A is also accepted.

HEBREW 1B. Fundamentals of Hebrew. 5 Units.
Designed for students with little or no exposure to Hebrew. May focus on Biblical Hebrew and/or modern Hebrew. Students learn the writing system and basics of grammar via latest pedagogical materials. Topics in Jewish culture are also included.

Prerequisite: HEBREW 1A. HEBREW 1A with a grade of C or better. Placement into HEBREW 1B is also accepted.

HEBREW 1C. Fundamentals of Hebrew. 5 Units.
Designed for students with little or no exposure to Hebrew. May focus on Biblical Hebrew and/or modern Hebrew. Students learn the writing system and basics of grammar via latest pedagogical materials. Topics in Jewish culture are also included.

Prerequisite: HEBREW 1B. HEBREW 1B with a grade of C or better. Placement into HEBREW 1C is also accepted.

(VI)

HEBREW 2A. Intermediate Hebrew. 4 Units.
Designed for students to advance their Hebrew language skills from introductory to intermediate level. Emphasizes development of meaningful communicative skills and critical study of Hebrew culture. Students develop reading, writing, speaking, listening, grammatical, and cultural skills.

Prerequisite: HEBREW 1C. HEBREW 1C with a grade of C or better

Restriction: International Studies Majors have first consideration for enrollment. School of Humanities students have first consideration for enrollment.

(VIII)

HEBREW 2B. Intermediate Hebrew. 4 Units.
Designed for students to advance their Hebrew language skills from introductory to intermediate level. Emphasizes development of meaningful communicative skills and critical study of Hebrew culture. Students develop reading, writing, speaking, listening, grammatical, and cultural skills.

Prerequisite: HEBREW 2A. HEBREW 2A with a grade of C or better

Restriction: International Studies Majors have first consideration for enrollment. School of Humanities students have first consideration for enrollment.

(VIII)

HEBREW 2C. Intermediate Hebrew. 4 Units.
Designed for students to advance their Hebrew language skills from introductory to intermediate level. Emphasizes development of meaningful communicative skills and critical study of Hebrew culture. Students develop reading, writing, speaking, listening, grammatical, and cultural skills.

Prerequisite: HEBREW 2B. HEBREW 2B with a grade of C or better

Restriction: School of Humanities students have first consideration for enrollment. International Studies Majors have first consideration for enrollment.
HEBREW 10A. Hebrew Peer-to-Peer Language Mentor Program. 1 Unit.
Peer-to-Peer Language Mentor Program in which student mentors work with student mentees to increase the language skills of both participants. One hour weekly meetings. HEBREW 10A is for language mentors.

Grading Option: Pass/no pass only.

Repeatability: May be taken for credit 4 times.

HEBREW 10B. Hebrew Peer-to-Peer Language Mentor Program. 1 Unit.
Peer-to-Peer Language Mentor Program in which student mentors work with student mentees to increase the language skills of both participants. One hour weekly meetings. HEBREW 10B is for language mentors.

Grading Option: Pass/no pass only.

Repeatability: May be taken for credit 4 times.

HEBREW 50. Jewish and Israeli Culture. 4 Units.
Examination of subjects relevant to the culture of Israel and Judaism in their historical and modern day contexts through the study of film, literature, religious texts, artistic representations, etc.

(IV, VIII)

HEBREW 199. Independent Study. 4 Units.
Research paper required.

Repeatability: May be repeated for credit unlimited times.

**Persian Courses**

PERSIAN 1A. Fundamentals in Persian. 5 Units.
Designed for students with little or no exposure to Persian. Students learn the modern writing system and grammar of Persian. Facilitates basic reading, writing, and speaking skills and fosters college-level literacy in Persian culture.

Prerequisite: Placement into PERSIAN 1A.

Overlaps with PERSIAN S1AB.

Restriction: PERSIAN 1A and PERSIAN S1AB may not be taken for full credit.

PERSIAN 1B. Fundamentals in Persian. 5 Units.
Designed for students with little or no exposure to Persian. Students learn the modern writing system and grammar of Persian. Facilitates basic reading, writing, and speaking skills and fosters college-level literacy in Persian culture.

Prerequisite: PERSIAN 1A. PERSIAN 1A with a grade of C or better. Placement into PERSIAN 1B is also accepted.

Overlaps with PERSIAN S1AB, PERSIAN S1BC.

Restriction: PERSIAN 1B and PERSIAN S1AB and PERSIAN S1BC may not be taken for full credit.

PERSIAN 1C. Fundamentals in Persian. 5 Units.
Designed for students with little or no exposure to Persian. Students learn the modern writing system and grammar of Persian. Facilitates basic reading, writing, and speaking skills and fosters college-level literacy in Persian culture.

Prerequisite: PERSIAN 1B or PERSIAN S1AB. PERSIAN 1B with a grade of C or better. PERSIAN S1AB with a grade of C or better. Placement into PERSIAN 1C is also accepted.

Overlaps with PERSIAN S1BC.

Restriction: PERSIAN 1C and PERSIAN S1BC may not be taken for full credit.

(VI)
PERSIAN S1AB. Fundamentals of Persian. 7.5 Units.
First half of first-year Persian. Designed for students with little or no exposure to Persian. Students learn the modern writing system and grammar of Persian. Facilitates basic reading, writing, and speaking skills. Fosters college-level literacy in Persian culture.
Prerequisite: Placement into PERSIAN S1AB.
Overlaps with PERSIAN 1A, PERSIAN 1B.
Restriction: PERSIAN S1AB and PERSIAN 1A and PERSIAN 1B may not be taken for full credit.

PERSIAN S1BC. Fundamentals of Persian. 7.5 Units.
Second half of first-year Persian. Continuation of S1AB, or for students with limited exposure to Persian. Students learn the modern writing system and grammar of Persian. Facilitates basic reading, writing, and speaking skills. Fosters college-level literacy in Persian culture.
Prerequisite: PERSIAN S1AB or PERSIAN 1B. PERSIAN S1AB with a grade of C or better. PERSIAN 1B with a grade of C or better. Placement into PERSIAN S1BC is also accepted.
Overlaps with PERSIAN 1B, PERSIAN 1C.
Restriction: PERSIAN S1BC and PERSIAN 1B and PERSIAN 1C may not be taken for full credit.

PERSIAN 2A. Intermediate Persian. 4 Units.
Designed for students to advance their Persian language skills from introductory to intermediate level. Student will advance their understanding of grammar and syntax. Facilitates intermediate-level reading, writing, and speaking skills. Fosters college-level cultural literacy.
Prerequisite: PERSIAN 1C or PERSIAN S1BC. PERSIAN 1C with a grade of C or better. PERSIAN S1BC with a grade of C or better. Placement into PERSIAN 2A is also accepted.
Restriction: School of Humanities students have first consideration for enrollment. International Studies Majors have first consideration for enrollment.

PERSIAN 2B. Intermediate Persian. 4 Units.
Designed for students to advance their Persian language skills from introductory to intermediate level. Students will advance their understanding of grammar and syntax. Facilitates intermediate-level reading, writing, and speaking skills. Fosters college-level cultural literacy.
Prerequisite: PERSIAN 2A. PERSIAN 2A with a grade of C or better. Placement into PERSIAN 2B is also accepted.
Restriction: School of Humanities students have first consideration for enrollment. International Studies Majors have first consideration for enrollment.

PERSIAN 2C. Intermediate Persian. 4 Units.
Designed for students to advance their Persian language skills from introductory to intermediate level. Students will advance their understanding of grammar and syntax. Facilitates intermediate-level reading, writing, and speaking skills. Fosters college-level cultural literacy.
Prerequisite: PERSIAN 2B. PERSIAN 2B with a grade of C or better. Placement into PERSIAN 2C is also accepted.
Restriction: School of Humanities students have first consideration for enrollment. International Studies Majors have first consideration for enrollment.

PERSIAN 10A. Persian Peer-to-Peer Language Mentor Program. 1 Unit.
Peer-to-Peer Language Mentor Program in which student mentors work with student mentees to increase the language skills of both participants. One hour weekly meetings. PERSIAN 10A is for language mentors.
Grading Option: Pass/no pass only.
Repeatability: May be taken for credit 4 times.
PERSIAN 10B. Persian Peer-to-Peer Language Mentor Program. 1 Unit.
Peer-to-Peer Language Mentor Program in which student mentors work with student mentees to increase the language skills of both participants. One hour weekly meetings. PERSIAN 10B is for language mentees.

Grading Option: Pass/no pass only.

Repeatability: May be taken for credit 4 times.

PERSIAN 50. Persian Culture. 4 Units.
Study of varied topics in Persian culture, area studies, and society, both in the present and in historical perspective. Topics are not normally repeated for a two-year period.

Repeatability: Unlimited as topics vary.

PERSIAN 150. Topics in Advanced Persian Culture. 4 Units.
In-depth examination of major works in premodern and modern Persian literature and/or the arts, with specific emphasis upon historical and cultural context and relevant societal issues and trends. Course is conducted in English.

Repeatability: May be taken for credit for 4 units as topics vary.

Vietnamese Courses

VIETMSE 1A. Fundamentals of Vietnamese. 5 Units.
Designed for students with little or no exposure to Vietnamese. Natural approach with emphasis on four fundamental skills of listening, speaking, reading, and writing. Conducted in Vietnamese.

Prerequisite: Placement is required.

Overlaps with VIETMSE S1AB.

VIETMSE 1B. Fundamentals of Vietnamese. 5 Units.
Designed for students with little or no exposure to Vietnamese. Natural approach with emphasis on four fundamental skills of listening, speaking, reading, and writing. Conducted in Vietnamese.

Prerequisite: VIETMSE 1A. VIETMSE 1A with a grade of C or better. Placement is also accepted.

Overlaps with VIETMSE S1AB, VIETMSE S1BC.

VIETMSE 1C. Fundamentals of Vietnamese. 5 Units.
Designed for students with little or no exposure to Vietnamese. Natural approach with emphasis on four fundamental skills of listening, speaking, reading, and writing. Conducted in Vietnamese.

Prerequisite: VIETMSE 1B or VIETMSE S1AB. VIETMSE 1B with a grade of C or better. VIETMSE S1AB with a grade of C or better. Placement is also accepted.

Overlaps with VIETMSE S1BC.

VIETMSE 2A. Intermediate Vietnamese. 4 Units.
Designed for students to advance their Vietnamese language skills from introductory to intermediate level. Designed to develop writing and reading skills and communicative skills in authentic situations. Students are introduced to aspects of Vietnamese culture relating to lesson topics.

Prerequisite: VIETMSE 1C and VIETMSE S1BC. VIETMSE 1C with a grade of C or better. VIETMSE S1BC with a grade of C or better. Placement into VIETMSE 2A is also accepted.

Restriction: School of Humanities students have first consideration for enrollment. International Studies Majors have first consideration for enrollment.
VIETMSE 2B. Intermediate Vietnamese. 4 Units.
Designed for students to advance their Vietnamese language skills from introductory to intermediate level. Designed to develop writing and reading skills and communicative skills in authentic situations. Students are introduced to aspects of Vietnamese culture relating to lesson topics.
Prerequisite: VIETMSE 2A. VIETMSE 2A with a grade of C or better. Placement into VIETMSE 2B is also accepted.
Restriction: School of Humanities students have first consideration for enrollment. International Studies Majors have first consideration for enrollment.
(VIII)

VIETMSE 2C. Intermediate Vietnamese. 4 Units.
Designed for students to advance their Vietnamese language skills from introductory to intermediate level. Designed to develop writing and reading skills and communicative skills in authentic situations. Students are introduced to aspects of Vietnamese culture relating to lesson topics.
Prerequisite: VIETMSE 2B. VIETMSE 2B with a grade of C or better. Placement into VIETMSE 2C is also accepted.
Restriction: School of Humanities students have first consideration for enrollment. International Studies Majors have first consideration for enrollment.
(VIII)

VIETMSE 10A. Vietnamese Peer-to-Peer Language Mentor Program. 1 Unit.
Peer-to-Peer Language Mentor Program in which student mentors work with student mentees to increase the language skills of both participants. One hour weekly meetings. VIETMSE 10A is for language mentors.
Grading Option: Pass/no pass only.
Repeatability: May be taken for credit 4 times.

VIETMSE 10B. Vietnamese Peer-to-Peer Language Mentor Program. 1 Unit.
Peer-to-Peer Language Mentor Program in which student mentors work with student mentees to increase the language skills of both participants. One hour weekly meetings. VIETMSE 10B is for language mentees.
Grading Option: Pass/no pass only.
Repeatability: May be taken for credit 4 times.

VIETMSE 50. Vietnamese Culture . 4 Units.
Vietnamese culture and society in modern and historical contexts through the study of literary works, film, and other media. Philosophy and religious practices may also be examined. Course is taught in English.
(IV)

VIETMSE 150. Vietnamese Literature and Culture in Translation. 4 Units.
Major works in Vietnamese literature and culture in context.
Repeatability: Unlimited as topics vary.

Department of Philosophy

Annalisa Coliva, Department Chair
85 Humanities Instructional Building
949-824-6525
http://www.humanities.uci.edu/philosophy/

Overview

Philosophy addresses itself to questions that arise insistently in every area of human experience and in every discipline within the university. Each discipline inevitably poses problems concerning the nature of the standards appropriate to it and the place of its subject matter within the total framework of human knowledge. If we are to understand science or art or literature, or such human practices as religion and moral thought, we are bound to address ourselves to philosophical issues relating to their nature, the uses of reason appropriate to them, and the contributions they make to our understanding and appreciation of ourselves and the world in which we live.

Undergraduate Program

Instruction in philosophy relies essentially upon discussion in which students are active participants. Wherever possible, therefore, classes are limited in size in order to permit sustained interchanges between students and instructor.
Some of the courses offered are of general interest to all students. Others are designed to explore issues that arise in selected and special disciplines such as art or science. The undergraduate advisor should be consulted for advice about courses best suited to the specialized needs of particular students.

The program of course offerings is also designed for those Philosophy majors whose intention may be either to enter some professional school upon graduation (e.g., law) or to engage in graduate work in philosophy.

The faculty encourages Philosophy majors and minors to seriously consider expanding their perspective through an experience of study abroad. The Study Abroad Center, which includes the University’s Education Abroad Program (UCEAP) and the International Opportunities Program (IOP), assists students in taking advantage of many worldwide opportunities for study and research. Specifically, those interested in analytic philosophy could consider the EAP programs in the United Kingdom, Canada, Sweden, Australia, and New Zealand, and those interested in Continental philosophy could consider the EAP programs in France, Germany, and Italy. See the Study Abroad Center section (p. 162) of the Catalogue or an academic counselor for additional information.

**Requirements for the B.A. in Philosophy**

All students must meet the University Requirements (p. 91).

All students must meet the School Requirements (p. 788).

**Departmental Requirements for the Major**

A. Select one of the following:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>PHILOS 1</td>
<td>Introduction to Philosophy</td>
</tr>
<tr>
<td>PHILOS 2</td>
<td>Puzzles and Paradoxes</td>
</tr>
<tr>
<td>PHILOS 3</td>
<td>Technology and Society</td>
</tr>
<tr>
<td>PHILOS 4</td>
<td>Introduction to Ethics</td>
</tr>
<tr>
<td>PHILOS 5</td>
<td>Contemporary Moral Problems</td>
</tr>
</tbody>
</table>

B. Select one of the following:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>PHILOS 30</td>
<td>Introduction to Symbolic Logic</td>
</tr>
<tr>
<td>PHILOS 104</td>
<td>Introduction to Logic</td>
</tr>
</tbody>
</table>

C. Select two of the following:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>PHILOS 10</td>
<td>History of Ancient Philosophy</td>
</tr>
<tr>
<td>PHILOS 11</td>
<td>History of Medieval Philosophy</td>
</tr>
<tr>
<td>PHILOS 12</td>
<td>History of Modern Philosophy</td>
</tr>
<tr>
<td>PHILOS 13</td>
<td>History of Contemporary Philosophy</td>
</tr>
</tbody>

<td>Introduction to Moral Philosophy</td>
</tr>
</tbody>
</table>

E. Select five of the following:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>PHILOS 100W</td>
<td>Writing Philosophy</td>
</tr>
<tr>
<td>PHILOS 105–199</td>
<td></td>
</tr>
</tbody>
</table>

1 Students planning to pursue graduate school are strongly advised to take PHILOS 105A and PHILOS 105B.

**Residence Requirement:** At least five upper-division courses required for the major must be completed successfully at UCI.

**Requirements for the B.A. in Philosophy with a Specialization in Medicine and Well-Being**

All students must meet the University Requirements (p. 91).

All students must meet the School Requirements (p. 788).

A. Complete:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>PHILOS 1</td>
<td>Introduction to Philosophy</td>
</tr>
</tbody>
</table>

or PHILOS 2 | Puzzles and Paradoxes |

PHILOS 3 | Technology and Society |

PHILOS 91 | The Philosophy of Sex |

B. Select one of the following:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
</table>

PHILOS 4  Introduction to Ethics  
PHILOS 5  Contemporary Moral Problems  
C. Complete:  
PHILOS 101  Introduction to Metaphysics  
PHILOS 102  Introduction to the Theory of Knowledge  
or PHILOS 102W  Introduction to the Theory of Knowledge  
PHILOS 103  Introduction to Moral Philosophy  
D. Select five of the following:  
PHILOS 121A  Medical Epistemology  
PHILOS 131C  Medical Ethics  
PHILOS 140  Topics in Philosophy of Science  
PHILOS 142W  Writing/Philosophy of Biology  
PHILOS 162  Social Ontology  
PHILOS 163  Social Epistemology  
PHILOS 164  Well-Being  

Residence Requirement: At least five upper-division courses required for the major must be completed successfully at UCI.

Requirements for the B.A. in Philosophy with a Specialization in Law and Society  
All students must meet the University Requirements (p. 91).  
All students must meet the School Requirements (p. 788).  
A. Complete:  
PHILOS 1  Introduction to Philosophy  
or PHILOS 2  Puzzles and Paradoxes  
PHILOS 3  Technology and Society  
PHILOS 22  Introduction to Law and Society  
B. Select one of the following:  
PHILOS 4  Introduction to Ethics  
PHILOS 5  Contemporary Moral Problems  
C. Complete:  
PHILOS 101  Introduction to Metaphysics  
PHILOS 102  Introduction to the Theory of Knowledge  
or PHILOS 102W  Introduction to the Theory of Knowledge  
PHILOS 103  Introduction to Moral Philosophy  
D. Select five of the following:  
PHILOS 130  Topics in Moral Philosophy  
PHILOS 132  Topics in Political and Social Philosophy  
PHILOS 133  Topics in Philosophy of Law  
PHILOS 144  Topics in Philosophy of Social Science  
PHILOS 162  Social Ontology  
PHILOS 163  Social Epistemology  
PHILOS 165  Philosophy of Action  

Residence Requirement: At least five upper-division courses required for the major must be completed successfully at UCI.

Additional Information  
Career Opportunities  
The study of argument and the precision and clarity of thought and writing required of Philosophy majors are excellent preparation for a variety of careers. Many undergraduates trained in Philosophy go on to professional schools in medicine, business, or law. The analytical skills developed in Philosophy courses are especially useful in legal education; indeed, many UCI Philosophy graduates have been successful at top law schools. Former Philosophy students have also used their skills to advantage in careers in government, business, teaching, law enforcement, and computer programming. Many Philosophy majors also continue their education at the graduate level, either in philosophy or a related discipline.
The UCI Career Center provides services to students and alumni including career counseling, information about job opportunities, a career library, and workshops on resume preparation, job search, and interview techniques. See the Career Center section (p. 145) for additional information.

Requirements for the Minor in Philosophy

Departmental Requirements

A. Select three of the following:

B. Complete four additional upper-division courses selected from PHILOS 100W–199. (PHILOS 199 may be taken for four units only.)

Residence Requirement for the Minor: Four upper-division courses must be completed successfully at UCI. By petition, two of the four may be taken through the UC Education Abroad Program, providing course content is approved in advance by the appropriate department chair.

On This Page:

- Requirements for the M.A. in Philosophy (p. 969)
- 4+1 M.A. Degree in Philosophy, Political Science and Economics (PPE) (p. 970)
- Requirements for the Ph.D. in Philosophy (p. 970)
- The Salzburg Exchange Program (p. 971)
- Program in Law and Graduate Studies (p. 971)
- Optional Emphasis in Critical Theory (p. 971)
- Optional Emphasis in Feminist Studies (p. 972)

Graduate Program

The Ph.D. program in Philosophy is jointly and cooperatively administered by the Department of Philosophy in the School of Humanities and the Department of Logic and Philosophy of Science (LPS) in the School of Social Sciences. The graduate program has two distinct tracks—the Philosophy track and the LPS track—both of which begin from a common core of shared requirements in history of philosophy, logic, ethics, and metaphysics/epistemology. Students are advised to apply to the track whose faculty, areas of specialization, and curriculum most closely correspond to their interests. The Philosophy track is described here. See the Department of Logic and Philosophy of Science (p. 1902) for a description of the LPS track.

UCI’s Philosophy Department is committed to providing students a well-rounded graduate education, including central areas of contemporary philosophy and a solid foundation in the history of philosophy. Those with interests in mathematics, the natural sciences, or the social sciences are encouraged to take courses in Logic and Philosophy of Science and to include LPS faculty members on their dissertation committees. The cooperative two-track program provides students the benefits of faculty expertise in a host of areas.

Every year the Philosophy Department invites distinguished philosophers from other universities to present their work to faculty and graduate students. Participation in this colloquium series, though not mandatory, contributes significantly to graduate education. Colloquia sponsored by Logic and Philosophy of Science might also be of interest to Philosophy track students.

Every new graduate student is assigned a faculty member whose purpose is to oversee the student’s progress through the major requirements for the advanced degree. The student consults with this faculty member each quarter about progress and any administrative or academic difficulties. After a student has satisfied course and distribution requirements and passed the Portfolio Exam (discussed below), he or she identifies a faculty member in the Philosophy Department as his or her principal dissertation advisor. Together they will recruit the other faculty members, from both inside and outside the Department of Philosophy, who will serve as the student's dissertation committee.

Requirements for the M.A. in Philosophy

UCI’s graduate program in Philosophy is a doctoral program. At present, no students are admitted to pursue only the M.A.
At least one year of study in the Philosophy program is usually necessary for award of the M.A. There is no list of required courses. The student may elect to follow either of the following routes to the degree: write a thesis on a subject to be chosen in consultation with an advisor and defend the thesis in an oral examination, or satisfy the Logic and Portfolio requirements (explained below).

Advancement to candidacy for the M.A. requires formal application to the Dean of Graduate Studies via the Philosophy Department Office. Application must be made with the recommendation of the Philosophy Department and must take place before the beginning of the quarter in which the student expects to receive the degree.

### 4+1 M.A. in Philosophy, Political Science and Economics (PPE)

The goal of this program is to train students in three critically important and related approaches to understanding the social world around us. Philosophy develops analytic rigor and trains students to reason logically. Political Science provides an understanding of how institutions impact modern societies and helps students evaluate the choices that such institutions regularly make. And economics is the study of how individuals, firms, and governments make decisions which together determine how resources are allocated. An appreciation of economics has increasingly become crucial for an understanding of institutional policy making. The objective of the M.A. in PPE is to prepare students for careers in government, law, private or public corporations, and non-profit organizations.

In order to be admitted to the program, undergraduate students must submit an application in the winter quarter of their third year. More information can be found in the School of Social Sciences’ Department of Logic and Philosophy of Science (p. 1902).

### Requirements for the Ph.D. in Philosophy

There is no set number of courses required for the Philosophy track, so that work can be tailored to the individual student’s needs and interests. However, as a prerequisite for the Ph.D., every student is required to have some experience in teaching. Before students receive their first appointment as TAs in this department, they must complete the TA training program offered by UCI’s Teaching, Learning, and Technology Center (TLTC).

Normative time to degree in the Philosophy track is seven years for the normally qualified student. Time to advancement to candidacy is four years. Time in candidacy is three years. Maximum time to degree permitted is nine years. A master’s degree is not a prerequisite for the Ph.D. The following are requirements for the Ph.D.:

#### First-Year Seminar

An examination of some standard works in the history of Philosophy, value theory, metaphysics, or epistemology; required of all first-year Philosophy graduate students in the School of Humanities.

#### Distribution Requirements

Students are required to take a range of courses designed to expose them to the various historical periods and fields of philosophy. When course offerings are announced, students are notified about which courses can be used to satisfy which requirements. In some cases, the requirement satisfied will ultimately depend on the content of the student's term paper(s).

The Distribution Requirements are:

1. **History.** To satisfy this requirement, students must receive a grade of B or better in at least four courses covering at least three of the following areas: Ancient, Medieval, Modern Empiricism, Modern Rationalism, Kant, Nineteenth Century, and Twentieth Century.

2. **Field.** To satisfy this requirement, students must receive a grade of B or better in two courses in value theory, one course in logic, and two courses in metaphysics/epistemology, broadly construed.

These requirements must be completed by the end of the seventh quarter in residence.

#### Logic Requirement

Students must receive a grade of B or better in an approved logic course. This requirement must be completed by the end of the seventh quarter in residence.

#### Tools of Research

The student’s dissertation advisor may require his or her advisee to pursue the tool(s) of research deemed useful for the advisee’s dissertation research. A student might, for example, be required to take classes outside the Department of Philosophy or learn languages other than English. The Tools of Research requirement must be completed by the end of the 12th quarter in residence.

#### The Portfolio

A portfolio of at least two papers is an extended writing sample designed to demonstrate a student's ability (a) to understand, analyze, and evaluate positions and arguments in the philosophical literature, and (b) to formulate and defend an original philosophical thesis. These virtues must be displayed at a level of sophistication indicating the student's ability to write a Ph.D. dissertation.
The portfolio must be submitted to the Graduate Coordinator at the end of the fifth week of the student's sixth quarter in residence. Portfolios will be evaluated by the entire faculty of the Philosophy Department. (Philosophy track students may request that relevant LPS faculty also be present at the evaluation meeting.)

**Prospectus Examination**

In preparation for the prospectus examination, students choose a dissertation advisor and a dissertation committee. They consult with their thesis advisor and other appropriate faculty to prepare a reading list on their area of concentration and a brief dissertation proposal with a comprehensive bibliography. The exam is an oral exam and is normally completed at the end of the seventh quarter, but must be completed by the end of the ninth quarter in residence. The prospectus exam is to determine whether the dissertation project is viable and promises results that will fulfill standards expected for a dissertation in the profession.

**Candidacy Examination**

In preparation for the candidacy examination, students prepare at least a draft chapter of their dissertation, an outline of the organization of the work, and update their prospectus and bibliography in consultation with their dissertation advisor and their dissertation committee. Students apply for candidacy by filing appropriate forms, including a list (devised in consultation with their advisor) of appropriate members for their Candidacy Committee; one of these, the External Examiner, must come from outside the Department of Philosophy. The Committee is then appointed by the Philosophy Department, on behalf of the Dean of the Graduate Division and the Graduate Council, to administer the oral candidacy examination on the prospectus and draft chapter(s) to determine whether or not the student will be approved to continue work on the dissertation.

The Candidacy Examination is normally completed at the end of the ninth quarter, but must be completed by the end of the 12th quarter in residence. The Philosophy Department Chair, on behalf of the Dean of the Graduate Division and the Graduate Council, then appoints a Doctoral Committee (typically taken from the Candidacy Committee and naturally including the dissertation advisor) to supervise the writing of the dissertation.

**Dissertation Defense**

Students must defend their dissertation during an oral examination administered by their Doctoral Committee.

**Program in Law and Graduate Studies (J.D./Ph.D.)**

Highly qualified students interested in combining the study of Law with graduate qualifications in Philosophy are invited to undertake concurrent degree study under the auspices of UC Irvine’s Program in Law and Graduate Studies. Students in this program pursue a coordinated curriculum leading to a J.D. from the School of Law in conjunction with a Ph.D. in Philosophy. Students must be admitted to both programs separately in order to pursue the concurrent Program in Law and Graduate Studies. Students admitted to the Program in Law and Graduate Studies have to complete all of the requirements of each degree. The normative time for completion of the Program in Law and Graduate Studies is eight years for the J.D./Ph.D. combination. Additional information is available from the Program Director’s Office 949-824-4158, or by email to plgs@law.uci.edu (plgs@law.uci.edu).

A full description of the program, with links to all relevant application information, can be found at the Program in Law and Graduate Studies homepage (http://www.law.uci.edu/academics/interdisciplinary-studies/concurrent-degrees.html).

**The Salzburg Exchange Program**

The Department of Philosophy and the Department of Logic and Philosophy of Science jointly administer an Exchange Program with the University of Salzburg. The program has two parts. The Scholarly Exchange provides opportunities for faculty and graduate students in Philosophy and LPS to visit Salzburg and for faculty and graduate students from Salzburg to visit one or the other of the UCI units. The Program also sponsors joint conferences, held alternately in Irvine and in Salzburg; these are co-sponsored by Salzburg and the UCI Interdisciplinary Program in the History and Philosophy of Science.

To be eligible for the Salzburg Exchange, a graduate student must have advanced to candidacy. The selected student spends one semester in Salzburg, usually teaching one course in the general area of the thesis topic. An upper-division course may be taught in English, but lower-division courses must be taught in German. (Some previous visitors have learned serviceable German by attending a Goethe institute during the preceding summer.) Typically, a Salzburg visitor will receive a Salzburg Fellowship intended to cover travel expenses, and a stipend; those who teach while in Salzburg will also receive a salary intended to cover living expenses (including health and dental insurance).

Application should be made to the Philosophy Department’s Salzburg Exchange Director by November 1 and should include a curriculum vita and syllabi for possible courses to be taught. The Director and/or the Philosophy Department Graduate Coordinator should be consulted for further information.

**Optional Emphasis in Critical Theory**

The School of Humanities offers an emphasis in Critical Theory that can be appended to the Philosophy track. A student interested in the emphasis begins by taking the three-quarter Critical Theory Workshop. With the recommendation of a workshop instructor or a Critical Theory faculty member in the Philosophy Department, the student may then apply to the Critical Theory Committee for admission to the emphasis. Emphasis students must complete the following requirements in addition to the usual Philosophy track requirements.
The Critical Theory Workshop
Students must successfully complete the three-quarter Critical Theory Workshop. This sequence is conceived as a reading group, normally conducted by a team of instructors, and developed with the input of all participants. Significant texts are discussed and analyzed in class; no term papers are required. (Students receive 0 units and In-progress grades for the fall and winter quarters; passing students receive 4 units and a Satisfactory grade for the spring quarter.

Advanced Critical Theory Requirement
Students must receive a grade of B or better in three HUMAN 270 courses offered under the supervision of the Critical Theory Committee. At least three such courses will be offered each year. With the approval of the Philosophy Department, these courses can be used to satisfy the tools of research requirement.

Mini-Seminar Requirement
Students must participate in two committee-sponsored mini-seminars (six–eight hours each) offered by visiting scholars on their ongoing research.

Research Paper Requirement
Students must complete a research paper under the guidance of a three-member committee, selected in consultation with the Director; at least one member must be from outside of the Philosophy Department. This paper may (but need not) be part of the portfolio or dissertation.

Upon completion of the emphasis requirements, a letter certifying that fact, signed by the Dean of Humanities and the Director of the Critical Theory Emphasis, will be added to the student’s dossier.

Optional Emphasis in Feminist Studies
A graduate emphasis in Feminist Studies also is available. Refer to the Gender and Sexuality Studies (p. 930) section (p. 930) of the Catalogue for information.

Faculty
Ermanno Bencivenga, Ph.D. University of Toronto, Professor of Philosophy; Humanities
Sven D. Bernecker, Ph.D. Stanford University, Professor of Philosophy
Annalisa Coliva, Ph.D. University of St. Andrews, Professor of Philosophy
Marcello Fiocco, Ph.D. University of California, Santa Barbara, Associate Professor of Philosophy
Margaret P. Gilbert, Ph.D. Oxford University, Abraham I. Melden Chair in Moral Philosophy and Professor of Philosophy
Sean Greenberg, Ph.D. Harvard University, Associate Professor of Philosophy
Jeffrey S. Helmreich, Ph.D. University of California, Los Angeles, Assistant Professor of Philosophy; School of Law
Aaron J. James, Ph.D. Harvard University, Professor of Philosophy
Stephen N. Jolley, Ph.D. Cambridge University, Professor Emeritus of Philosophy
Bonnie D. Kent, Ph.D. Columbia University, Professor of Philosophy; Religious Studies
Joseph F. Lambert, Ph.D. Michigan State University, Professor Emeritus of Philosophy
Alan Nelson, Ph.D. University of Illinois at Chicago, Professor Emeritus of Philosophy
Casey C. Perin, Ph.D. University of California, Berkeley, Associate Professor of Philosophy
Duncan Pritchard, Ph.D. University of St. Andrews, Professor of Philosophy
Gerasimos X. Santas, Ph.D. Cornell University, Professor Emeritus of Philosophy
Karl Schafer, Ph.D. New York University, Professor of Philosophy
Martin Schwab, Ph.D. Heidelberg University, Professor Emeritus of Philosophy; European Languages and Studies
David W. Smith, Ph.D. Stanford University, Professor of Philosophy
Nicholas P. White, Ph.D. Harvard University, Professor Emeritus of Philosophy
Peter W. Woodruff, Ph.D. University of Pittsburgh, Professor Emeritus of Philosophy
Affiliate Faculty

Jeffrey A. Barrett, Ph.D. Columbia University, *Professor of Logic and Philosophy of Science; Philosophy*

Jeremy Heis, Ph.D. University of Pittsburgh, *Associate Professor of Logic and Philosophy of Science; Philosophy*

Penelope J. Maddy, Ph.D. Princeton University, *UCI Distinguished Professor of Logic and Philosophy of Science; Mathematics; Philosophy* (philosophy of mathematics and logic, meta-philosophy)

Brian Skyrms, Ph.D. University of Pittsburgh, *UCI Distinguished Professor of Logic and Philosophy of Science; Economics; Philosophy*

P. Kyle Stanford, Ph.D. University of California, San Diego, *Professor of Logic and Philosophy of Science; Philosophy*

Kai Wehmeier, Ph.D. University of Münster, *Director, Center for the Advancement of Logic, its Philosophy, History, and Applications and Professor of Logic and Philosophy of Science; Linguistics; Philosophy*

Courses

**PHILOS 1. Introduction to Philosophy. 4 Units.**
A selection of philosophical problems, concepts, and methods, e.g., free will, cause and substance, personal identity, the nature of philosophy itself. Materials fee.

(IV)

**PHILOS 2. Puzzles and Paradoxes. 4 Units.**
Introduction to the formal tools needed to comprehend and evaluate philosophical arguments and theoretical reasoning in general.

(IV and VB)

**PHILOS 3. Technology and Society. 4 Units.**
A study of the nature of technology, its relation to human values, the philosophical assumptions in its development, and the philosophical implications of technology.

(II)

**PHILOS 4. Introduction to Ethics. 4 Units.**
Selected topics from the history of ethics, e.g., the nature of the good life and the moral justification of conduct.

(IV)

**PHILOS 5. Contemporary Moral Problems. 4 Units.**
Selected moral issues of current interest, e.g., abortion, sexual morality, euthanasia, capital punishment, reverse discrimination, civil disobedience, or violence.

(IV)

**PHILOS 7. Introduction to Existentialism. 4 Units.**
An analysis of themes in phenomenology and existentialism and their philosophical origins, e.g., consciousness, self and other, freedom and individuality.

(IV)

**PHILOS 10. History of Ancient Philosophy. 4 Units.**
Examination of the central philosophical themes developed by the pre-Socratics, Socrates, Plato, Aristotle, the Stoics, the Epicureans, and the Skeptics.

(IV)

**PHILOS 11. History of Medieval Philosophy. 4 Units.**
A study of some of the major theological and philosophical texts from the Medieval period.

Prerequisite: Recommended: PHILOS 10.

(IV)
PHILOS 12. History of Modern Philosophy. 4 Units.
A study of major developments in western philosophy from Descartes to Kant with readings from Descartes, Leibniz, Locke, Berkeley, Hume, and Kant.
Prerequisite: Recommended: PHILOS 10 or PHILOS 11.
(IV)

PHILOS 13. History of Contemporary Philosophy. 4 Units.
A study of recent philosophical developments in Anglo-American and Continental philosophy with readings from such figures as Russell, Moore, Wittgenstein, Quine, Heidegger, and Sartre.
Prerequisite: Recommended: PHILOS 12.
(IV)

PHILOS 22. Introduction to Law and Society. 4 Units.
What constitutes a legal system? What does it mean for a society to have a system as a part of the social fabric. Examines the social status of law and its use as a tool for fashioning society.
(III)

PHILOS 29. Critical Reasoning. 4 Units.
Same as LPS 29.
(II and Vb).

PHILOS 30. Introduction to Symbolic Logic. 4 Units.
An introduction to the symbolism and methods of the logic of statements, including evaluation of arguments by truth tables, the techniques of natural deduction, and semantic tableaux.
Same as LPS 30, LINGUIS 43.
(Vb)

PHILOS 31. Introduction to Inductive Logic. 4 Units.
Philosophical questions concerning the foundations of scientific inference, e.g., the traditional problem of induction, the Goodman paradox, the concept of cause, Mill's method of inductive reasoning, probability calculus, different interpretations of probability, and their interaction in inductive reasoning.
Same as LPS 31.
(II, Va)

PHILOS 40. Special Topics in Philosophy. 4 Units.
Lectures on selected topics at the lower-division level.
Repeatability: Unlimited as topics vary.

PHILOS 91. The Philosophy of Sex. 4 Units.
Discusses the origins of biological sex, dynamics of sexual selection, sex differences in humans, and the construction of gender in human societies. Seeks to understand the role social values play in the creation of science.
Same as LPS 91.
Overlaps with LPS H91.
(III)
PHILOS 100W. Writing Philosophy. 4 Units.
Discussion of those aspects of writing of special importance in philosophy, e.g., philosophical terminology, techniques for evaluating arguments, philosophical definitions and theories. At least 4,000 words of assigned composition based on philosophical readings.

Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.

Same as LPS 100W.

Restriction: Upper-division students only.

(lb)

PHILOS 101. Introduction to Metaphysics. 4 Units.
A study of one or more of the problems of “first philosophy,” e.g., substance, free will, causation, abstract entities, identity.

PHILOS 102. Introduction to the Theory of Knowledge. 4 Units.
A study of one or more of the basic issues in epistemology, e.g., the role of perception in the acquisition of knowledge, the nature of evidence, the distinction between belief and knowledge, and the nature of truth and certainty.

Same as LPS 102.

PHILOS 102W. Introduction to the Theory of Knowledge. 4 Units.
A study of one or more of the basic issues in epistemology, e.g., the role of perception in the acquisition of knowledge, the nature of evidence, the distinction between belief and knowledge, and the nature of truth and certainty.

Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.

Overlaps with PHILOS 102, LPS 102.

(lb)

PHILOS 103. Introduction to Moral Philosophy. 4 Units.
A study of one or more of the problems of contemporary moral philosophy, e.g., the nature of justice, liberalism versus conservatism, happiness and its relation to virtue and right conduct, the objectivity of moral standards.

PHILOS 104. Introduction to Logic. 4 Units.
Introduction to sentence logic, including truth tables and natural deduction; and to predicate logic, including semantics and natural deduction.

Same as LPS 104, LINGUIS 142.

PHILOS 105A. Elementary Set Theory. 4 Units.
An introduction to the basic working vocabulary of mathematical reasoning. Topics include sets, Boolean operations, ordered n-tuples, relations, functions, ordinal and cardinal numbers.

Same as LPS 105A, LINGUIS 145A.

PHILOS 105B. Metalogic. 4 Units.
Introduction to formal syntax (proof theory) and semantics (model theory) for first-order logic, including the deduction, completeness, compactness, and Löwenheim-Skolem theorems.

Prerequisite: PHILOS 105A

Same as LPS 105B, LINGUIS 145B.

Overlaps with MATH 150.

PHILOS 105C. Undecidability and Incompleteness. 4 Units.
Introduction to the formal theory of effective processes, including recursive functions, Turing machines, Church's thesis, and proofs of Godel's incompleteness theorem for arithmetic, and Church's undecidability theorem for first-order logic.

Prerequisite: PHILOS 105B

Same as LINGUIS 145C, LPS 105C.

Overlaps with MATH 152.

Concurrent with LPS 205C.
PHILOS 106. Topics in Logic. 4 Units.
Selected topics in mathematical or philosophical logic.
Prerequisite: PHILOS 105B or LPS 105B
Repeatability: Unlimited as topics vary.
Same as LPS 106.

PHILOS 108. Topics in Induction, Probability, and Decision Theory. 4 Units.
Selected topics in induction, probability, and decision theory.
Repeatability: Unlimited as topics vary.
Same as LPS 108.

PHILOS 110. Topics in Ancient Philosophy. 4 Units.
Selected topics from the writings of Plato and Aristotle, e.g., Aristotle's criticisms of Plato's metaphysics, ethics, or politics.
Repeatability: May be taken for credit 2 times as topics vary.

PHILOS 111. Topics in Medieval Philosophy. 4 Units.
Studies of some of the major issues of concern to Medieval philosophers, e.g., universals, the nature and existence of God, faith, and reason.
Repeatability: May be taken for credit 2 times as topics vary.

PHILOS 113. Topics in Modern Philosophy. 4 Units.
Focuses on the works of central philosophical figures of modern Philosophy (e.g., Descartes, Leibniz, Hobbes, Locke, Hume, Kant) or on the treatment of one or more central philosophical problems by a number of these figures.
Repeatability: Unlimited as topics vary.
Same as LPS 113.

PHILOS 114. Topics in Nineteenth-Century Philosophy. 4 Units.
Studies of some of the major figures after Kant (e.g., Hegel, Nietzsche, Marx, Kierkegaard), especially in German idealism and social thought.
Repeatability: Unlimited as topics vary.

PHILOS 115. Topics in History of Analytic Philosophy. 4 Units.
Review of central theories or figures in the history of analytic philosophy. Emphasis on writings of Frege, Russell, Schlick, Carnap, and Quine. Topics include the nature of meaning and truth, the synthetic/analytic distinction, and scientific knowledge.
Repeatability: Unlimited as topics vary.
Same as LPS 115.

PHILOS 116. Topics in Continental Philosophy. 4 Units.
Studies of some of the major figures (e.g., Husserl), movements (e.g., phenomenology, existentialism) in early twentieth-century continental European thought.
Repeatability: Unlimited as topics vary.

PHILOS 120. Topics in Metaphysics. 4 Units.
Examines central philosophical questions concerning our own fundamental nature and that of the world around us (e.g., causation and necessity, determination, free will, personal identity, the mind-body problem).
Repeatability: Unlimited as topics vary.
Same as LPS 120.

PHILOS 121. Topics in the Theory of Knowledge. 4 Units.
One or more topics in the theory of knowledge, e.g., the nature of rational justification, of perceptual knowledge, of a priori knowledge.
Repeatability: Unlimited as topics vary.
Same as LPS 121.
PHILOS 121A. Medical Epistemology. 4 Units.
Analysis of epistemological issues concerning medical research and health care. Topics may include medical evidence, transmission of medical knowledge, medical expertise, the epistemology of medical disagreement, classification of illnesses, well-being, philosophy of pain, and medical decision making.

PHILOS 122. Topics in Philosophy of Mind. 4 Units.
Selected topics involving the concept of mind, e.g., the relation between mind and body, the self, personal identity, consciousness, the unconscious.

Repeatability: Unlimited as topics vary.

PHILOS 123. Topics in Philosophy of Religion. 4 Units.
Critical examination of concepts involved in the theological literature, e.g., the nature and existence of God, miracles, the problem of evil, divine command theories in ethics.

Repeatability: Unlimited as topics vary.

PHILOS 130. Topics in Moral Philosophy. 4 Units.
Selected topics in ethics.

Repeatability: Unlimited as topics vary.

PHILOS 131A. Applied Ethics. 4 Units.
Topics may include capital punishment, world hunger, obligations to future generations, environmental ethics, animal rights, economic justice, sexual morality, affirmative action, racism and sexism, or legalization of drugs.

PHILOS 131C. Medical Ethics. 4 Units.
Analysis of moral issues concerning health care. Topics may include just allocation of scarce medical resources, the doctor/patient relationship, genetic engineering, surrogate motherhood, abortion, euthanasia, or social policy concerning AIDS.

PHILOS 132. Topics in Political and Social Philosophy. 4 Units.
Selected topics in social and political philosophy, e.g., the functions of government, the justification of political authority, the nature of democracy, the varieties of liberty, and social justice. Readings from classical and contemporary sources.

Repeatability: Unlimited as topics vary.

PHILOS 133. Topics in Philosophy of Law. 4 Units.
Selected topics concerning legal systems and the concept of law, e.g., the nature and purpose of law, the nature of authority, the relationship between law and morality, law and political-economic systems.

Repeatability: Unlimited as topics vary.

PHILOS 140. Topics in Philosophy of Science. 4 Units.
Selected topics in contemporary philosophy of science, e.g., the status of theoretical entities, the confirmation of theories, the nature of scientific explanation.

Repeatability: Unlimited as topics vary.

Same as LPS 140.

PHILOS 141A. Topics in Philosophy of Physics. 4 Units.
Selected topics in the philosophy of physics, e.g., the interpretation of quantum mechanics, the nature of spacetime, the problem of quantum field theories.

Repeatability: Unlimited as topics vary.

Same as LPS 141A.

PHILOS 141B. Geometry and Spacetime. 4 Units.
An examination of the foundations of the special theory of relativity, with emphasis on the geometry of Minkowski spacetime, and its relation to both Euclidean and non-Euclidean (hyperbolic) plane geometries.

Prerequisite: MATH 2D and (MATH 3A or MATH 6G)

Same as LPS 141B.
PHILOS 141C. Philosophy of Quantum Mechanics. 4 Units.
An examination of the standard von Neumann-Dirac formulation of quantum mechanics. The quantum measurement problem is discussed along with several proposed solutions, including GRW, many-worlds, man-minds, and Bohm's theory.

Same as LPS 141C.

PHILOS 141D. Probability and Determinism. 4 Units.
An examination of a cluster of interrelated issues concerning probability, determinism, logic, and the foundations of quantum mechanics.

Prerequisite: MATH 2D and (MATH 3A or MATH 6G)

Same as LPS 141D.

PHILOS 142W. Writing/Philosophy of Biology. 4 Units.
Philosophy of biology, e.g., scientific method in biology, the structure of evolutionary theory, teleology, ethics, and evolution. Course work includes one 4,000-word and four 1,000-word papers.

Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.

Same as LPS 142W, BIO SCI E142W.

Restriction: Juniors only.

(lb)

PHILOS 143. Topics in Philosophy of Psychology. 4 Units.
Selected topics in the philosophy of psychology, e.g., the nature of psychological explanation, reductionism, issues in cognitive, behavioral, and neuroscience.

Repeatability: Unlimited as topics vary.

Same as LPS 143, PSYCH 123P.

Restriction: Psychology Majors have first consideration for enrollment. Philosophy Majors have first consideration for enrollment.

PHILOS 144. Topics in Philosophy of Social Science. 4 Units.
Selected topics in the philosophy of the social sciences, e.g., Is their goal to understand behavior or to predict and control it? Are they normative and the natural sciences not? Do they incorporate philosophical doctrines about language and mind?.

Repeatability: May be taken for credit for 4 units as topics vary.

Same as LPS 144.

PHILOS 145. Topics in Philosophy of Language. 4 Units.
Selected topics in the philosophy of language, e.g., the nature of meaning, mechanisms of reference, speech acts.

Repeatability: Unlimited as topics vary.

Same as LPS 145, LINGUIS 141.

PHILOS 146. Topics in Philosophy of Logic. 4 Units.
Selected topics in the philosophy of logic, e.g., the nature of logical truth and our knowledge of it, the status of propositions, definite descriptions, and existential presuppositions.

Repeatability: Unlimited as topics vary.

Same as LPS 146.

PHILOS 147. Topics in Philosophy of Mathematics. 4 Units.
Selected historical and contemporary topics in the philosophy of mathematics, e.g., mathematical truth and ontology, mathematical knowledge, the nature and role of proof, the workings of mathematics in application.

Repeatability: Unlimited as topics vary.

Same as LPS 147.

PHILOS 150. Phenomenology . 4 Units.
A study of the foundations of phenomenology in Husserl and its background in Bolzano, Frege, Brentano, Meinong, Kant, and Descartes.
PHILOS 151. Existentialism. 4 Units.
A study of such central existentialist thinkers as Heidegger and Sartre.

Prerequisite: Recommended: PHILOS 7 or PHILOS 150.

PHILOS 162. Social Ontology. 4 Units.
Examines how things in one's social environment exist. Such things are compared and contrasted to others in what might be regarded as the given, natural environment. Topics discussed include natural kinds; artifacts; essentialism; constructivism; intentionality; agency.

PHILOS 163. Social Epistemology. 4 Units.
Social epistemology is specifically concerned with questions concerning knowledge and justification that arise in a social context. Topics discussed include testimony, experts, disagreement, group knowledge, feminist epistemology, legal epistemology, and epistemology of education.

PHILOS 164. Well-Being. 4 Units.
Examines what it is that makes a life good (or bad) for the person who lives it. Topics include hedonism, desire-satisfaction theories of well-being (as well as other such theories), the notion of harm, the possibility of posthumous harm.

PHILOS 165. Philosophy of Action. 4 Units.
Philosophy of action is specifically concerned with questions concerning the nature of acting, and related phenomena such as intending, willing, trying, and trusting. It deals both with individual and group action and their moral and epistemological underpinnings.

PHILOS 190. Special Topics in Philosophy. 4 Units.
Lectures on selected topics to be given by regular faculty and visiting faculty.

Repeatability: Unlimited as topics vary.

PHILOS 199. Directed Special Studies. 2-4 Units.
Independent study on a research topic supervised by a faculty member.

Repeatability: May be repeated for credit unlimited times.

PHILOS 200. Special Topics in Philosophy. 4 Units.
Seminars on selected topics to be given by regular faculty and visiting faculty.

Repeatability: Unlimited as topics vary.

PHILOS 201. First-Year Seminar. 4 Units.
An examination of some standard works in the history of philosophy, value theory, metaphysics, or epistemology; required of all first-year Philosophy graduate students in the School of Humanities.

Repeatability: May be taken for credit 2 times.

Restriction: Graduate students only. Philosophy Majors only. Logic and Philosophy of Sci Majors only.

PHILOS 205A. Set Theory. 4 Units.
The basic working vocabulary of mathematical reasoning. Topics include: sets, Boolean operations, ordered n-tuples, relations, functions, ordinal and cardinal numbers.

Same as LPS 205A.

PHILOS 205B. Metalogic. 4 Units.
Formal syntax (proof theory) and semantics (model theory) for first-order logic, including the deduction, completeness, compactness, and Loewenheim-Skolem theorems.

Prerequisite: PHILOS 205A or LPS 205A

Same as LPS 205B.
PHILOS 205C. Undecidability and Incompleteness. 4 Units.
Formal theory of effective processes, including recursive function, Turing machines, Church’s thesis, proofs of Goedel’s incompleteness theorem for arithmetics, and Church’s undecidability for first-order logic.

Prerequisite: PHILOS 205B or LPS 205B

Same as LPS 205C.

Restriction: Graduate students only.

Concurrent with LPS 105C.

PHILOS 206. Topics in Logic. 4 Units.
Studies in selected areas of logic. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

Same as LPS 206.

PHILOS 210. Topics in Ancient Philosophy. 4 Units.
Studies in selected areas of ancient philosophy. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

PHILOS 211. Topics in Medieval Philosophy. 4 Units.
Studies in selected areas of medieval philosophy. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

PHILOS 212. Topics in Renaissance Philosophy. 4 Units.
Studies in selected areas of renaissance philosophy. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

PHILOS 213. Topics in Modern Philosophy. 4 Units.
Studies in selected areas of modern philosophy. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

Same as LPS 213.

PHILOS 214. Topics in Nineteenth-Century Philosophy. 4 Units.
Studies in selected areas of nineteenth-century philosophy. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

PHILOS 215. Topics in Analytic Philosophy. 4 Units.
Studies in selected areas of analytic philosophy. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

Same as LPS 215.

PHILOS 216. Topics in Continental Philosophy. 4 Units.
Studies in selected areas of continental philosophy. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

PHILOS 218. Topics in Contemporary Philosophy. 4 Units.
Studies in selected areas of contemporary philosophy. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

PHILOS 220. Topics in Metaphysics. 4 Units.
Studies in selected areas of metaphysics. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

Same as LPS 220.
PHILOS 221. Topics in Epistemology. 4 Units.
Studies in selected areas of epistemology. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

Same as LPS 221.

PHILOS 221A. Medical Epistemology. 4 Units.
Analysis of epistemological issues concerning medical research and healthcare. Topics may include medical evidence, transmission of medical knowledge in the doctor-patient interaction, medical expertise, epistemology of medical disagreement, classification of illness, well-being, philosophy of pain, or medical decision making.

Same as LPS 221A.

Restriction: Graduate students only.

PHILOS 222. Topics in Mind and Action. 4 Units.
Studies in selected areas of mind and action. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

PHILOS 230. Topics in Ethics . 4 Units.
Studies in selected areas of ethics. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

PHILOS 232. Topics in Political and Social Philosophy. 4 Units.
Studies in selected areas of political and social philosophy. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

Same as LPS 232.

PHILOS 234. Topics in Aesthetics . 4 Units.
Studies in selected areas of aesthetics. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

PHILOS 240. Topics in Philosophy of Science. 4 Units.
Studies in selected areas of philosophy of science. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

Same as LPS 240.

PHILOS 241. Topics in Philosophy of Physics. 4 Units.
Studies in selected areas of philosophy of physics. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

Same as LPS 241.

PHILOS 242. Topics in Philosophy of Biology. 4 Units.
Studies in selected areas of philosophy of biology. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

Same as LPS 242.

PHILOS 243. Topics in Philosophy of Psychology. 4 Units.
Selected topics in the philosophy of psychology, e.g., the nature of psychological explanation, reductionism, issues in cognitive, behavioral, and neuroscience.

Repeatability: Unlimited as topics vary.

Same as LPS 243, PSYCH 231P.
PHILOS 244. Topics in Philosophy of Social Science. 4 Units.
Studies in selected areas of philosophy and social science. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

Same as LPS 244.

PHILOS 245. Topics in Philosophy of Language. 4 Units.
Studies in selected areas of philosophy of language. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

Same as LPS 245.

PHILOS 246. Topics in Philosophy of Logic. 4 Units.
Studies in selected areas of philosophy of logic. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

Same as LPS 246.

PHILOS 247. Topics in Philosophy of Mathematics. 4 Units.
Studies in selected areas of philosophy of mathematics. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

Same as LPS 247.

PHILOS 250. Topics in Existentialism and Phenomenology. 4 Units.
Studies in selected areas of existentialism and phenomenology. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

PHILOS 298. Independent Study. 4-12 Units.
Independent research with Philosophy faculty.

Repeatability: May be repeated for credit unlimited times.

PHILOS 299. Directed Research. 4-12 Units.
Directed research with Philosophy faculty.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

PHILOS 399. University Teaching. 4 Units.
Limited to Teaching Assistants.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

Undergraduate Program in Religious Studies

Susan Klein, Director
400 Murray Krieger Hall
949-824-6735
http://www.humanities.uci.edu/religious_studies/

Overview

Religious Studies includes an interdisciplinary major and minor that focus on the comparative understanding of the various ways different peoples, across space and through time, have developed their religious ideas, values, systems, beliefs, rituals, and traditions in response to fundamental questions of human existence. The curriculum seeks to provide a wide-ranging academic understanding and knowledge of the religious experience in society through study in the Schools of Humanities, Social Sciences, Social Ecology, and the Claire Trevor School of the Arts. As an interdisciplinary academic discipline, the study of religion offers a rigorous, systematic, and dispassionate intellectual inquiry into various aspects of religious systems,
their practitioners and outlooks, and their goals and expressions. It employs a wide variety of approaches and methods in order to understand the role of religion in both human experience and thought.

Students in the Religious Studies major complete an emphasis either in World Religious Traditions or, more particularly, in Judaism/Christianity/Islam.

Categories and Approved Courses

The complete list of approved courses varies from quarter to quarter, depending upon course scheduling. For complete up-to-date information on approved courses, please consult the Religious Studies website (http://www.humanities.uci.edu/religious_studies).

Requirements for the B.A. in Religious Studies

All students must meet the University Requirements (p. 91).

All students must meet the School Requirements (p. 788).

Requirements for the Major

A. Complete:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>REL STD 5A</td>
<td>World Religions I</td>
</tr>
<tr>
<td>REL STD 5B</td>
<td>World Religions II</td>
</tr>
<tr>
<td>REL STD 5C</td>
<td>Religious Dialogue</td>
</tr>
<tr>
<td>REL STD 110</td>
<td>Thinking about Religion: Theories and Methodologies</td>
</tr>
<tr>
<td>or REL STD 110W</td>
<td></td>
</tr>
</tbody>
</table>

B. Select six upper-division electives, two in each of the following categories:

1. Judaism/Christianity/Islam
2. World Religious Traditions
3. Thematic Approaches to Religion

C. Select two additional upper-division courses from either category 1 or 2 above in order to complete an emphasis in Judaism/Christianity/Islam or in World Religious Traditions.

1 Selected from the approved lists published on the Religious Studies website (http://www.humanities.uci.edu/religious_studies). One relevant lower-division course may be substituted for an upper-division course, with prior approval.

Studying Abroad: Students are encouraged to study abroad and may be able to satisfy a significant portion of their requirements abroad. Courses taken abroad must be approved by the Director of Religious Studies in order to be applied toward major requirements.

Residence Requirement for the Major: A minimum of five upper-division courses required for the major must be completed successfully at UCI.

Additional Information

Career Opportunities

Majoring in Religious Studies is an excellent preparation for living in a multicultural society and for a variety of careers in counseling, teaching, commerce, writing, government, the arts, and professional religious leadership. The major’s emphasis on broad understanding, critical thinking skills, and clear written expression provides an effective springboard for graduate study in the humanities and social science or professional schools in medicine, law, or business.

The UCI Career Center provides services to students and alumni including career counseling, information about job opportunities, a career library, and workshops on resume preparation, job search, and interview techniques. See the Career Center section (p. 145) for additional information.

B. Four upper-division electives selected from the three categories under B in the B.A. in Religious Studies, including at least one course from both categories 1 and 2. Two of the four courses must be outside of the student’s major. One relevant lower-division course may be substituted for an upper-division course, with prior approval.
Residence Requirement for the Minor: Four upper-division courses required for the minor must be completed successfully at UCI. Two of the four may be taken through the UC Education Abroad Program, provided course content is approved by the Director of the Religious Studies program.

Affiliate Faculty

Elizabeth G. Allen, Ph.D. University of Michigan, Associate Professor of English; Comparative Literature; Religious Studies (Chaucer, Gower, 15th century poetry; exemplary literature, romance, chronicle, episodic form; intersections between ethics and politics, politics and religion; hospitality, sovereignty, legal and constitutional history of England)

Stanley Bailey, Ph.D. University of California, Los Angeles, Professor of Sociology; Religious Studies (race and ethnicity, religion, immigration, Latin America)

Emily L. Baum, Ph.D. University of California, San Diego, Associate Professor of History; Religious Studies (modern Chinese history, history of medicine)

Victoria Bernal, Ph.D. Northwestern University, Professor of Anthropology; Culture and Theory; Gender and Sexuality Studies; Religious Studies

Susan K. Brown, Ph.D. University of Washington, Professor of Sociology; Religious Studies (immigration, inequality, urban sociology)

Carol M. Burke, Ph.D. University of Maryland, College Park, Professor of English; Religious Studies (literary and cultural theory, literary journalism, new media studies)

Vinayak Chaturvedi, Ph.D. University of Cambridge, Associate Professor of History; Culture and Theory; Religious Studies (modern South Asia, social and intellectual history)

Yong Chen, Ph.D. Cornell University, Associate Dean of Curriculum and Student Services and Professor of History; Asian American Studies; Religious Studies (Asian American history and immigration, food and culture, U.S./China economic and cultural interactions)

James T. Chiampi, Ph.D. Yale University, Professor of Italian; Religious Studies (Dante and Italian Renaissance)

Chungmoo Choi, Ph.D. Indiana University, Associate Professor of Korean Culture; Religious Studies (modern Korea, postcolonial and colonial discourse, popular culture, anthropology)

Susan C. Coutin, Ph.D. Stanford University, Professor of Criminology, Law and Society; Anthropology; Religious Studies (law, culture, immigration, human rights, citizenship, political activism, Central America)

Touraj Daryaee, Ph.D. University of California, Los Angeles, UCI Endowed Chair in Persian Studies and Culture and Professor of History; Religious Studies (Iran, Zoroastrianism, Ancient Medieval World)

Rebecca Davis, Ph.D. University of Notre Dame, Associate Professor of English; Religious Studies (Old and Middle English literature, Piers Plowman, medieval religious culture, women's writing, medieval philosophy)

Michael A. Fuller, Ph.D. Yale University, Department Chair and Professor of East Asian Languages and Literature; Chinese; Religious Studies (Chinese poetry and poetics, the cultural and intellectual contexts for poetry, aesthetic theory, linguistic issues in classical Chinese)

Qitao Guo, Ph.D. University of California, Berkeley, Associate Professor of History; Religious Studies (social, cultural, and religious history of pre-modern China (the Ming and Qing dynasties))

Andromache Karanika, Ph.D. Princeton University, Associate Professor of Classics; Religious Studies (Greek epic poetry, Greek lyric, folklore)

Bonnie D. Kent, Ph.D. Columbia University, Professor of Philosophy; Religious Studies

Aaron Kheriaty, M.D. Georgetown University, Health Sciences Associate Clinical Professor of Psychiatry and Human Behavior; Religious Studies

Susan B. Klein, Ph.D. Cornell University, Professor of Japanese; Religious Studies (premodern and modern theater and dance, Japanese religions, feminist critical theory)

Mark A. LeVine, Ph.D. New York University, Professor of History; Culture and Theory; Religious Studies (modern Middle Eastern history, Islamic studies, histories of empire and globalization)

James K. Lee, Ph.D. University of California, Los Angeles, Associate Professor of Asian American Studies; Culture and Theory; Religious Studies (Asian American literature and culture, contemporary U.S. literature, race and ethnic studies, urban studies, religious studies)

Matthias Lehmann, Ph.D. Freie Universität Berlin, Director of the Interdisciplinary Minor in Jewish Studies and Teller Family Chair in Jewish History and Professor of History; European Languages and Studies; Religious Studies (early modern and modern Jewish history, Sephardic studies)

Karen Leonard, Ph.D. University of Wisconsin, Professor Ementa of Anthropology; Religious Studies
Jayne Elizabeth Lewis, Ph.D. Princeton University, Director of Humanities Honors Program and Professor of English; Religious Studies (literature and medicine, restoration and 18th century British literature, literature of the supernatural and gothic fiction, history and/of fiction, atmosphere as literary concept and construct within natural philosophy)

Julia R. Lupton, Ph.D. Yale University, Associate Dean for Research and Professor of English; Comparative Literature; Education; Religious Studies (Renaissance literature, literature and psychology)

Cecelia M. Lynch, Ph.D. Columbia University, Professor of Political Science; Religious Studies

Sanjoy Mazumdar, Ph.D. Massachusetts Institute of Technology, Professor of Urban Planning and Public Policy; Asian American Studies; Religious Studies

Shampa Mazumdar, Ph.D. Northeastern University, Lecturer of Sociology; Religious Studies (religion, immigration, Asian American, urban sociology)

Michael T. McBride, Ph.D. Yale University, Professor of Economics; Logic and Philosophy of Science; Religious Studies

Joseph H. McKenna, Ph.D. Fordham University, Lecturer of History; Religious Studies (history of religious ideas)

Nancy Ann McLoughlin, Ph.D. University of California, Santa Barbara, Associate Professor of History; European Languages and Studies; Religious Studies (late Medieval Europe, intellectual history, gender)

John Miles, Ph.D. Harvard University, Professor Emeritus of English; Religious Studies (religion, literature, international relations, western scriptures [Jewish, Christian, Muslim] as literature; religious poetry and music, religion, science, and the environment)

Margaret Miles, Ph.D. Princeton University, Professor of Art History; Religious Studies; Visual Studies (Greek and Roman art, archaeology)

Keith L. Nelson, Ph.D. University of California, Berkeley, UCI Endowed Chair and Edward A. Dickson Emeritus of History; Religious Studies

Jane O. Newman, Ph.D. Princeton University, Professor of Comparative Literature; English; European Languages and Studies; Religious Studies (comparative Renaissance and early modern literature and culture [English, French, German, Italian, neo-Latin], Mediterranean Renaissance studies, Baroque, afterlives of antiquity, Walter Benjamin, Erich Auerbach, pre-modern lessons for the modern and post-modern)

Maria C. Pantelia, Ph.D. Ohio State University, Director, Thesaurus Linguae Graecae® and Professor of Classics; Religious Studies (Greek epic, Hellenistic poetry, digital technologies in the humanities)

Alka Patel, Ph.D. Harvard University, Associate Professor of Art History; History; Religious Studies; Visual Studies (South Asian and Islamic art and architecture, historiographies, Islamic diasporas in Cuba)

Amy Powell, Ph.D. Harvard University, Associate Professor of Art History; European Languages and Studies; Religious Studies; Visual Studies (Late medieval and early modern art of northern Europe, critical theory)

Adrian Preda, M.D. , Health Sciences Professor of Psychiatry and Human Behavior; Religious Studies

Gary Richardson, Ph.D. University of California, Berkeley, UCI Chancellor's Fellow and Professor of Economics; European Languages and Studies; Religious Studies

Michael Ryan, Ph.D. University of Iowa, Professor of English; Religious Studies (American literature, creative writing, poetry, poetics, autobiography)

Victoria A. Silver, Ph.D. University of California, Los Angeles, Associate Professor of English; European Languages and Studies; Religious Studies (early modern literature and culture, religious studies, history and theory of rhetoric, literature and philosophy)

Daniel Stokols, Ph.D. University of North Carolina, Chapel Hill, Professor Emeritus of Psychology and Social Behavior; Program in Public Health; Religious Studies; Urban Planning and Public Policy

Roxanne Varzi, Ph.D. Columbia University, Associate Professor of Anthropology; Culture and Theory; Film and Media Studies; Religious Studies; Visual Studies (Iran, media, war, visual anthropology, film studies, ethnographic and fiction writing)

Courses

REL STD 5A. World Religions I. 4 Units.
An introduction to the history, doctrine, culture, and writing of Judaism, Christianity, and Islam.

Same as HISTORY 16A.

(IV and VIII ).
REL STD 5B. World Religions II. 4 Units.
An introduction to various religious traditions in selected areas of the world—including India and South Asia, East Asia, Africa, and the Americas.

Same as HISTORY 16B.

(IV and VIII )

REL STD 5C. Religious Dialogue. 4 Units.
Lectures and discussion on controversial topics in religion: sexual morality; religious violence; science; treatment of women and girls; religious truth, American Constitutional matters; secularization; the future of religion, and other topics.

Same as HISTORY 16C.

(IV, VIII)

REL STD 17. An Economic Approach to Religion. 4 Units.
Introduction to how basic economic concepts such as demand, supply, consumption, production, competition, free-riding, innovation, regulation, and rent-seeking can be applied to understand observed religious behavior.

Same as ECON 17.

(III)

REL STD 21. Philosophy and Religion. 4 Units.
Examines the intersection of religion and philosophy from a standpoint that does not presuppose previous academic study of either. Both Western and Eastern traditions and perspectives may be explored.

Repeatability: May be taken for credit 3 times as topics vary.

REL STD 56. Society and Religion. 4 Units.
A critical and personal examination of the varieties of religious and spiritual experience human beings are undergoing in contemporary society. The role of conscious understanding and unconscious conditioning regarding religion and spirituality.

Repeatability: May be taken for credit 3 times as topics vary.

REL STD 60. Gender and Religion. 4 Units.
A presentation in selected issues in the study of gender and religion.

Repeatability: May be taken for credit 3 times as topics vary.

(III, VIII)

REL STD 90. Aspects of Religion. 4 Units.
A presentation of selected issues in the study of religion.

Repeatability: May be taken for credit 3 times as topics vary.

REL STD 91. Topics in Aspects of Asian Religions. 4 Units.
A survey course of a specific Asian religious tradition such as Hinduism, Buddhism, Jainism, Sikhism, Daoism, Confucianism, or Shinto in its manifestation in Asia or in its transmission to the Americas.

Repeatability: May be taken for credit 3 times as topics vary.

REL STD 100. Topics in the Study of Religion. 4 Units.
The intersection of religious belief and practices with selected subjects of continuing interest.

Repeatability: May be taken for credit 3 times as topics vary.

REL STD 103. Topics in the Philosophy of Religion. 4 Units.
Critical examination of philosophical concepts in religious scripture and theology, e.g., the nature and existence of God, miracles, the problem of evil, and divine command theories in ethics. May include any religious tradition.

Repeatability: May be taken for credit 3 times as topics vary.
REL STD 106. Topics in Gender and Religion. 4 Units.
Critical examination of how religious beliefs and practices have shaped (and been shaped by) attitudes toward gender and sexuality in modern and/or premodern society.

Repeatability: May be taken for credit 3 times as topics vary.

REL STD 110. Thinking about Religion: Theories and Methodologies. 4 Units.
A survey and investigation of the major thinkers, theories, and methodologies in the study of religions. Designed to develop the student's ability to analyze and articulate theoretical arguments; includes a paper on relevant Religious Studies topics.

Prerequisite: (REL STD 5A or HISTORY 16A) and (REL STD 5B or HISTORY 16B) and (REL STD 5C or HISTORY 16C)

Overlaps with REL STD 110W.

Restriction: Religious Studies Majors have first consideration for enrollment.

REL STD 110W. Thinking about Religion: Theories and Methodologies. 4 Units.
A survey and investigation of the major thinkers, theories, and methodologies in the study of religions. Designed to develop the student's ability to analyze and articulate theoretical arguments in writing; includes a paper on relevant Religious Studies topics.

Prerequisite: (REL STD 5A or HISTORY 16A) and (REL STD 5B or HISTORY 16B) and (REL STD 5C or HISTORY 16C). Satisfactory completion of the Lower-Division Writing requirement.

Overlaps with REL STD 110.

Restriction: Religious Studies Majors have first consideration for enrollment.

(REL STD 115. Religion and World Politics. 4 Units.
Examines the relationship between religion and world politics historically and today, focusing on connections with peace/war, democracy, human rights, secularism(s), and globalization. Covers major debates, scholarship, concepts, and theories through class exercises, exams, and essays.

Prerequisite: POL SCI 41A or INTL ST 11 or INTL ST 12 or REL STD 5A or REL STD 5B or REL STD 5C

Same as POL SCI 146B, INTL ST 151B.

REL STD 120. Topics in Asian Religious Traditions. 4 Units.
Studies involving (but not limited to) Hinduism, Buddhism, Confucianism, Jainism, Sikhism, Daoism, Shinto or Shamanism, including both elite and doctrinal aspects and forms of more popular religiosity.

Repeatability: May be taken for credit 3 times as topics vary.

REL STD 122. Ancient India. 4 Units.
Examines the visual and religious history of the region defined as "India" today, but necessarily encompassing modern Bangladesh and Pakistan. Culminates with the supposed Golden Age of the Gupta empire and its far-reaching legacies.

Same as HIST 170A, ART HIS 155A.

REL STD 123. Medieval India. 4 Units.
Examines the visual and religious history of the region defined as "India" today, but necessarily encompassing modern Bangladesh and Pakistan. Culminates with the supposed Golden Age of the Gupta empire and its far-reaching legacies.

Same as HIST 170B, ART HIS 155B.

REL STD 124. Topics in Modern Indian Religion. 4 Units.
Topics in religions of the Indian subcontinent including, but not confined to, Hinduism, Jainism, Sikhism, Islam, and Buddhism from the founding of the Mughal Empire in 1526 to the creation of the several modern states of the Indian subcontinent.

Repeatability: May be taken for credit 3 times as topics vary.

REL STD 130. Jewish, Islamic, and Middle Eastern Religious Traditions. 4 Units.
Character and evolution of Egyptian, Jewish, Zoroastrian, Muslim, and other religious communities of the region from their formative periods to the present era.

Repeatability: May be taken for credit 3 times as topics vary.
REL STD 130F. Jews and Power. 4 Units.
Examines the relationship between the Jewish people and political power over a 3500 year period. How have Jews preserved their communal interests and personal safety? How have they defined the proper relationship of the people to political authority.

Same as HISTORY 130F, POL SCI 154J.

REL STD 140. Early Western Religious Traditions. 4 Units.
Religious perspectives of the Mediterranean and European regions from the earliest times to approximately 1500 C.E.

Repeatability: May be taken for credit 3 times as topics vary.

REL STD 141. Recent Western Religious Traditions. 4 Units.
Studies related to Catholic, Protestant, and Orthodox Christianity as well as alternative belief systems in Europe of the early modern and modern eras.

Repeatability: May be taken for credit 3 times as topics vary.

REL STD 150. Religion in the Americas. 4 Units.
Religious belief and social context in North and South America from the earliest human societies to the present.

Repeatability: May be taken for credit 3 times as topics vary.

REL STD 160. Diaspora Religions. 4 Units.
Examination of what happens to belief and practice as religious communities are scattered geographically.

Repeatability: May be taken for credit 3 times as topics vary.

REL STD 170. Topics in Comparative Studies in Religion. 4 Units.
Literary, historical, or philosophical comparison of selected religious and quasi-religious traditions, their beliefs and practices.

Repeatability: May be taken for credit 3 times as topics vary.

REL STD 190. Senior Colloquium. 4 Units.
Reading and group discussion of selected texts under the direction of an instructor. Paper required.

Repeatability: May be taken for credit 3 times as topics vary.
Restriction: A minimum of two students must enroll.

REL STD 199. Independent Study. 1-4 Units.
Directed reading and research in consultation with a faculty member. Substantial written work required.

Repeatability: Unlimited as topics vary.
Restriction: Upper-division students only.

REL STD 399. University Teaching . 4 Units.
Limited to teaching assistants.
Grading Option: Satisfactory/unsatisfactory only.
Repeatability: May be repeated for credit unlimited times.
Restriction: Graduate students only.

Department of Spanish and Portuguese

Luis F. Avilés, Department Chair
322 Humanities Hall
949-824-6901
http://www.humanities.uci.edu/spanishandportuguese/

Overview
The Department of Spanish and Portuguese offers programs of study leading to the B.A. in Spanish with emphases in Literature and Culture, Spanish for Future Teachers, and Cinema: Spain, Latin America, and U.S. Latino; and an M.A. and Ph.D. in Spanish.

While members of the faculty are recognized nationally and internationally for their research, creative writing, and contributions to the academic profession, one of the Department's highest priorities is to maintain teaching excellence. The Department's goal is to provide students with a level-
specific, solid education in the diverse fields of study that are offered. Many of the undergraduate and graduate courses reflect the faculty’s interest in bringing together historical, critical-theoretical, and interdisciplinary perspectives in the study of literature and other cultural artifacts such as film. At the graduate level, students are encouraged to take courses in other UCI programs such as Gender and Sexuality Studies, the Critical Theory Emphasis, Comparative Literature, and Film and Media Studies.

The Department of Spanish and Portuguese offers a minor in Spanish and a minor in Spanish/English Bilingual Education. The Spanish minor provides the opportunity to develop language proficiency while expanding knowledge of Hispanic cultures, literature, and linguistics. Many Spanish minors combine their studies with fields such as political science (pre-law), pre-med, communications, psychology, and economics. The goal of the minor in Spanish/English Bilingual Education is to create a pathway to better prepare students who wish to become future bilingual teachers.

Undergraduate Program

Beginning Spanish Language Courses

The beginning and intermediate Spanish language curriculum consists of six courses: SPANISH 1A-SPANISH 1B-SPANISH 1C and SPANISH 2A-SPANISH 2B-SPANISH 2C. This series is designed to teach students the four fundamental linguistic skills: speaking, understanding, reading, and writing Spanish. Using a task-supported and content-based approach, these foundation courses have the objective to provide foreign language skills that facilitate successful transitioning into more advanced Spanish. At the same time, these beginning Spanish classes are an excellent portal for study abroad, be that in Spain or in Latin America. For an overview of relevant study sites, visit the Study Abroad Center website (http://www.cie.uci.edu).

All students must adhere to the placement policies listed hereafter. Students with prior knowledge of Spanish may need to take the Spanish placement test.

Spanish Placement

To enroll in SPANISH 1A or any Spanish course through the SPANISH 3 series:

Students without previous background in Spanish must take a copy of their high school transcript to their academic counseling office to activate their eligibility to enroll in SPANISH 1A or SPANISH 1AB.

Students with previous high school background in Spanish wanting to enroll in any SPANISH 1A through the SPANISH 3 series at UCI for the first time must take the placement test. Eligibility to enroll in any courses from SPANISH 1A through the SPANISH 3 series at UCI will be based on the result of that placement test (http://www.testingcenter.uci.edu).

Students with a previous course (or courses) in Spanish from another college or university who want to enroll in any courses from SPANISH 1A through the SPANISH 3 series at UCI must ask their academic counseling office to review their previous coursework on file with the University in order to receive authorization to enroll in the next course. If their counseling office is having difficulty determining placement based on these records, the student’s counseling office should contact a counselor in the Humanities Undergraduate Counseling Office for assistance.

Students who graduated from a high school in a Spanish-speaking country, or who graduated from a Spanish Academy, must take a copy of their transcripts to the Language Curriculum Director, Humanities Hall 322, to determine where they should be placed.

Students who have already met the UCI language other than English general education or breadth requirement with SAT Subject Test scores, International Baccalaureate (IB) scores, or Advanced Placement (AP) examination and plan to enroll in a Spanish course at UCI are still required to take the Spanish placement test. Students cannot earn units or grade points at UCI in courses from which they have been exempted on the basis of IB or AP credit, even if the placement test result recommends enrollment in such a level.

Students currently enrolled in any SPANISH 1A through SPANISH 2B course at UCI will be eligible to enroll for the next course within the series without having to take the placement test, provided they receive a C or better.

To enroll in the SPANISH 3 series or beyond: An active prerequisite check system is in place for the SPANISH 3 series. In order to enroll in the SPANISH 3 series, a student must have passed SPANISH 2C or must have received a score within the possible range of scores for the SPANISH 3 series on the Spanish placement test. Students who score above the range of scores required for the SPANISH 3 series on the Spanish placement test may proceed to upper-division Spanish courses upon the recommendation of the Language Curriculum Director.

Placement testing is offered throughout the academic year (summer included). For details about registering for a placement test, contact the Academic Testing Center

3040 Anteater Instruction and Research Building
949-824-6207
Email: testcenter@uci.edu (testoff@uci.edu)
http://www.testingcenter.uci.edu

Placement test results are valid for one calendar year.
On-campus Spanish language immersion program (“La Casa Nuestra”): UC Irvine offers students the opportunity to live in an on-campus housing unit in Arroyo Vista where Spanish can be spoken on a daily basis. The name of this Spanish-only housing unit is La Casa Nuestra.

La Casa Nuestra is a residential Spanish language immersion program that relies on participants to comply with the Spanish-Only Language Rule that applies to all shared living spaces within the Casa. The rule applies at all times, including evenings and weekends. Residents may choose to speak English (or other languages) in their bedrooms, but, in the spirit of the Casa, are encouraged to make an effort to speak Spanish, even in their rooms, whenever possible. The program is open to all UCI students with 2-3 years of high school Spanish and/or 1 year of college Spanish. Visit the La Casa Nuestra information on the Department of Spanish and Portuguese Undergraduate Program website (http://www.humanities.uci.edu/spanishandportuguese/undergrad).

Bachelor’s Degree in Spanish

The B.A. program in Spanish is devoted to the study of the languages and cultures of Spanish-speaking countries. Students are encouraged to participate in UC Irvine’s La Casa Nuestra housing program, which offers Spanish-language immersion on a 24/7 basis as described above.

Students select one of three emphases:

1. Literature and Culture;
2. Spanish for Future Teachers; or

Each of these emphases strives to teach students to speak Spanish with fluency, and to carry out academic work in this language. NOTE: An emphasis may be chosen upon declaring the Spanish major, or at a later stage. The major, however, goes far beyond mere language learning, as it is designed to offer a broad humanistic education. The courses explore the literatures and cultures of Spain and Latin America from their first manifestations to the present. The faculty approach this rich cultural legacy from an interdisciplinary perspective that puts Latin American and Spanish texts in dialogue with other fields of knowledge such as anthropology, linguistics, history, women's studies, and studies on globalization, among others. The program also offers courses in Spanish and Latin American film, as well as in visual culture. Unless stated otherwise, courses in the three emphases are taught in Spanish.

By the end of the first year, students attain mastery of the basic structure of the language and ability to converse on everyday topics, as well as to read and write at an elementary level. In the second year, emphasis is put on gradually raising the level of the student’s ability to read and write. Two third-year courses or the SPANISH 3 series focuses on writing development, and the courses include SPANISH 3A (or SPANISH 3H) and SPANISH 3B (or SPANISH 3J). SPANISH 3H and SPANISH 3J are designed for heritage speakers of Spanish who are required to take SPANISH 3H instead of SPANISH 3A and SPANISH 3J instead of SPANISH 3B. Heritage speakers are here defined as students who were raised speaking Spanish at home, but who have received little formal education in Spanish. Furthermore, a course in phonetics (SPANISH 113A) aims to perfect pronunciation and presents historical and dialect variants of Spanish. SPANISH 107 (Advanced Spanish Grammar) helps students solidify fine points of grammar. In addition to giving students a sense of literary history, the introductory courses in literature (SPANISH 101A, SPANISH 101B), also to be taken in the third year, introduce students to elements of literary research and writing. The courses in Hispanic culture (SPANISH 110A, SPANISH 110B, SPANISH 110C) combine a panoramic overview with a close look at a specific country or topic, and require a final research project. Upper-division literature and film courses offer a more detailed analysis of specific texts and require a final research paper.

The faculty encourages students who are serious about improving their Spanish language ability in reading, writing, and speaking to take advantage of opportunities to immerse themselves in the Spanish language by studying in Argentina, Chile, Mexico, Spain, or other Spanish-speaking countries through various study abroad programs administered through UCI’s Study Abroad Center. Programs are available for the summer, one quarter, one semester, or one year. This allows students to complete a significant portion of their bachelor’s degree requirements in Spain or Latin America (for details, see Residence Requirements below). While abroad, students are given the opportunity to improve their Spanish in a natural context, and to enjoy exposure to other cultures. Once back at UCI, students who have studied abroad typically use this newly gained knowledge to excel in advanced upper-division courses, and to successfully enter graduate school programs or the career path of their choice. See the Study Abroad Center section (p. 167) of the Catalogue or an academic counselor for additional information.

Double Major: Students in the B.A. program often double major. Double majoring in Spanish and a second department provides the best of both worlds: the requirements for the Spanish major give students the linguistic and humanistic skills that will qualify them for diverse career paths, while the second degree provides students with the additional expertise they are seeking. Together, these bachelor’s degrees will reward students with a distinctively competitive edge. A double major is especially useful for pre-med, pre-law, and other students (future teachers included) who want an extensive education in the natural or social sciences and a strong liberal arts program as well.
Requirements for the B.A. in Spanish

All students must meet the University Requirements (p. 91).

All students must meet the School Requirements (p. 788).

All students must meet the Language Other Than English Placement and Progression policies. (p. 789)

Departmental Requirements for the Major in Spanish

SPANISH 2C or the equivalent is a prerequisite to SPANISH 3A (or SPANISH 3H) or SPANISH 3B (or SPANISH 3J). SPANISH 3A or SPANISH 3H and SPANISH 3B or SPANISH 3J are the prerequisites for most of the upper-division courses. SPANISH 3A or SPANISH 3H can be taken concurrently with SPANISH 3B or SPANISH 3J, though it is recommended that students take these two courses in sequence.

Students must choose one of the following emphases:

1. Emphasis in Literature and Culture

<table>

B. Complete:

| FLM&MDA 85A | Introduction to Film and Visual Analysis |
C. Five upper-division electives:

1. Four must be in film:
   (a) One film course may come from any department
   (b) Three film courses must be taken in the Department of Spanish and Portuguese

2. One literature course taught in Spanish, from the Department of Spanish and Portuguese

Students who wish to pursue a career in teaching are encouraged to complete the minor in Educational Studies in tandem with the emphasis. The following courses are recommended in fulfillment of the minor in Educational Studies: EDUC 108, EDUC 124, EDUC 128, EDUC 131, EDUC 173, EDUC 349; and EDUC 160, or two quarters of HUMAN 195.

Residence Requirement for the Major (all emphases): At least five upper-division courses required for the major must be completed successfully at UCI. By petition, two of the five may be taken through the UC Education Abroad Program, providing course content is approved by the Humanities Office of Undergraduate Study and the Undergraduate Director of the Department of Spanish and Portuguese. See also the Study Abroad Option information below.

Additional Information

Study Abroad Option

Students are encouraged to study abroad, possibly satisfying a significant portion of their major requirements abroad. For the maximum number of courses allowed and other pertinent details, see the Spanish Undergraduate Program website (http://www.humanities.uci.edu/spanishandportuguese/undergrad).

All courses taken abroad must be approved. Approval typically involves the following: (1) presentation of syllabi and other pertinent course materials (term papers, exams, etc.) from the host university, and (2) submission of a UCI Humanities Petition form (available online, and to be completed after the student’s return to UCI) to the Undergraduate Director of the Department of Spanish and Portuguese, and to the Humanities Office of Undergraduate Study (HIB 143). Students are advised to consult with the Undergraduate Director and the Humanities Office of Undergraduate Study, both before and after their stay abroad. See also the Residence Requirement above.

Career Opportunities

With over 400 million speakers, Spanish is the third most widely spoken language in the world, which explains in part why Spanish has such a growing global reach and rapidly increasing national and international appeal—in business, education, the media, sports, as well as elsewhere. Knowledge of the Spanish language and cultures has thus become highly marketable in many professions (nursing, the entertainment and/or travel industry, tourism, among others).

The Spanish B.A. degree prepares students to have ready access to careers that require advanced knowledge of the Spanish language and the multiple cultures associated with it. At the same time, competitive students in the program obtain a solid preparation for graduate school. The students’ graduate career paths vary widely and include literary and/or cultural studies, teaching, nursing, law/ business, nonprofit organizations, medicine, sociology, and other specialties.

The UCI Career Center provides services to students and alumni including career counseling, information about job opportunities, a career library, and workshops on resume preparation, job search, and interview techniques. For additional information, visit the Career Center (http://www.career.uci.edu) and the Department's Careers in Foreign Language websites (http://www.humanities.uci.edu/spanish/career.htm).

Requirements for the Minor in Spanish

Requirements for the Spanish Minor

All students are subject to the Language Other Than English Placement and Progression (p. 789) policies.

A. Complete the following:
   SPANISH 3A Grammar and Composition
   or SPANISH 3H Spanish for Heritage Speakers: Exploring U.S. Latino Issues
   SPANISH 3B Composition and Grammar
   or SPANISH 3J Spanish for Heritage Speakers: Researching U.S. Latino Issues

B. Four upper-division departmental Spanish courses, one of which may be taught in English (excluding SPANISH 150).

C. SPANISH 15 or one additional upper-division departmental Spanish course (excluding SPANISH 150).

NOTE: SPANISH 2C (or equivalent) is a prerequisite to Spanish minor requirements.
Residence Requirement for the Spanish Minor: At least four upper-division courses required for the minor must be completed successfully at UCI. By petition, two of the four may be taken through the UC Education Abroad Program, providing course content is approved in advance by the appropriate department or committee chair.

Requirements for the Minor in Spanish/English Bilingual Education
All students are subject to the Language other than English Placement and Progression (http://catalogue.uci.edu/schoolofhumanities/departmentofspanishandportuguese/https:/schoolofhumanities/#undergraduateprogramstext) policies.

A. Complete:
HUMAN/EDUC 52/LINGUIS 51B Foundations of Bilingual Education and Bilingualism

B. Complete:
EDUC 101 Strategies for Tutoring and Teacher Aiding in a Bilingual Classroom
EDUC 107 Child Development in Education
EDUC 124 Multicultural Education in K-12 Schools

C. Complete:
SPANISH 101B Introductory Studies to Latin America Literature and Culture
SPANISH 113B Introduction to Spanish Linguistics

One additional upper-division course taught in Spanish, in the Department of Spanish and Portuguese.

Residence Requirement for the Spanish/English Bilingual Education Minor: HUMAN 52/EDUC 52/LINGUIS 51B, EDUC 101, EDUC 107, EDUC 124, and at least one upper-division Spanish course must be completed successfully at UCI. By petition, the upper-division Spanish course may be taken through the UC Education Abroad Program, provided course content is approved in advance by the appropriate undergraduate studies advisor or department chair.

Graduate Program
All graduate courses in the Department are taught in either Spanish or Portuguese, unless otherwise indicated in the course description.

Master of Arts in Spanish
The Master of Arts degree in Spanish is a two-year program of study designed to expose the beginning graduate student to all periods of peninsular, Latin American, and Chicano/Latino literature and culture. The degree is awarded upon the successful completion of course work and written and oral comprehensive examinations. A minimum of eight graduate seminars must be completed in the Department of Spanish and Portuguese with a letter grade.

Requirements
Students are required to take one course in Theory (SPANISH 239A or SPANISH 239B or equivalent). Master’s candidates must complete a minimum of three quarters of course work in the Department; the maximum time to complete the master’s program is two years. The M.A. exam must be taken no later than the fifth quarter of graduate study. Students entering with a bachelor’s degree must satisfy the requirements for a master’s degree before they proceed toward a Ph.D. This includes the master’s level examinations and course work. Normally only students intending to work toward the Ph.D. are admitted to the graduate program.

Doctor of Philosophy in Spanish
The Department of Spanish and Portuguese offers a Ph.D. in Spanish with a specialization in Spanish, Spanish-American, or Chicano/Latino literatures and cultures. The program integrates period and genre studies with work in literary and critical theory, linguistics, sociohistorical studies, and cultural studies. The Department seeks to professionalize its Ph.D. candidates not as narrow specialists but rather as scholars and critics acquainted with a range of fields that relate to and enhance their discipline. Graduate emphases in Comparative Literature, Critical Theory, and Women’s Studies are available; other areas of study (for example, film, history) may be designed with approval from the student’s Ph.D. guidance committee. The Department has been traditionally committed to excellence in teaching, both in its own practice and in the formation of its graduates.

Language Requirements
An additional foreign language (with proficiency equivalent to the 2C level) is required; this requirement may be satisfied by examination or course work. The selection of a foreign language must be approved by the student’s guidance committee and is based on the specific research interests and field of study of the candidate.

Course Requirements
A minimum of 16 courses beyond the B.A. or eight beyond the M.A. are required. One course in linguistics (diachronic or synchronic), and one graduate course in Luso-Brazilian literature and culture are required at the Ph.D. level. For incoming students who have not taken a graduate level foreign language teaching methodology course, the seminar course (HUMAN 398A-HUMAN 398B) is required. HUMAN 398A-HUMAN 398B will be completed over the course of two quarters; HUMAN 398A will be completed during the spring quarter of the first year, and HUMAN 398B in the fall quarter of the second year. HUMAN 398A-HUMAN 398B will not be part of the 16 required courses beyond the B.A. or eight beyond the M.A. Note that these requirements may include course work completed in the master’s program; the remaining elective courses are selected with the approval of the student’s
guidance committee to prepare for the doctoral examination and the dissertation. Students are encouraged to take more than the minimum number of required courses.

Continuing students and students who transfer into the doctoral program from elsewhere must take a minimum of eight graduate courses at UCI, of which six must be in the Department of Spanish and Portuguese. With regard to students who enter the Ph.D. program with their master’s degree from another institution, the Ph.D. guidance committee will determine the number of courses that will be accepted.

A student may pursue the Ph.D. with an emphasis in Comparative Literature by taking a minimum of five courses in the Comparative Literature program.

Time to Degree
The normative time for completion of the Ph.D. is seven years; four years to candidacy, three years in candidacy. The maximum time permitted is eight years.

Teaching
The Department recognizes its responsibility to train all Ph.D. candidates as teachers and requires that all doctoral students with no prior teaching experience complete a minimum of three quarters of language teaching (SPANISH 399). Moreover, all doctoral students are encouraged to complete a teaching practicum by co-teaching an upper-division course with a professor and enrolling in SPANISH 292, which is graded Satisfactory/Unsatisfactory only.

Qualifying Examination
Upon completion of course work, the Ph.D. student advances to candidacy by passing the written and oral qualifying examinations by unanimous decision. The qualifying examination requires the student to develop two topics in close consultation with the examination committee. One topic must present a critical problem from a historical perspective, while the other may focus on a more specific area within the student’s major field of interest. Students are encouraged to incorporate theoretical and interdisciplinary components into the formulation of their topics. A two-hour oral examination that includes discussion of the written examinations is also required. The normative time for advancement to candidacy is four years.

Dissertation
A dissertation topic is chosen by the candidate in consultation with the dissertation director and committee, and normally falls within the major field covered by the qualifying examinations. The candidate presents a study plan to the dissertation committee, which approves the proposal and a preliminary research outline. The student submits drafts of chapters to the dissertation director who corrects and approves the drafts and circulates them to other committee members for commentary.

Spanish Course Enrollment Authorization and Course Equivalencies

Enrollment Authorization: See the Language Other Than English Placement (p. 789) information for specific Spanish placement information, click on the “Major” tab above. Students with prior college course(s) must take a copy of their college transcripts to their academic counseling office for enrollment authorization. Other counseling offices are encouraged to call the Humanities Undergraduate Counseling Office if they have questions about a particular student’s eligibility to enroll at a given level.

NOTE: SPANISH 1A, SPANISH S1AB, and SPANISH 1AB are open only to students who have no prior knowledge of Spanish. Students must take a copy of their high school transcript to their academic counseling office to activate their eligibility to enroll in SPANISH 1A, SPANISH S1AB, or SPANISH 1AB. Equivalent sequences/courses may not be repeated for credit.

Lower-Division Course Equivalencies: A chart showing the lower-division Spanish course equivalencies is available on the Department of Spanish and Portuguese website (http://www.humanities.uci.edu/spanishandportuguese).

Faculty
Ana Maria Amar Sanchez, Ph.D. University of Buenos Aires, Professor Emerita of Spanish and Portuguese

Luis Avilés, Ph.D. Brown University, Associate Professor of Spanish and Portuguese; European Languages and Studies (Golden Age literature and critical theory)

Anne J. Cruz, Ph.D. Stanford University, Professor Emerita of Spanish and Portuguese

Lucia G. Cunningham, Ph.D. University of Kansas, Professor Emerita of Spanish and Portuguese

Ivette Hernandez-Torres, Ph.D. Brown University, Associate Professor of Spanish and Portuguese

Horacio Legras, Ph.D. Duke University, Associate Professor of Spanish and Portuguese

Viviana A. Mahieux, Ph.D. Harvard University, Associate Professor of Spanish and Portuguese

Santiago Morales-Rivera, Ph.D. Harvard University, Assistant Professor of Spanish and Portuguese; European Languages and Studies (contemporary Spanish intellectual history, literature and culture)
Gonzalo Navajas, Ph.D. University of California, Los Angeles, Professor of Spanish and Portuguese; European Languages and Studies (eighteenth through twentieth-first century Spanish literature and intellectual history, film, critical theory, cultural criticism, creative writing)

Dayle S. Nunez, Ph.D. Stanford University, Professor Emeritus of Spanish and Portuguese

Hector H. Orjuela, Ph.D. University of Kansas, Professor Emeritus of Spanish and Portuguese

Julian I. Palley, Ph.D. University of New Mexico, Professor Emeritus of Spanish and Portuguese

Armin Schwegler, Ph.D. University of California, Berkeley, Professor of Spanish and Portuguese; Linguistics

Jacobo Sefami, Ph.D. University of Texas at Austin, Professor of Spanish and Portuguese

Julio R. Torres, Ph.D. Georgetown University, Assistant Professor of Spanish and Portuguese; Linguistics (heritage languages, second language acquisition)

Juan Villegas, Ph.D. University of Chile, Professor Emeritus of Spanish and Portuguese

Zidia O. Webb, M.A. Michigan State University, Lecturer with Security of Employment Emeritus of Spanish and Portuguese

Portuguese Courses

PORTUG 121. Topics in Luso-Brazilian Literature. 4 Units.
In English. Contextualized study of a major author, current, or genre in Brazilian, Portuguese, and/or Lusophone African literature. Examples: Gender, Race, and Sexualities in Postcolonial Lusophone Literatures; Women and Writing in Brazil and Portugal; The Short Story.
Repeatability: Unlimited as topics vary.

PORTUG 243. Studies in Luso-Brazilian Literature and Culture. 4 Units.
Critical analysis of selected literary works from Portugal and/or Brazil. Contextualizes the works within their historical and literary specificity, and discusses pertinent theoretical issues raised by them. Taught in Portuguese.
Prerequisite: Reading knowledge of Portuguese.
Repeatability: Unlimited as topics vary.
Restriction: Graduate students only.

Spanish Courses

SPANISH 1A. Fundamentals of Spanish. 5 Units.
Communicative approach with emphasis on conversational skills: the students and their environment, their experiences, and their opinions about issues. Reading and writing skills also introduced.
Prerequisite: Placement into SPANISH 1A.
Overlaps with SPANISH 1AB, SPANISH S1AB.
Restriction: SPANISH 1A and SPANISH 1AB and SPANISH S1AB may not be taken for full credit.

SPANISH 1AB. Fundamentals Intensive Spanish. 10 Units.
An intensive, proficiency-oriented, and task-based approach, designed to develop basic oral communicative abilities in Spanish. Reading and writing skills, along with an introduction to Hispanic cultures.
Prerequisite: Placement into SPANISH 1A.
Overlaps with SPANISH 1A, SPANISH 1B, SPANISH S1AB.
Restriction: SPANISH 1AB and SPANISH 1A and SPANISH 1B and SPANISH S1AB may not be taken for full credit.

SPANISH 1B. Fundamentals of Spanish. 5 Units.
Communicative approach with emphasis on conversational skills: the students and their environment, their experiences, and their opinions about issues. Reading and writing skills also introduced.
Prerequisite: SPANISH 1A. SPANISH 1A with a grade of C or better. Placement into SPANISH 1B is also accepted.
Overlaps with SPANISH 1AB, SPANISH S1AB.
Restriction: SPANISH 1B and SPANISH 1AB and SPANISH S1AB may not be taken for full credit.
SPANISH 1C. Fundamentals of Spanish. 5 Units.
Communicative approach with emphasis on conversational skills: the students and their environment, their experiences, and their opinions about issues. Reading and writing skills also introduced.

Prerequisite: SPANISH 1AB or SPANISH 1B or SPANISH S1AB. SPANISH 1AB with a grade of C or better. SPANISH 1B with a grade of C or better. SPANISH S1AB with a grade of B or better. Placement into SPANISH 1C is also accepted.

Overlaps with SPANISH S1BC.

Restriction: SPANISH 1C and SPANISH S1BC may not be taken for full credit.

(VI)

SPANISH S1AB. Fundamentals of Spanish. 7.5 Units.
First half of first-year Spanish in an intensified form. Communicative approach with emphasis on conversational skills.

Prerequisite: Placement into SPANISH 1A.

Overlaps with SPANISH 1A, SPANISH 1B, SPANISH 1AB.

Restriction: SPANISH S1AB and SPANISH 1A and SPANISH 1B and SPANISH 1AB may not be taken for full credit.

SPANISH S1BC. Fundamentals of Spanish. 7.5 Units.
Second half of first-year Spanish in an intensified form. Communicative approach with emphasis on conversational skills.

Prerequisite: SPANISH S1AB or SPANISH 1A or SPANISH 1B. SPANISH S1AB with a grade of C or better. SPANISH 1A with a grade of C or better. SPANISH 1B with a grade of C or better. Placement into SPANISH 1B or SPANISH 1C is also accepted.

Overlaps with SPANISH 1B, SPANISH 1C, SPANISH 1AB.

Restriction: SPANISH S1BC and SPANISH 1B and SPANISH 1C and SPANISH 1AB may not be taken for full credit.

(VI)

SPANISH 2A. Intermediate Spanish. 4 Units.
Conversation, reading, and composition skills are developed using texts of literary and social interest. Emphasis on grammar review.

Prerequisite: SPANISH 1C or SPANISH S1BC. SPANISH 1C with a grade of C or better. SPANISH S1BC with a grade of C or better. Placement into SPANISH 2A is also accepted.

Overlaps with SPANISH 2AB, SPANISH S2AB, SPANISH 2.

Restriction: School of Humanities students have first consideration for enrollment. International Studies Majors have first consideration for enrollment. SPANISH 2A and SPANISH S2AB and SPANISH 2 may not be taken for full credit.

(VIII)

SPANISH 2AB. Intermediate Intensive Spanish. 8 Units.
Intensive intermediate course designed to improve student's abilities in reading, writing, speaking, and comprehension, including a thorough introduction to Hispanic cultures. Throughout the course the grammatical component of the language is gradually reviewed and tested.

Prerequisite: SPANISH 1C or SPANISH S1BC. SPANISH 1C with a grade of C or better. SPANISH S1BC with a grade of C or better. Placement into SPANISH 2A is also accepted.

Overlaps with SPANISH 2A, SPANISH 2B, SPANISH S2AB, SPANISH 2.

Restriction: SPANISH 2AB and SPANISH 2A and SPANISH 2B and SPANISH S2AB and SPANISH 2 may not be taken for full credit.

(VIII)
SPANISH 2B. Intermediate Spanish. 4 Units.
Conversation, reading, and composition skills are developed using texts of literary and social interest. Emphasis on grammar review.

Prerequisite: SPANISH 2A. SPANISH 2A with a grade of C or better. Placement into SPANISH 2B is also accepted.

Overlaps with SPANISH 2AB, SPANISH S2AB, SPANISH 2.

Restriction: School of Humanities students have first consideration for enrollment. International Studies Majors have first consideration for enrollment. SPANISH 2B and SPANISH 2AB and SPANISH S2AB and SPANISH 2 may not be taken for full credit.

(VIII)

SPANISH 2C. Intermediate Spanish. 4 Units.
Conversation, reading, and composition skills are developed using texts of literary and social interest. Emphasis on grammar review.

Prerequisite: SPANISH 2AB or SPANISH 2B or SPANISH S2AB. SPANISH 2AB with a grade of C or better. SPANISH 2B with a grade of C or better. SPANISH S2AB with a grade of B or better. Placement into SPANISH 2C is also accepted.

Overlaps with SPANISH S2BC, SPANISH 2.

Restriction: School of Humanities students have first consideration for enrollment. International Studies Majors have first consideration for enrollment. SPANISH 2C and SPANISH S2BC and SPANISH 2 may not be taken for full credit.

(VIII)

SPANISH S2AB. Intermediate Spanish. 6 Units.
First half of second-year Spanish in an intensified form. Conversation, reading, and composition skills are developed using texts of literary and social interest. Emphasis on grammar review.

Prerequisite: SPANISH 1C or SPANISH S1BC. SPANISH 1C with a grade of C or better. SPANISH S1BC with a grade of C or better. Placement into SPANISH 2A is also accepted.

Overlaps with SPANISH 2A, SPANISH 2B, SPANISH 2AB, SPANISH 2.

Restriction: SPANISH S2AB and SPANISH 2A and SPANISH 2B and SPANISH 2AB and SPANISH 2 may not be taken for full credit.

(VIII)

SPANISH S2BC. Intermediate Spanish. 6 Units.
Second half of second-year Spanish in an intensified form. Conversation, reading, and composition skills are developed using texts of literary and social interest. Emphasis on grammar review.

Prerequisite: SPANISH 2B or SPANISH S2AB or SPANISH 2A. SPANISH 2B with a grade of C or better. SPANISH S2AB with a grade of C or better. SPANISH 2A with a grade of B or better. Placement into SPANISH 2B or SPANISH 2C is also accepted.

Overlaps with SPANISH 2B, SPANISH 2C, SPANISH 2AB, SPANISH 2.

Restriction: SPANISH S2BC and SPANISH 2B and SPANISH 2C and SPANISH 2AB and SPANISH 2 may not be taken for full credit.

(VIII)

SPANISH 3A. Grammar and Composition. 4 Units.
Focuses on intermediate to advanced grammar and composition in an orderly fashion. Emphasis is placed on key elements of grammar, to constitute about 70 percent of the course, and composition writing, to constitute about 30 percent of the workload.

Prerequisite: SPANISH 2 or SPANISH 2C or SPANISH S2BC

Overlaps with SPANISH 3H.

(VIII)
SPANISH 3B. Composition and Grammar. 4 Units.
Focuses on intermediate to advanced grammar and composition in an orderly fashion. Emphasis is placed on key elements of grammar, to constitute about 30 percent of the course, and composition writing, to constitute about 70 percent of the workload.

Prerequisite: SPANISH 2 or SPANISH 2C or SPANISH S2BC

Overlaps with SPANISH 3J.

Restriction: SPANISH 3J and SPANISH 3B may not both be taken for credit.

(VIII)

SPANISH 3H. Spanish for Heritage Speakers: Exploring U.S. Latino Issues. 4 Units.
Designed for students who grew up speaking Spanish in their homes/communities, whose schooling has been primarily in English, and need additional practice writing in Spanish.

Prerequisite: Placement into SPANISH 3H.

Overlaps with SPANISH 3A.

Restriction: SPANISH 3H and SPANISH 3A may not both be taken for credit.

(VII)

SPANISH 3J. Spanish for Heritage Speakers: Researching U.S. Latino Issues. 4 Units.
Designed for students who grew up speaking Spanish in their homes/communities, but whose education has been primarily in English. Focus will be on research and writing on U.S. Latino issues.

Prerequisite: Placement into SPANISH 3J.

Overlaps with SPANISH 3B.

Restriction: SPANISH 3J and SPANISH 3B may not both be taken for credit.

SPANISH 15. Advanced Spanish Conversation. 4 Units.
Designed to improve the fluency of non-native speakers of Spanish. Concentrates on the expansion of vocabulary, as well as listening and speaking skills. Not open to native or semi-native speakers of Spanish.

Prerequisite: SPANISH 2 or SPANISH 2C or SPAN 2BC. SPANISH 2 with a grade of C or better. SPANISH 2C with a grade of C or better. SPAN 2BC with a grade of C or better

SPANISH 44. Hispanic Literatures for Nonmajors. 4 Units.
Focuses on major Spanish and Latin American literary texts within a historical and theoretical perspective. Taught in English with literary texts read in the original language.

Prerequisite: SPANISH 2 or SPANISH 2C or SPANISH S2BC

Restriction: No Spanish Majors.

(VIII)

SPANISH 50. Latin America, U.S. Latino, and Iberian Cultures. 4 Units.
Introduction (for non-majors) to the culture of the Spanish- and Portuguese-speaking worlds (Europe, Latin America, U.S., Africa). May focus on any time period. Taught in english.

Repeatability: May be taken for credit 3 times as topics vary.

(IV and VIII).

SPANISH 61. The Culture of the Visual Image in Latin America. 4 Units.
A survey of visual forms of expression which have endured through more than five centuries of pre-colonial, colonial, and independent Latin America. Forms to be treated in the class include painting, monuments, sculpture, urban planning, graffiti, comics, and photography.

(IV and VIII).
SPANISH 62. Latinx, Multilingualism, and Social Justice. 4 Units.
Explores the role of multilingualism (Spanish, indigenous languages, Latino English) in Latinx social justice movements in the United States with an emphasis on California. Course is taught in English.

(VII)

SPANISH 97. Fundamentals of Spanish (with Emphasis on Reading). 4 Units.
Designed for students interested in acquiring a solid reading knowledge of Spanish, and to facilitate the understanding and translating of Spanish texts covering a variety of disciplines. Does not fulfill any undergraduate foreign language requirement. Taught in English.
Prerequisite: Does not serve as prerequisite for any higher-level Spanish courses.
Restriction: No Spanish Majors.

SPANISH 101A. Introduction to Iberian Literature and Culture. 4 Units.
Introduction to the major authors and movements of Iberian literature and culture from the Middle Ages to the present.
Prerequisite: (SPANISH 3A or SPANISH 3H) and SPANISH 3B

SPANISH 101B. Introductory Studies to Latin America Literature and Culture. 4 Units.
A historical overview of Latin American literature and culture mainly focused on canonical texts. Topics include colonialism and postcolonialism, the nation, indigenismo, gender, literary movements. Also introduces literary analysis, research methods, and cultural critique.
Prerequisite: (SPANISH 3A or SPANISH 3H) and SPANISH 3B

SPANISH 104. Writing in Spanish. 4 Units.
Focuses on the use of writing as a medium to encourage critical thinking and the practical analysis of literary texts as well as the study of historical and social issues in the Spanish-speaking world.
Prerequisite: (SPANISH 3A or SPANISH 3H) and SPANISH 3B

SPANISH 105. Spanish Communication. 4 Units.
Designed to help students develop Spanish oral skills by exposing them to different verbal Spanish language registers. Special emphasis placed on abilities essential to professional or academic careers. Intended for Spanish majors as an important component of their overall education.
Prerequisite: (SPANISH 3A or SPANISH 3H) and SPANISH 3B

SPANISH 107. Advanced Spanish Grammar. 4 Units.
Designed for students who have demonstrated a substantial level of proficiency in their studies of the Spanish language. Takes thorough approach to advanced grammatical problems, in order to assist students in their mastery of the elements of the Spanish language.
Prerequisite: (SPANISH 3A or SPANISH 3H) and SPANISH 3B

SPANISH 110A. Topics in Peninsular Literature and Cultures. 4 Units.
Topics in Peninsular literature and cultures.
Prerequisite: (SPANISH 3A or SPANISH 3H) and SPANISH 3B
Repeatability: Unlimited as topics vary.

SPANISH 110B. Topics in Latin American Literature and Cultures. 4 Units.
Topics in Latin American literature and cultures.
Prerequisite: (SPANISH 3A or SPANISH 3H) and SPANISH 3B
Repeatability: Unlimited as topics vary.

SPANISH 110C. U.S. Latino Literature and Cultures. 4 Units.
Focuses on aspects of literature, art, cultural production, and history of the multifaceted Latino cultures that have developed within the United States. Focuses on one group, such as Caribbean Americans, Chicanos, Central Americans, or a comparative perspective of several groups.
Same as CHC/LAT 134.
SPANISH 113A. Spanish Phonetics. 4 Units.
Introduction to fundamental notions of Spanish phonetics. Particular attention paid to problems of pronunciation that arise in native and non-native speakers of Spanish due to interference between Spanish and English. Phonology (the system that underlies phonetics) and Spanish dialectology included.
Prerequisite: (SPANISH 3A or SPANISH 3H) and SPANISH 3B

SPANISH 113B. Introduction to Spanish Linguistics. 4 Units.
Application of basic notions of linguistics to Spanish, Spanish phonology, morphology, syntax, and semantics. Special attention to the application of linguistics to the teaching of Spanish.
Prerequisite: (SPANISH 3A or SPANISH 3H) and SPANISH 3B

SPANISH 116. Topics in Medieval Spanish Literature and Culture. 4 Units.
Medieval literature in Spain from the ninth century to 1500. Works of lyric and epic poetry, prose fiction, and nonfiction. Substantial historical and cultural background explored.
Prerequisite: (SPANISH 3A or SPANISH 3H) and SPANISH 3B
Repeatability: Unlimited as topics vary.

SPANISH 119. Textual Analysis and Interpretation. 4 Units.
Focus on analysis and interpretation of literary texts. Emphasis on narrative, poetry, theater/performance, and visual media. Introduces students to major currents in theoretical thought, such as cultural studies, postmodernism, and others. Oral presentations and short essays required. Taught in Spanish.
Prerequisite: (SPANISH 3A or SPANISH 3H) and SPANISH 3B

SPANISH 121. Topics in Golden Age Literature and Culture. 4 Units.
Golden Age Literature in Spain including the Renaissance and Baroque periods. Works of poetry, narrative, and theater. Historical and cultural background.
Prerequisite: (SPANISH 3A or SPANISH 3H) and SPANISH 3B
Repeatability: May be taken for credit 3 times as topics vary.

SPANISH 122. Topics in 18th and 19th Century Spanish Literature and Culture. 4 Units.
The main literary and ideological trends in 18th and 19th century Spain, including the enlightenment, romanticism, realism, and naturalism.
Prerequisite: (SPANISH 3A or SPANISH 3H) and SPANISH 3B
Repeatability: May be taken for credit 3 times as topics vary.

SPANISH 123. Topics in 20th and 21st Century Spanish Literature and Culture. 4 Units.
20th century Spanish authors. Works of poetry, narrative, or theater. Historical context of the period and principles of literary theory.
Prerequisite: (SPANISH 3A or SPANISH 3H) and SPANISH 3B
Repeatability: May be taken for credit 3 times as topics vary.

SPANISH 130A. Topics in Latin American Colonial Literature and Culture. 4 Units.
Topics in Latin American colonial literature and culture.
Prerequisite: (SPANISH 3A or SPANISH 3H) and SPANISH 3B
Repeatability: Unlimited as topics vary.

SPANISH 130B. Topics in Latin American Literature and Culture of the 19th Century. 4 Units.
Topics in Latin American literature and culture of the 19th century.
Prerequisite: (SPANISH 3A or SPANISH 3H) and SPANISH 3B
Repeatability: Unlimited as topics vary.
SPANISH 130C. Topics in Latin American Literature and Culture of the 20th Century. 4 Units.
Topics in Latin American literature and culture of the 20th century.
Prerequisite: (SPANISH 3A or SPANISH 3H) and SPANISH 3B
Repeatability: Unlimited as topics vary.

SPANISH 140. Topics in Chicano Literature and Culture. 4 Units.
Studies in selected areas of Chicano/Latino Studies. Topics addressed vary each quarter. Taught in English.
Repeatability: May be taken for credit 4 times as topics vary.
Same as CHC/LAT 110.

SPANISH 150. Topics in Literature in Translation. 4 Units.
Study of texts by modern and contemporary Peninsular, Latin American, and/or U.S. Latino writers in translation. Taught in English. Not applicable toward Spanish major or minor requirements.
Repeatability: Unlimited as topics vary.

SPANISH 160. Topics in Luso-Hispanic Film Studies. 4 Units.
Study of Peninsular, Latin-American, and/or U.S. Latino film. Taught in English or Spanish.
Prerequisite: SPANISH 3A or SPANISH 3H. SPANISH 3B is also required when taught in Spanish.
Repeatability: Unlimited as topics vary.

SPANISH 185. Selected Topics in Peninsular Literature and Culture. 4 Units.
Selection of representative topics in Spanish and/or Portuguese literature and culture.
Prerequisite: (SPANISH 3A or SPANISH 3H) and SPANISH 3B
Repeatability: Unlimited as topics vary.

SPANISH 186. Selected Topics in Latin American Literature and Culture. 4 Units.
Selection of representative topics in the history of Latin American literature and culture.
Prerequisite: (SPANISH 3A or SPANISH 3H) and SPANISH 3B
Repeatability: Unlimited as topics vary.

SPANISH 187. Selected Topics in Spanish Linguistics. 4 Units.
Major topics in Spanish linguistics.
Prerequisite: (SPANISH 3A or SPANISH 3H) and SPANISH 3B
Repeatability: Unlimited as topics vary.

SPANISH 190. Colloquium. 4 Units.
Specialized, discussion-based course dealing primarily with a research topic that reflects the instructor's current intellectual interests. Required oral presentation(s) and final research paper. Limited to 15 students.
Prerequisite: SPANISH 107 or SPANISH 113A
Restriction: Upper-division students only. Spanish Majors only.

SPANISH 199. Independent Study. 1-4 Units.
Research paper required.
Repeatability: May be repeated for credit unlimited times.

SPANISH 201. History of the Spanish Language. 4 Units.
Diachronic survey of phonological changes from Latin to Old Spanish to Modern Spanish. Focuses in Castilian including Romance languages and other peninsula dialects for comparative purposes. Morphological changes.

SPANISH 204. Spanish in Contact. 4 Units.
Sociohistorical and linguistic overview of Spanish in contact with Basque, Catalan, English, German, American Indian, and African languages in Spain, Latin America, and the United States. Examines theories about language contact, and linguistic changes in Spanish phonology and grammar.
SPANISH 205. Spanish Dialectology. 4 Units.
Phonological, morphological, and syntactic variations in Spanish as spoken in the Hispanic world, from synchronic and diachronic points of view. The study of Spanish as spoken in the United States.

Restriction: Graduate students only.

SPANISH 212. Topics in Medieval Iberia. 4 Units.
Topics in medieval Spanish literature.

Repeatability: Unlimited as topics vary.

SPANISH 214. Topics in Golden Age Literature and Culture. 4 Units.
Topics in Golden Age literature and culture.

Repeatability: Unlimited as topics vary.

SPANISH 218. Topics in Enlightenment and Romanticism. 4 Units.
Topics in Enlightenment and Romanticism.

Repeatability: Unlimited as topics vary.

SPANISH 219. Topics in Nineteenth Century. 4 Units.
Topics in nineteenth-century Spanish literature and culture.

Repeatability: Unlimited as topics vary.

SPANISH 220. Topics in Twentieth Century. 4 Units.
Topics in twentieth-century Spanish literature and culture.

Repeatability: Unlimited as topics vary.

SPANISH 221. Topics in Iberian Studies. 4 Units.
Cross-cultural connections and interactions between different ethnicities in the Iberian Peninsula.

Repeatability: Unlimited as topics vary.

SPANISH 231. Topics in Colonial Latin America. 4 Units.
Topics in Colonial Latin America.

Repeatability: Unlimited as topics vary.

SPANISH 232. Topics in Nineteenth-Century Latin America. 4 Units.
Topics in nineteenth-century Latin America.

Repeatability: Unlimited as topics vary.

SPANISH 233. Topics in Twentieth-Century Latin America. 4 Units.
Topics in twentieth-century Latin America.

Repeatability: Unlimited as topics vary.

SPANISH 234. Topics in Latin America. 4 Units.
Topics in Latin America.

Repeatability: Unlimited as topics vary.

SPANISH 235. Topics in Trans-Oceanic Studies. 4 Units.
Focuses on meaningful connections between different geographical and cultural areas.

Repeatability: Unlimited as topics vary.

SPANISH 239A. Topics in Literary Theory I. 4 Units.
Traces the development of Western literary critical principles from Aristotle to the twentieth century through selected readings of key figures in intellectual history (Aristotle, St. Augustine, Descartes, Kant, Hegel, Marx, Nietzsche, William James, Freud).

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.
SPANISH 239B. Topics in Literary Theory II. 4 Units.
Study of major critical movements of the twentieth century, from Modernism's varied trends to those of the Postmodern/Postcolonial period. Emphasis on the development of prior critical discourses as well as revisionary theories.

Prerequisite: SPANISH 239A

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.

SPANISH 239C. Special Topics in Theory. 4 Units.
Focus on issues related to critical theory, theory of literature, cultural criticism and visual arts as they pertain specifically to Latin America, Spain, Portugal, and Brazil. Topics vary. Examples: Latin American cultural studies; theory, film, and media in post-war Spain.

Repeatability: Unlimited as topics vary.

SPANISH 245. Topics in Luso-Hispanic Film. 4 Units.
Topics in Luso-Hispanic Film.

Repeatability: Unlimited as topics vary.

SPANISH 251. Topics in Chicano Literature and Culture. 4 Units.
Topics in Chicano Literature and Culture.

Repeatability: Unlimited as topics vary.

SPANISH 252. Topics in U.S. Latino Literature and Culture. 4 Units.
Topics in U.S. Latino Literature and Culture.

Repeatability: Unlimited as topics vary.

SPANISH 260. Seminar in Spanish . 4 Units.
Topics in Spanish.

Repeatability: Unlimited as topics vary.

SPANISH 270. Creative Writing Workshop in Spanish/English. 4 Units.
Discussion of theory and practice of creative writing. Focus on critical analysis of participant's work in progress. Texts may be written in Spanish and/or English and may be written in poetry or prose format.

Repeatability: Unlimited as topics vary.

SPANISH 290. Individual Study. 4 Units.
Individual Study.

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.

SPANISH 291. Directed Reading. 4 Units.
Directed Reading in Spanish.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.

SPANISH 292. Teaching Practicum. 4 Units.
Teaching Practicum.

Grading Option: Satisfactory/unsatisfactory only.
SPANISH 299. Dissertation Research. 4-12 Units.
Dissertation Research.
Grading Option: Satisfactory/unsatisfactory only.
Repeatability: May be repeated for credit unlimited times.
Restriction: Graduate students only. School of Humanities students only.

SPANISH 399. University Teaching. 4 Units.
Limited to Teaching Assistants.
Repeatability: May be repeated for credit unlimited times.
Restriction: Graduate students only.

Special Programs
This section includes a variety of special programs that are available through the School of Humanities. Click on the tabs above for information about each program.

Click here for the list of Courses in Humanities (p. 792).

Minor in Humanities and Law
Jeffrey Helmreich, Director
85 Humanities Instructional Building
949-824-6525
http://www.humanities.uci.edu/humlaw/

The minor in Humanities and Law is comprised of courses in the School of Humanities that UCI graduates have found to be useful in developing skills and knowledge that prepare them for law-related careers. One set of courses develops skills in critical reading, writing, and analysis that are necessary in dealing with legal issues. Another set presents theoretical and analytical perspectives on ethical, political, and social issues relevant to the law. A final set focuses on specific legal issues from a humanistic perspective. Lower-division requirements primarily develop foundational skills in the first set, whereas upper-division requirements build on these skills by addressing the concerns from the other sets. The minor does not include how-to courses on particular legal practices.

Requirements for the Minor in Humanities and Law

A. Complete:
PHILOS 22 Introduction to Law and Society
ENGLISH 11 Society, Law, and Literature ¹

B. Select one of the following options:
HUMAN 1A- 1AS- 1B- 1BS- 1C- 1CS Humanities Core Lecture
and Humanities Core Writing
and Humanities Core Lecture
and Humanities Core Writing
and Humanities Core Lecture
and Humanities Core Writing

(or the Humanities Core Alternative) ²

or

PHILOS 2 or PHILOS 29 and one course, not used above, chosen from: PHILOS 22, PHILOS 133, ENGLISH 11, or GEN&SEX 60B

C. Select five upper-division courses from among a list of quarterly approved courses, at least one each from philosophy, history, and either literature or classics. ³

¹ Additional courses may be substituted with prior approval of the Director of the Humanities and Law minor.
² The Humanities Core Alternative is also an option. Visit the School of Humanities Undergraduate Study website (http://www.humanities.uci.edu/SOH/students/core.php) for additional information.
³ Consult the Humanities and Law website (http://www.humanities.uci.edu/humlaw) for currently approved courses.

Students considering a career in law are strongly encouraged to take advantage of other law-related courses offered across the campus and of extracurricular activities such as the Pre-Law Society.
Residence Requirement for the Minor: Four upper-division courses required for the minor must be successfully completed at UCI. Two of the four may be taken through the UC Education Abroad Program, provided course content is approved in advance by the appropriate department chair.

Interdisciplinary Minor in Asian Studies

http://www.humanities.uci.edu/asianstudies/

Robert Uriu, Co-Director, School of Social Sciences
rmuriu@uci.edu

Qitao Guo, Co-Director, School of Humanities
guoq@uci.edu

The countries and cultures of Asia are significant participants in the world community. They present compellingly different models for social organization, historical development, and cultural commitments. The many countries of this large and complex region provide challenges and opportunities whether one plans to be a scholar, a business person, or a diplomat. The minor in Asian Studies draws upon the expertise of faculty throughout UCI to create opportunities for students to explore Asian topics in a variety of fields, to develop advanced language skills, and to acquire a broader perspective as they apply the disciplinary training of their major field to effective and informed studies of Asian subjects. The minor is open to all UCI students.

Requirements for the Interdisciplinary Minor in Asian Studies

Students choose one country and language of specialization. At the present the Asian Studies minor focuses on China, Japan, or Korea.

Requirements for the minor are met by taking eight courses (of which no more than four may be lower-division) as specified below.

A. One upper-division History course with a focus on Asia approved by the director.

B. Three quarters of course work in one Asian language of specialization beyond the first-year level. Approved courses are:

1. Second-, third-, or fourth-year language:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>CHINESE 2DA- 2DB- 2DC</td>
<td>Intermediate Mandarin Chinese - Dialect Background Track and Intermediate Mandarin Chinese - Dialect Background Track</td>
</tr>
<tr>
<td>CHINESE 2MA- 2MB- 2MC</td>
<td>Intermediate Mandarin Chinese - Mandarin Background Track and Intermediate Mandarin Chinese - Mandarin Background Track</td>
</tr>
<tr>
<td>CHINESE 3A- 3B- 3C</td>
<td>Advanced Mandarin Chinese and Advanced Mandarin Chinese</td>
</tr>
<tr>
<td>JAPANSE 3A- 3B- 3C</td>
<td>Advanced Japanese and Advanced Japanese</td>
</tr>
<tr>
<td>JAPANSE 101A- 101B</td>
<td>Fourth Year Japanese and Fourth Year Japanese</td>
</tr>
<tr>
<td>KOREAN 2KA- 2KB- 2KC</td>
<td>Intermediate Korean for Students with a Previous Background in Korean and Intermediate Korean for Students with a Previous Background in Korean</td>

<td>Advanced Korean and Advanced Korean</td>
</tr>
</tbody>
</table>
KOREAN 101A
Fourth Year Korean
Other sequences in Asian languages as available.
2. Either Classical Chinese or Classical Japanese:

CHINESE 100A-100C
Classical Chinese
and Classical Chinese

JAPANSE 100A-100B
Classical Japanese
and Classical Japanese (plus a third quarter of Japanese language study)

3. Literature courses taught in the original language:

CHINESE 115
Chinese Literature: Advanced Texts

JAPANSE 115
Japanese Literature: Advanced Texts

KOREAN 115
Korean Literature: Advanced Texts

Or graduate seminars
C. Four additional courses selected from an approved list.

1. At least two of these courses must be taken in one (or more) department(s) other than the student’s major department.
2. The courses must cover at least two different Asian countries, one of which is the country of language specialization.
3. No more than two of the courses may be lower-division (and only one may be lower-division if any combination of second- or third-year East Asian language is used for the language required above).

1 These courses require placement examinations given by the Academic Testing Center. Students who, for example, place out of CHINESE 2B would then take CHINESE 2C, CHINESE 3A-CHINESE 3B to meet the requirement.
2 These courses have a prerequisite of completion of the fourth-year language sequence or its equivalent.
3 Available at the Asian Studies Minor website (http://www.humanities.uci.edu/asiastudies).

NOTE: A maximum overlap of two courses is permitted between this minor and a student’s major.

Residence Requirement for the Minor: Four upper-division (or graduate) courses must be successfully completed at UCI. Two of the four may be taken through the UC Education Abroad Program, provided course content is approved in advance by the appropriate program director.

Interdisciplinary Minor in Jewish Studies
Matthias Lehmann, Director
400 Murray Krieger Hall
949-824-6735
www.humanities.uci.edu/jewishstudies

The minor in Jewish Studies is an interdisciplinary program that introduces students to the many facets of Jewish cultures through the study of the history, philosophy, art, literature, languages, and social and political institutions of Jews from ancient to modern times. The minor provides students with grounding in areas of fundamental importance to the Humanities and Social Sciences, supporting and enriching the students’ majors. The minor may be taken in tandem with any major and prepares students for graduate programs in Jewish Studies. The interdisciplinary approach of Jewish Studies exposes students to a wide range of disciplines and, like other established liberal arts fields, provides a foundation for pursuing a range of careers.

Requirements for the Minor in Jewish Studies
A. Complete:

HISTORY 18A
Introduction to Jewish Cultures

B. Select at least four upper-division courses from the approved list on the Jewish Studies website. 1

C. Select three additional, lower- or upper-division courses from the approved list on the Jewish Studies website. 1

1 Students should consult the Jewish Studies website (http://www.humanities.uci.edu/jewishstudies/program/minor.php). With the approval of the Director, other relevant courses may satisfy the requirements for the minor.

Residence Requirement for the Minor: At least four upper-division courses required for the minor must be completed successfully at UCI. By petition, two of the four may be taken through the UC Education Abroad Program, providing course content is approved in advance by the appropriate program director.

Interdisciplinary Minor in Latin American Studies
Alex Borucki, Director
322 Humanities Hall
949-824-6901
Latin America is a complex cultural and historical region created by Spanish and Portuguese colonization in the New World and which encompasses territories and peoples from the southernmost tip of South America to the Caribbean Islands and the United States. As an area born out of a series of conquests, migrations, contacts, and conflicts, it is transcultural, multi-lingual, and multi-ethnic. It has been a vital part of the formation of the modern world even as it has continued to function as a source for the expression of economic, political, and cultural alternatives to dominant Western formations. The minor provides deeper knowledge and expertise in this region for students interested in a variety of careers. It complements the disciplinary training of a students’ major field by asking that students engage with Latin America through a variety of disciplines and by working with faculty across different schools at UCI.

Requirements for the Minor in Latin American Studies
Requirements for the minor are met by taking seven courses (of which no more than three may be lower-division) as specified below. No more than four courses may be taken in any one single department.

A. Complete one of the following core courses:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>SPANISH 50</td>
<td>Latin America, U.S. Latino, and Iberian Cultures</td>
</tr>
<tr>
<td>HISTORY 70D</td>
<td>Problems in History: Latin America</td>
</tr>
<tr>
<td>HUMAN 100</td>
<td>Latin America and the Caribbean</td>
</tr>
</tbody>
</table>

B. One course from each of the following three categories—History, Culture, and Social Sciences—selected from the approved list on the Latin American Studies website.

C. Three additional courses selected from the approved list.

The approved list is available at the Latin American Studies website (http://www.humanities.uci.edu/latinamericanstudies).

With the approval of the director, other relevant courses also may satisfy the requirements for the minor.

Residence Requirement for the Minor: Four upper-division courses required for the minor must be completed successfully at UCI. Two of the four may be taken through the UC Education Abroad Program, provided course content is approved in advance by the appropriate department chair.

Graduate Emphasis in Latin American Studies
The Graduate Emphasis in Latin American Studies is open to students from all fields and allows students to gain interdisciplinary knowledge about the study of Latin America and form scholarly relationships with a range of faculty and graduate students interested in Latin America from across the UCI campus. The emphasis requires one year-long foundation workshop on Latin American Studies and two graduate seminars dealing centrally with issues related to Latin America.

Admission
Applicants must first be admitted to, or currently enrolled in, a Master’s or Ph.D. program at UCI and submit an application form to the director of the emphasis. Students should ideally apply while they are still engaged in coursework, but exceptions may be considered by the committee.

Requirements for the Graduate Emphasis in Latin American Studies
Minimum course work for the graduate emphasis in Latin American Studies consists of three courses: a three quarter course entitled Issues in Latin American Studies (HUMAN 265A, HUMAN 265B, HUMAN 265C) and two approved electives that are centrally related to the study of Latin America. Many students may elect to take one of these seminars within their home departments as course-work that also satisfies other degree requirements. One of these seminars must be from outside the student’s home department (and not cross-listed with their home department). For students completing an M.A. thesis or Ph.D. dissertation, the research project will engage the study of Latin America as part of the overall project and one member of the candidate’s dissertation committee should be a core or affiliate faculty in Latin American Studies.

Interdisciplinary Minor in Persian Studies
Touraj Daryaee, Director
400 Murray Krieger Hall
949-824-6735
www.humanities.uci.edu/persianstudiesminor

The interdisciplinary minor in Persian Studies offers undergraduate students an opportunity to study the Iranian and the Persianate world through the study of language, literature, history, and culture. Students who complete the minor will acquire command of the Persian language and have a grasp of the history, literature, art and architecture, cinema, and/or music of the Iranian and the Persianate world. With a minor in Persian Studies, students will learn how to study Persian literary and historical texts and selected cultural art forms as well as the history of Iran, Afghanistan, Tajikistan, and beyond. The minor may be taken in tandem with any major.
Requirements for the Minor in Persian Studies

Requirements for the minor are met by taking eight courses (32 units) beyond PERSIAN 2C (of which no more than four may be lower-division, excluding first and second year Persian language courses) as specified below. No more than four courses may be taken in any one single discipline.

A. Complete the following:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>PERSIAN 2C</td>
<td>Intermediate Persian (or equivalent proficiency)</td>
</tr>
<tr>
<td>PERSIAN 50</td>
<td>Persian Culture</td>
</tr>
</tbody>
</table>

B. Complete the following:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>HISTORY 131B</td>
<td>Ancient Persia</td>
</tr>
<tr>
<td>HISTORY 131C</td>
<td>Medieval Persia</td>
</tr>
<tr>
<td>HISTORY 131D</td>
<td>Modern Iran</td>
</tr>
</tbody>
</table>

C. Select four courses chosen from an approved list.¹

¹ Consult the Persian Studies minor website (http://www.humanities.uci.edu/persianstudiesminor) for a list of approved courses. With the approval of the Director, other relevant courses also may satisfy the requirements for the minor.

Residence requirement for the minor: Four upper-division courses required for the minor must be completed successfully at UCI.

Additional Interdisciplinary Minors

Information about the following two minors is available in the School of Social Sciences section (p. 1654) of the Catalogue.

The minor in Conflict Resolution provides skills in conflict analysis and resolution and a useful understanding of integrative institutions at the local, regional, and international levels.

The minor in Chicano/Latino Studies is designed to provide an awareness, knowledge, and appreciation of the language, history, culture, literature, sociology, anthropology, politics, social ecology, health, medicine, and creative (art, dance, film, drama, music) accomplishments in the Chicano/Latino communities.

Information about the following minors is available in the Interdisciplinary Studies section (p. 1137) of the Catalogue.

The minor in Civic and Community Engagement seeks to provide students with the knowledge, skills, attitudes, and values to engage as citizens and active community members in the twenty-first century. The minor is distinguished both by what students learn, and by how they learn it.

The minor in Global Sustainability trains students to understand the changes that need to be made in order for the human population to live in a sustainable relationship with the resources available on this planet.

The minor in the History and Philosophy of Science explores how science is actually done and how it has influenced history, and is concerned with determining what science and mathematics are, accounting for their apparent successes, and resolving problems of philosophical interest that arise in the sciences.

The minor in Native American Studies focuses on history, culture, religion, and the environment. The three core courses serve as an introduction to the Native American experience from the perspective of different historical periods and frameworks of analysis.

Academic English/English as a Second Language Program

335 Humanities Instructional Building
949-824-6781
http://www.humanities.uci.edu/esl/

Jerry Lee, Director of the Academic English/English as a Second Language Program

Academic English 20A-B-C-D through 29 and 139W are for students who have been admitted to UCI and who need additional coursework in Academic English. Enrollment in a number of the Academic English classes is restricted to those students who place into that particular course based on the results from the Academic English placement test. Students required to complete AC ENG 20A, AC ENG 20B, AC ENG 20C, AC ENG 20D, and/or AC ENG 22A must complete the lower-division reading/writing requirement before their seventh quarter or they will be subject to probation. They are to enroll in WRITING 39A immediately after they are authorized to do so by the Academic English/English as a Second Language Program. Academic English courses are required to be completed as a Pass/Not Pass only grade option which will apply toward the 12 baccalaureate unit limit on P/NP only coursework. Students will receive workload credit for Academic English courses taken beyond this 12-unit limit but will not receive additional credits applicable to the bachelor's degree.

Minor in Medical Humanities

Sven Bernecker, Co-Director
Medical Humanities is an interdisciplinary, humanistic, and cultural study of illness, health, health care, and the body. In contrast to the medical sciences, the medical humanities – which include bioethics, narrative medicine, history of medicine, culture studies, science and technology studies, medical anthropology, philosophy, dance, music, literature, film, and visual and performing arts – focus more on meaning making than measurement.

Students explore the boundaries between sickness and health, and learn to see life through a patient’s eyes. Topics include the authority of the physician, the role of the hospital, the doctor-patient relationship, the social dimensions of racial and gender differences, and changing conceptions of disease and healing.

The minor may be combined with any major and of particular interest to those students planning to attend medical school, nursing school, pharmacy school, and public health school, as well as students in the humanities seeking to pursue graduate work in the field of medical humanities.

### Requirements for the Minor in Medical Humanities

A. Select one of the following:

<table>
<thead>
<tr>
<th>Course</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>MED HUM 1</td>
<td>Health, Wellness, and Conception of the Body</td>
</tr>
<tr>
<td>MED HUM 3</td>
<td>Art and Medicine</td>
</tr>
</tbody>
</table>

B. Select one of the following:

<table>
<thead>
<tr>
<th>Course</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>CLASSIC 10</td>
<td>Scientific and Specialized Terminology</td>
</tr>
<tr>
<td>DANCE 3</td>
<td>Scientific Concepts of Health</td>
</tr>
<tr>
<td>GEN&amp;SEX 60A</td>
<td>Gender and Science</td>
</tr>
<tr>
<td>PHILOS 3</td>
<td>Technology and Society</td>
</tr>
<tr>
<td>PHILOS 4</td>
<td>Introduction to Ethics</td>
</tr>
<tr>
<td>PHILOS 5</td>
<td>Contemporary Moral Problems</td>
</tr>
</tbody>
</table>

C. Select one of the following:

<table>
<thead>
<tr>
<th>Course</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>GEN&amp;SEX 165B</td>
<td>Sexuality, Health and Medicine</td>
</tr>
<tr>
<td>PHILOS 121A</td>
<td>Medical Epistemology</td>
</tr>
<tr>
<td>PHILOS 131C</td>
<td>Medical Ethics</td>
</tr>
</tbody>
</table>

D. Complete the following:

<table>
<thead>
<tr>
<th>Course</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>MED HUM 195</td>
<td>Capstone Seminar: The Clinical Moral Laboratory</td>
</tr>
</tbody>
</table>

E. Select three additional courses (two of which must be upper-division) chosen from those listed above in A, B, and C, and among a list of quarterly approved courses. With the approval of the Co-Directors of the Minor in Medical Humanities, other relevant courses may satisfy the requirements for the minor.

1 The list of quarterly approved courses is available on the Medical Humanities website (http://www.humanities.uci.edu/medicalhumanities).

### Residence Requirement for the Minor:

Four upper-division courses required for the minor must be successfully completed at UCI. Two of the four may be taken through the UC Education Abroad Program, provided course content is approved in advance by the Co-Directors of the Minor in Medical Humanities.

### Graduate Emphasis in Medical Humanities

The graduate emphasis in Medical Humanities is a formal component of graduate studies at UCI in addition to the fulfillment of requirements toward a Ph.D., M.F.A., or M.A. in an array of fields in the schools of Arts, Humanities, and Medicine.

The emphasis allows students to gain interdisciplinary knowledge about the study of illness, health, healthcare, and the body. The emphasis requires three graduate seminars offered through the Medical Humanities graduate course offerings. Satisfactory completion of the emphasis is certified by the Director or Co-Directors of the Medical Humanities Emphasis and is noted at the student’s dossier.

### Admission

Applicants must first be admitted to, or currently enrolled in, a Ph.D. program or state-supported Master’s program and submit an application form to the director of the emphasis. The application should include a signature of approval from the student’s advisor or program director.

### Requirements

Minimum course work for the graduate emphasis in Medical Humanities consists of three courses, part of the Medical Humanities graduate course offerings, chosen in consultation with the Graduate Emphasis co-directors. Students may elect to take seminars within their home departments as course work that also satisfies other degree requirements. One of the three courses has to be core course MED HUM 200. An upper-division
undergraduate course with supplemental graduate level work after consultation with the instructor and the director or co-directors can count toward the emphasis.

Course Options for the Emphasis

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>ANTHRO 204A</td>
<td>Proseminar in Medicine, Science, and Technology</td>

<tr>
<td>ANTHRO 232B</td>
<td>Medical Anthropology</td>
</tr>
<tr>
<td>ASIANAM 201</td>
<td>Graduate Topics in Asian American Studies</td>
</tr>
<tr>
<td>CHC/LAT 210A</td>
<td>Cultural and Historical Precedents for Latinos and Medical Care</td>
</tr>
<tr>
<td>CHC/LAT 210B</td>
<td>Cultural and Historical Precedents for Latinos and Medical Care</td>
</tr>
<tr>
<td>CHC/LAT 211A</td>
<td>Latinos/Latinas and Medical Care: Contemporary Issues</td>
</tr>
<tr>
<td>CHC/LAT 289</td>
<td>Special Topics in Chicano/Latino Studies</td>
</tr>
<tr>
<td>DANCE 201</td>
<td>Seminar in Kinesiology for Dance</td>
</tr>
<tr>
<td>ENGLISH 210</td>
<td>Studies in Literary History</td>
</tr>
<tr>
<td>PHILOS 242</td>
<td>Topics in Philosophy of Biology</td>
</tr>
<tr>
<td>MED HUM 200</td>
<td>Critical Perspectives in Medical Humanities</td>
</tr>
</tbody>
</table>

Academic English Courses

**AC ENG 20A. Academic Writing. 5 Units.**
Grammar, sentence structure, paragraph and essay organization of formal written English.

Prerequisite: Placement into AC ENG 20A.
Grading Option: Pass/no pass only.

**AC ENG 20B. Academic Writing. 5 Units.**
Grammar, sentence structure, paragraph and essay organization of formal written English.

Prerequisite: AC ENG 20A. Placement into AC ENG 20B is also accepted.
Grading Option: Pass/no pass only.

**AC ENG 20C. Essentials of Academic Writing. 5 Units.**
Grammar, sentence structure, paragraph and essay organization of formal written English.

Prerequisite: AC ENG 20B. Placement into AC ENG 20C is also accepted.
Grading Option: Pass/no pass only.

**AC ENG 20D. Academic Writing. 5 Units.**
Grammar, sentence structure, paragraph and essay organization of formal written English.

Prerequisite: AC ENG 20C
Grading Option: Pass/no pass only.

**AC ENG 22A. Academic English Reading and Vocabulary. 2 Units.**
Intensive reading exercises with occasional practice in extensive reading, focusing on comprehension, development of vocabulary, syntax, rhetorical features, reading strategies, and study skills.

Prerequisite: Placement into AC ENG 22A is required.
Grading Option: Pass/no pass only.

**AC ENG 22B. ESL Reading and Vocabulary. 2 Units.**
Extensive reading and discussion with emphasis on journal articles, textbook chapters, notetaking, and the interpretation of charts, diagrams, tables, and figures.

Grading Option: Pass/no pass only.
AC ENG 23A. ESL Pronunciation I. 2 Units.
Designed for international graduate students. Provides an emphasis on pronunciation. Development of listening and speaking skills in five fundamental areas: pronunciation, intonation, word stress, listening comprehension, and informal campus communication. Presentations of personal experiences and reports on graphs.

Grading Option: Pass/no pass only.
Repeatability: May be taken for credit 3 times.

AC ENG 23B. ESL Conversation II. 2 Units.
Designed for international graduate students. Provides an emphasis on conversational fluency. Further development of listening and speaking skills: review of English sounds, sentence stress, and rhythm. Oral reports, debates, and reports on graphs and surveys.

Grading Option: Pass/no pass only.
Repeatability: May be taken for credit 3 times.

AC ENG 23C. ESL Advanced Communication III. 2 Units.
Designed for international graduate students with advanced communication skills. Further development of listening and speaking skills: review of minimal pairs, consonant blends, intonation, stress and rhythm. Oral presentations emphasized utilizing graphs, syllabi, academic terms, and video presentations on academic work.

Prerequisite: AC ENG 23A or AC ENG 23B

Grading Option: Pass/no pass only.
Repeatability: May be taken for credit 3 times.

AC ENG 24. ESL International TA Workshop. 2 Units.
Designed for advanced-level international students preparing to be teaching assistants. Provides extensive practice in oral and written communication skills associated with teaching introductory-level college courses and participating in academic presentations and discussions. Review and analysis of language problems.

Prerequisite: AC ENG 23A or AC ENG 23B or AC ENG 23C

Grading Option: Pass/no pass only.
Repeatability: May be taken for credit 3 times.

AC ENG 28. Grammar. 2-4 Units.
A full review of English grammar covering the following areas: grammar terms, verb tenses, verb forms, conditionals, passive and word forms, punctuation, sentence structure. The concepts are applied in targeted sentence and paragraph writing practice.

Grading Option: Pass/no pass only.
Repeatability: May be taken for credit 3 times.

AC ENG 29. Special Topics in ESL. 2 Units.
Directed and individualized work in English as a second language not covered in the AC ENG 20, 21, 22 sequence.

Grading Option: Pass/no pass only.
Repeatability: Unlimited as topics vary.

AC ENG 139W. Advanced Academic Writing Across the Curriculum. 4 Units.
Designed for transfer students who speak English as a second language. Focuses on developing academic reading and writing skills including essay content, organization, vocabulary, and grammar. Academic content also covered.

Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.
Restriction: Restricted to students whose first language is not English.
Medical Humanities Initiative Courses

MED HUM 1. Health, Wellness, and Conception of the Body. 4 Units.
Asks what is health and who gets to have it? What is considered a “healthy” or “sick” body? We analyze historical and contemporary experiences of illness, medicine, and caregiving, including how patients represent their bodies and healing.

(GE III or IV).

MED HUM 3. Art and Medicine. 4 Units.
Analyzes the relationship between medicine and the visual arts from the late medieval to modern periods, covering topics such as anatomy, optical medical technologies, gender and race in medicine, and popular representations of disease and doctors.

(GE II or IV).

MED HUM 195. Capstone Seminar: The Clinical Moral Laboratory. 4 Units.
Interdisciplinary exploration of the clinical encounter, and the importance of meaning making in these “moral laboratories.” Students enter the clinical space as participant observers, and reflect on how the clinical site informs and challenges reading practices.

Prerequisite: MED HUM 1 or MED HUM 3 or GEN&SEX 60A. Satisfactory completion of the Lower-Division Writing requirement.
Restriction: Upper-division students only.

MED HUM 200. Critical Perspectives in Medical Humanities. 4 Units.
Analyzes social and cultural understandings of the body, health, illness, medicine, and disease. Themes include critical histories of the body; non-compliant subjects interacting with medicine; racial-sexual hierarchies of health; and theories and expressions of pain and suffering.

Restriction: Graduate students only.

Graduate Program in Visual Studies

James Nisbet, Director
2000 Humanities Gateway
949-824-1124
http://www.humanities.uci.edu/visualstudies/

Overview

The graduate program in Visual Studies, administered jointly by the faculties of the Department of Art History and the Department of Film and Media Studies, offers students the opportunity to pursue a doctorate in the cultural analysis of visual artifacts and experiences. Visual Studies synthesizes methodological insights from both component disciplines in order to examine the social practices of visual representation and visuality itself. The program leads to a Ph.D. in Visual Studies. While the program (in certain instances) grants an M.A. to students en route to their Ph.D., it admits only those students intending to complete their doctorate at UCI.

In addition, an emphasis in Visual Studies, described on the Requirements tab, is available to Ph.D. and M.F.A. students in all departments at UCI.

Admission

The program is open to students applying with either a bachelor’s or a master’s degree, and applicants must meet the general requirements for admission to graduate study at UCI. A recent sample of academic writing—such as a representative undergraduate paper, or the master’s thesis or a major research paper written at the master’s level—should be submitted with the application packet.

The program accepts applicants for admission for the fall quarter only. Additional information is available on the Visual Studies website (http://www.humanities.uci.edu/visualstudies).

Language Requirements

All students are required to demonstrate a reading knowledge of at least one foreign language and are strongly encouraged to develop competence in a second. Students consult with the Director and/or their principal advisor(s) to determine the appropriate language on which the student will be tested, based on their interests and program of study. Advisors, moreover, may require the demonstration of reading knowledge in additional languages according to the scholarly demands of the student’s specific field. All language requirements must be satisfied before students are advanced to candidacy for the Ph.D.

Course Requirements

Beyond the core series (VIS STD 290A-VIS STD 290B-VIS STD 290C), students are required to complete an additional 11 courses for a total of 14 courses. Out of this total, at least 10 courses (including the core series and VIS STD 297) must be within the program in Visual Studies, and at least two courses are to be from outside the Visual Studies discipline.
Students admitted with an M.A. in a related field may petition the Visual Studies Graduate Committee to have some of their course requirements waived; such petitions will be considered in close consultation with the primary advisor and on a case-by-case basis (though all students must take the core sequence). While students may accrue units for University Teaching (ART HIS 399 or FL&MDA 399), Reading for the Preliminary Examination (VIS STD 298A), and Prospectus Research (VIS STD 298B) these do not count toward the required number of courses.

**Master’s Paper and M.A.**

During their second year, students admitted without an M.A. in a related field will enroll in VIS STD 296 for the purpose of expanding and developing a seminar paper into a Master’s paper under the supervision of a faculty advisor. The Master’s paper is an essay of near-publication quality, approximately 30 pages in length. In addition to the advisor, two additional readers from the Visual Studies faculty will assess the Master’s paper and the student’s overall academic performance. The committee will assess whether or not the student has satisfied all requirements for the M.A. Those students who have satisfied the M.A. requirements, but whose committees assess their work as not meeting the standards for Ph.D. study, will receive a terminal M.A.

**Preliminary Examination**

By the end of the first year, a student must reach an agreement with one of the program’s core faculty members to serve as principal advisor. The student will work with the principal advisor to plan completion of his or her program requirements and to select the faculty who will supervise examination fields. The examination committee will be constituted in accordance with UCI Senate and Visual Studies program policies.

The student and principal advisor define two fields, one major and one minor to be examined by the faculty. The fields should combine historical breadth and some variety in media. Over the course of two quarters, students prepare reading lists in close consultation with their principal advisor and field supervisor, and complete the reading of those lists. The examination normally takes place at the end of each of the two quarters of study.

The first part of the examination consists of a written component, in which the student is called upon to respond to questions posed in the two examination fields. The student’s written responses are assessed by the director of each exam reading as pass or fail; however, the responses are circulated to all committee members. There is also an oral component to the preliminary exam process.

**Prospectus and Advancement to Candidacy**

During their third year, students draft a prospectus that defines the scope, approach, and rationale for a proposed dissertation and begin research on the dissertation. At the end of the third year the student should defend the written exams and prospectus with the entire five-person committee. Based on the student’s written exam results, prospectus, oral defense, and overall progress, the committee will determine whether the student has successfully advanced to candidacy. Except in extraordinary circumstances, no student will be given more than two chances to pass any given section of the examination.

Advancement to candidacy for the Ph.D. is contingent upon successful completion of both the preliminary exams, subsequent approval of the prospectus by the dissertation committee, and satisfaction of all language requirements. The normative time for advancement to candidacy is three years.

**Dissertation**

The student and the principal advisor consult to determine the composition of a doctoral committee of three members including the principal advisor, which then must unanimously approve the prospectus before the student proceeds with the dissertation. The doctoral committee, on the basis of the candidate’s past academic performance and proposed dissertation topic, may require additional course work or other forms of preparation for the dissertation. The doctoral committee, under the direction of the principal advisor, supervises the student’s research program and ultimately approves the dissertation. The normative time for completion of the Ph.D. program is six years, and the maximum permitted is seven years.

After submitting a full dissertation to their committee members, students will be required to pass an oral dissertation defense with their three-person doctoral committee prior to filing their dissertation and graduating. The examination will be open to all members of the academic community. Faculty and graduate students of the school (or academic unit) and the Graduate Dean must be given appropriate written notice at least five days in advance of the date, time, and place of the examination.

**Graduate Emphasis in Visual Studies**

In addition to the doctoral program in Visual Studies described above, the Program in Visual Studies also offers an emphasis in Visual Studies available to Ph.D. and M.F.A. students in all departments at UCI. Satisfactory completion of the emphasis is certified by the Director of Visual Studies and is noted in the student's dossier.

**Admission to the Program**

Students must first be admitted to, or currently enrolled in, a Ph.D. or M.F.A. program at UCI. Applicants must submit to the Director of Visual Studies a summary of prior undergraduate and graduate course work related to Visual Studies, institutions attended, and major(s), together with a brief statement of purpose, including career objectives, areas of interest and research, record of research, teaching, professional accomplishments, and/or creative work. Lack of prior course work does not preclude admission, so long as a compelling statement of research interests, congruent with the emphasis, makes the case. Admission to the emphasis is on a rolling basis. The Director tracks students’ progress toward fulfillment of the emphasis requirements and meets with students to advise them on a program of study, as required.
Emphasis Requirements
Minimum course work for the graduate emphasis in Visual Studies consists of four courses: VIS STD 290C and three additional elective Visual Studies seminars.

For doctoral students, the qualifying examination and dissertation topic should incorporate Visual Studies as a central concern. One area of the Ph.D. qualifying examination should be on a Visual Studies topic, and one member of the candidate’s qualifying examination committee and dissertation committee is normally a member of the Visual Studies faculty. There are no requirements concerning qualifying examinations or theses for M.F.A. students.

Faculty
Eyal Amiran, Ph.D. University of Virginia, Professor of Comparative Literature; Film and Media Studies; Visual Studies (digital media theory, twentieth-century literature, narrative and textual theory, psychoanalysis, modern and postmodern intellectual history)

Catherine Benamou, Ph.D. New York University, Associate Professor of Film and Media Studies; Culture and Theory; Visual Studies (Hispanophone and Lusophone cinema and television, U.S. Latino media, Orson Welles and maverick cinema, transnational flows, spectatorship, cinematic memory and cultures of preservation)

Roland Betancourt, Ph.D. Yale University, Assistant Professor of Art History; Visual Studies (Byzantine and Medieval Art, Critical Theory)

Bridget R. Cooks Cumbo, Ph.D. University of Rochester, Associate Professor of African American Studies; Art History; Culture and Theory; Visual Studies (African American art, museum studies, feminist and post-colonial theory)

Sohail Daulatzai, Ph.D. University of Southern California, Associate Professor of Film and Media Studies; African American Studies; Visual Studies (African American studies, postcolonial theory, race, hip hop, Muslim diasporas)

Aglaya Glebova, Ph.D. University of California, Berkeley, Assistant Professor of Art History; Film and Media Studies; Visual Studies (history and theory of photography and film, European avant-garde, Russian and Soviet art)

Bambi Haggins, Ph.D. University of California, Los Angeles, Associate Professor of Film and Media Studies; Visual Studies (Black [African American] comedy in film, television, digital media and performance, television history, comedy as social and political discourse, African-American studies, American studies)

Kristen L. Hatch, Ph.D. University of California, Los Angeles, Director of the Graduate Program in Visual Studies and Associate Professor of Film and Media Studies; Visual Studies (American film history; stardom; histories of race, gender, and sexuality; childhood; melodrama)

James D. Herbert, Ph.D. Yale University, Professor of Art History; Visual Studies (modern European art)

Lucas Hilderbrand, Ph.D. New York University, Professor of Film and Media Studies; Visual Studies (Queer cultures and media, cultural studies, documentary, pornography, popular music, video art, histories of technology)

Victoria E. Johnson, Ph.D. University of Southern California, Associate Professor of Film and Media Studies; African American Studies; Culture and Theory; Visual Studies (television, critical race theory, sound, media policy, sport)

Peter O. Krapp, Ph.D. University of California, Santa Barbara, Department Chair and Professor of Film and Media Studies; English; Informatics; Music; Visual Studies (digital culture, media history, cultural memory)

Felicidad (Bliss) Lim, Ph.D. New York University, Associate Professor of Film and Media Studies; Visual Studies (Philippine cinema, temporality, postcolonial and feminist film theory, transnational horror and the fantastic, film archives)

Catherine Liu, Ph.D. Yale University, Professor of Film and Media Studies; Comparative Literature; Visual Studies (Hou Hsiao-hsien, culture wars, Frankfurt School, historiography of critical theory/cultural studies, surveillance, cold war culture and neoliberalism)

Lyle Massey, Ph.D. University of California, Los Angeles, Associate Professor of Art History; Visual Studies (Italian Renaissance and early modern European art, gender theory, science studies)

Margaret Miles, Ph.D. Princeton University, Professor of Art History; Religious Studies; Visual Studies (Greek and Roman art, archaeology)

Tyrus Miller, Ph.D. Stanford University, Dean of the School of Humanities and Professor of English; Art History; Visual Studies (modernist and avant-garde studies in literature and visual arts; critical theory and aesthetics; modern architecture and urbanism; East-Central European studies; culture of socialism and post-socialism; Frankfurt School theory)

Glen M. Mimura, Ph.D. University of California, Santa Cruz, Associate Professor of Film and Media Studies; Visual Studies (minoritarian and political film; media and race; popular culture and social movements)

James P. Nisbet, Ph.D. Stanford University, Associate Professor of Art History; Visual Studies (modern and contemporary art)
Alka Patel, Ph.D. Harvard University, Associate Professor of Art History; History; Religious Studies; Visual Studies (South Asian and Islamic art and architecture, historiographies, Islamic diasporas in Cuba)

Allison J. Perlman, Ph.D. University of Texas at Austin, Associate Professor of History; Film and Media Studies; Visual Studies (history of broadcasting, American social movements, media law and policy, media activism, popular memory)

Amy Powell, Ph.D. Harvard University, Associate Professor of Art History; European Languages and Studies; Religious Studies; Visual Studies (Late medieval and early modern art of northern Europe, critical theory)

Fatimah Tobing Rony, Ph.D. Yale University, Associate Professor of Film and Media Studies; Culture and Theory; Visual Studies (ethnographic film, race and representation, film production)

Braxton Soderman, Ph.D. Brown University, Assistant Professor of Film and Media Studies; Visual Studies (digital and new media studies, video games, networks, digital art and electronic literature)

Cécile Marie Whiting, Ph.D. Stanford University, Professor of Art History; Visual Studies (American art, 20th century visual culture)

Bert Winther-Tamaki, Ph.D. New York University, Department Chair and Professor of Art History; Asian American Studies; Visual Studies (modern Japanese art and visual culture, Asian American art, art and globalization)

Roberta Wue, Ph.D. New York University, Associate Professor of Art History; Visual Studies (modern Chinese art, photography, print culture)

Affiliate Faculty

M. Ackbar Abbas, M.Phil. University of Hong Kong, Professor of Comparative Literature; Film and Media Studies; Visual Studies (Hong Kong culture and postcolonialism, visual culture, architecture and cinema, cultural theory, globalization)

Geoffrey C. Bowker, Ph.D. University of Melbourne, Chancellor's Professor of Informatics; Visual Studies (values in design, social studies of databases, science and technology studies)

Kyung Hyun Kim, Ph.D. University of Southern California, Professor of Korean Culture; Asian American Studies; Film and Media Studies; Visual Studies (East Asian cinema, modern Korea, critical theory)

Jared Charles Sexton, Ph.D. University of California, Berkeley, Associate Professor of African American Studies; Culture and Theory; Film and Media Studies; Visual Studies (race and sexuality, policing and imprisonment, contemporary U.S. cinema and political culture, multiracial coalition, critical theory)

Michael F. Szalay, Ph.D. Johns Hopkins University, Department Chair and Professor of English; Film and Media Studies; Visual Studies (contemporary television and literature)

Roxanne Varzi, Ph.D. Columbia University, Associate Professor of Anthropology; Culture and Theory; Film and Media Studies; Religious Studies; Visual Studies (Iran, media, war, visual anthropology, film studies, ethnographic and fiction writing)

Courses

VIS STD 290A. Art History: Theories and Methods. 4 Units.
Examines canonical texts and explores current directions in Art History.

VIS STD 290B. Film & Media Studies: Theories and Methods. 4 Units.
Examines canonical texts and explores current directions in Film and Media Studies.

VIS STD 290C. Visual Studies: Theories and Methods. 4 Units.
Examines canonical texts and explores current directions in Visual Studies.

VIS STD 294. Getty Consortium Seminar. 4 Units.
Special graduate seminar offered at the Getty Research Institute in Los Angeles, involving faculty and graduate students from the five graduate programs in Art History or Visual Studies located in southern California (UCI, UCLA, UCR, UCSB, and USC).

Repeatability: Unlimited as topics vary.

VIS STD 295. Graduate Seminar in Visual Studies. 4 Units.
Studies in selected areas of Visual Studies. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.
VIS STD 296. Directed Reading. 4 Units.
Directed reading on a specific topic agreed upon by student and instructor.
Repeatability: May be repeated for credit unlimited times.
Restriction: Graduate students only.

VIS STD 297. Writing Practicum. 4 Units.
Offered winter quarter each year and taught in a workshop format. Assists students with the preparation and revision of the dissertation prospectus so that they may advance to candidacy.
Prerequisite: VIS STD 290A and VIS STD 290B and VIS STD 290C
Grading Option: Satisfactory/unsatisfactory only.
Restriction: Graduate students only.

VIS STD 298A. Reading for the Preliminary Examination. 4-12 Units.
Grading Option: Satisfactory/unsatisfactory only.
Repeatability: May be repeated for credit unlimited times.
Restriction: Graduate students only.

VIS STD 298B. Prospectus Research. 4-12 Units.
Research and writing of the dissertation prospectus.
Grading Option: Satisfactory/unsatisfactory only.
Repeatability: May be repeated for credit unlimited times.
Restriction: Graduate students only.

VIS STD 299. Dissertation Research. 4-12 Units.
Research and writing of the dissertation.
Grading Option: Satisfactory/unsatisfactory only.
Repeatability: May be repeated for credit unlimited times.
Restriction: Graduate students only.
Donald Bren School of Information and Computer Sciences

- Degrees (p. 1018)
- Honors (p. 1018)
- Careers (p. 1018)

Overview

The Donald Bren School of Information and Computer Sciences (ICS) embodies excellence, creativity, and collaborative innovation in computer science and information technology. As the only independent computing school in the University of California system, it is well-positioned to continue its tradition of exploring and advancing the boundaries of a broad, multidisciplinary field on a global scale.

ICS faculty have extensive training in traditional computer science, as well as engineering, mathematics and statistics, and the social sciences. The School’s stand-alone structure, as opposed to being part of an engineering school, enables the faculty to take the broadest possible view of computer science and information technology. This breadth is reflected in the diverse set of academic degree options for undergraduate and graduate students, some of which are interdisciplinary and jointly administered with other academic units.

The School’s three departments — Computer Science, Informatics, and Statistics — fuel a wide range of instructional and research efforts, including: design of algorithms and data structures; computer architecture and embedded computer systems; networked and distributed systems; systems software; social and mobile computing; artificial intelligence, machine learning and data mining; computer games and virtual worlds; databases and information retrieval; computer graphics and visualization; bioinformatics, computational biology and genomics; computer-supported cooperative work, human-centered computing and human-computer interaction; security and privacy; software engineering; managerial and social aspects of computing technology; and statistics. The vibrant ICS community continues to explore innovative topics ranging from building complete computer systems on chips smaller than a human fingernail to developing user-interface systems that allow workers on opposite sides of the world to collaborate effectively. ICS research continues to focus on how computing and information technology can be used to solve a broad set of real-world problems, such as improving how first responders communicate during a crisis, optimizing transportation systems, analyzing data to expedite biological research, and improving network security.

ICS faculty actively lead and participate in a variety of research laboratories, institutes and centers, including the Institute for Genomics and Bioinformatics; Institute for Software Research; Institute for Virtual Environments and Computer Games; California Institute for Telecommunications and Information Technology (Calit2); Data Science Initiative; Center for Machine Learning and Intelligent Systems; Center for Digital Transformation; Center for Emergency Response Technologies; Center for Algorithms and Theory of Computation; Center for Research in Sustainability, Collapse-Preparedness & Information Technology; Secure Computing and Networking Center; Center for Ethnography; Social & Technological Action Research Group; Secure Systems and Software Laboratory; Software Engineering and Analysis Lab; Computational Vision Lab; Transformative Play Lab; Laboratory for Ubiquitous Computing and Interaction; and Institute for Future Health.

Faculty and student-driven research in ICS is supported through a variety of grants, gifts, and contracts from public and private institutions such as the State of California, the U.S. Department of Education, various U.S. defense agencies, the National Science Foundation, the National Institutes of Health, NASA, and various companies, including The Aerospace Corporation, Boeing, Disney, Experian, Google, IBM, Intel, Microsoft, Samsung, Facebook, and Yahoo!

Faculty and alumni of ICS have contributed some of computing’s most significant advancements, including revolutionizing computer-aided drafting techniques; the creation of the current Hypertext Transfer Protocol (HTTP/1.1); development of the Internet standards for HTTP and Uniform Resource Identifiers (URI); the founding of the Apache HTTP Server Project that produces the software for more than 60 percent of public Internet websites; and the creation of the Domain Name System (DNS) that translates Web and e-mail addresses into the numeric system used to route information along the Internet.

ICS is committed to increasing diversity in the computing and information technology fields. The Office of Access and Inclusion (http://tech.uci.edu/access) was created in 2014 as a joint initiative between ICS and UCI’s Samuel School of Engineering to support the recruitment, retention, and graduation of undergraduate and graduate students from populations underrepresented in engineering and computer science. The School is also an active partner of the National Center for Women & Information Technology (NCWIT), whose overarching goal is parity in the professional information field.
technology workforce, and a committed BRAID (Building, Recruiting And Inclusion for Diversity) Institution, working to increase the percentage of women and students of color majoring in computer science.

1. Offered jointly with The Paul Merage School of Business. See the Interdisciplinary Studies (p. 1137) section of the Catalogue for information.
2. Offered jointly with The Henry Samueli School of Engineering. See the Interdisciplinary Studies (p. 1137) section of the Catalogue for information.
3. Admission to the Ph.D. program is no longer available.

**Honors**

Honors at graduation, e.g., *cum laude, magna cum laude, summa cum laude*, are awarded to approximately the top 16 percent of the graduating seniors. A general criterion is that a student must have completed at least 72 units in residence at the University of California. The student’s cumulative record at the end of the final quarter is the basis for consideration of awarding Latin Honors. Other important factors are considered visit at Honors Recognition (p. 90).

**Careers**

Graduates of the Donald Bren School of Information and Computer Sciences go on to pursue a variety of careers in both industry and academia in the areas of cutting-edge technology, science and business. With the goal of solving real-world problems with a global impact, ICS graduates find limitless opportunities as leaders in virtually every domain—from aerospace, automotive, biomedical, business information management, consumer products, cybersecurity, data science, engineering, entertainment, environmental, finance, gaming, national defense, pharmacology, and software engineering. ICS graduates often find jobs as members of research and development teams—building advanced technologies; designing software and hardware systems; analyzing and securing data; and specifying, designing, and maintaining computing infrastructures for a variety of institutions—while others venture off to form successful start-up companies or work as independent consultants. It is also common for ICS graduates to spend a few years in their related industry before moving into management or advanced technical positions, while others find that the undergraduate educational experience in ICS is the perfect stepping-stone for pursuing graduate studies in various computer science, informatics and statistics degrees, or venturing off into other academic areas such as medicine, law, engineering, or management.

**Undergraduate Programs**

A Donald Bren School of ICS undergraduate education is a blend of scholarship, science, technology, and practical application that forms an excellent foundation for professional life.

The basis of the undergraduate programs are a set of fundamental courses in mathematics and computer science, supplemented by general education courses from other academic disciplines. A premium is placed on both communication and quantitative skills. Students quickly gain hands-on experience with advanced computing systems, and intense use of computer and network technologies continues throughout the undergraduate program. Students study data organization, algorithm design and analysis, design and organization of hardware and network systems, software engineering, artificial intelligence, social aspects of system design and use, and management of technology. In the process, students work with state-of-the-art hardware and software technologies, and learn several contemporary programming languages.

**The Bren School offers eight majors:**

- B.S. in Business Information Management (p. 1164) (offered jointly with The Paul Merage School of Business)
- B.S. in Computer Game Science (p. 1020)
- B.S. in Computer Science (p. 1072)
- B.S. in Computer Science and Engineering (p. 1167) (offered jointly with The Henry Samueli School of Engineering)
- B.S. in Data Science (p. 1125)
- B.S. in Informatics (p. 1102)
- B.S. in Information and Computer Science (p. 1024)
The Bren School offers the following minors:

- Bioinformatics (p. 1077)
- Digital Information Systems (p. 1106)
- Health Informatics (p. 1106)
- Informatics (p. 1106)
- Information and Computer Science (p. 1027)
- Statistics (p. 1127)

Admissions

To ensure admission consideration for the fall quarter, students should be sure to file their application by November 30 of the prior year. The selection criteria include grades, test scores, and other considerations.

Transfer Student Policy

Transfer requirements vary by major.

- Business Information Management (p. 1164)
- Computer Game Science (p. 1020)
- Computer Science (p. 1072)
- Computer Science and Engineering (p. 1167)
- Data Science (p. 1125)
- Informatics (p. 1101)
- Software Engineering (p. 1025)

NOTE TO TRANSFER APPLICANTS: These majors require a series of lower-division courses, and prerequisites constrain the order in which they can be taken. Junior-level transfer students who must complete a significant part of this sequence may find that it will take longer than two years at UCI to complete their degree. Python, Java, and C++ are used in the curriculum; therefore, transfer students should plan to learn these languages by studying on their own or by completing related programming courses prior to their first quarter at UCI. Please note: For Fall 2019 applicants, a minimum grade of B will be expected for each major’s required courses for admission.

It is recommended that students meet the articulation agreement on Assist.org (http://www.assist.org/web-assist/welcome.html) between their community colleges and this major at UC Irvine. This will allow them to make efficient progress toward the major.

Change of Major

Students interested in changing their major to one offered by the School should contact the ICS Student Affairs Office for more information and assistance. Information is also available at the UCI Change of Major Criteria website (http://www.changeofmajor.uci.edu).

Major and Minor Restrictions

ICS majors (including shared majors, BIM and CSE) pursuing minors within the Donald Bren School of ICS may not count more than five courses toward both the major and minor. Some ICS majors and minors outside of the School are not permitted due to significant overlap. Visit the ICS Student Affairs Office website for Majors and Minors restrictions. (http://www.ics.uci.edu/ugrad/degrees/MajorMinor_Restrictions_Chart.pdf) All students should check the Double Major Restrictions Chart (http://www.ics.uci.edu/ugrad/degrees/Dbl_Major_Restr_Chart.pdf) and view our information page (http://www.ics.uci.edu/ugrad/degrees/Double_Majors.php) on double majoring to see what degree programs are eligible for double majoring.

Special Programs and Courses

The ICS Honors Program

The ICS Honors Program provides selected upper-division students an opportunity to carry out a research project under the direction of a faculty member in the School. Eligible students participate in the ICS Honors Seminar (I&C SCI H197), which provides an introduction to the range of current faculty research. Each student then affiliates with an ICS faculty advisor who agrees to supervise a minimum of two quarters of research. The participating student prepares a final written research report and submits a copy for review to both the faculty advisor and the Honors Program advisor. Successful completion of the Honors Program earns the student a certificate and medal from the School. Further, a notation of successful completion is added to the student’s transcript. For more information about course requirements, application procedures, and deadlines visit http://honors.ics.uci.edu/, or contact the Student Affairs Office at 949 824-5156.
Other Opportunities
ICS undergraduates may complement their educational experience by participating in other programs. Information about the following programs is available elsewhere in the Catalogue and via the program Web sites: Campuswide Honors Program, Undergraduate Research Opportunities Program, Education Road Program, and Student Achievement Guided by Experience (SAGE Scholars).

Concentration: Engineering and Computer Science in the Global Context
The globalization of the marketplace for information technology services and products makes it likely that ICS graduates will work in multicultural settings or be employed by companies with extensive international operations or customer bases. The goal of the concentration is to help students develop and integrate knowledge of the history, language, and culture of a country or geographic region outside the United States, through course work both at UCI and an international host campus, followed by a technology-related internship in the host country.

All ICS majors in good standing may propose an academic plan that demonstrates the ability to complete the concentration (a minimum of eight courses) and other requirements for graduation in a reasonable time frame. It is expected that a student’s proposal will reflect a high degree of planning that includes the guidance of academic counselors and those at the UCI Study Abroad Center regarding course selection, as well as considerations related to internship opportunities, housing, and financial aid. Each student’s proposed program of study must be approved by the ICS Associate Dean for Student Affairs. The Associate Dean will be available to assist qualified students with the development of a satisfactory academic plan, as needed.

The concentration consists of the following components:

1. A minimum of eight courses at UCI or at the international campus with an emphasis on the culture, language (if applicable and necessary), history, literature of the country that corresponds to the international portion of the program, international law, international labor policy, global issues, global institutions, global conflict and negotiation, and global economics;
2. A one- or two-semester sequence of technical courses related to the major and, possibly, culture, history, and literature courses taken at an international university;
3. A two-month or longer technical internship experience in the same country as the international educational experience.

More information about the requirements for the concentration is available in the ICS Student Affairs Office.

Undergraduate Major in Business Information Management (BIM)
This program is administered jointly by ICS and The Paul Merage School of Business. For information, see the Interdisciplinary Studies (p. 1164) section of the Catalogue.

Requirements for the B.S. in Business Information Management
All students must meet the University Requirements (p. 91).
Major Requirements: See the Interdisciplinary Studies (p. 1164) section of the Catalogue.

Undergraduate Major in Computer Game Science
The Computer Game Science major gives students a strong foundation in introductory information and computer science, an extensive education in technologies and design practices associated with computer games, and an opportunity to focus in two areas of particular interest to the student. Students who complete the major will be able to create interactive and human-centered game designs; implement games using skills in modeling, graphics, software engineering, hardware architectures, human interfaces, and aesthetics; and evaluate games and game technology for their use in education, art, and social change.

Career Paths. A wide variety of careers and graduate programs are open to Computer Game Science (CGS) graduates. The video game industry is comparable in size to the film and music industries, and job growth projections are strong for people with strong technical backgrounds. Many other fields, including mobile software development, interactive entertainment, and training and education software have demand for similar skill sets and knowledge. CGS graduates are well-trained in computer science, and can thus pursue graduate programs or any career that involves designing, implementing, evaluating, or interacting with computer-based systems.

Admissions
Freshman Applicants: See the Undergraduate Admissions section (p. 52).

Transfer Applicants:
Junior-level applicants who satisfactorily complete course requirements will be given preference for admission. Please note: For Fall 2019 applicants, a minimum grade of B will be required for each major's required courses below. Applicants must satisfy the following requirements:

1. Complete one year of approved college-level math, preferably courses in calculus equivalent to UCI's MATH 2A-MATH 2B; if not available, two semester courses equivalent to other major-related math courses are acceptable.
2. One year of computer programming courses in an objected-oriented or higher-level programming language. For example, Python, Java, C++, data structures, assembly language and machine organization. Object-oriented or higher-level programming language courses that do not directly
articulate to I&C SCI 31 and I&C SCI 33 can be used to satisfy the admissions requirements. Introduction to computer science courses do not meet this requirement.

**NOTES:**

Transfer applicants to the Computer Game Science major should be aware that several lower-division courses must be taken at UCI; therefore, the minimum time to degree completion will exceed two years.

Additional computer science courses beyond the two required are strongly recommended, particularly those that align with the major of interest. Our first year of object-oriented programming is taught in Python. C++ and Java is used extensively in the curriculum; therefore, transfer students should plan to learn it by studying on their own or by completing related programming courses prior to their first quarter at UCI.

Courses in Visual Basic, C, and C# are not approved preparation for this major.

### Requirements for the B.S. in Computer Game Science

All students must meet the University Requirements (p. 91).

**Major Requirements**

**Lower-division**

A. Select one of the following series:

<table>
<thead>
<tr>
<th>Course Series</th>

### Film and Media Studies
With prior approval of the ICS Associate Dean for Student Affairs, a student may design a new track, or an Independent Study, Honors Research, or Special Topics course may be substituted for a course in a track. Computer Game Science (CGS) elective courses may not be counted as part of the Management minor. NOTE: All proposed courses must be upper-division and at least 4 units in value.

Major and minor restrictions: Click on the "Majors/Minors Restrictions" tab at the top of this page.

1 Fulfills GE III. Note, you must satisfy the UC Entry Level Writing requirement to enroll in I&C SCI 60.
2 Fulfills GE IV.
3 Select two of these.

NOTES:
1. Students are advised that this sample program lists the minimum requirements; it is possible that students may have to take additional courses to prepare for required courses.
2. The lower-division writing requirement must be completed by the end of the seventh quarter at UCI.
3. This is only a sample plan. Course offerings may be moved due to unforeseen circumstances. It is strongly recommended that students meet with an academic advisor to create an academic plan tailored to meet their specific areas of interest.

Undergraduate Major in Information and Computer Science

The Information and Computer Science major is intended for highly motivated students who are currently enrolled at UCI, who find that their academic and career interests are not well served by any of the existing ICS majors, and would be better served by a uniquely designed course of study.

Application Process

New students are not admitted directly to the Information and Computer Science major. Continuing students can apply to change their major to Information and Computer Science no earlier than the fall quarter of their sophomore year. Students must submit a proposal for a four-year plan of study, along with rationale explaining why the proposed plan is a well-motivated and coherent set of courses that does not fit into any of the existing ICS majors. Students submitting proposals are strongly encouraged to follow the lower-division requirements for one of the ICS majors (or provide a rationale for why this is not appropriate) and should include at least 48 units of upper-division ICS, Computer Science, Informatics, or Statistics courses.
Proposals must be approved by the ICS Associate Dean for Student Affairs. See the ICS Student Affairs Office for more details. Complete information about changing majors to ICS is available at the UCI Change of Major Criteria website (http://www.changeofmajor.uci.edu).

Admissions
New students are not admitted directly to the Information and Computer Science major.

Transfer Applicants:
Students are strongly encouraged to follow the transfer preparation guidelines for any of the other Bren ICS majors.

Requirements for the B.S. in Information and Computer Science
All students must meet the University Requirements (p. 91).
Major Requirements: See the ICS Student Affairs Office.

Undergraduate Major in Software Engineering
The Software Engineering major gives students a strong foundation in software engineering as well as a solid basis in computer science. Students who complete the major will be able to be productive members of software engineering teams in a variety of application domains including, but not restricted to, Web and mobile applications. The acquired technical knowledge and appreciation for life-long learning, combined with the ability to place software in the social context in which it is developed, empowers students to create novel applications that have the potential to bring social change.

Admissions
Freshman Applicants: See the Undergraduate Admissions section (p. 52).

Transfer Applicants:
Junior-level applicants who satisfactorily complete course requirements will be given preference for admission. Applicants must satisfy the following minimum requirements.

Have a cumulative GPA of 3.0 and a grade of B or higher in the required courses below:

1. Completion of one year of approved college-level math, preferably courses in calculus equivalent to UCI’s MATH 2A-MATH 2B; if not available, one year of coursework equivalent to other major-related math courses is acceptable.
2. One year of computer programming courses in an object-oriented or higher-level programming language. For example, Python, Java, C++, data structures, assembly language and machine organization. Object-oriented or higher-level programming language courses that do not directly articulate to I&C SCI 31-33 can be used to satisfy the admissions requirements. Introduction to computer science courses do not meet this requirement.

Additional Approved Courses:
- One course in advanced data structures
- One course in machine organization and assembly language (both topics must be covered)
- One course in software engineering
- One course in discrete mathematics
- One course in Boolean algebra
- One course in linear algebra

NOTES:
Additional computer science courses beyond the two required are strongly recommended, particularly those that align with the major of interest. Our first year of object-oriented programming is taught in Python. C++ and Java is used extensively in the curriculum; therefore, transfer students should plan to learn it by studying on their own or by completing related programming courses prior to their first quarter at UCI.

Courses in Visual Basic, C, and C# are not approved preparation for this major.

Requirements for the B.S. in Software Engineering
All students must meet the University Requirements (p. 91).

### NOTES:

1. Students are advised that this sample program lists the minimum requirements; it is possible that students may have to take additional courses to prepare for required courses.

2. The lower-division writing requirement must be completed by the end of the seventh quarter at UCI.

3. This is only a sample plan. Course offerings may be moved due to unforeseen circumstances. It is strongly recommended that students meet with an academic advisor to create an academic plan tailored to meet their specific areas of interest.

### Important Notes:

Students enrolled in other degree programs who are interested in the field of computer science may pursue the Bren School introductory course sequences (I&C SCI 31/CSE 41, I&C SCI 32/CSE 42, and I&C SCI 33/CSE 43) followed by other courses for which they have met the prerequisites as far as their interests require and their programs permit. The introductory courses, along with other lower-division ICS courses, may be used to fulfill General Education requirements. Nonmajors may also take other Bens ICS courses for which they have met the prerequisites.

The ICS Student Affairs Office is staffed by professional academic counselors and peer advisors. These individuals are available to assist students with program planning, questions on University and School policies and procedures, progress toward graduation, and other issues that arise in the course of a student’s education. Faculty also are available for advising, generally for suggestions of additional course work in the student’s academic, research, and career interest areas and on preparation for graduate school.

### Minor in Information and Computer Science

Students outside the School may also pursue a minor in Information and Computer Science. The minor provides a focused study of Information and Computer Science to supplement a student’s major program of study and prepares students for a profession, career, or academic pursuit in which computer science is an integral part but is not the primary focus. The ICS minor contributes to students’ competence in computing technology and proficiency in programming as well as exposing them to the fundamentals of computer science. The minor allows students sufficient flexibility to pursue courses that complement their major field or address specific interests.
Requirements for the Minor in Information and Computer Science

A. Complete:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>I&amp;C SCI 31-32-33-45C-46</td>
<td>Introduction to Programming and Programming with Software Libraries and Intermediate Programming and Programming in C/C++ as a Second Language and Data Structure Implementation and Analysis</td>
</tr>
<tr>
<td>I&amp;C SCI 6D</td>
<td>Discrete Mathematics for Computer Science</td>
</tr>
</tbody>
</table>

B. Select one of the following:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>I&amp;C SCI 51</td>
<td>Introductory Computer Organization</td>
</tr>
<tr>
<td>or IN4MATX 43</td>
<td>Introduction to Software Engineering</td>
</tr>
</tbody>
</table>

C. Select two upper-division from the following: ¹

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>COMPSCI 111-144</td>
<td>Software Architecture</td>
</tr>
<tr>
<td>COMPSCI 151–177</td>
<td>Computer Game Development</td>
</tr>
<tr>
<td>IN4MATX 101–102</td>
<td>Human Computer Interaction</td>
</tr>
<tr>
<td>IN4MATX 111–119</td>
<td>Information Retrieval</td>

<td>Computer Supported Cooperative Work</td>
</tr>
<tr>
<td>IN4MATX 131</td>
<td>Introduction to Medical Informatics</td>
</tr>
<tr>
<td>IN4MATX 132–134</td>
<td></td>
</tr>
<tr>
<td>IN4MATX 141</td>
<td></td>
</tr>
<tr>
<td>IN4MATX 148</td>
<td></td>
</tr>
<tr>
<td>IN4MATX 153</td>
<td></td>
</tr>
<tr>
<td>IN4MATX 161–163</td>
<td></td>
</tr>
<tr>
<td>IN4MATX 171</td>
<td></td>
</tr>
</tbody>
</table>

¹ COMPSCI 190–199 and IN4MATX 190–199 may not be applied to the minor.

NOTES:

2. A maximum of two courses may be taken for the Pass/Not Pass grade option toward any minor.
3. There are no applications for an ICS minor. Students must have a peer advisor or academic counselor of their major add the minor to their Degree Audit once they begin pursuing the minor.
4. To ensure you are certified for the minor at graduation, the minor must be on your Degree Audit and Application for Graduation. Your Student Affairs Office can add the minor to your Degree Audit and will certify your minor at time of graduation, so it is important to keep them updated on your academic progress.

Graduate Programs in Information and Computer Sciences

ICS M.S. students must complete the concentration in Embedded Systems (p. 1029).

For additional information about the following graduate programs and requirements, click on these links: Computer Science (p. 1078); Informatics (p. 1109); Statistics (p. 1128); Software Engineering (p. 1109); Networked Systems (p. 1145), which is supervised by an interdepartmental faculty group from the Department of Computer Science in the Bren School and the Department of Electrical Engineering and Computer Science in The Henry Samueli School of Engineering. Information is available on the Interdisciplinary Studies section (p. 1137) of the Catalogue.

Admission

Applicants will be evaluated on the basis of their prior academic record. Applicants for the M.S. are expected to have a bachelor’s degree in computer science or a related field. Those who do not have an undergraduate degree in computer science may take the Computer Science Subject GRE test to demonstrate sufficient background in the field. Scores are reviewed on a case-by-case basis. Ph.D. applicants will additionally be evaluated in their potential for creative research and teaching in Information and Computer Sciences.

Applicants are expected to have (1) skills in computer programming at least equivalent to those obtained in college-level courses in programming and language development; (2) skills in mathematics equivalent to those obtained in complete college-level courses in logic and set theory, analysis, linear
algebra and modern algebra, or probability and statistics; (3) data structures, analysis of algorithms, automata theory, or formal languages; and (4)
computer architectures.

All applicants are evaluated on the materials submitted: letters of recommendation, official GRE test scores, official college transcripts, and personal
statement. For more information, contact the ICS graduate counselor at 949-824-5156 or send email to gcounsel@ics.uci.edu.

Financial Assistance
Financial assistance is available to Ph.D. students in the form of fellowships, teaching assistantships, and research assistantships. Although assistance
varies, it is the School’s goal to support all entering Ph.D. students, subject to availability of funds. International students who are not citizens of
countries where English is either the primary or dominant language, as approved by Graduate Council, and who apply for teaching assistantships must
take one of the approved English proficiency examinations. More information is available in the Graduate Division (p. 189) section of the Catalogue.

Students with a Previously Earned Master’s Degree
Credit for one or all required courses may be given at the time of admission to those students who have completed a master’s degree in computer
science or a closely related field. Course equivalency will be determined by the Bren School Associate Dean for Student Affairs following a written
recommendation from a sponsoring research advisor. Research advisors can require that a student take additional courses when this is appropriate.

An additional M.S. will not be awarded if the student currently holds an M.S. in computer science or a related field from another university.

Course Substitutions
A student who has taken relevant graduate courses at UCI or another university may petition to have a specific course certified as equivalent to one
which satisfies Bren School of ICS requirements. The petition should describe the course and should be approved by either the student’s advisor or the
instructor teaching the class, and by the Associate Dean for Student Affairs. Only two courses can be substituted.

Master of Science Program

Students pursuing the M.S. in Information and Computer Science must complete a concentration in Embedded Systems.

For additional information about the following graduate programs and requirements, click on these links: Computer Science (p. 1078); Software
Engineering (p. 1109); Statistics (p. 1128); Networked Systems (p. 1145).

M.S. students may select one of two options, the thesis plan or the comprehensive examination plan, as described below. The normative time for
completion of the M.S. is two years. All study must be completed within four calendar years from the date of admission.

Plan I: Thesis Plan
The thesis option is available for graduate students who may wish to continue on to a Ph.D. program or those who wish to concentrate on a specific
problem. To qualify for this option, students must be in good academic standing with their Department. The student must enroll in at least two quarters
of Thesis Supervision (COMPSCI 298 or IN4MATX 298) that will substitute for two required courses as specified under the concentration area or
specialization of choice. All required courses must be completed with a grade of B or better, and the student must write a research or thesis project.
A committee of three faculty members (voting members of the Academic Senate) will guide the student and give final approval of the thesis. The
committee will consist of an advisor (faculty member from the student’s department) who is willing to supervise the thesis project, and two other faculty
members (one of which must be from the student’s department) who are willing to serve on the committee as readers of the thesis. An oral presentation
of the thesis to the committee will be required. Seminar courses that have an “S” suffix (e.g., 209S) do not count toward degree requirements.

Plan II: Comprehensive Examination Plan
The student completes the required units as specified under the concentration area. Each course must be completed with a grade of B or better.
Seminar courses that have an “S” suffix (e.g., 209S) do not count toward degree requirements. The student must take a comprehensive examination
given by ICS faculty. The examination covers the core requirements.

ICS Concentration in Embedded Systems—M.S.
The goal of this program is to prepare students for challenges in developing future embedded systems. These future systems will further integrate
communications, multimedia, and advanced processors with complex embedded and real-time software for automotive, medical, telecommunications,
and many other application domains. Furthermore, embedded systems are becoming parallel, deploying multiprocessor systems-on-a-chip and parallel
application software. An in-depth knowledge of the underlying scientific and engineering principles is required to understand these advances and to
contribute productively to development of such systems. This program helps students master embedded system fundamentals, advanced computer
architecture and compilers, networking, security, embedded, parallel and distributed software, and computer graphics in a sequence of courses and
labs. Students also complete a large embedded systems project and may choose to write a Master’s thesis.

Required Courses
The following courses must be completed with a grade of B or better.
Select six of the following:

**List A**
- COMPSCI 244 Introduction to Embedded and Ubiquitous Systems
- COMPSCI 250A Computer Systems Architecture
- COMPSCI 232 Computer and Communication Networks
- COMPSCI 203 Network and Distributed Systems Security
- COMPSCI 242 Parallel Computing
- COMPSCI 250B Modern Microprocessors
- COMPSCI 230 Distributed Computer Systems
- COMPSCI 243 High-Performance Architectures and Their Compilers

Select six additional courses in one of the following two ways:

1. For students pursuing the M.S. thesis option, two four-unit courses in Thesis Supervision (COMPSCI 298) plus four graduate courses taken from List A or the following List B
2. For all other students, six graduate courses taken from List A or the following List B

**List B**
- COMPSCI 241 Advanced Compiler Construction
- COMPSCI 245 Software for Embedded Systems
- COMPSCI 252 Introduction to Computer Design
- EECS 211 Advanced System Software
- COMPSCI 211A Visual Computing
- COMPSCI 248A/IN4MATX 241 Introduction to Ubiquitous Computing
- IN4MATX 211 Software Engineering
- IN4MATX 235 Advanced User Interface Architecture
- COMPSCI 236 Wireless and Mobile Networking
- COMPSCI 265 Graph Algorithms
- EECs 223 Real-Time Computer Systems

M.S. Students who do not have an undergraduate degree in Computer Science or equivalent must also take COMPSCI 260.

**Comprehensive Examination or Thesis**

Each student must either (1) pass a comprehensive examination administered by the Embedded Systems faculty; or (2) submit a thesis for approval by a three-person committee consisting of an advisor (who is an ICS Embedded Systems full-time faculty member) and two other full-time faculty members (one of which must be from ICS).

**Faculty**

Jonathan Alexander, Ph.D. Louisiana State University, **Campus Writing Coordinator and Professor of English; Culture and Theory; Education; Gender and Sexuality Studies; Informatics** (writing studies, sexuality studies, queer theory, new media studies)

Shannon L. Alfaro, M.S. University of California, Irvine, **Lecturer of Computer Science**

Animashree Anandkumar, Ph.D. Cornell University, **Assistant Professor of Computer Science** (statistical inference and learning of graphical models, scalable network algorithms)

Nader Bagherzadeh, Ph.D. University of Texas at Austin, **Professor of Electrical Engineering and Computer Science; Computer Science** (parallel processing, computer architecture, computer graphics, VLSI design)

Brigitte Baldi, Ph.D. Massachusetts Institute of Technology, **Lecturer of Statistics**

Pierre F. Baldi, Ph.D. California Institute of Technology, **UCI Chancellor's Professor of Computer Science; Biological Chemistry; Biomedical Engineering; Developmental and Cell Biology; Mathematics** (bioinformatics, computational biology)

Scott Bartell, Ph.D. University of California, Davis, **Associate Professor of Program in Public Health; Environmental Health Sciences; Social Ecology; Statistics**

Lubomir Bic, Ph.D. University of California, Irvine, **Professor of Computer Science; Electrical Engineering and Computer Science** (parallel and distributed computing, mobile agents)

Rebecca W. Black, Ph.D. University of Wisconsin-Madison, **Associate Professor of Informatics**
Geoffrey C. Bowker, Ph.D. University of Melbourne, Chancellor's Professor of Informatics; Visual Studies (values in design, social studies of databases, science and technology studies)

Elaheh Bozorgzadeh, Ph.D. University of California, Los Angeles, Associate Professor of Computer Science; Electrical Engineering and Computer Science (design automation and synthesis for embedded systems, VLSI CAD, reconfigurable computing)

Carter Butts, Ph.D. Carnegie Mellon University, Professor of Sociology; Electrical Engineering and Computer Science; Statistics (mathematical sociology, social networks, quantitative methodology, human judgment and decision making, economic sociology)

Michael Carey, Ph.D. University of California, Berkeley, Donald Bren Professor of Information & Computer Sciences and Professor of Computer Science

Yunan Chen, Ph.D. Drexel University, Associate Professor of Informatics; Program in Public Health (medical informatics, human computer interaction)

Pai H. Chou, Ph.D. University of Washington, Professor Emeritus of Electrical Engineering and Computer Science; Computer Science (embedded systems, wireless sensor systems, medical devices, real-time systems, hardware/software co-synthesis)

John L. Crawford, Media Artist and Software Designer, Graduate Advisor and Associate Dean for Research Creation and Associate Professor of Dance; Informatics (dance film, interactive media, telematic performance, motion capture, digital arts)

Roderic N. Crooks, Ph.D. University of California, Los Angeles, Assistant Professor of Informatics (science and technology studies, education technology, critical data studies, data visualization, community archives)

Rina Dechter, Ph.D. University of California, Los Angeles, Professor of Computer Science

Brian C. Demsky, Ph.D. Massachusetts Institute of Technology, Associate Professor of Electrical Engineering and Computer Science; Computer Science (compiler programming, language software engineering, fault tolerance)

Michael B. Dillencourt, Ph.D. University of Maryland, College Park, Professor of Computer Science

John Christopher Dobbins, Ph.D. University of California, San Diego, Professor of Music; Informatics

Rainer B. Doemer, Ph.D. Dortmund University, Professor of Electrical Engineering and Computer Science; Computer Science (system-level design, embedded computer systems, design methodologies, specification and modeling languages)

James P. Dourish, Ph.D. University College London, Chancellor's Professor of Informatics; Computer Science (human-computer interaction, computer-supported cooperative work)

Nikil D. Dutt, Ph.D. University of Illinois at Urbana–Champaign, UCI Chancellor's Professor of Computer Science; Cognitive Sciences; Electrical Engineering and Computer Science (embedded systems, computer architecture, electronic design automation, software systems, brain-inspired architectures and computing)

Magda S. El Zarki, Ph.D. Columbia University, Professor of Computer Science; Electrical Engineering and Computer Science; Informatics (telecommunications, networks, wireless communication, video transmission)

David A. Eppstein, Ph.D. Columbia University, UCI Chancellor's Professor of Computer Science

Julian Feldman, Ph.D. Carnegie Institute of Technology, Professor Emeritus of Computer Science

Charless C. Fowlkes, Ph.D. University of California, Berkeley, Associate Professor of Computer Science; Cognitive Sciences; Electrical Engineering and Computer Science (computer vision, machine learning, computational biology)

Michael S. Franz, Ph.D. Swiss Federal Institute of Technology in Zurich, Professor of Computer Science; Electrical Engineering and Computer Science (systems software, particularly compilers and virtual machines, trustworthy computing, software engineering)

Daniel H. Frost, M.S. University of California, Irvine, Senior Lecturer of Computer Science; Informatics (artificial intelligence, software engineering, computer graphics, teaching of programming)

Jean-Luc Gaudiot, Ph.D. University of California, Los Angeles, Professor of Electrical Engineering and Computer Science; Computer Science (parallel processing, computer architecture, processor architecture)

Daniel L. Gillen, Ph.D. University of Washington, Department Chair and Professor of Statistics; Program in Public Health

Tony D. Givargis, Ph.D. University of California, Riverside, Professor of Computer Science (embedded systems, platform-based system-on-a-chip design, low-power electronics)

Michael T. Goodrich, Ph.D. Purdue University, UCI Chancellor's Professor of Computer Science; Electrical Engineering and Computer Science (computer security, algorithm design, data structures, Internet algorithmics, geometric computing, graphic drawing)
Richard H. Granger, Ph.D. Yale University, *Professor Emeritus of Computer Science*

Judith Gregory, Ph.D. University of California, San Diego, *Associate Adjunct Professor of Informatics* (values in design, translational biomedical informatics, participatory design, design and emotion)

Michele Guindani, Ph.D. Universita Luiga Bocconi, *Associate Professor of Statistics*

Vijay Gurbaxani, Ph.D. University of Rochester, *Taco Bell Chair in Information Technology Management and Professor of Paul Merage School of Business; Informatics* (economics of information systems management, impact of information technology on organization and market structure)

Matthew Harding, Ph.D. Massachusetts Institute of Technology, *Associate Professor of Economics; Statistics*

Ian G. Harris, Ph.D. University of California, San Diego, *Associate Professor of Computer Science; Electrical Engineering and Computer Science* (hardware/software covalidation, manufacturing test)

Gillian Hayes, Ph.D. Georgia Institute of Technology, *Robert A. and Barbara L. Kleist Professor of Informatics; Education* (interactive and collaborative technology, human-computer interaction, computer-supported cooperative work, educational technology, ubiquitous computing)

Wayne B. Hayes, Ph.D. University of Toronto, *Associate Professor of Computer Science*

Dan S. Hirschberg, Ph.D. Princeton University, *Professor of Computer Science; Electrical Engineering and Computer Science* (analyses of algorithms, concrete complexity, data structures, models of computation)

Alexander T. Ihler, Ph.D. Massachusetts Institute of Technology, *Associate Professor of Computer Science*

Sandra S. Irani, Ph.D. University of California, Berkeley, *Professor of Computer Science*

Mizuko Ito, Ph.D. Stanford University, *John D. and Catherine T. MacArthur Foundation Chair in Digital Media and Learning and Professor in Residence of Anthropology; Education; Informatics* (ethnography, game studies, youth culture, learning sciences, online communities)

Jesse C. Jackson, M.A. University of Toronto, *Director of the Minor in Digital Arts and Associate Professor of Art; Informatics*

Ramesh Chandra Jain, Ph.D. Indian Institute of Technology Kharagpur, *Donald Bren Professor of Information & Computer Sciences and Professor of Computer Science*

Stanislaw M. Jarecki, Ph.D. Massachusetts Institute of Technology, *Professor of Computer Science*

Ivan G. Jeliazkov, Ph.D. Washington University, *Associate Professor of Economics; Statistics*

Wesley O. Johnson, Ph.D. University of Minnesota, *Professor Emeritus of Statistics*

James Jones, Ph.D. Georgia Institute of Technology, *Associate Professor of Informatics* (software engineering, software testing and analysis, debugging and fault localization, static and dynamic analysis, software visualization)

Scott A. Jordan, Ph.D. University of California, Berkeley, *Professor of Computer Science; Electrical Engineering and Computer Science* (pricing and differentiated services in the Internet, resource allocation in wireless networks, telecommunications policy)

David G. Kay, J.D. Loyola Marymount University, *Senior Lecturer Emeritus of Informatics; Computer Science* (computer law, computer science education)

Dennis F. Kibler, Ph.D. University of California, Irvine, *Professor Emeritus of Computer Science*

Raymond O. Klefstad, Ph.D. University of California, Irvine, *Lecturer of Computer Science*

Cory P. Knobel, Ph.D. University of Michigan, *Assistant Adjunct Professor of Informatics* (interactive and collaborative technology, values in design, modes of knowledge representation, philosophy of science and technology)

Alfred Kobsa, Ph.D. University of Vienna, *Professor of Informatics; Computer Science* (user modeling, human-computer interaction, artificial intelligence, cognitive science, interdisciplinary computer science)

Peter O. Krapp, Ph.D. University of California, Santa Barbara, *Department Chair and Professor of Film and Media Studies; English; Informatics; Music; Visual Studies* (digital culture, media history, cultural memory)

Jeffrey L. Krichmar, Ph.D. George Mason University, *Professor of Cognitive Sciences; Computer Science* (computational neuroscience, robotics)

Fadi J. Kurdahi, Ph.D. University of Southern California, *Director, Center for Embedded Computer Systems and Associate Dean for Graduate and Professional Studies and Professor of Electrical Engineering and Computer Science; Computer Science* (VLSI system design, design automation of digital systems)
Richard H. Lathrop, Ph.D. Massachusetts Institute of Technology, Professor of Computer Science (modeling structure and function, machine learning, intelligent systems and molecular biology, protein structure/function prediction)

Marco Levorato, Ph.D. University of Padua, Assistant Professor of Computer Science; Electrical Engineering and Computer Science

Chen Li, Ph.D. Stanford University, Professor of Computer Science

Kwei-Jay Lin, Ph.D. University of Maryland, College Park, Professor of Electrical Engineering and Computer Science; Computer Science (real-time systems, distributed systems, service-oriented computing)

Cristina V. Lopes, Ph.D. Northeastern University, Professor of Informatics; Computer Science (programming languages, acoustic communications, operating systems, software engineering)

George S. Lueker, Ph.D. Princeton University, Professor Emeritus of Computer Science

Aditi Majumder, Ph.D. University of North Carolina at Chapel Hill, Professor of Computer Science; Electrical Engineering and Computer Science (novel displays and cameras for computer graphics and visualization, human-computer interaction, applied computer vision)

Gloria J. Mark, Ph.D. Columbia University, Professor of Informatics (computer-supported cooperative work, human-computer interaction)

Athina Markopoulou, Ph.D. Stanford University, Associate Professor of Electrical Engineering and Computer Science; Computer Science (networking—reliability and security, multimedia networking, measurement and control, design and analysis of network protocols and algorithms, internet reliability and security, multimedia streaming, network measurements and control)

Melissa Mazmanian, Ph.D. Massachusetts Institute of Technology, Associate Professor of Informatics (computer-mediated communication, organization studies, information and communication technologies in practice, social response to emerging technologies, work/non-work negotiations in the information age)

Gopi Meenakshisundaram, Ph.D. University of North Carolina at Chapel Hill, Professor of Computer Science; Electrical Engineering and Computer Science (geometry and topology for computer graphics, image-based rendering, object representation, surface reconstruction, collision detection, virtual reality, telepresence)

Sharad Mehrotra, Ph.D. University of Texas at Austin, Professor of Computer Science

Volodymyr Minin, Ph.D. University of California, Los Angeles, Professor of Statistics

Eric D. Mjolsness, Ph.D. California Institute of Technology, Professor of Computer Science; Mathematics (applied mathematics, mathematical biology, modeling languages)

Bin Nan, Ph.D. University of Washington, Professor of Statistics

Bonnie A. Nardi, Ph.D. University of California, Irvine, Professor of Informatics (computer-supported collaborative work, human-computer interaction, computer-mediated communication, user studies methods, activity theory, cultural responses to technology development)

Emily Navarro, Ph.D. University of California, Irvine, Lecturer of Informatics

Alexandru Nicolau, Ph.D. Yale University, Department Chair and Professor of Computer Science; Electrical Engineering and Computer Science (architecture, parallel computation, programming languages and compilers)

Gary Olson, Ph.D. Stanford University, Professor Emeritus of Informatics (interactive and collaborative technology, human-computer interaction, computer-supported cooperative work)

Judith Olson, Ph.D. University of Michigan, Professor Emeritus of Informatics; Paul Merage School of Business; Urban Planning and Public Policy (interactive and collaborative technology, human-computer interaction, computer-supported cooperative work)

Hernando C. Ombao, Ph.D. University of Michigan, Professor Emeritus of Statistics; Cognitive Sciences

Richard Pattis, M.S. Stanford University, Senior Lecturer of Computer Science; Informatics (MicroWorlds for teaching programming, debugging, computational tools for non-computer scientists)

Simon G. Penny, M.F.A. Hong Kong University of Science and Technology, Professor of Art; Informatics (informatics, robotic sculpture, interactive environments, electronic media)

Kavita S. Philip, Ph.D. Cornell University, Associate Professor of History; Informatics (history of modern South Asia, science and technology, political ecology, critical theoretical studies of race, gender, colonialism, new media, and globalization)

Dale J. Poirier, Ph.D. University of Wisconsin-Madison, Professor Emeritus of Economics; Statistics
David F. Redmiles, Ph.D. University of Colorado Boulder, Professor of Informatics (computer-supported cooperative work, human computer interaction, software engineering, globally distributed development teams, user interfaces, software tools)

Amelia C. Regan, Ph.D. University of Texas at Austin, Professor of Computer Science; Civil and Environmental Engineering

Stephanie Reich, Ph.D. Vanderbilt University, Associate Professor of Education; Informatics; Psychology and Social Behavior (child development, parenting, peer interactions, media, program evaluation)

Debra J. Richardson, Ph.D. University of Massachusetts, Professor Emeritus of Informatics (software engineering, program testing, life-cycle validation, software environments)

Katie Salen Tekinbaş, M.F.A. Rhode Island School of Design, Professor of Informatics (game design, connected learning design, human-computer interaction)

Ardalan Amiri Sani, Ph.D. Rice University, Assistant Professor of Computer Science (involves building efficient, high performance, and reliable systems)

Isaac D. Scherson, Ph.D. Weizmann Institute of Science, Professor of Computer Science; Electrical Engineering and Computer Science (parallel computing architectures, massively parallel systems, parallel algorithms, interconnection networks, performance evaluation)

Patricia Seed, Ph.D. University of Wisconsin-Madison, Professor of History; Informatics (mapping: history and design, game design, navigation)

Babak Shahbaba, Ph.D. University of Toronto, Associate Professor of Statistics; Computer Science

Weining Shen, Ph.D. North Carolina State University, Assistant Professor of Statistics

Phillip C-Y Sheu, Ph.D. University of California, Berkeley, Professor of Electrical Engineering and Computer Science; Biomedical Engineering; Computer Science (database systems, interactive multimedia systems)

Alice Silverberg, Ph.D. Princeton University, Professor of Mathematics; Computer Science (algebra and number theory)

Patrick J. Smyth, Ph.D. California Institute of Technology, Professor of Computer Science; Statistics

Kurt Squire, Ph.D. Indiana University, Professor of Informatics (video game design, games for learning, mobile technologies, civic engagement, place-based learning)

Thomas A. Standish, Ph.D. Carnegie Institute of Technology, Professor Emeritus of Information and Computer Sciences (software testing and analysis, software semantics and epistemology, programming and cognition, software comprehension)

Constance Steinkuehler, Ph.D. University of Wisconsin, Madison, Professor of Informatics (video games for impact, game-mediated cognition and learning, online social interaction, video games and policy)

Hal S. Stern, Ph.D. Stanford University, UCI Chancellor's Professor of Statistics; Cognitive Sciences

Mark Steyvers, Ph.D. Indiana University, Professor of Cognitive Sciences; Computer Science; Psychology and Social Behavior (higher-order cognition, cognitive neuroscience, computational modeling, collective intelligence)

Joshua Tanenbaum, M.A. Simon Fraser University, Assistant Professor of Informatics (digital games and narrative, tangible and wearable interaction, maker and DIY culture, nonverbal communication and virtual worlds)

Richard N. Taylor, Ph.D. University of Colorado Boulder, Professor Emeritus of Informatics (software engineering, user interfaces, environments, team support)

Alexander W. Thornton, B.S. University of California, Irvine, Lecturer of Computer Science

Gene Y. Tsudik, Ph.D. University of Southern California, UCI Chancellor's Professor of Computer Science

Kojiro Umezaki, M.A. Dartmouth College, Associate Professor of Music; Computer Science

Jessica Utt, Ph.D. Pennsylvania State University, Professor Emeritus of Statistics

Joachim S. Vandekerckhove, Ph.D. University of Leuven, Assistant Professor of Cognitive Sciences; Statistics (response time modeling, model fitting, computational statistics, psychometrics, Bayesian statistics)

Alexander Veidenbaum, Ph.D. University of Illinois at Urbana-Champaign, Professor of Computer Science

Nalini Venkatasubramanian, Ph.D. University of Illinois at Urbana-Champaign, Professor of Computer Science
Alladi Venkatesh, Ph.D. Syracuse University, Professor of Paul Merage School of Business; Informatics (social impacts of information technology, Internet and the New Economy, Smart Home technologies, children and multimedia)

Richert Wang, Ph.D. University of California, Irvine, Lecturer of Computer Science

Mark J. Warschauer, Ph.D. University of Hawaii at Manoa, Professor of Education; Informatics (language, literacy, technology, STEM)

Xiaohui Xie, Ph.D. Massachusetts Institute of Technology, Associate Professor of Computer Science; Developmental and Cell Biology (computational biology, bioinformatics, genomics, neural computation, machine learning)

Guoqing Xu, Ph.D. Ohio State University, Assistant Professor of Computer Science

Yaming Yu, Ph.D. Harvard University, Associate Professor of Statistics

Zhaoxia Yu, Ph.D. William Marsh Rice University, Associate Professor of Statistics

Charles S. Zender, Ph.D. University of Colorado Boulder, Professor of Earth System Science; Computer Science

Hong-Kai Zhao, Ph.D. University of California, Los Angeles, Department Chair and Chancellor's Professor of Mathematics; Computer Science (applied and computational mathematics, inverse problems and imaging)

Shuang Zhao, Ph.D. Cornell University, Assistant Professor of Computer Science (computer graphics with a focus on material appearance modeling and physically-based rendering)

Hadar Ziv, Ph.D. University of California, Irvine, Lecturer of Informatics (software testing, requirements engineering, Bayesian modeling)

André W. van der Hoek, Ph.D. University of Colorado Boulder, Professor of Informatics (software engineering)

**Computer Science Courses**

**COMPSCI 111. Digital Image Processing. 4 Units.**
Introduction to the fundamental concepts of digital signal and image processing as applicable in areas such as multimedia, graphics, AI, data mining, databases, vision, or video games. Topics include image representation, space- and frequency-domain transformations, filters, segmentation, and compression.

Prerequisite: (I&C SCI 46 or CSE 46) and I&C SCI 6D and (MATH 6G or MATH 3A or I&C SCI 6N). I&C SCI 46 with a grade of C or better. CSE 46 with a grade of C or better. I&C SCI 6D with a grade of C or better. MATH 6G with a grade of C or better. MATH 3A with a grade of C or better. I&C SCI 6N with a grade of C or better

Restriction: School of Info & Computer Sci students have first consideration for enrollment.

**COMPSCI 112. Computer Graphics. 4 Units.**
Introduction to the fundamental principles of 3D computer graphics including polygonal modeling, geometric transformations, visibility algorithms, illumination models, texturing, and rasterization. Use of an independently-learned 3D graphics API to implement these techniques.

Prerequisite: (I&C SCI 22 or CSE 22 or I&C SCI H22 or I&C SCI 33 or CSE 43) and (I&C SCI 45C or CSE 45C) and (MATH 6G or MATH 3A or I&C SCI 6N). I&C SCI 22 with a grade of C or better. CSE 22 with a grade of C or better. I&C SCI 6D with a grade of C or better. MATH 6G with a grade of C or better. I&C SCI 33 with a grade of C or better. CSE 43 with a grade of C or better. I&C SCI 45C with a grade of C or better. CSE 45C with a grade of C or better. MATH 6G with a grade of C or better. I&C SCI 6N with a grade of C or better

Restriction: School of Info & Computer Sci students have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment.

**COMPSCI 113. Computer Game Development. 4 Units.**
Introduction to the principles of interactive 2D and 3D computer game development. Concepts in computer graphics, algorithms, software engineering, art and graphics, music and sound, story analysis, and artificial intelligence are presented and are the basis for student work.

Prerequisite: COMPSCI 112 or COMPSCI 171 or IN4MATX 121 or ART 106B or I&C SCI 163 or I&C SCI 166

Same as IN4MATX 125.

Restriction: School of Info & Computer Sci students have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment.
COMPSCI 114. Projects in Advanced 3D Computer Graphics. 4 Units.
Projects in advanced 3D graphics such as illumination, geometric modeling, visualization, and animation. Topics include physically based and global illumination, solid modeling, curved surfaces, multiresolution modeling, image-based rendering, basic concepts of animation, and scientific visualization.
Prerequisite: COMPSCI 112 and (I&C SCI 45C or CSE 45C). I&C SCI 45C with a grade of C or better. CSE 45C with a grade of C or better.
Recommended: COMPSCI 161 or CSE 161 or COMPSCI 164 or COMPSCI 165.
Restriction: School of Info & Computer Sci students have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment.

COMPSCI 115. Computer Simulation. 4 Units.
Discrete event-driven simulation; continuous system simulation; basic probability as pertaining to input distributions and output analysis; stochastic and deterministic simulation; static and dynamic system simulation.
Prerequisite: I&C SCI 6B and I&C SCI 6N and (STATS 67 or (STATS 7 and STATS 120A)) and I&C SCI 51 and IN4MATX 43. I&C SCI 6B with a grade of C or better. I&C SCI 6N with a grade of C or better. STATS 67 with a grade of C or better. STATS 7 with a grade of C or better. STATS 120A with a grade of C or better. I&C SCI 51 with a grade of C or better. IN4MATX 43 with a grade of C or better
Restriction: Upper-division students only. School of Info & Computer Sci students have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment.

COMPSCI 116. Computational Photography and Vision. 4 Units.
Introduces the problems of computer vision through the application of computational photography. Specific topics include photo-editing (image warping, compositing, hole filling), panoramic image stitching, and face detection for digital photographs.
Prerequisite: I&C SCI 6D and (MATH 6G or MATH 3A or I&C SCI 6N) and MATH 2B and (I&C SCI 46 or CSE 46). I&C SCI 6D with a grade of C or better. MATH 6G with a grade of C or better. MATH 3A with a grade of C or better. I&C SCI 6N with a grade of C or better. MATH 2B with a grade of C or better. I&C SCI 46 with a grade of C or better. CSE 46 with a grade of C or better
Restriction: School of Info & Computer Sci students have first consideration for enrollment.

COMPSCI 117. Project in Computer Vision. 4 Units.
Students undertake construction of a computer vision system. Topics include automatically building 3D models from photographs, searching photo collections, robot navigation, and human motion tracking.
Prerequisite: I&C SCI 6D and (MATH 3A or I&C SCI 6N) and MATH 2B and (I&C SCI 46 or CSE 46) and (COMPSCI 112 or COMPSCI 116 or COMPSCI 171 or COMPSCI 178). I&C SCI 6D with a grade of C or better. MATH 3A with a grade of C or better. I&C SCI 6N with a grade of C or better. MATH 2B with a grade of C or better. I&C SCI 46 with a grade of C or better. CSE 46 with a grade of C or better
Restriction: School of Info & Computer Sci students have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment.

COMPSCI 121. Information Retrieval. 4 Units.
An introduction to information retrieval including indexing, retrieval, classifying, and clustering text and multimedia documents.
Prerequisite: (I&C SCI 45C or I&C SCI 45J) and (STATS 7 or STATS 67). I&C SCI 45C with a grade of C or better. I&C SCI 45J with a grade of C or better
Same as IN4MATX 141.
Restriction: School of Info & Computer Sci students have first consideration for enrollment.

COMPSCI 122A. Introduction to Data Management. 4 Units.
Introduction to the design of databases and the use of database management systems (DBMS) for applications. Topics include entity-relationship modeling for design, relational data model, relational algebra, relational design theory, and Structured Query Language (SQL) programming.
Prerequisite: I&C SCI 33 or CSE 43 or EECS 114. I&C SCI 33 with a grade of C or better. CSE 43 with a grade of C or better
Same as EECS 116.
Restriction: Computer Science Engineering Majors have first consideration for enrollment. School of Info & Computer Sci students have first consideration for enrollment.
COMPSCI 122B. Project in Databases and Web Applications. 4 Units.
Introduces students to advanced database technologies and Web applications. Topics include database connectivity (ODBC/JDBC), extending databases using stored procedures, database administration, Web servers, Web programming languages (Java servlets, XML, Ajax, and mobile platforms).

Prerequisite: (COMPSCI 122A or EECS 116) and I&C SCI 45J

Overlaps with COMPSCI 137, IN4MATX 124.

Restriction: School of Info & Computer Sci students have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment.

COMPSCI 122C. Principles of Data Management. 4 Units.
Covers fundamental principles underlying data management systems. Content includes key techniques including storage management, buffer management, record-oriented file system, access methods, query optimization, and query processing.

Prerequisite: COMPSCI 122A and (I&C SCI 53 or COMPSCI 143A)

Restriction: School of Info & Computer Sci students have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment.

Concurrent with COMPSCI 222.

COMPSCI 125. Next Generation Search Systems. 4 Units.
Discusses concepts and techniques related to all aspects of search systems. After considering basic search technology and the state-of-art systems, rapidly developing techniques for multimedia search, local search, event-search, and video-on-demand are explored.

Prerequisite: I&C SCI 21 or CSE 21 or IN4MATX 41 or I&C SCI 31

Restriction: Upper-division students only.

Concurrent with COMPSCI 225.

COMPSCI 131. Parallel and Distributed Computing. 4 Units.
Parallel and distributed computer systems. Parallel programming models. Common parallel and distributed programming issues. Specific topics include parallel programming, performance models, coordination and synchronization, consistency and replication, transactions, fault tolerance.

Prerequisite: (I&C SCI 53 and I&C SCI 53L) or COMPSCI 143A

COMPSCI 132. Computer Networks. 4 Units.
Computer network architectures, protocols, and applications. Internet congestion control, addressing, and routing. Local area networks. Multimedia networking.

Prerequisite: EECS 55 or STATS 67

Same as EECS 148.

Restriction: Computer Engineering Majors have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment.

COMPSCI 133. Advanced Computer Networks. 4 Units.
Fundamental principles in computer networks are applied to obtain practical experience and skills necessary for designing and implementing computer networks, protocols, and network applications. Various network design techniques, simulation techniques, and UNIX network programming are covered.

Prerequisite: COMPSCI 132

COMPSCI 134. Computer and Network Security. 4 Units.
Overview of modern computer and networks security, attacks, and countermeasures. Authentication, identification, data secrecy, data integrity, authorization, access control, computer viruses, network security. Also covers secure e-commerce and applications of public key methods, digital certificates, and credentials.

Prerequisite: I&C SCI 6D and (I&C SCI 33 or CSE 43) and (COMPSCI 122A or EECS 116 or COMPSCI 132 or COMPSCI 143A)

Restriction: School of Info & Computer Sci students have first consideration for enrollment.
COMPSCI 137. Internet Applications Engineering. 4 Units.
Concepts in Internet applications engineering with emphasis on the Web. Peer-to-Peer and Interoperability. Topics include HTTP and REST, Remote Procedure/Method Calls, Web Services, data representations, content distribution networks, identity management, relevant W3C/IETF standards, and relevant new large-scale computing styles.
Prerequisite: (COMPSCI 132 or EECS 148) and I&C SCI 45J
Same as IN4MATX 124.
Overlaps with COMPSCI 122B.
Restriction: Upper-division students only. School of Info & Computer Sci students have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment.

COMPSCI 141. Concepts in Programming Languages I. 4 Units.
In-depth study of several contemporary programming languages stressing variety in data structures, operations, notation, and control. Examination of different programming paradigms, such as logic programming, functional programming and object-oriented programming; implementation strategies, programming environments, and programming style.
Prerequisite: (I&C SCI 51 or CSE 31 or EECS 31) and (I&C SCI 46 or CSE 46). I&C SCI 51 with a grade of C or better. CSE 31 with a grade of C or better. EECS 31 with a grade of C or better. I&C SCI 46 with a grade of C or better. CSE 46 with a grade of C or better
Same as IN4MATX 101.
Restriction: School of Info & Computer Sci students have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment.

COMPSCI 142A. Compilers and Interpreters. 4 Units.
Introduction to the theory of programming language processors covering lexical analysis, syntax analysis, semantic analysis, intermediate representations, code generation, optimization, interpretation, and run-time support.
Prerequisite: CSE 141 or COMPSCI 141 or IN4MATX 101
Restriction: School of Info & Computer Sci students have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment.

COMPSCI 142B. Language Processor Construction. 4 Units.
Project course which provides working laboratory experience with construction and behavior of compilers and interpreters. Students build actual language processors and perform experiments which reveal their behaviors.
Prerequisite: COMPSCI 142A or CSE 142

COMPSCI 143A. Principles of Operating Systems. 4 Units.
Principles and concepts of process and resource management, especially as seen in operating systems. Processes, memory management, protection, scheduling, file systems, and I/O systems are covered. Concepts illustrated in the context of several well-known systems.
Prerequisite: (I&C SCI 46 or CSE 46) and (I&C SCI 51 or EECS 31 or CSE 31)
Overlaps with EECS 111.
Restriction: School of Info & Computer Sci students have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment.

COMPSCI 143B. Project in Operating System Organization. 4 Units.
Detailed specification and design of critical components of an actual operating system including a memory manager, a process server, and a file/I/O subsystem. Hardware/software tradeoffs. Emphasis on logical organization of system and communication.
Prerequisite: COMPSCI 143A
Restriction: School of Info & Computer Sci students have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment.
COMPSCI 145. Embedded Software. 4 Units.
Principles of embedded computing systems: embedded systems architecture, hardware/software components, system software and interfacing, real-time operating systems, hardware/software co-development, and communication issues. Examples of embedded computing in real-world application domains. Simple programming using an embedded systems development environment.
Corequisite: COMPSCI 145L
Prerequisite: (CSE 46 or I&C SCI 46) and (I&C SCI 51 or CSE 132 or EECS 112)
Restriction: School of Info & Computer Sci students have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment.

COMPSCI 145L. Embedded Software Laboratory. 2 Units.
Laboratory section to accompany COMPSCI 145.
Corequisite: COMPSCI 145
Restriction: School of Info & Computer Sci students have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment.

COMPSCI 146. Programming in Multitasking Operating Systems. 4 Units.
User- and systems-level programming of modern Internet-connected, multi-user, multitasking operating systems. Shells, scripting, filters, pipelines, programmability, extensibility, concurrency, inter-process communication. Concrete examples of a modern operating system (such as, but not necessarily, Unix programmed in C) are used.
Prerequisite: (I&C SCI 46 or CSE 46) and I&C SCI 51. I&C SCI 46 with a grade of C or better. CSE 46 with a grade of C or better. I&C SCI 51 with a grade of C or better. Recommended: COMPSCI 143A.
Restriction: School of Info & Computer Sci students have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment.

COMPSCI 151. Digital Logic Design. 4 Units.
Prerequisite: (I&C SCI 33 or CSE 43) and I&C SCI 51 and I&C SCI 6B and I&C SCI 6D. I&C SCI 33 with a grade of C or better. CSE 43 with a grade of C or better. I&C SCI 51 with a grade of C or better
Restriction: School of Info & Computer Sci students have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment.

COMPSCI 152. Computer Systems Architecture. 4 Units.
Design of computer elements; ALU, control unit, and arithmetic circuits. Memory hierarchy and organization. Caches. Function unit sharing and pipelining. I/O and interrupt processing. RTL and behavioral modeling using hardware description languages. Microprocessor organization and implementation techniques.
Prerequisite: COMPSCI 151
Overlaps with I&C SCI 160, EECS 112.

COMPSCI 153. Logic Design Laboratory. 4 Units.
Introduction to standard integrated circuits. Construction and debugging techniques. Design of digital systems using LSI and MSI components. Practical use of circuits in a laboratory environment, including implementation of small digital systems such as arithmetic modules, displays, and timers.
Prerequisite: COMPSCI 151

COMPSCI 154. Computer Design Laboratory. 4 Units.
Underlying primitives of computer instruction sets. Principles of microprogramming. Microprogramming. Microprograms written for one or more systems. Typical microprogramming applications discussed and implemented or simulated.
Prerequisite or corequisite: COMPSCI 151
Restriction: School of Info & Computer Sci students have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment.
COMPSCI 161. Design and Analysis of Algorithms. 4 Units.
Techniques for efficient algorithm design, including divide-and-conquer and dynamic programming, and time/space analysis. Fast algorithms for problems applicable to networks, computer games, and scientific computing, such as sorting, shortest paths, minimum spanning trees, network flow, and pattern matching.

Prerequisite: (I&C SCI 46 or CSE 46) and I&C SCI 6B and I&C SCI 6D and MATH 2B. I&C SCI 46 with a grade of C or better. CSE 46 with a grade of C or better

Restriction: School of Info & Computer Sci students have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment.

COMPSCI 162. Formal Languages and Automata. 4 Units.
Formal aspects of describing and recognizing languages by grammars and automata. Parsing regular and context-free languages. Ambiguity, nondeterminism. Elements of computability; Turning machines, random access machines, undecidable problems, NP-completeness.

Prerequisite: (I&C SCI 46 or CSE 46) and MATH 2A and MATH 2B and I&C SCI 6B and I&C SCI 6D. I&C SCI 46 with a grade of C or better. CSE 46 with a grade of C or better

Same as LINGUIS 102.

Restriction: School of Info & Computer Sci students have first consideration for enrollment. Cognitive Sciences Majors have first consideration for enrollment. Language Science Majors have first consideration for enrollment.

COMPSCI 163. Graph Algorithms. 4 Units.
Algorithms for solving fundamental problems in graph theory. Graph representations, graph traversal, network flow, connectivity, graph layout, matching problems.

Prerequisite: COMPSCI 161 or CSE 161

Restriction: School of Info & Computer Sci students have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment.

Concurrent with COMPSCI 265.

COMPSCI 164. Computational Geometry and Geometric Modeling. 4 Units.
Algorithms and data structures for computational geometry and geometric modeling, with applications to game and graphics programming. Topics: convex hulls, Voronoi diagrams, algorithms for triangulation, motion planning, and data structures for geometric searching and modeling of 2D and 3D objects.

Prerequisite: I&C SCI 46 or CSE 46. I&C SCI 46 with a grade of C or better. CSE 46 with a grade of C or better

Restriction: School of Info & Computer Sci students have first consideration for enrollment.

COMPSCI 165. Project In Algorithms And Data Structures. 4 Units.
Design, implementation, execution, and analysis of algorithms for problems such as sorting, searching, data compression, and data encryption. Time-space-structure trade-offs.

Prerequisite: COMPSCI 161 or CSE 161. Recommended: I&C SCI 45C OR CSE 45C.

COMPSCI 167. Introduction to Applied Cryptography. 4 Units.
An introduction to the essential aspects of applied cryptography, as it is used in practice. Topics include classical cryptography, block ciphers, stream ciphers, public-key cryptography, digital signatures, one-way hash functions, basic cryptographic protocols, and digital certificates and credentials.

Prerequisite: COMPSCI 161 or CSE 161

Restriction: Upper-division students only.

COMPSCI 169. Introduction to Optimization. 4 Units.

Prerequisite: (I&C SCI 6N or MATH 3A) and (STATS 67 or (STATS 7 and STATS 120A))

Restriction: School of Info & Computer Sci students have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment.

Concurrent with COMPSCI 268.
COMPSCI 171. Introduction to Artificial Intelligence. 4 Units.
Different means of representing knowledge and uses of representations in heuristic problem solving. Representations considered include predicate logic, semantic nets, procedural representations, natural language grammars, and search trees.

Prerequisite or corequisite: (STATS 7 and STATS 120A) or STATS 67 and (I&C SCI 46 or CSE 46) and MATH 2B

Restriction: School of Info & Computer Sci students have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment.

COMPSCI 172B. Neural Networks and Deep Learning . 4 Units.
Neural network and deep learning from multiple perspectives. Theory of parallel distributed processing systems, algorithmic approaches for learning from data in various manners, applications to difficult problems in AI from computer vision, to natural language understanding, to bioinformatics and chemoinformatics.

Prerequisite: (STATS 120A and STATS 120B) or MATH 121A or COMPSCI 178 or COMPSCI 273A

Concurrent with COMPSCI 274C.

COMPSCI 175. Project in Artificial Intelligence. 4 Units.
Construction of a working artificial intelligence system. Evaluation of capabilities of the system including impact of knowledge representation.

Prerequisite: COMPSCI 171 and COMPSCI 178

Restriction: School of Info & Computer Sci students have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment.

COMPSCI 177. Applications of Probability in Computer Science. 4 Units.
Application of probability to real-world problems in computer science. Typical topics include analysis of algorithms and graphs, probabilistic language models, network traffic modeling, data compression, and reliability modeling.

Prerequisite: MATH 2B and STATS 67 and I&C SCI 6B and I&C SCI 6D and (MATH 3A or I&C SCI 6N)

Restriction: School of Info & Computer Sci students have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment.

COMPSCI 178. Machine Learning and Data-Mining. 4 Units.
Introduction to principles of machine learning and data-mining applied to real-world datasets. Typical applications include spam filtering, object recognition, and credit scoring.

Prerequisite: I&C SCI 6B and I&C SCI 6D and (I&C SCI 6N or MATH 3A) and MATH 2B and (STATS 67 or (STATS 7 and STATS 120A))

Restriction: School of Info & Computer Sci students have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment.

COMPSCI 179. Algorithms for Probabilistic and Deterministic Graphical Models. 4 Units.
Graphical model techniques dealing with probabilistic and deterministic knowledge representations. Focuses on graphical models such as constraint networks, Bayesian networks, and Markov networks that have become a central paradigm for knowledge representation and reasoning in AI and general computer science.

Prerequisite: COMPSCI 171

COMPSCI 183. Introduction to Computational Biology. 4 Units.

Prerequisite: MATH 2D or MATH 3A or STATS 7 or STATS 8

Same as BME 132, BIO SCI M123.

Concurrent with MOL BIO 223 and BME 232.
COMPSCI 184A. Representations and Algorithms for Molecular Biology. 4 Units.
Introduction to computational methods in molecular biology, aimed at those interested in learning about this interdisciplinary area. Covers computational approaches to understanding and predicting the structure, function, interactions, and evolution of DNA, RNA, proteins, and related molecules and processes.
Prerequisite: I&C SCI 6N or MATH 3A or MATH 6G
Restriction: Upper-division students only.
Concurrent with COMPSCI 284A.

COMPSCI 184C. Computational Systems Biology. 4 Units.
Prerequisite: COMPSCI 184A
Concurrent with COMPSCI 284C.

COMPSCI 189. Project in Bioinformatics. 4 Units.
Teaches problem definition and analysis, data representation, algorithm design, component integration, solution validation, and testability with teams specifying, designing, building, and testing a solution to a bioinformatics problem. Lectures include engineering values, discussions, and ethical ramifications of biomedical computing issues.
Prerequisite: COMPSCI 184A. COMPSCI 184A with a grade of C or better

COMPSCI 190. Special Topics in Information and Computer Science. 4 Units.
Studies in selected areas of Information and Computer Science. Topics addressed vary each quarter.
Prerequisite: Prerequisites vary.
Repeatability: Unlimited as topics vary.

COMPSCI H198. Honors Research. 4 Units.
Directed independent research in computer science for honors students.
Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.
Repeatability: May be repeated for credit unlimited times.
Restriction: Campuswide Honors Program students only. Bren School of ICS Honors students only. Upper-division students only.

COMPSCI 199. Individual Study. 2-5 Units.
Individual research or investigation with Computer Science faculty.
Repeatability: May be repeated for credit unlimited times.

COMPSCI 200S. Seminar in Computer Science Research. 1 Unit.
Graduate colloquium series. Includes weekly talks by notable computer scientists.
Grading Option: Satisfactory/unsatisfactory only.
Repeatability: May be repeated for credit unlimited times.

COMPSCI 201. Foundations of Cryptographic Protocols. 4 Units.
Explores fundamental cryptographic tools, including encryption, signatures, and identification schemes. Students are introduced to the provable security paradigm of modern cryptography, focusing on understanding of security properties provided by cryptographic tools, and on proving security (or insecurity) of cryptographic constructions.
Prerequisite: COMPSCI 260 or COMPSCI 263

COMPSCI 201P. Introduction to Computer Security. 4 Units.
Introduction to computer security, including systems, technology, and management. Topics include authorization, authentication, data integrity, malware, operating systems security, network security, web security, and basic cryptography.
Prerequisite: Knowledge of Python or C++ programming is required.
Restriction: Master of Computer Science Degree students only. Graduate students only.
COMPSCI 202. Applied Cryptography. 4 Units.
Design and analysis of algorithms for applied cryptography. Topics include symmetric and asymmetric key encryption, digital signatures, one-way hash functions, digital certificates and credentials, and techniques for authorization, non-repudiation, authentication, identification, data integrity, proofs of knowledge, and access control.
Prerequisite: COMPSCI 260 and COMPSCI 263

COMPSCI 202P. Applied Cryptography. 4 Units.
Design and analysis of algorithms for applied cryptography. Topics include symmetric and asymmetric key encryption, digital signatures, one-way hash functions, digital certificates and credentials, and techniques for authorization, non-repudiation, authentication, identification, data integrity, proofs of knowledge, and access control.
Restriction: Graduate students only.

COMPSCI 203. Network and Distributed Systems Security. 4 Units.
Modern computer and networks security: attacks and countermeasures, authentication, identification, data secrecy, data integrity, authorization, access control, computer viruses, network security. Group communication and multicast security techniques. Covers secure e-commerce and applications of public key methods, digital certificates, and credentials.
Prerequisite: EECS 148 or COMPSCI 132
Same as NET SYS 240.

COMPSCI 203P. Network Security. 4 Units.
Introduction to network security, including network threats and attacks, as well as defenses against such attacks. Topics include network infrastructure security, mobile and Wi-Fi security, spam, phishing, firewalls, anonymity, secure email, secure and private cloud computing, and web security.
Prerequisite: COMPSCI 201P or COMPSCI 202P
Restriction: Master of Computer Science Degree students only. Graduate students only.

COMPSCI 204. Usable Security and Privacy. 4 Units.
Introduces usability problems in security and privacy methods, tools, and software. Overviews prominent examples of both failures and successes in usable security and privacy. Surveys state-of-the-art techniques and evaluation methodologies.
Same as IN4MATX 237.
Overlaps with IN4MATX 231, COMPSCI 203.
Restriction: Informatics Majors have first consideration for enrollment. Computer Science Majors have first consideration for enrollment. Undergraduate degree in CompSci or Informatics is strongly recommended.

COMPSCI 206. Principles of Scientific Computing. 4 Units.
Overview of widely used principles and methods of numerical and scientific computing, including basic concepts and computational methods in linear algebra, optimization, and probability.
Prerequisite: Basic courses in multivariate calculus, linear algebra, and probability.
Overlaps with STATS 230.

COMPSCI 206P. Principles of Scientific Computing. 4 Units.
Overview of widely used principles and methods of numerical and scientific computing, including basic concepts and computational methods in floating-point, linear algebra, optimization, simulation, modeling, and probability/statistics as it relates to model evaluation.
Prerequisite: Basic knowledge of multivariate calculus, linear algebra, and familiarity with MATLAB.
Restriction: Graduate students only.

COMPSCI 210P. Computer Graphics and Visualization. 4 Units.
Interactive 3D graphics rendering pipeline, illumination and shading, ray tracing, texture-, bump-, mip-mapping, hidden surface removal, anti-aliasing, multiresolution representations, volume rendering techniques, iso-surface extraction.
Prerequisite: Familiarity with linear algebra is required.
Restriction: Master of Computer Science Degree students only. Graduate students only.
COMPSCI 211A. Visual Computing. 4 Units.
Fundamentals of image processing (convolution, linear filters, spectral analysis), vision geometry (projective geometry, camera models and calibration, stereo reconstruction), radiometry (color, shading, illumination, BRDF), and visual content synthesis (graphics pipeline, texture- bump-, mip-mapping, hidden surface removal, anti-aliasing).

COMPSCI 211B. Computer Graphics and Visualization. 4 Units.
Interactive 3D graphics rendering pipeline, illumination and shading, ray tracing, texture-, bump-, mip-mapping, hidden surface removal, anti-aliasing, multiresolution representations, volume rendering techniques, iso-surface extraction.

Prerequisite: COMPSCI 211A

COMPSCI 211P. Visual Computing. 4 Units.
Develops a comprehensive understanding of fundamentals of image processing (convolution, linear filters, spectral analysis), vision geometry (projective geometry, camera models and calibration, stereo reconstruction), radiometry (color, shading, illumination, BRDF), visual content synthesis (graphics pipeline, texture-bump-, mip-mapping, hidden surface, anti-aliasing).

Prerequisite: Undergraduate-level familiarity with Linear algebra (matrices and operations), eigenvalue, eigenvectors, linear regression; basic of algorithms; programming in C/C++

Restriction: Graduate students only.

COMPSCI 212. Multimedia Systems and Applications. 4 Units.
Organization and structure of modern multimedia systems; audio and video encoding/compression; quality of service concepts; scheduling algorithms for multimedia; resource management in distributed and multimedia systems; multimedia protocols over high-speed networks; synchronization schemes; multimedia applications; and teleservices.

Prerequisite: COMPSCI 143A and COMPSCI 161. B.S. degree in Computer Science is also accepted. Recommended: COMPSCI 131 and COMPSCI 132 and COMPSCI 133.

COMPSCI 213. Introduction to Visual Perception. 4 Units.
Introduction to the process of human visual perception. Offers the physiological and psychophysical approach to understand vision, introducing concepts of perception of color, depth, movement. Examples of quantification and application of these models in computer vision, computer graphics, multimedia, HCI.

Prerequisite: MATH 121A

COMPSCI 216. Image Understanding. 4 Units.
The goal of image understanding is to extract useful semantic information from image data. Course covers low-level image and video processing techniques, feature descriptors, segmentation, objection recognition, and tracking.

Prerequisite: I&C SCI 6D and (I&C SCI 6N or MATH 6G or MATH 3A) and MATH 2B and I&C SCI 46

COMPSCI 217. Light and Geometry in Computer Vision. 4 Units.
Examines the issues of light transport and multiview geometry in computer vision. Applications include camera calibration, 3D understanding, stereo reconstruction, and illumination estimation.

Prerequisite: I&C SCI 6D and (I&C SCI 6N or MATH 6G or MATH 3A) and MATH 2B and I&C SCI 46 and COMPSCI 211A

COMPSCI 221. Information Retrieval, Filtering, and Classification. 4 Units.
Algorithms for the storage, retrieval, filtering, and classification of textual and multimedia data. The vector space model, Boolean and probabilistic queries, and relevance feedback. Latent semantic indexing; collaborative filtering; and relationship to machine learning methods.

Prerequisite: COMPSCI 161 and COMPSCI 171 and (I&C SCI 6N or MATH 3A or MATH 6G)

Same as IN4MATX 225.

Restriction: Graduate students only.

COMPSCI 222. Principles of Data Management. 4 Units.
Covers fundamental principles underlying data management systems. Content includes key techniques including storage management, buffer management, record-oriented file system, access methods, query optimization, and query processing.

Prerequisite: COMPSCI 122A and (I&C SCI 53 or COMPSCI 143A)

Concurrent with COMPSCI 122C.
COMPSCI 222P. Principles of Data Management. 4 Units.
Covers fundamental principles underlying data management systems. Understanding and implementation of key techniques including storage management, buffer management, record-oriented file system, access methods, query optimization, and query processing.

Prerequisite: C++ programming skills, understanding of Data Structures and Algorithms

Restriction: Graduate students only.

COMPSCI 223. Transaction Processing and Distributed Data Management. 4 Units.
Covers fundamental principles underlying transaction processing including database consistency, concurrency control, database recovery, and fault-tolerance. Includes transaction processing in centralized, distributed, parallel, and client-server environments.

Prerequisite: COMPSCI 222 and COMPSCI 131

COMPSCI 225. Next Generation Search Systems. 4 Units.
Discusses concepts and techniques related to all aspects of search systems. After considering basic search technology and the state-of-art systems, rapidly developing techniques for multimedia search, local search, event-search, and video-on-demand are explored.

Prerequisite: I&C SCI 21 or CSE 21 or IN4MATX 41 or I&C SCI 31 or CSE 41

Restriction: Upper-division students only. Graduate students only.

Concurrent with COMPSCI 125.

COMPSCI 230. Distributed Computer Systems. 4 Units.
Principles of distributed computing systems. Topics covered include message-passing, remote procedure calls, distributed shared memory synchronization, resource and process/thread management, distributed file systems, naming and security.

COMPSCI 232. Computer and Communication Networks. 4 Units.

Prerequisite: EECS 148 or COMPSCI 132

Same as EECS 248A, NET SYS 201.

Restriction: Graduate students only.

COMPSCI 232P. Computer and Communication Networks . 4 Units.
Internet architecture, protocols, and services. Advanced concepts of IP and TCP, including addressing, internetworking, forwarding, routing, and implementations of flow and congestion control. Internet services such as Network Address Translation and Domain Name Servers. Overview of Local Area Networks.

Restriction: Graduate students only.

COMPSCI 233. Networking Laboratory. 4 Units.
A laboratory-based introduction to basic networking concepts such as addressing, sub-netting, bridging, ARP, and routing. Network simulation and design. Structured around weekly readings and laboratory assignments.

Prerequisite: EECS 148 or COMPSCI 132

Same as NET SYS 202.

COMPSCI 234. Advanced Networks. 4 Units.
Design principles of networked systems, advanced routing and congestion control algorithms, network algorithms, network measurement, management, security, Internet economics, and emerging networks.

Prerequisite: NET SYS 201 or COMPSCI 232 or EECS 248A

Same as NET SYS 210.
COMPSCI 236. Wireless and Mobile Networking. 4 Units.
Introduction to wireless networking. The focus is on layers 2 and 3 of the OSI reference model, design, performance analysis, and protocols. Topics covered include: an introduction to wireless networking, digital cellular, next generation cellular, wireless LANs, and mobile IP.

Prerequisite: EECS 148 or COMPSCI 132

Same as NET SYS 230.

COMPSCI 237. Middleware for Networked and Distributed Systems. 4 Units.
Discusses concepts, techniques, and issues in developing distributed systems middleware that provides high performance and Quality of Service for emerging applications. Also covers existing standards (e.g., CORBA, DCOM, Jini, Espeak) and their relative advantages and shortcomings.

Prerequisite: An undergraduate-level course in operating systems and networks.

Same as NET SYS 260.

COMPSCI 238. Advanced Operating Systems. 4 Units.
Focuses on advanced and graduate-level topics in operating systems. Presents important recent developments in operating systems, topics not covered in undergraduate operating systems courses. This includes novel operating system designs and techniques to improve existing ones.

Prerequisite: COMPSCI 143A

COMPSCI 238P. Operating Systems. 4 Units.
In-depth organization of the core operating system abstraction and its implementation (virtual memory, kernel and user mode, system calls, threads, context switches, interrupts, inter-process communication, hardware interface, etc.) and a range of recent developments in de-facto industry standard operating systems.

Prerequisite: Working knowledge of C and the Linux environment.

Restriction: School of Info & Computer Sci students only. Master of Computer Science Degree students only. Graduate students only.

COMPSCI 241. Advanced Compiler Construction. 4 Units.
Advanced study of programming language implementation techniques: optimizations such as common sub-expression elimination, register allocation, and instruction scheduling. Implementation of language features such as type-directed dispatch, garbage collection, dynamic linking, and just-in-time code generation.

Prerequisite: COMPSCI 142A

COMPSCI 242. Parallel Computing. 4 Units.

COMPSCI 242P. Compilers and Interpreters. 4 Units.
Provides in-depth study of compilers and interpreters which are the primary forms of programming language processing in computing.

Prerequisite: Knowledge of C++ programming is required.

Restriction: Master of Computer Science Degree students only. Graduate students only.

COMPSCI 243. High-Performance Architectures and Their Compilers. 4 Units.
Emphasis on the development of automatic tools (i.e., compilers/environments) for the efficient exploitation of parallel machines, and the trade-offs between hardware and software in the design of supercomputing and high-performance machines.

COMPSCI 244. Introduction to Embedded and Ubiquitous Systems. 4 Units.
Embedded and ubiquitous system technologies including processors, DSP, memory, and software. System interfacing basics; communication strategies; sensors and actuators, mobile and wireless technology. Using pre-designed hardware and software components. Design case studies in wireless, multimedia, and/or networking domains.

Prerequisite: I&C SCI 51 and COMPSCI 152 and COMPSCI 161 and (I&C SCI 6N or MATH 3A or MATH 6G or I&C SCI 6D). B.S. degree in Computer Science is also accepted.

Same as IN4MATX 244.
COMPSCI 244P. Introduction to the Internet of Things. 4 Units.
Develops a comprehensive understanding of the hardware and software technology, the communication protocols, and the security and privacy requirements underlying the Internet of Things ecosystem, particularly those using computing elements (processors, DSPs/ASIPs), sensors, and accessing cloud services.

Prerequisite: Undergraduate-level familiarity with fundamentals of integrated circuit blocks, processors, optimization/algorithm design, and some programming experience.

Restriction: Graduate students only.

COMPSCI 245. Software for Embedded Systems. 4 Units.

Prerequisite: I&C SCI 51 and COMPSCI 152 and COMPSCI 161 and (I&C SCI 6N or MATH 3A or MATH 6G or I&C SCI 6D). B.S. degree in Computer Science is also accepted.

COMPSCI 246. Dependability, Validation, and Testing of Embedded Systems. 4 Units.

Prerequisite: B.S. degree in Computer Science or basic courses in algorithms and data structures, calculus, discrete math, linear algebra, symbolic logic.

COMPSCI 248A. Introduction to Ubiquitous Computing. 4 Units.
The "disappearing computer" paradigm. Differences to the desktop computing model: applications, interaction in augmented environments, security, alternate media, small operating systems, sensors, and embedded systems design. Evaluation by project work and class participation.

Same as IN4MATX 241.

COMPSCI 248B. Ubiquitous Computing and Interaction. 4 Units.
Principles and design techniques for ubiquitous computing applications. Conceptual basis for tangible and embodied interaction. Interaction in virtual and augmented environments. Design methods and techniques. Design case studies. Examination by project work.

Prerequisite: IN4MATX 231 and IN4MATX 241

Same as IN4MATX 242.

COMPSCI 250A. Computer Systems Architecture. 4 Units.
Study of architectural issues and their relation to technology and software: design of processor, interconnections, and memory hierarchies.

Prerequisite: COMPSCI 152

COMPSCI 250B. Modern Microprocessors. 4 Units.
Fundamental concepts and recent advances in computer architecture necessary to understand and use modern microprocessors. Topics span out-of-order execution, multiple instruction issue, control/data speculation, predication, advanced cache and DRAM organizations, embedded systems, DSP and multi-media instructions.

Prerequisite: COMPSCI 250A

Overlaps with COMPSCI 243.

COMPSCI 250P. Computer Systems Architecture. 4 Units.
Study of architectural issues and their relation to technology and software: design of processor, interconnections, and memory hierarchies.

Prerequisite: Undergraduate-level familiarity with fundamentals of integrated circuit blocks, processors, and optimization/algorithm design, and some programming experience.

Restriction: Graduate students only.

COMPSCI 252. Introduction to Computer Design. 4 Units.
The methodology and use of CAD tools for computer design, accomplished by a lab in which students practice design using commercially available silicon compilers and other tools.

Prerequisite: COMPSCI 151 and COMPSCI 152
COMPSCI 253. Analysis of Programming Languages. 4 Units.
Concepts in modern programming languages, their interaction, and the relationship between programming languages and methods for large-scale, extensible software development. Empirical analysis of programming language usage.

Same as IN4MATX 212.

COMPSCI 253P. Advanced Programming and Problem Solving. 4 Units.
Provides in-depth preparation for industry interviews requiring demonstration of problem solving and programming skills. Emphasis is on understanding problem statements, considering edge cases, developing effective test cases, designing correct solutions, explaining these clearly, and implementing a solution correctly.

Corequisite: COMPSCI 260P
Restriction: Master of Computer Science Degree students only. Graduate students only.

COMPSCI 259S. Seminar in Design Science. 2 Units.
Current research and research trends in design science. Forum for presentation and criticism by students of research work in progress.

Repeatability: May be taken for credit 18 times.

COMPSCI 260. Fundamentals of the Design and Analysis of Algorithms. 4 Units.
Covers fundamental concepts in the design and analysis of algorithms and is geared toward non-specialists in theoretical computer science. Topics include: deterministic and randomized graph algorithms, fundamental algorithmic techniques like divide-and-conquer strategies and dynamic programming, and NP-completeness.

Prerequisite: COMPSCI 161

COMPSCI 260P. Fundamentals of Algorithms with Applications. 4 Units.
Covers fundamental concepts in the design and analysis of algorithms and is geared toward practical application and implementation. Topics include greedy algorithms, deterministic and randomized graph algorithms, models of network flow, fundamental algorithmic techniques, and NP-completeness.

Restriction: Graduate students only.

COMPSCI 261. Data Structures. 4 Units.
An in-depth treatment of data structures and their associated management algorithms including resource complexity analysis.

Prerequisite: I&C SCI 46 and COMPSCI 161

COMPSCI 261P. Data Structures with Applications. 4 Units.
Data structures and their associated management algorithms, including their applications and analysis.

Prerequisite: COMPSCI 260P
Restriction: Graduate students only.

COMPSCI 262. Computational Complexity. 4 Units.
Advanced course in computational models and complexity classes. Covers the fundamentals of Turing Machines, Decidability, and NP-completeness. Includes discussion of more advanced topics including polynomial hierarchy, randomized complexity classes, #P-completeness and hardness of approximation.

Prerequisite: COMPSCI 162

COMPSCI 262P. Automata and Grammars. 4 Units.
Principles and applications of automata, grammars, and formal languages. Topics include finite state machines, regular expressions, context-free grammars, pushdown automata, Turing machines, and the limits of computation, as well as text-processing applications in lexical analyzers and parsers.

Restriction: Master of Computer Science Degree students only. Graduate students only.

COMPSCI 263. Analysis of Algorithms. 4 Units.
Analysis of correctness and complexity of various efficient algorithms; discussion of problems for which no efficient solutions are known.

Prerequisite: COMPSCI 161 and COMPSCI 261
COMPSCI 264. Quantum Computation and Information. 4 Units.
Basic models for quantum computation and their foundations in quantum mechanics. Quantum complexity classes and quantum algorithms, including algorithms for factoring and quantum simulation. Introduction to quantum information theory and quantum entanglement.

Prerequisite: Basic courses in linear algebra and algorithms.

COMPSCI 265. Graph Algorithms. 4 Units.
Graph definitions, representation methods, graph problems, algorithms, approximation methods, and applications.

Prerequisite: COMPSCI 161 and COMPSCI 261

COMPSCI 266. Computational Geometry. 4 Units.
An overview of some of the basic problems in computational geometry and of some algorithmic and data-structuring techniques appropriate to their solution.

Prerequisite: COMPSCI 161 and COMPSCI 261

COMPSCI 267P. Data Compression. 4 Units.
An introduction to the theory and practice of modern data compression techniques. Topics include codes, coding, modeling, text compression, lossless and lossy image compression standards and systems, audio compression.

Restriction: Master of Computer Science Degree students only. Graduate students only.

COMPSCI 268. Introduction to Optimization. 4 Units.

Prerequisite: STATS 67 or (STATS 7 and STATS 120A) and (I&C SCI 6N or MATH 3A)

Restriction: School of Info & Computer Sci students have first consideration for enrollment.

COMPSCI 271. Introduction to Artificial Intelligence. 4 Units.
The study of theories and computational models for systems which behave and act in an intelligent manner. Fundamental subdisciplines of artificial intelligence including knowledge representation, search, deduction, planning, probabilistic reasoning, natural language parsing and comprehension, knowledge-based systems, and learning.

COMPSCI 271P. Introduction to Artificial Intelligence. 4 Units.
The study of theories and computational models for systems which behave and act in an intelligent manner. Fundamental sub-disciplines of artificial intelligence, including knowledge representation, search, deduction, planning, probabilistic reasoning, natural language parsing and comprehension, knowledge-based systems, and learning.

Restriction: Graduate students only.

COMPSCI 272. Statistical Natural Language Processing. 4 Units.
Statistical models, machine learning algorithms, and computational tasks involved in natural language processing. Focuses on approaches that learn these models from data, and covers applications such as information extraction, dialog systems, machine translation, and question answering.

Prerequisite: COMPSCI 171 and COMPSCI 178

Restriction: School of Info & Computer Sci students have first consideration for enrollment. Graduate students only.
COMPSCI 273A. Machine Learning. 4 Units.
Computational approaches to learning algorithms for classifications, regression, and clustering. Emphasis is on discriminative classification methods such as decision trees, rules, nearest neighbor, linear models, and naive Bayes.
Prerequisite: COMPSCI 271 and COMPSCI 206

COMPSCI 273P. Machine Learning and Data Mining. 4 Units.
Introduction to principles of machine learning and data mining. Learning algorithms for classifications, regression, and clustering. Emphasis is on discriminative classification methods such as decision trees, rules, nearest neighbor, linear models, and naive Bayes.
Prerequisite: COMPSCI 271. COMPSCI 271 with a grade of B or better. Python programming knowledge is required.
Restriction: Master of Computer Science Degree students only. Graduate students only.

COMPSCI 274A. Probabilistic Learning: Theory and Algorithms. 4 Units.
An introduction to probabilistic and statistical techniques for learning from data, including parameter estimation, density estimation, regression, classification, and mixture modeling.
Prerequisite: COMPSCI 206

COMPSCI 274B. Learning in Graphical Models. 4 Units.
Models for data analysis are presented in the unifying framework of graphical models. The emphasis is on learning from data but inference is also covered. Real world examples are used to illustrate the material.
Prerequisite: COMPSCI 274A

COMPSCI 274C. Neural Networks and Deep Learning. 4 Units.
Neural network and deep learning from multiple perspectives. Theory of parallel distributed processing systems, algorithmic approaches for learning from data in various manners, applications to difficult problems in AI from computer vision, to natural language understanding, to bioinformatics and chemoinformatics.
Prerequisite: (STATS 120A and STATS 120B) or MATH 121A or COMPSCI 178 or COMPSCI 273A

Overlaps with COMPSCI 274A, COMPSCI 279S, COMPSCI 277, COMPSCI 276, COMPSCI 278, COMPSCI 274B.
Concurrent with COMPSCI 172B.

COMPSCI 274P. Neural Networks and Deep Learning. 4 Units.
Introduction to principles of machine learning and neural networks. Architecture design. Feedforward and recurrent networks. Learning models and algorithms. Applications to data analysis and prediction problems in areas such as machine vision, natural language processing, biomed, and finance.
Prerequisite: COMPSCI 271P. Knowledge of Python programming is required.
Restriction: Master of Computer Science Degree students only. Graduate students only.

COMPSCI 275. Network-based Reasoning/Constraint Networks. 4 Units.
Study of the theory and techniques of constraint network model. Covers techniques for solving constraint satisfaction problems: backtracking techniques, consistency algorithms, and structure-based techniques. Tractable subclasses. Extensions into applications such as temporal reasoning, diagnosis, and scheduling.
Prerequisite: Basic course in algorithm design and analysis.

COMPSCI 276. Reasoning in Probabilistic Graphical Models. 4 Units.
Focuses on algorithms for probabilistic reasoning using graphical models such as Bayesian Networks and Markov Networks that encode knowledge as local probabilistic relations. Tasks include finding most likely scenarios over a subset of variables, or updating posterior probability, given observations.
Prerequisite: A basic course in probability.

COMPSCI 277. Data Mining. 4 Units.
Introduction to the general principles of inferring useful knowledge from large data sets (commonly known as data mining or knowledge discovery). Relevant concepts from statistics, databases and data structures, optimization, artificial intelligence, and visualization are discussed in an integrated manner.
Prerequisite: COMPSCI 273A or COMPSCI 274A
COMPSCI 278. Probability Models. 4 Units.
Advanced probability, discrete time Markov chains, Poisson processes, continuous time Markov chains. Queuing or simulation as time permits.
Prerequisite: STATS 120A
Concurrent with STATS 121.

COMPSCI 284A. Representations and Algorithms for Molecular Biology. 4 Units.
Introduction to computational methods in molecular biology, aimed at those interested in learning about this interdisciplinary area. Covers computational approaches to understanding and predicting the structure, function, interactions, and evolution of DNA, RNA, proteins, and related molecules and processes.
Prerequisite: A Basic course in algorithms, or a basic course in molecular biology.
Concurrent with COMPSCI 184A.

COMPSCI 284C. Computational Systems Biology. 4 Units.
Prerequisite: COMPSCI 284A or (BIO SCI 99 and MATH 2D)
Concurrent with COMPSCI 184C.

COMPSCI 285. Mathematical and Computational Biology. 4 Units.
Prerequisite: MATH 227A
Same as MATH 227C.

COMPSCI 290. Research Seminar. 2 Units.
Forum for presentation and criticism by students of research work in progress. Presentation of problem areas and related work. Specific goals and progress of research.
Grading Option: Satisfactory/unsatisfactory only.
Repeatability: May be repeated for credit unlimited times.
Restriction: Graduate students only.

COMPSCI 295. Special Topics in Information and Computer Science. 4 Units.
Studies in selected areas of Information and Computer Science. Topics addressed vary each quarter.
Repeatability: Unlimited as topics vary.
Restriction: Graduate students only.

COMPSCI 296. Elements of Scientific Writing. 4 Units.
Introduces the concepts and principles of good scientific writing, demonstrates them by examples drawn from the literature, and uses a hands-on approach to apply them to documents being written by the participants.
Grading Option: Satisfactory/unsatisfactory only.

COMPSCI 296P. Capstone Professional Writing and Communication for Computer Science Careers. 6 Units.
Written and oral communication for computer science and IT careers. Production of the detailed design and development document for the concurrent capstone design class and refinement of written documents and oral communications skills needed for a successful job search.
Corequisite: COMPSCI 297P
Prerequisite: Successful completion of 24 units in the Master of Computer Science program.
Restriction: Master of Computer Science Degree students only. Graduate students only.
**COMPSCI 297P. Capstone Design Project for Computer Science.** 6 Units.
Design and development of app, software system, or hardware component of system based on students’ prior knowledge of advanced computer science principles. Implement at least a working prototype and test this using relevant use cases and/or input data.

Corequisite: COMPSCI 296P
Prerequisite: Successful completion of 24 units in the Master of Computer Science program.

Restriction: Master of Computer Science Degree students only. Graduate students only.

**COMPSCI 298. Thesis Supervision.** 2-12 Units.
Individual research or investigation conducted in preparation for the M.S. thesis option or the dissertation requirements for the Ph.D. program.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only. School of Information and Computer Science majors only.

**COMPSCI 298P. Computer Science Practicum.** 1-4 Units.
Internship in which students work individually at an outside organization to gain experience with the challenges involved in technology-related work.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Restriction: School of Info & Computer Sci students only. Master of Computer Science Degree students only. Graduate students only.

**COMPSCI 299. Individual Study.** 1-12 Units.
Individual research or investigation with Computer Science faculty.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only. School of Information and Computer Science majors only.

**COMPSCI 299P. Individual Study.** 4-8 Units.
Supervised individual study in computer science.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be taken for credit 4 times.

Restriction: Master of Computer Science Degree students have first consideration for enrollment. Graduate students only.

**Informatics Courses**

**IN4MATX 12. Barter to Bitcoin: Society, Technology and the Future of Money.** 4 Units.
Digital money has captured the broad imagination of speculators, coders, regulators, criminals and the mass media. Course puts this change in context: how do we understand money as a social, political and technological phenomenon?

Same as SOC SCI 11A.

**(II and III ).**

**IN4MATX 43. Introduction to Software Engineering.** 4 Units.
Concepts, methods, and current practice of software engineering. Large-scale software production, software life cycle models, principles and techniques for each stage of development.

Prerequisite: I&C SCI 32

Overlaps with I&C SCI 105.

Restriction: School of Info & Computer Sci students have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment.
IN4MATX 101. Concepts in Programming Languages I. 4 Units.
In-depth study of several contemporary programming languages stressing variety in data structures, operations, notation, and control. Examination of different programming paradigms, such as logic programming, functional programming and object-oriented programming; implementation strategies, programming environments, and programming style.
Prerequisite: (I&C SCI 51 or CSE 31 or EECS 31) and (I&C SCI 46 or CSE 46). I&C SCI 51 with a grade of C or better. CSE 31 with a grade of C or better. EECS 31 with a grade of C or better. I&C SCI 46 with a grade of C or better. CSE 46 with a grade of C or better
Same as COMPSCI 141.
Restriction: School of Info & Computer Sci students have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment.

IN4MATX 102. Concepts of Programming Language II. 4 Units.
In-depth study of major programming paradigms: imperative, functional, declarative, object-oriented, and aspect-oriented. Understanding the role of programming languages in software development and the suitability of languages in context. Domain-specific languages. Designing new languages for better software development support.
Prerequisite: IN4MATX 101 or COMPSCI 141 or CSE 141. CSE 141 with a grade of C or better

IN4MATX 113. Requirements Analysis and Engineering. 4 Units.
Aims to equip students to develop techniques of software-intensive systems through successful requirements analysis techniques and requirements engineering. Students learn systematic process of developing requirements through cooperative problem analysis, representation, and validation.
Prerequisite: IN4MATX 42 or I&C SCI 22 or CSE 22 or I&C SCI 33 or CSE 43 and (IN4MATX 43 or I&C SCI 52). IN4MATX 42 with a grade of C or better. I&C SCI 22 with a grade of C or better. CSE 22 with a grade of C or better. I&C SCI 33 with a grade of C or better. CSE 43 with a grade of C or better. IN4MATX 43 with a grade of C or better. I&C SCI 52 with a grade of C or better
Restriction: School of Info & Computer Sci students have first consideration for enrollment.

IN4MATX 115. Software Testing, Analysis, and Quality Assurance. 4 Units.
Preparation for developing high-quality software through successful verification and validation techniques. Fundamental principles of software testing, implementing software testing practices, ensuring the thoroughness of testing to gain confidence in the correctness of the software.
Prerequisite: (I&C SCI 45J or I&C SCI 45C or I&C SCI 46 or CSE 46) and IN4MATX 43. I&C SCI 45J with a grade of C or better. I&C SCI 45C with a grade of C or better. I&C SCI 46 with a grade of C or better. CSE 46 with a grade of C or better. IN4MATX 43 with a grade of C or better
Restriction: School of Info & Computer Sci students have first consideration for enrollment.

IN4MATX 117. Project in Software System Design. 4 Units.
Specification, design, construction, testing, and documentation of a complete software system. Special emphasis on the need for and use of teamwork, careful planning, and other techniques for working with large systems.
Prerequisite: (IN4MATX 43 or I&C SCI 52) and (I&C SCI 33 or CSE 43 or I&C SCI 22 or CSE 22 or IN4MATX 42). I&C SCI 52 with a grade of C or better. IN4MATX 42 with a grade of C or better
Restriction: Upper-division students only.

IN4MATX 121. Software Design: Applications. 4 Units.
Introduction to application design: designing the overall functionality of a software application. Topics include general design theory, software design theory, and software architecture. Includes practice in designing and case studies of existing designs.
Prerequisite: I&C SCI 33 or CSE 43. I&C SCI 33 with a grade of C or better. CSE 43 with a grade of C or better
Restriction: Upper-division students only. School of Info & Computer Sci students have first consideration for enrollment.

IN4MATX 122. Software Design: Structure and Implementation. 4 Units.
Introduction to implementation design: designing the internals of a software application. Topics include design aesthetics, design implementation, design recovery, design patterns, and component reuse. Includes practice in designing and case studies of existing designs.
Prerequisite: (I&C SCI 45J or I&C SCI 46 or IN4MATX 45) and (IN4MATX 101 or COMPSCI 141 or CSE 141)

IN4MATX 123. Software Architecture. 4 Units.
Prepares students to engineer well-structured software systems. Students learn a wide range of software architectural styles, architectural platforms that provide standard services to applications, and formal architecture description languages.
Prerequisite: (IN4MATX 122 or IN4MATX 101 or COMPSCI 141 or CSE 141) and IN4MATX 113
IN4MATX 124. Internet Applications Engineering. 4 Units.
Concepts in Internet applications engineering with emphasis on the Web. Peer-to-Peer and Interoperability. Topics include HTTP and REST, Remote Procedure/Method Calls, Web Services, data representations, content distribution networks, identity management, relevant W3C/IETF standards, and relevant new large-scale computing styles.
Prerequisite: (COMPSCI 132 or EECS 148) and I&C SCI 45J
Same as COMPSCI 137.
Overlaps with COMPSCI 122B.
Restriction: Upper-division students only. School of Info & Computer Sci students have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment.

IN4MATX 125. Computer Game Development. 4 Units.
Introduction to the principles of interactive 2D and 3D computer game development. Concepts in computer graphics, algorithms, software engineering, art and graphics, music and sound, story analysis, and artificial intelligence are presented and are the basis for student work.
Prerequisite: COMPSCI 112 or COMPSCI 171 or IN4MATX 121 or ART 106B or I&C SCI 163 or I&C SCI 166
Same as COMPSCI 113.
Restriction: School of Info & Computer Sci students have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment.

IN4MATX 131. Human Computer Interaction. 4 Units.
Basic principles of human-computer interaction (HCI). Introduces students to user interface design techniques, design guidelines, and usability testing. Students gain the ability to design and evaluate user interfaces and become familiar with some of the outstanding research problems in HCI.
Prerequisite: IN4MATX 41 or I&C SCI 10 or I&C SCI 21 or CSE 21 or I&C SCI H21 or I&C SCI 31 or CSE 41 or ENGR 10 or ENGRMAE 10 or EECS 10. IN4MATX 41 with a grade of C or better. I&C SCI 10 with a grade of C or better. I&C SCI 21 with a grade of C or better. CSE 21 with a grade of C or better. I&C SCI H21 with a grade of C or better. I&C SCI 31 with a grade of C or better. CSE 41 with a grade of C or better. ENGR 10 with a grade of C or better. ENGRMAE 10 with a grade of C or better. EECS 10 with a grade of C or better
Restriction: Upper-division students only.

IN4MATX 132. Project in Human-Computer Interaction Requirements and Evaluation. 4 Units.
Students undertake significant projects in the elicitation and specification of HCI requirements and the thorough evaluation of user interfaces.
Prerequisite: IN4MATX 131

IN4MATX 133. User Interaction Software. 4 Units.
Introduction to human-computer interaction programming. Emphasis on current tools, standards, methodologies for implementing effective interaction designs. Widget toolkits, Web interface programming, geo-spatial and map interfaces, mobile phone interfaces.
Prerequisite: I&C SCI 45J. I&C SCI 45J with a grade of C or better

IN4MATX 134. Project in User Interaction Software. 4 Units.
Students complete an end-to-end user interface programming project based on an iterative design paradigm. Topics may include requirements brainstorming, paper prototyping, iterative development, cognitive walk-through, quantitative evaluation, and acceptance testing. Materials fee.
Prerequisite: IN4MATX 131 and IN4MATX 133

IN4MATX 141. Information Retrieval. 4 Units.
An introduction to information retrieval including indexing, retrieval, classifying, and clustering text and multimedia documents.
Prerequisite: (I&C SCI 45C or I&C SCI 45J) and (STATS 7 or STATS 67). I&C SCI 45C with a grade of C or better. I&C SCI 45J with a grade of C or better
Same as COMPSCI 121.
Restriction: School of Info & Computer Sci students have first consideration for enrollment.
IN4MATX 143. Information Visualization. 4 Units.
Introduction to interactive visual interfaces for large datasets, and to principles of human visual perception and human computer interaction that inform their design. Various applications for data analysis and monitoring are discussed.
Prerequisite: IN4MATX 131 or I&C SCI 52 or (IN4MATX 43 and I&C SCI 31 or CSE 41 or I&C SCI 21 or CSE 21 or IN4MATX 41). IN4MATX 131 with a grade of C or better. I&C SCI 52 with a grade of C or better. IN4MATX 43 with a grade of C or better. I&C SCI 31 with a grade of C or better. CSE 41 with a grade of C or better. I&C SCI 21 with a grade of C or better. CSE 21 with a grade of C or better. IN4MATX 41 with a grade of C or better.

IN4MATX 148. Project in Ubiquitous Computing. 4 Units.
Introduction to ubiquitous computing research methods, tools, and techniques. Prototyping, design, and evaluation of physical computing applications, smart environments, embedded systems, and future computing scenarios. Includes hands-on in-class laboratory exercises. Materials fee.
Prerequisite: I&C SCI 10 or I&C SCI 21 or CSE 21 or I&C SCI 31 or CSE 41 or IN4MATX 41. I&C SCI 10 with a grade of C or better. I&C SCI 21 with a grade of C or better. CSE 21 with a grade of C or better. I&C SCI 31 with a grade of C or better. CSE 41 with a grade of C or better. IN4MATX 41 with a grade of C or better.
Restriction: Upper-division students only.

IN4MATX 151. Project Management. 4 Units.
Introduces theoretical and practical aspects of project management. Topics include organizational theory, group behavior, project management skills, case studies, personal and group productivity tools, management of distributed work, stakeholders, consultants, and knowledge management. Students do a project exercise.
Prerequisite: IN4MATX 43 or I&C SCI 52. I&C SCI 52 with a grade of C or better.
Restriction: Upper-division students only.

IN4MATX 153. Computer Supported Cooperative Work. 4 Units.
Introduces concepts and principles of collaborative systems. Topics may include shared workspaces, group interaction, workflow, architectures, interaction between social and technical features of group work, and examples of collaborative systems used in real-world settings. Students develop a simple collaborative application.
Prerequisite: (IN4MATX 161 or I&C SCI 52 or IN4MATX 43) and (I&C SCI 31 or CSE 41 or I&C SCI 21 or CSE 21 or IN4MATX 41). I&C SCI 52 with a grade of C or better. I&C SCI 31 with a grade of C or better. CSE 41 with a grade of C or better. I&C SCI 21 with a grade of C or better. CSE 21 with a grade of C or better. IN4MATX 41 with a grade of C or better.

IN4MATX 161. Social Analysis of Computing. 4 Units.
Introduction of computing as a social process. Examines the social opportunities and problems raised by new information technologies, and the consequences of different ways of organizing. Topics include computing and work life, privacy, virtual communities, productivity paradox, systems risks.
Prerequisite: IN4MATX 41 or I&C SCI 10 or I&C SCI 21 or CSE 21 or I&C SCI 31 or CSE 41 or ENGR 10 or EECS 10 or ENGRMAE 10. IN4MATX 41 with a grade of C or better. I&C SCI 10 with a grade of C or better. I&C SCI 21 with a grade of C or better. CSE 21 with a grade of C or better. I&C SCI 31 with a grade of C or better. CSE 41 with a grade of C or better. ENGR 10 with a grade of C or better. EECS 10 with a grade of C or better. ENGRMAE 10 with a grade of C or better. Satisfactory completion of the Lower-Division Writing requirement.

IN4MATX 162W. Organizational Information Systems. 4 Units.
Introduction to role of information systems in organizations, components and structure of organizational information systems, and techniques used in information systems analysis, design, and implementation.
Prerequisite: IN4MATX 161. Satisfactory completion of the Lower-Division Writing requirement.

IN4MATX 163. Project in the Social and Organizational Impacts of Computing. 4 Units.
Students undertake projects intended to gather and analyze data from situations in which computers are used, organize and conduct experiments intended to test hypotheses about impacts, and explore the application of concepts learned in previous courses.
Prerequisite: IN4MATX 162

IN4MATX 171. Introduction to Medical Informatics. 4 Units.
Broad overview of medical informatics for students with varied backgrounds. Electronic medical records, online resources, mobile technologies, patient safety, and computational design. Legal, ethical, and public policy issues. Health systems management. Evaluation and fieldwork for health systems.
Same as PUBHLTH 105.
Restriction: Upper-division students only.
IN4MATX 172. Project in Health Informatics. 4 Units.
Students undertake significant quarter-long projects related to health informatics. Topics may include field evaluations of health care technologies, prototypes, iterative design, and system implementations.

Prerequisite: PUBHLTH 105 or IN4MATX 171

Same as PUBHLTH 106.

IN4MATX 190. Special Topics in Informatics. 4 Units.
Studies in selected areas of informatics. Topics addressed vary each quarter.

Prerequisite: Prerequisites vary.

Repeatability: Unlimited as topics vary.

IN4MATX 191A. Senior Design Project. 4 Units.
Group supervised project in which students analyze, specify, design, construct, evaluate, and adapt a significant information processing system. Topics include team management, professional ethics, and systems analysis.

Prerequisite: IN4MATX 113 and IN4MATX 121 and IN4MATX 131 and IN4MATX 151 and IN4MATX 161

Grading Option: In Progress (Letter Grade with P/NP).

Restriction: Seniors only. Software Engineering Majors have first consideration for enrollment. Informatics Majors have first consideration for enrollment.

IN4MATX 191B. Senior Design Project. 4 Units.
Group supervised project in which students analyze, specify, design, construct, evaluate, and adapt a significant information processing system. Topics include team management, professional ethics, and systems analysis.

Prerequisite: IN4MATX 191A

Restriction: Seniors only.

IN4MATX H198. Honors Research. 4 Units.
Directed independent research in Informatics for honors students.

Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.

Repeatability: May be repeated for credit unlimited times.

Restriction: Bren School of ICS Honors students only. Campuswide Honors Program students only.

IN4MATX 199. Individual Study. 2-5 Units.
Individual research or investigation under the direction of an individual faculty member.

Repeatability: May be repeated for credit unlimited times.

IN4MATX 201. Research Methodology for Informatics. 4 Units.
Introduction to strategies and idioms of research in Informatics. Includes examination of issues in scientific inquiry, qualitative and quantitative methods, and research design. Both classic texts and contemporary research literature are read and analyzed.

IN4MATX 203. Qualitative Research Methods in Information Systems. 4 Units.
Introduction to qualitative research methods used to study computerization and information systems, such as open-ended interviewing, participant observation, and ethnography. Studies of the methods in practice through examination of research literature.

Prerequisite: IN4MATX 261 or IN4MATX 251

IN4MATX 205. Quantitative Research Methods in Information Systems. 4 Units.
Quantitative research methods used to study computerization and information systems. Design of instruments, sampling, sample sizes, and data analysis. Validity and reliability. Longitudinal versus cross-sectional designs. Analysis of secondary data. Studies of the methods through examination of research literature.

Prerequisite: IN4MATX 251 or IN4MATX 261. Basic knowledge of elementary statistics is also required.
IN4MATX 207S. Doctoral Seminar on Research and Writing. 2 Units.
Doctoral seminar centered on original research and writing. Provides a chance for doctoral students at all levels to present original work, brainstorm ongoing issues, and learn to provide and receive critical feedback from peers.

Grading Option: Satisfactory/unsatisfactory only.
Repeatability: May be repeated for credit unlimited times.

IN4MATX 209S. Seminar in Informatics. 2 Units.
Current research and research trends in informatics. Forum for presentation and criticism by students of research work in progress.
Repeatability: Unlimited as topics vary.

IN4MATX 211. Software Engineering. 4 Units.
Study of the concepts, methods, and tools for the analysis, design, construction, and measurement of complex software-intensive systems. Underlying principles emphasized. State-of-the-art software engineering and promising research areas covered, including project management.

IN4MATX 212. Analysis of Programming Languages. 4 Units.
Concepts in modern programming languages, their interaction, and the relationship between programming languages and methods for large-scale, extensible software development. Empirical analysis of programming language usage.

Same as COMPSCI 253.

IN4MATX 213. Requirements Engineering and Specification. 4 Units.
Study of rigorous techniques in requirements engineering - requirements definition phase of software development - with focus on modeling and specification. Topics include notations and models for requirements specification; and methods, tools and processes for software requirements elicitation, representation, analysis.
Restriction: Graduate students only.

IN4MATX 215. Software Analysis and Testing. 4 Units.
Studies techniques for developing confidence in software from traditional testing schemes to integrated, multitechnique analytic approaches. Considers strengths and weaknesses and explores opportunities for synergistic technique application. Emphasis is on approaches integrated into the software process.

IN4MATX 219. Software Environments. 4 Units.
Study of the requirements, concepts, and architectures of comprehensive, integrated, software development and maintenance environments. Major topics include process support, object management, communication, interoperability, measurement, analysis, and user interfaces in the environment context.

IN4MATX 221. Software Architecture. 4 Units.
Study of the concepts, representation techniques, development methods, and tools for architecture-centric software engineering. Topics include domain-specific software architectures, architectural styles, architecture description languages, software connectors, and dynamism in architectures.

IN4MATX 223. Applied Software Design Techniques. 4 Units.
Study of concepts, representations, techniques, and case studies in structuring software systems, with an emphasis on design considerations. Topics include static and dynamic system structure, data models, abstractions, naming, protocols and application programmer interfaces.

IN4MATX 225. Information Retrieval, Filtering, and Classification. 4 Units.
Algorithms for the storage, retrieval, filtering, and classification of textual and multimedia data. The vector space model, Boolean and probabilistic queries, and relevance feedback. Latent semantic indexing; collaborative filtering; and relationship to machine learning methods.
Prerequisite: COMPSCI 161 and COMPSCI 171 and (I&C SCI 6N or MATH 3A or MATH 6G)
Same as COMPSCI 221.
Restriction: Graduate students only.

IN4MATX 231. User Interface Design and Evaluation. 4 Units.
Introduction to the design and evaluation of user interfaces, with an emphasis on methodology. Cognitive principles, design life cycle, on-line and off-line prototyping techniques. Toolkits and architectures for interactive systems. Evaluation techniques, including heuristic and laboratory methods.
IN4MATX 232. Research in Human-Centered Computing. 4 Units.
Introduction to contemporary topics in human-computer interaction, including methods, technologies, design, and evaluation. Emerging application domains and their challenges to traditional research methods. Advanced architectures and technologies. Critical issues.

Prerequisite: Some familiarity with HCI principles.

IN4MATX 233. Intelligent User Interfaces. 4 Units.
Explores example software systems and their underlying concepts that leverage computing to empower and augment human individuals in their activities. Topics span the fields of user interface design, human-computer interaction, software engineering, and cognitive computing.

Prerequisite: COMPSCI 171

IN4MATX 235. Advanced User Interface Architecture. 4 Units.
Architectural concerns in advanced interactive systems. The design of current and emerging platforms for novel interactive systems. Paradigms such as constraint-based programming, multimodal interaction, and perceptual user interfaces for individual, distributed, and ubiquitous applications.

IN4MATX 237. Usable Security and Privacy. 4 Units.
Introduces usability problems in security and privacy methods, tools, and software. Overviews prominent examples of both failures and successes in usable security and privacy. Surveys state-of-the-art techniques and evaluation methodologies.

Same as COMPSCI 204.
Overlaps with IN4MATX 231, COMPSCI 203.

Restriction: Informatics Majors have first consideration for enrollment. Computer Science Majors have first consideration for enrollment. Undergraduate degree in Compsci or Informatics is strongly recommended.

IN4MATX 241. Introduction to Ubiquitous Computing. 4 Units.
The “disappearing computer” paradigm. Differences to the desktop computing model: applications, interaction in augmented environments, security, alternate media, small operating systems, sensors, and embedded systems design. Evaluation by project work and class participation.

Same as COMPSCI 248A.

IN4MATX 242. Ubiquitous Computing and Interaction. 4 Units.
Principles and design techniques for ubiquitous computing applications. Conceptual basis for tangible and embodied interaction. Interaction in virtual and augmented environments. Design methods and techniques. Design case studies. Examination by project work.

Prerequisite: IN4MATX 231 and IN4MATX 241

Same as COMPSCI 248B.

IN4MATX 244. Introduction to Embedded and Ubiquitous Systems. 4 Units.
Embedded and ubiquitous system technologies including processors, DSP, memory, and software. System interfacing basics; communication strategies; sensors and actuators, mobile and wireless technology. Using pre-designed hardware and software components. Design case studies in wireless, multimedia, and/or networking domains.

Prerequisite: I&C SCI 51 and COMPSCI 152 and COMPSCI 161 and (I&C SCI 6N or MATH 3A or MATH 6G or I&C SCI 6D). B.S. degree in Computer Science is also accepted.

Same as COMPSCI 244.

IN4MATX 251. Computer-Supported Cooperative Work. 4 Units.
The role of information systems in supporting work in groups and organizations. Examines various technologies designed to support communication, information sharing, and coordination. Focuses on behavioral and social aspects of designing and using group support technologies.

IN4MATX 261. Social Analysis of Computing. 4 Units.
The social and economic impacts of computing and information technologies on groups, organizations, and society. Topics include computerization and changes in the character of work, social control and privacy, electronic communities, and risks of safety-critical systems to people.

IN4MATX 263. Computerization, Work, and Organizations. 4 Units.
Selected topics in the influence of computerization and information systems in transforming work and organizations. Theories of organization and organizational change. Processes by which diverse information technologies influence changes in work and organizations over short and long time periods.

Prerequisite: IN4MATX 251 or IN4MATX 261
IN4MATX 265. Theories of Information Society . 4 Units.
Social and economic conceptions of information technology. Macrosocial and economic conditions that foster changes in information technologies. Social construction of information and computer technology in professional worlds. Theories of information technology and large-scale social change.
Prerequisite: IN4MATX 251 or IN4MATX 261

IN4MATX 267. Digital Media and Society. 4 Units.
Selected topics in the technological and social aspects of online interactions, and policy including online games, social media, electronic activism, e-commerce, and digital libraries. Media-theoretic approaches to digital technology. Architectures, infrastructure considerations, and their consequences.
Prerequisite: IN4MATX 251 or IN4MATX 261

IN4MATX 269. Computer Law. 4 Units.
Restriction: Graduate students only.

IN4MATX 273. Information Technology in Global Sustainability. 4 Units.
Explores the relationship between recent developments in information technology and the global transition to sustainability. Topics include the role of IT systems in the provision of human needs and wants (e.g., smart grids, food systems, and other IT-enabled infrastructure).
Restriction: Graduate students only.

IN4MATX 280. Overview of Human-Computer Interaction and Design . 4 Units.
Introduction to human-computer interaction and user-centered design. The material is focused on laying the groundwork for understanding the history, importance, and methods of human-computer interaction and design.

IN4MATX 281. User Needs Analysis . 4 Units.
Understanding the user’s context, needs, and preferences. Topics include interviews and observations, modeling the context, flow, culture, space and artifacts involved in an endeavor, ways of aggregating what is found, and presenting these findings to others.
Prerequisite: IN4MATX 280

IN4MATX 282. Design and Prototyping . 4 Units.
Introduction to user-centered design and prototyping. Focused on practical methods for interaction design. Topics include the nature of design and the challenges to creating and evaluating good designs, as well specific skills for designing interactive systems.
Prerequisite: IN4MATX 280

IN4MATX 283. User Experience Evaluation . 4 Units.
Evaluating prototypes and completed systems. Topics include comparative analysis, laboratory experiments, heuristic evaluation, cognitive walkthroughs, surveys, clickstreams, and help-desk.
Prerequisite: IN4MATX 280

IN4MATX 284. Advanced Design and Prototyping . 4 Units.
Develop and communicate interactive technology design prototypes. Moving concepts from brainstorming and paper prototypes to wireframe and limited functionality mock-ups.
Prerequisite: IN4MATX 282

IN4MATX 285. Interactive Technology Studio . 4 Units.
Technologies, languages, and skills required for creating prototypes to communicate interactive technology concepts. Topics include HTTP, CSS, CSS scripting, AJAX, Design Patterns, Javascript, Javascript libraries such as jQuery, SQL, MVC, and cloud architectures.
Prerequisite: IN4MATX 280

IN4MATX 286. Innovations in HCI and Design . 4 Units.
Recent social and technological developments in human-computer interaction and design. Topics will vary as the field progresses but include novel input techniques, novel platforms, and innovations in theory and methods of design.
Prerequisite: IN4MATX 280
IN4MATX 287. Capstone Project in HCI and Design . 4 Units.
Group project that reinforces all concepts learned in this program, including knowing where user experience work is most appropriate and essential, and executing the appropriate steps.

Prerequisite: IN4MATX 283 and IN4MATX 284

IN4MATX 288. Capstone Project and Portfolio . 4 Units.
Completion of capstone projects and development of portfolios. Ideation, critique, development, and critique.

Prerequisite: IN4MATX 287

IN4MATX 290. Research Seminar. 2 Units.
Forum for presentation and criticism by students of research work in progress. Presentation of problem areas and related work. Specific goals and progress of research.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

IN4MATX 291S. Literature Survey in Software Engineering. 2 Units.
Reading and analysis of relevant literature in Software Engineering under the direction of a faculty member.

Repeatability: May be repeated for credit unlimited times.

IN4MATX 295. Special Topics in Informatics. 4 Units.
Studies in selected areas of informatics. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.

IN4MATX 298. Thesis Supervision. 2-12 Units.
Individual research or investigation conducted in preparation for the M.S. thesis option or the dissertation requirements for the Ph.D. program.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

IN4MATX 299. Individual Study. 1-12 Units.
Individual research or investigation under the direction of an individual faculty member.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

Information and Computer Sci Courses

I&C SCI 3. Internet Technologies and their Social Impact. 4 Units.
Examines current Internet technologies and social implications at the individual, group, and societal level. Blogs, wikis, sharing of video, photos, and music, e-commerce, social networking, gaming, and virtual environments. Issues include privacy, trust, identity, reputation, governance, copyright, and malicious behavior.

(III)

I&C SCI 4. Human Factors for the Web. 4 Units.

Restriction: May not be taken for credit after IN4MATX 131.

(II)
I&C SCI 5. Global Disruption and Information Technology. 4 Units.
Explores how new forms of information technology may support transition to a sustainable civilization. Topics include design and implementation of IT systems, science of global change, online community building, and “green IT”. Activities involve reading, writing, discussion, and final project.

(I)

I&C SCI 6B. Boolean Logic and Discrete Structures. 4 Units.
Relations and their properties; Boolean algebras, formal languages; finite automata.
Prerequisite: High school mathematics through trigonometry.
Restriction: School of Info & Computer Sci students have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment.

(Vb)

I&C SCI 6D. Discrete Mathematics for Computer Science. 4 Units.
Covers essential tools from discrete mathematics used in computer science with an emphasis on the process of abstracting computational problems and analyzing them mathematically. Topics include mathematical induction, combinatorics, and recurrence relations.
Prerequisite: Recommended: I&C SCI 6B
Restriction: School of Info & Computer Sci students have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment. Computer Engineering majors have second consideration.

(Vb)

I&C SCI 6N. Computational Linear Algebra. 4 Units.
Matrices and linear transformations, systems of linear equations, determinants, linear vector spaces, eigenvalues and eigenvectors, orthogonal matrices, diagonalization, and least squares. Topics will be taught primarily from an algorithmic perspective, including computational solutions, applications, and numerical error analysis.
Overlaps with MATH 6G, MATH 3A.

(II, Vb)

I&C SCI 10. How Computers Work. 4 Units.
Introduction to digital computer and communication systems. Capabilities and limitations of information technology. Representing information in digital form. Overview of computer organization, Internet, operating systems, software. Human-computer interaction and social impact.
Restriction: May not be taken for credit after I&C SCI 51, I&C SCI 52, I&C SCI 105, or IN4MATX 43.

(II)

I&C SCI 11. The Internet and Public Policy. 4 Units.
How the Internet works. Current public policy issues concerning the Internet. Introductory economics. Communications law. Interactions between information technology, economics, and law. Case studies about Internet and communications policy.
Same as ECON 11.

(II or III).

I&C SCI 20. Invitation to Computing. 4 Units.
Foundational principles of computer science for students with no computing background that are interested in a related career. Big ideas of computing explored, including programming through use of sequential, conditional, iterative logic. Good computational practices, problem solving, and organization discussed.

I&C SCI 31. Introduction to Programming. 4 Units.
Introduction to fundamental concepts and techniques for writing software in a high-level programming language. Covers the syntax and semantics of data types, expressions, exceptions, control structures, input/output, methods, classes, and pragmatics of programming.
Overlaps with EECS 10, EECS 12, ENGRMAE 10.
Restriction: School of Info & Computer Sci students have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment.

(II and VB).
I&C SCI 32. Programming with Software Libraries. 4 Units.
Construction of programs for problems and computing environments more varied than in I&C SCI 31. Using library modules for applications such as graphics, sound, GUI, database, Web, and network programming. Language features beyond those in I&C SCI 31 are introduced as needed.

Prerequisite: I&C SCI 31 or CSE 41. I&C SCI 31 with a grade of C or better. CSE 41 with a grade of C or better

Restriction: School of Info & Computer Sci students have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment.

(I and (VA or VB).

I&C SCI 32A. Python Programming and Libraries (Accelerated). 4 Units.
Introduces Python syntax and semantics for fundamental programming concepts. Constructing programs for varied problems and environments. Using library modules for applications such as graphics, sound, GUI, database, Web, and network programming. Accelerated course for students with previous programming background.

Prerequisite: AP Computer Science A. AP Computer Science A with a minimum score of 3. Placement via a transfer course in computer programming or equivalent experience may also be accepted upon review.

Overlaps with I&C SCI 31, I&C SCI 32.

Restriction: School of Info & Computer Sci students have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment.

(I and (VA or VB).

I&C SCI 33. Intermediate Programming. 4 Units.
Intermediate-level language features and programming concepts for larger, more complex, higher-quality software. Functional programming, name spaces, modules, class protocols, inheritance, iterators, generators, operator overloading, reflection. Analysis of time and space efficiency.

Prerequisite: I&C SCI 32 or CSE 42. I&C SCI 32 with a grade of C or better. CSE 42 with a grade of C or better

Restriction: School of Info & Computer Sci students have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment.

(I and VB).

I&C SCI 45C. Programming in C/C++ as a Second Language. 4 Units.
An introduction to the lexical, syntactic, semantic, and pragmatic characteristics of the C/C++ languages for experienced programmers. Emphasis on object-oriented programming, using standard libraries, and programming with manual garbage collection.

Prerequisite: I&C SCI 33 or CSE 43 or EECS 40. I&C SCI 33 with a grade of C or better. CSE 43 with a grade of C or better. EECS 40 with a grade of C or better

Restriction: School of Info & Computer Sci students have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment.

I&C SCI 45J. Programming in Java as a Second Language. 4 Units.
An introduction to the lexical, syntactic, semantic, and pragmatic characteristics of the Java language for experienced programmers. Emphasis on object-oriented programming, using standard libraries, and programming with automatic garbage collection.

Prerequisite: I&C SCI 33 or CSE 43. I&C SCI 33 with a grade of C or better. CSE 43 with a grade of C or better

Overlaps with I&C SCI 22, CSE 22, I&C SCI 23, CSE 23, IN4MATX 45.

Restriction: I&C SCI 45J may not be taken for credit after I&C SCI 22, CSE 22, I&C SCI 23, CSE 23, or IN4MATX 45.

I&C SCI 46. Data Structure Implementation and Analysis. 4 Units.
Focuses on implementation and mathematical analysis of fundamental data structures and algorithms. Covers storage allocation and memory management techniques.

Prerequisite: CSE 45C or I&C SCI 45C. CSE 45C with a grade of C or better. I&C SCI 45C with a grade of C or better

Restriction: School of Info & Computer Sci students have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment.

(Vb)
I&C SCI 51. Introductory Computer Organization. 6 Units.
Multilevel view of system hardware and software. Operation and interconnection of hardware elements. Instruction sets and addressing modes. Virtual memory and operating systems. Laboratory work using low-level programming languages.
Prerequisite: (I&C SCI 21 or CSE 21 or I&C SCI 31 or CSE 41 or IN4MATX 42) and I&C SCI 6B. IN4MATX 42 with a grade of C or better

(II)

I&C SCI 53. Principles in System Design. 4 Units.
Principles and practice of engineering of computer software and hardware systems. Topics include techniques for controlling complexity; strong modularity using client-server design, virtual memory, and threads; networks; coordination of parallel activities; security and encryption; and performance optimizations.
Corequisite: I&C SCI 53L
Prerequisite: I&C SCI 51

I&C SCI 53L. Principles in System Design Library. 2 Units.
Required laboratory section and co-requisite for I&C SCI 53.
Corequisite: I&C SCI 53
Prerequisite: I&C SCI 51

I&C SCI 60. Computer Games and Society. 4 Units.
The study and critical analysis of computer games as art objects, cultural artifacts, gateways to virtual worlds, educational aids, and tools for persuasion and social change. Emphasis on understanding games in their historical and cultural context.
Prerequisite: Satisfaction of the UC Entry Level Writing Requirement.

(III)

I&C SCI 61. Game Systems and Design. 4 Units.
Principles and usage of game design elements. Introduction to technologies that support modern computer games. Students design, implement, and critique several small games.

(I)

I&C SCI 62. Game Technologies and Interactive Media. 4 Units.
Technologies for interactive media and game design. Web-based software systems, virtual world platforms, and game engines. Emphasis on conceptual and architectural aspects of these technologies.
Prerequisite: I&C SCI 21 or CSE 21 or I&C SCI 31 or CSE 41 or IN4MATX 42. IN4MATX 42 with a grade of C or better

I&C SCI 80. Special Topics in Information and Computer Science. 2-4 Units.
Studies in selected areas of information and computer sciences. Topics addressed vary each quarter.
Prerequisite: Prerequisites vary.
Repeatability: Unlimited as topics vary.

I&C SCI 90. New Students Seminar. 1 Unit.
Introduces students to the Donald Bren School of Information and Computer Sciences. Focuses on advising students making the transition to UCI, community building, and mostly surveying the technical areas within departments in ICS, via talks by faculty on their research.
Grading Option: Pass/no pass only.

I&C SCI 105. Digital Information Systems. 4 Units.
Design and analysis of digital information systems. Covers underlying database and network technology, and software engineering principles used to build these systems. Evaluating digital information systems, and recognizing common flaws and vulnerabilities.
Prerequisite: I&C SCI 10 or I&C SCI 21 or CSE 21 or I&C SCI H21 or IN4MATX 41. I&C SCI 10 with a grade of C or better. I&C SCI 21 with a grade of C or better. CSE 21 with a grade of C or better. I&C SCI H21 with a grade of C or better. IN4MATX 41 with a grade of C or better
Overlaps with I&C SCI 52, IN4MATX 43.
I&C SCI 139W. Critical Writing on Information Technology. 4 Units.
Study and practice of critical writing and oral communication as it applies to information technology. Each student writes assignments of varying lengths, totaling at least 4,000 words.

Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.

Restriction: Upper-division students only.

(Ib)

I&C SCI 160. Graphics Processors and Game Platforms. 4 Units.
Principles of computer architecture emphasizing hardware used with general purpose processor to support high-performance computer games and graphics engines.

Prerequisite: I&C SCI 51

Overlaps with COMPSCI 152.

I&C SCI 161. Game Engine Lab. 4 Units.
The use of an open source game or graphics engine in the design and implementation of a computer game. Principles of game engine design. Students work on teams to design, implement, and evaluate new computer games based on an engine.

Prerequisite: I&C SCI 45C or CSE 45C

Restriction: School of Info & Computer Sci students have first consideration for enrollment.

I&C SCI 162. Modeling and World Building. 4 Units.
Use of 3D modeling software and related tools to design and create animated, textured models, and expansive virtual worlds incorporating objects, scenes, and venues for activity within game worlds and online environments.

Prerequisite or corequisite: I&C SCI 33 and (I&C SCI 6N or MATH 3A) and I&C SCI 61

Restriction: School of Info & Computer Sci students have first consideration for enrollment.

I&C SCI 163. Mobile and Ubiquitous Games. 4 Units.
Design and technology of mobile games, including mixed reality gaming, urban games, and locative media. Case studies of significant systems. Uses and limitations of location-based technologies. Infrastructures and their relationships to gameplay and design.

Prerequisite: I&C SCI 61 and (I&C SCI 10 or I&C SCI 21 or I&C SCI 31 or IN4MATX 41)

I&C SCI 166. Game Design. 4 Units.
Game design takes into consideration psychology, narrative, platform features and limitations, marketing, computer science capabilities, human-computer interface principles, industry trends, aesthetic judgment, and other factors. Students focus on video game design through lectures, readings, presentations, implementation, and play testing.

Prerequisite: I&C SCI 61 and (IN4MATX 43 or I&C SCI 52)

I&C SCI 167. Multiplayer Game Systems. 4 Units.
Foundations and technologies that enable multiuser, networked, and persistent virtual environments. Emphasis on database design and management, network protocols, and concurrency control to accommodate large numbers of simultaneous users.

Prerequisite: I&C SCI 51

I&C SCI 168. Multiplayer Game Project. 4 Units.
Designing and implementing a multiuser, networked, and persistent virtual environment or game. Emphasis on cultural aspects, community building, user interface issues and design, security, privacy, and economics.

Prerequisite: (I&C SCI 52 or IN4MATX 43) and I&C SCI 167. IN4MATX 43 with a grade of C or better

I&C SCI 169A. Capstone Game Project I. 4 Units.
Students work in teams to design and implement a new computer game or virtual world. Emphasis on sound, art, and level design, building a community, cut scenes, production values, full utilization of hardware and software platform, and current industry trends.

Prerequisite: I&C SCI 168

Grading Option: In Progress (Letter Grade with P/NP).
I&C SCI 169B. Capstone Game Project II. 4 Units.
Students work in teams to design and implement a new computer game or virtual world. Emphasis on sound, art, and level design, building a community, cut scenes, production values, full utilization of hardware and software platform, and current industry trends.
Prerequisite: I&C SCI 169A

I&C SCI 192. Industrial or Public Sector Field Study. 2 Units.
Students participate in an off-campus, supervised internship for a minimum of 60 hours. Students apply classroom knowledge through internship projects in the private sector or nonprofit agencies.
Grading Option: Pass/no pass only.
Repeatability: May be taken for credit 2 times.

I&C SCI 193. Tutoring in ICS. 2 Units.
Principles and practice of providing technical assistance to novice learners in information and computer sciences.
Repeatability: May be taken for credit for 18 units.
Restriction: ICS Peer Tutoring Program students only.

I&C SCI H197. Honors Seminar. 2 Units.
An overview of computer science and selected recent trends in research. Students attend talks on current faculty research, with opportunities for discussion.
Grading Option: Pass/no pass only.
Restriction: Bren School of ICS Honors students only. Campuswide Honors Program students only.

I&C SCI 398A. Teaching Assistant Training Seminar. 2 Units.
Theories, methods, and resources for teaching computer science at the university level, particularly by teaching assistants. Classroom presentations, working with individuals, grading, motivating students. Participants will give and critique presentations and may be videotaped while teaching.
Grading Option: Satisfactory/unsatisfactory only.

I&C SCI 398B. Advanced Teaching Assistant Seminar. 4 Units.
Teaching computer science at the university level, emphasizing issues in teaching an entire course. Course organization, designing examinations and projects, grading, motivating students. Participants will begin to assemble teaching portfolios.
Prerequisite: I&C SCI 398A
Grading Option: Satisfactory/unsatisfactory only.

I&C SCI 399. University Teaching. 4 Units.
Involves on-the-job experience for Teaching Assistants.
Repeatability: May be repeated for credit unlimited times.
Restriction: Teaching assistants only.

Statistics Courses
STATS 5. Seminar in Data Science. 1 Unit.
An introduction to the field of Data Science; intended for entering freshman and transfers.
Grading Option: Pass/no pass only.
Restriction: Information Computer Science Majors only.

STATS 7. Basic Statistics. 4 Units.
Introduces basic inferential statistics including confidence intervals and hypothesis testing on means and proportions, t-distribution, Chi Square, regression and correlation. F-distribution and nonparametric statistics included if time permits.
Overlaps with STATS 8, MGMT 7, SOCECOL 13.
Restriction: STATS 7 may not be taken for credit concurrently with or after STATS 110, STATS 111, STATS 112.
STATS 8. Introduction to Biological Statistics. 4 Units.
Introductory statistical techniques used to collect and analyze experimental and observational data from health sciences and biology. Includes exploration of data, probability and sampling distributions, basic statistical inference for means and proportions, linear regression, and analysis of variance.

Overlaps with SOCECOL 13, MGMT 7, STATS 7.

Restriction: STATS 8 may not be taken for credit concurrently with or after STATS 110, STATS 111, STATS 112.

(Va)

STATS 67. Introduction to Probability and Statistics for Computer Science. 4 Units.
Introduction to the basic concepts of probability and statistics with discussion of applications to computer science.

Prerequisite: MATH 2B

Restriction: School of Info & Computer Sci students have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment. STATS 67 may not be taken for credit concurrently with or after STATS 120B.

(Va)

STATS 68. Statistical Computing and Exploratory Data Analysis. 4 Units.
Introduces key concepts in statistical computing. Techniques such as exploratory data analysis, data visualization, simulation, and optimization methods, will be presented in the context of data analysis within a statistical computing environment.

Prerequisite: STATS 7 and I&C SCI 31

STATS 110. Statistical Methods for Data Analysis I. 4 Units.
Introduction to statistical methods for analyzing data from experiments and surveys. Methods covered include two-sample procedures, analysis of variance, simple and multiple linear regression.

Prerequisite: STATS 7 or STATS 8 or AP90 or (STATS 120A and STATS 120B and STATS 120C). AP90 with a minimum score of 3

Restriction: School of Info & Computer Sci students only.

STATS 111. Statistical Methods for Data Analysis II. 4 Units.
Introduction to statistical methods for analyzing data from surveys or experiments. Emphasizes application and understanding of methods for categorical data including contingency tables, logistic and Poisson regression, loglinear models.

Prerequisite: STATS 110

Concurrent with STATS 202.

STATS 112. Statistical Methods for Data Analysis III. 4 Units.
Introduction to statistical methods for analyzing longitudinal data from experiments and cohort studies. Topics covered include survival methods for censored time-to-event data, linear mixed models, non-linear mixed effects models, and generalized estimating equations.

Prerequisite: STATS 111

Concurrent with STATS 203.

STATS 115. Introduction to Bayesian Data Analysis. 4 Units.
Basic Bayesian concepts and methods with emphasis on data analysis. Special emphasis on specification of prior distributions. Development for one-two samples and on to binary, Poisson, and linear regression. Analyses performed using free OpenBugs software.

Prerequisite: STATS 120C. Recommended: STATS 110.

Concurrent with STATS 205.
STATS 120A. Introduction to Probability and Statistics I. 4 Units.
Introduction to basic principles of probability and statistical inference. Axiomatic definition of probability, random variables, probability distributions, expectation.
Prerequisite: MATH 2A and MATH 2B and (MATH 2D or MATH 4)
Overlaps with MATH 130A.
Restriction: Data Science Majors have first consideration for enrollment. Quantitative Economics majors have second consideration.
Concurrent with STATS 281A.

STATS 120B. Introduction to Probability and Statistics II. 4 Units.
Introduction to basic principles of probability and statistical inference. Point estimation, interval estimating, and testing hypotheses, Bayesian approaches to inference.
Prerequisite: STATS 120A
Restriction: Data Science Majors have first consideration for enrollment. Quantitative Economics majors have second consideration.
Concurrent with STATS 281B.

STATS 120C. Introduction to Probability and Statistics III. 4 Units.
Introduction to basic principles of probability and statistical inference. Linear regression, analysis or variance, model checking.
Prerequisite: STATS 120B and (MATH 3A or MATH 6G or I&C SCI 6N)
Restriction: Data Science Majors have first consideration for enrollment. Quantitative Economics majors have second consideration.
Concurrent with STATS 281C.

STATS 140. Multivariate Statistical Methods. 4 Units.
Theory and application of multivariate statistical methods. Topics include statistical inference for the multivariate normal model and its extensions to multiple samples and regression, use of statistical packages for data visualization and reduction, discriminant analysis, cluster analysis, and factor analysis.
Prerequisite: STATS 120C and (MATH 3A or I&C SCI 6N)
Concurrent with STATS 240.

STATS 170A. Project in Data Science I. 4 Units.
Problem definition and analysis, data representation, algorithm selection, solution validation, and results presentation. Students do team projects and lectures cover analysis alternatives, project planning, and data analysis issues. First quarter emphasizes approach selection, project planning, and experimental design.
Prerequisite: STATS 68 and STATS 112 and IN4MATX 43 and COMPSCI 122A and COMPSCI 161 and COMPSCI 178
Grading Option: In Progress (Letter Grade with P/NP).
Restriction: Seniors only. Data Science Majors have first consideration for enrollment.

STATS 170B. Project in Data Science II. 4 Units.
Problem definition and analysis, data representation, algorithm selection, solution validation, and results presentation. Students do team projects and lectures cover analysis alternatives, project planning, and data analysis issues. Second quarter emphasizes project execution and analysis, and presentation of results.
Prerequisite: STATS 170A
Restriction: Seniors only. Data Science Majors have first consideration for enrollment.

STATS 199. Individual Study. 2-5 Units.
Individual research or investigations under the direction of an individual faculty member.
Repeatability: May be repeated for credit unlimited times.
STATS 200A. Intermediate Probability and Statistical Theory. 4 Units.
Basics of probability theory, random variables and basic transformations, univariate distributions—discrete and continuous, multivariate distributions.
Prerequisite: STATS 120C

STATS 200B. Intermediate Probability and Statistical Theory. 4 Units.
Random samples, transformations, limit laws, normal distribution theory, introduction to stochastic processes, data reduction, point estimation (maximum likelihood).
Prerequisite: STATS 200A

STATS 200C. Intermediate Probability and Statistical Theory. 4 Units.
Interval estimation, hypothesis testing, decision theory and Bayesian inference, basic linear model theory.
Prerequisite: STATS 200B

STATS 201. Statistical Methods for Data Analysis I. 4 Units.
Introduction to statistical methods for analyzing data from experiments and surveys. Methods covered include two-sample procedures, analysis of variance, simple and multiple linear regression.
Prerequisite: STATS 7 or STATS 8
Restriction: STATS 201 cannot be taken for credit after taking STATS 210.

STATS 202. Statistical Methods for Data Analysis II. 4 Units.
Introduction to statistical methods for analyzing data from surveys or experiments. Emphasizes application and understanding of methods for categorical data including contingency tables, logistic and Poisson regression, loglinear models.
Prerequisite: STATS 201 or STATS 210
Concurrent with STATS 111.

STATS 203. Statistical Methods for Data Analysis III. 4 Units.
Introduction to statistical methods for analyzing longitudinal data from experiments and cohort studies. Topics covered include survival methods for censored time-to-event data, linear mixed models, non-linear mixed effects models, and generalized estimating equations.
Prerequisite: STATS 202
Concurrent with STATS 112.

STATS 205. Introduction to Bayesian Data Analysis. 4 Units.
Basic Bayesian concepts and methods with emphasis on data analysis. Special emphasis on specification of prior distributions. Development for one-two samples and on to binary, Poisson and linear regression. Analyses performed using free OpenBugs software.
Prerequisite: STATS 120C. Recommended: STATS 201 or STATS 210.
Concurrent with STATS 115.

STATS 210. Statistical Methods I: Linear Models. 4 Units.
Statistical methods for analyzing data from surveys and experiments. Topics include randomization and model-based inference, two-sample methods, analysis of variance, linear regression and model diagnostics.
Prerequisite: Knowledge of basic statistics, calculus, linear algebra.

STATS 210A. Statistical Methods I: Linear Models. 4 Units.
Statistical methods for analyzing data from surveys and experiments. Topics include randomization and model-based inference, two-sample methods, analysis of variance, linear regression, and model diagnostics.
Prerequisite: Knowledge of basic statistics (at the level of STATS 7), calculus, and linear algebra.
Restriction: Graduate students only.
STATS 210B. Statistical Methods II: Categorical Data. 4 Units.
Introduction to statistical methods for analyzing discrete and non-normal outcomes. Emphasizes the development and application of methods for categorical data, including contingency tables, logistic and Poisson regression, loglinear models.

Prerequisite: STATS 210. May not be taken for graduate credit by Ph.D. students in Statistics.
Restriction: Graduate students only.

STATS 210C. Statistical Methods III: Longitudinal Data. 4 Units.
Introduction to statistical methods for analyzing longitudinal outcomes. Emphasizes the development and application of regression methods for correlated and censored outcomes, as well as censored outcomes, are covered.

Prerequisite: STATS 210B. May not be taken for graduate credit by Ph.D. students in Statistics.
Restriction: Graduate students only.

STATS 211. Statistical Methods II: Generalized Linear Models. 4 Units.
Development of the theory and application of generalized linear models. Topics include likelihood estimation and asymptotic distributional theory for exponential families, quasi-likelihood and mixed model development. Emphasizes methodological development and application to real scientific problems.

Prerequisite or corequisite: STATS 210

STATS 212. Statistical Methods III: Methods for Correlated Data. 4 Units.
Development and application of statistical methods for analyzing corrected data. Topics covered include repeated measures ANOVA, linear mixed models, non-linear mixed effects models, and generalized estimating equations. Emphasizes both theoretical development and application of the presented methodology.

Prerequisite: STATS 211

STATS 220A. Advanced Probability and Statistics Topics. 4 Units.
Advanced topics in probability and statistical inference including measure theoretic probability, large sample theory, decision theory, resampling and Monte Carlo methods, nonparametric methods.

Prerequisite: STATS 200C

STATS 220B. Advanced Probability and Statistics Topics. 4 Units.
Advanced topics in probability and statistical inference, including measure theoretic probability, large sample theory, decision theory, resampling and Monte Carlo methods, nonparametric methods.

Prerequisite: STATS 220A and MATH 140B

STATS 225. Bayesian Statistical Analysis. 4 Units.
Introduction to the Bayesian approach to statistical inference. Topics include univariate and multivariate models, choice of prior distributions, hierarchical models, computation including Markov chain Monte Carlo, model checking, and model selection.

Prerequisite: STATS 205 and STATS 230

STATS 226. Advanced Topics in Modern Bayesian Statistical Inference. 4 Units.
Modern Bayesian Statistics: selected topics from theory of Markov chains, application of theory to modern methods of Markov chain Monte Carlo sampling; Bayesian non-parametric and semiparametric modeling, including Dirichlet Process Mixtures; Mixtures of Polya Trees.

Prerequisite: STATS 200C and STATS 225

STATS 230. Statistical Computing Methods. 4 Units.
Numerical computations and algorithms with applications in statistics. Topics include optimization methods including the EM algorithm, random number generation and simulation, Markov chain simulation tools, and numerical integration.

Prerequisite: Two quarters of upper-division or graduate training in probability and statistics.
Overlaps with COMPSCI 206.
STATS 235. Modern Data Analysis Methods . 4 Units.
Introduces selected modern tools for data analysis. Emphasizes use of computational and resampling techniques for data analyses when the data do not conform to standard toolbox of regression models and/or complexity of modeling problem threatens validity of standard methods.
Prerequisite: STATS 120C and STATS 205 and (STATS 201 or STATS 210)
Restriction: Graduate students only.

STATS 240. Multivariate Statistical Methods. 4 Units.
Theory and application of multivariate statistical methods. Topics include statistical inference for the multivariate normal model and its extensions to multiple samples and regression, use of statistical packages for data visualization and reduction, discriminant analysis, cluster analysis, and factor analysis.
Prerequisite: STATS 120C and (MATH 3A or I&C SCI 6N)
Concurrent with STATS 140.

STATS 245. Time Series Analysis. 4 Units.
Statistical models for analysis of time series from time and frequency domain perspectives. Emphasizes theory and application of time series data analysis methods. Topics include ARMA/ARIMA models, model identification/estimation, linear operators, Fourier analysis, spectral estimation, state space models, Kalman filter.
Corequisite: STATS 200C
Prerequisite or corequisite: STATS 201 or STATS 210

STATS 246. Spectral Analysis . 4 Units.
Spectral methods that are most commonly utilized for analyzing univariate and multivariate time series and signals. These methods include spectral and coherence estimation, transfer function modeling, classification and discrimination of time series, non-stationary time series, time-frequency analysis, and wavelets analysis.
Prerequisite: STATS 200B and (STATS 201 or STATS 210)

STATS 250. Biostatistics. 4 Units.
Statistical methods commonly used to analyze data arising from clinical studies. Topics include analysis of observational studies and randomized clinical trials, techniques in the analysis of survival and longitudinal data, approaches to handling missing data, meta-analysis, nonparametric methods.
Prerequisite: STATS 210

STATS 255. Statistical Methods for Survival Data. 4 Units.
Statistical methods for analyzing survival data from cohort studies. Topics include parametric and nonparametric methods, the Kaplan-Meier estimator, log-rank tests, regression models, the Cox proportional hazards model and accelerated failure time models, efficient sampling designs, discrete survival models.
Corequisite: STATS 202 or STATS 211.
Prerequisite: STATS 210

STATS 257. Introduction to Statistical Genetics. 4 Units.
Provides students with knowledge of the basic principles, concepts, and methods used in statistical genetic research. Topics include principles of population genetics, and statistical methods for family- and population-based studies.
Prerequisite: Two quarters of upper-division or graduate training in statistical methods.
Same as EPIDEM 215.

STATS 260. Inference with Missing Data. 4 Units.
Statistical methods and theory useful for analysis of multivariate data with partially observed variables. Bayesian and likelihood-based methods developed. Topics include EM-type algorithms, MOMC samplers, multiple imputation, and general location model. Applications from economics, education, and medicine are discussed.
Prerequisite or corequisite: STATS 210 or STATS 200C. STATS 230.
STATS 262. Theory and Practice of Sample Surveys. 4 Units.
Basic techniques and statistical methods used in designing surveys and analyzing collected survey data. Topics include simple random sampling, ratio and regression estimates, stratified sampling, cluster sampling, sampling with unequal probabilities, multistage sampling, and methods to handle nonresponse.
Prerequisite: STATS 120C

STATS 265. Causal Inference. 4 Units.
Various approaches to causal inference focusing on the Rubin causal model and propensity-score methods. Topics include randomized experiments, observational studies, non-compliance, ignorable and non-ignorable treatment assignment, instrumental variables, and sensitivity analysis. Applications from economics, politics, education, and medicine.
Prerequisite: STATS 200C and STATS 210

STATS 270. Stochastic Processes. 4 Units.
Introduction to the theory and application of stochastic processes. Topics include Markov chains, continuous-time Markov processes, Poisson processes, and Brownian motion. Applications include Markov chain Monte Carlo methods and financial modeling (for example, option pricing).
Prerequisite: STATS 120C
Overlaps with MATH 271A, MATH 271B, MATH 271C.

STATS 275. Statistical Consulting. 4 Units.
Training in collaborative research and practical application of statistics. Emphasis on effective communication as it relates to identifying scientific objectives, formulating a statistical analysis plan, choice of statistical methods, and interpretation of results and their limitations to non-statisticians.
Prerequisite: STATS 203 or STATS 212
Repeatability: May be taken for credit 2 times.

STATS 280. Seminar in Statistics. 0.5 Units.
Periodic seminar series covering topics of current research in statistics and its application.
Grading Option: Satisfactory/unsatisfactory only.
Repeatability: May be repeated for credit unlimited times.
Restriction: Graduate students only.

STATS 281A. Introduction to Probability and Statistics I. 4 Units.
Introduction to basic principles of probability and statistical inference. Axiomatic definition of probability, random variables, probability distributions, expectation.
Restriction: Graduate students only.
Concurrent with STATS 120A.

STATS 281B. Introduction to Probability and Statistics II. 4 Units.
Introduction to basic principles of probability and statistical inference. Point estimation, interval estimating, and testing hypotheses, Bayesian approaches to inference.
Restriction: Graduate students only.
Concurrent with STATS 120B.

STATS 281C. Introduction to Probability and Statistics III. 4 Units.
Introduction to basic principles of probability and statistical inference. Contingency table analysis, linear regression, analysis of variance, model checking.
Restriction: Graduate students only.
Concurrent with STATS 120C.

STATS 295. Special Topics in Statistics. 4 Units.
Studies in selected areas of statistics. Topics addressed vary each quarter.
Repeatability: Unlimited as topics vary.
STATS 298. Thesis Supervision. 2-12 Units.
Individual research or investigation conducted in preparation for the M.S. thesis option or the dissertation requirements for the Ph.D. program.

Repeatability: May be repeated for credit unlimited times.

STATS 299. Individual Study. 2-12 Units.
Individual research or investigation under the direction of an individual faculty member.

Repeatability: May be repeated for credit unlimited times.

Overview
With over 45 full-time faculty members, 300+ graduate students, and more than 2,000 undergraduates, we provide a world-class research environment spanning not only the core areas of computer science — including computer architecture, system software, networking and distributed computing, data and information systems, the theory of computation, artificial intelligence, and computer graphics — but also highly interdisciplinary programs, such as biomedical informatics, data mining, security and privacy, and ubiquitous computing.

The diverse research interests of our faculty are reflected directly in our educational programs. Computer Science faculty teach most of the undergraduate and graduate courses for the degree programs in both Computer Science and Information & Computer Science. We jointly offer with our colleagues in The Henry Samueli School of Engineering an undergraduate degree in Computer Science and Engineering, as well as the graduate program in Networked Systems. We also have a major in Computer Game Science, jointly offered with the Department of Informatics.

Our department collaborates with many other institutions in the United States and abroad, and its doors are always open to a multitude of visitors and collaborators from all corners of the globe.

Undergraduate Major in Computer Science
The Computer Science major emphasizes the principles of computing that underlie our modern world, and provides a strong foundational education to prepare students for the broad spectrum of careers in computing. This major can serve as preparation for either graduate study or a career in industry. Students receive a solid background in low-level architecture and systems; middle-level infrastructure, algorithms, and mathematical foundations. This is a highly flexible degree that allows students to explore a broad range of topics in modern computing. In order to achieve some focus in their upper-division studies, students are required to satisfy the requirements for one of the nine specializations described below.

Algorithms. This specialization focuses on fundamental computational techniques, including their analysis and applications to topics in computer vision, computer games, graphics, artificial intelligence, and information retrieval. Topics include data structures, graph and network algorithms, computational geometry, probabilistic algorithms, complexity theory, and cryptography.

Architecture and Embedded Systems. This specialization integrates principles of embedded systems, software, hardware, computer architecture, distributed systems and networks, and prepares students to design and create efficient hardware/software architectures for emerging application areas. Students in this specialization will build upon a strong foundation in software and hardware and learn how to design networked embedded systems, and efficient computer architectures for a diverse set of application domains such as gaming, visualization, search, databases, transaction processing, data mining, and high-performance and scientific computing.

Bioinformatics. This specialization introduces students to the interdisciplinary intersection of biology and medicine with computer science and information technology. Students who complete the specialization will understand biomedical computing problems from the computer science perspectives, and be able to design and develop software that solves computational problems in biology and medicine.

General Computer Science. This specialization allows students to acquire a well-rounded knowledge of computer science that may be tailored to their individual interests. Students choose 11 upper-division computer science courses, including two project courses. This specialization will appeal to those who are interested in a broad education in computer science, or who wish to create their own unique specialization not found in the current list of (other) specializations under this major.

Information. This specialization is intended to prepare students for working with and developing a wide variety of modern data and information systems. Topics covered by this concentration include database management, information retrieval, Web search, data mining, and data-intensive computing.

Intelligent Systems. This specialization will introduce students to the principles underlying intelligent systems, including topics such as representing human knowledge, building automated reasoning systems, developing intelligent search techniques, and designing algorithms that adapt and learn from
data. Students in this specialization will use these principles to solve problems across a variety of applications such as computer vision, information retrieval, data mining, automated recommender systems, bioinformatics, as well as individually designed projects.

**Networked Systems.** This specialization focuses on Internet architecture, Internet applications, and network security. It also encourages students to learn about operating systems, databases, search, programming, embedded systems, and performance.

**Systems and Software.** This specialization deals with principles and design of systems and software. It emphasizes the interaction between software and the computing infrastructure on which it runs and the performance impact of design decisions. Core topics include the hardware/software interface, languages and compilers, operating systems, parallel and distributed computing. Elective topics include networking, security, graphics, and databases.

**Visual Computing.** This specialization encompasses the digital capture, processing, synthesis and display of visual data such as images and video. This specialization includes computer vision, image processing, and graphics, and covers such topics as the representation of 3D objects, visual recognition of objects and people, interactive and photo-realistic image rendering, and physics and perception of light and color.

The Department also offers a joint undergraduate degree in Computer Science and Engineering, in conjunction with The Henry Samueli School of Engineering; information is available in the Interdisciplinary Studies section (p. 1167) of the Catalogue.

**Admissions**

**Freshman Applicants:** See the Undergraduate Admissions section (p. 52).

**Transfer Applicants:**

Junior-level applicants who satisfactorily complete course requirements will be given preference for admission. Applicants must satisfy the following minimum requirements.

Have a cumulative GPA of 3.0 and a grade of B or higher in all required courses below:

1. Complete one year of approved college-level math, preferably courses in calculus equivalent to UCI's MATH 2A - MATH 2B; if not available, one year of coursework equivalent to other major-related math courses is acceptable.
2. One year of computer programming courses in an objected-oriented or higher-level programming language. For example, Python, Java, C++, data structures, assembly language and machine organization. Object-oriented or higher-level programming language courses that do not directly articulate to I&C SCI 31-33 can be used to satisfy the admissions requirements. Introduction to computer science courses do not meet this requirement.

**Additional Approved Courses:**

- One course in advanced data structures
- One course in machine organization and assembly language (both topics must be covered)
- One course in software engineering
- One course in discrete mathematics
- One course in Boolean algebra
- One course in linear algebra

**NOTES:**

Additional computer science courses beyond the two required are strongly recommended, particularly those that align with the major of interest. Our first year of object-oriented programming is taught in Python. C++ and Java is used extensively in the curriculum; therefore, transfer students should plan to learn it by studying on their own or by completing related programming courses prior to their first quarter at UCI.

Courses in Visual Basic, C, and C# are not approved preparation for this major.

**Major and Minor Restrictions**

Bren School of ICS majors (including shared majors, BIM and CSE) pursuing minors within the Bren School of ICS may not count more than five courses toward both the major and minor. Some ICS majors and minors outside of the School are not permitted due to significant overlap. Visit the ICS Student Affairs Office website for Majors and Minors restrictions. (http://www.ics.uci.edu/ugrad/degrees/MajorMinor_Restrictions_Chart.pdf) All students should check the Double Major Restrictions Chart (http://www.ics.uci.edu/ugrad/degrees/Dbl_Major_Restr_Chart.pdf) and view our information page (http://www.ics.uci.edu/ugrad/degrees/Double_Majors.php) on double majoring to see what degree programs are eligible for double majoring.

**Requirements for the B.S. in Computer Science**

All students must meet the University Requirements (p. 91).

**Major Requirements**

**Lower-division**

A. Select one of the following series:
<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>I&amp;C SCI 31- 32- 33</td>
<td>Introduction to Programming and Programming with Software Libraries and Intermediate Programming</td>

<tr>
<td>COMPSCI 142B</td>
<td>Language Processor Construction</td>
</tr>
<tr>
<td>COMPSCI 143B</td>
<td>Project in Operating System Organization</td>
</tr>
</tbody>
</table>
B-2. Specialization: Select and satisfy the requirements for one of the specializations below. (Note: Students may not pursue more than one specialization.)

Some of the specializations include recommended electives. These are courses related to the specialization and intended to help students choose courses to take toward their upper-division elective requirement.

**Algorithms**

- COMPSCI 162
- COMPSCI 163
- COMPSCI 164
- COMPSCI 165
- COMPSCI 167
- COMPSCI 169

**Architecture and Embedded Systems:** four courses from the following list:

- COMPSCI 145-145L
- COMPSCI 151
- COMPSCI 152
- COMPSCI 153
- COMPSCI 154

Recommended electives:

- COMPSCI 131
- COMPSCI 142A
- COMPSCI 143A

**Bioinformatics:** three courses from the following list:

- COMPSCI 184A
- COMPSCI 172B
- COMPSCI 184C
- COMPSCI 189

**General CS track**

- COMPSCI 111-189, except COMPSCI 161

**Information**

- COMPSCI 121
- COMPSCI 122A
- COMPSCI 178

and four courses from:

- I&C SCI 45J
- COMPSCI 122B
- COMPSCI 125
- COMPSCI 132
- COMPSCI 134
- COMPSCI 141
- COMPSCI 142A
- COMPSCI 163

- Information Retrieval
- Introduction to Data Management
- Machine Learning and Data-Mining
- Programming in Java as a Second Language
- Project in Databases and Web Applications
- Next Generation Search Systems
- Computer Networks
- Computer and Network Security
- Concepts in Programming Languages I
- Compilers and Interpreters
- Principles of Operating Systems
- Graph Algorithms
<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>COMPSCI 165</td>
<td>Project In Algorithms And Data Structures</td>
</tr>
<tr>
<td>COMPSCI 167</td>
<td>Introduction to Applied Cryptography</td>
</tr>
<tr>
<td>COMPSCI 179</td>
<td>Algorithms for Probabilistic and Deterministic Graphical Models</td>
</tr>
</tbody>
</table>

At least one of which must be:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>COMPSCI 122B</td>
<td>Project in Databases and Web Applications</td>
</tr>
<tr>
<td>or COMPSCI 125</td>
<td>Next Generation Search Systems</td>

NOTES:

1. Students are advised that this sample program lists the minimum requirements; it is possible that students may have to take additional courses to prepare for required courses.

2. The lower-division writing requirement must be completed by the end of the seventh quarter at UCI.

3. This is only a sample plan. Course offerings may be moved due to unforeseen circumstances. It is strongly recommended that students meet with an academic advisor to create an academic plan tailored to meet their specific areas of interest.

Undergraduate Major in Computer Science and Engineering (CSE)

This program is administered jointly by the Department of Computer Science in the Bren School of ICS, and the Department of Electrical Engineering and Computer Science (EECS) in The Henry Samueli School of Engineering. For information, see the Interdisciplinary Studies (p. 1167) section of the Catalogue.

Requirements for the B.S. in Computer Science and Engineering

All students must meet the University Requirements (p. 91).

Major Requirements: See the Interdisciplinary Studies (p. 1167) section.

Minor in Bioinformatics

The minor provides a focused study of bioinformatics to supplement a student’s major program of study and prepares students for a profession, career, or academic pursuit in which biomedical computing is an integral part but is not the primary focus. The Bioinformatics minor contributes to students’ competence in computing applied to biomedical problems and data, as well as exposing them to the fundamentals of the life sciences from a computer science perspective. The minor allows students sufficient flexibility to pursue courses that complement their major field or address specific interests.

Students who complete the minor requirements will be able to do the following: synthesize computer science, quantitative methods, and biological science; understand the synergistic set of reciprocal influences between life and computational sciences and technologies; discuss biomedical
Requirements for the Minor in Bioinformatics

A. Complete all of the following:

<td>Project in Bioinformatics</td>
</tr>
</tbody>
</table>

NOTE: A maximum of two courses may be taken Pass/Not Pass toward a minor. Bren School majors should refer to the Majors/Minors Restrictions Catalogue section before attempting to minor in Bioinformatics. Students who are considering a major in Computer Science or Computer Science and Engineering must complete the major requirements for a letter grade. Visit the ICS Student Affairs Office website for Majors and Minors restrictions (http://www.ics.uci.edu/ugrad/degrees/MajorMinor_Restrictions_Chart.pdf)

Graduate Program in Computer Science

Computer Science encompasses both theoretical and practical aspects of design, analysis, and implementation of computer systems, as well as applications of computing to numerous other fields. Core research areas include: (1) artificial intelligence and machine learning, (2) bioinformatics, (3) computer architecture, (4) embedded systems, (5) graphics and computer vision, (6) database systems and information management, (7) multimedia and gaming, (8) networks and distributed systems, (9) programming languages and compilers, (10) security, privacy and cryptography, (11) design and analysis of algorithms, and (12) scientific computing.

The M.S. and Ph.D. degrees in Computer Science (CS) are broad and flexible programs, offering students opportunities for in-depth graduate study and cutting-edge research, covering a broad range of topics in Computer Science.

Master of Computer Science

The Master of Computer Science Program prepares students for immediate entry into the technology workforce as well as support students for enhanced job opportunities and mobility. The program emphasizes computer science that applies to a wide variety of applications and industries where students learn or reinforce key computer science concepts through classroom- and project-based learning, and through individual and collaborative assignments.

The program spans four academic quarters--fall, winter, spring, and fall in addition to a summer component that includes either an internship or additional coursework.

A key feature of the program is the capstone design courses, which are taken simultaneously and include design, development, and professional writing components.

Admissions

Most applicants come from a computing-related undergraduate program; however, applications from students with other technical backgrounds and sufficient preparation in programming are also welcomed. Applications are also encouraged from students with non-technical academic backgrounds who have sufficient preparation in programming and extensive technical employment experience. Any admitted students with any deficiencies in discrete mathematics and data structures are highly recommended to register for community college or online courses prior to entering the program in the fall.

For specific information regarding admissions requirements and the application process, please refer to the Graduate Division website (https://grad.uci.edu).

Requirements

A. Complete three of the following core courses:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>COMPSCI 222P</td>
<td>Principles of Data Management</td>
</tr>
<tr>
<td>COMPSCI 232P</td>
<td>Computer and Communication Networks</td>
</tr>
<tr>
<td>COMPSCI 238P</td>
<td>Operating Systems</td>
</tr>
<tr>
<td>COMPSCI 250P</td>
<td>Computer Systems Architecture</td>
</tr>
<tr>
<td>COMPSCI 260P</td>
<td>Fundamentals of Algorithms with Applications</td>
</tr>
<tr>
<td>COMPSCI 261P</td>
<td>Data Structures with Applications</td>
</tr>
<tr>
<td>COMPSCI 273P</td>
<td>Machine Learning and Data Mining</td>
</tr>
</tbody>
</table>
B. Complete two capstone courses:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>COMPSCI 296P</td>
<td>Capstone Professional Writing and Communication for Computer Science Careers</td>
</tr>
<tr>
<td>COMPSCI 297P</td>
<td>Capstone Design Project for Computer Science</td>
</tr>
</tbody>
</table>

C. Select at least six of the following: \(^1\)

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>COMPSCI 201P</td>
<td>Introduction to Computer Security</td>

</tr>
<tr>
<td>COMPSCI 263P</td>
<td>Analysis of Algorithms</td>
</tr>
<tr>
<td>COMPSCI 267P</td>
<td>Data Compression</td>
</tr>
<tr>
<td>COMPSCI 268P</td>
<td>Introduction to Optimization Modeling</td>
</tr>
<tr>
<td>COMPSCI 271P</td>
<td>Introduction to Artificial Intelligence</td>
</tr>
<tr>
<td>COMPSCI 273P</td>
<td>Machine Learning and Data Mining</td>
</tr>
<tr>
<td>COMPSCI 274P</td>
<td>Neural Networks and Deep Learning</td>
</tr>
</tbody>
</table>

\(^1\) Courses completed as core courses in Section A cannot also be counted toward Section C.

All Master of Computer Science students are expected to maintain a minimum GPA of 3.0 throughout the program, with no individual grade lower than a B-. The normative time to degree is four quarters; the maximum time to degree is three years.

**Master of Science in Computer Science**

The course requirements for the M.S. are identical to those of the Ph.D., although completion plans differ. M.S. students can choose a thesis option that allows them to undertake a research-based thesis in lieu of two elective courses. For general information about admissions, the M.S. completion plan options, visit the Bren School of ICS Graduate Programs (p. 1028) section (p. 1028) of the Catalogue.

**Doctor of Philosophy in Computer Science**

**Required Courses**

Each student must complete at least 47 units of course work with an average GPA of at least 3.5 for Ph.D. students and 3.0 for M.S. students. In addition, students must receive at least a B in each course counted toward filling these requirements. The set of core and elective courses chosen by a student must be approved by the student’s research advisor before advancement to candidacy. Faculty associated with each research area will provide suggested curricula for that area to guide students in their selection of courses. These curricula will also help Ph.D. students to prepare for their candidacy examination (see below) which must be taken in a specific research area.

Students must complete three quarters of COMPSCI 200S, four core courses, and seven elective courses. The course requirements are as follows:

Students must select four areas from the list of seven areas given below. From each area, they must select at least one of the courses listed for that area.

**Data Structures and Algorithms**

<table>

COMPSCI 241  Advanced Compiler Construction
COMPSCI 243  High-Performance Architectures and Their Compilers
COMPSCI 230  Distributed Computer Systems

**Artificial Intelligence**
COMPSCI 271  Introduction to Artificial Intelligence
COMPSCI 273A  Machine Learning

**Networks/Multimedia**
COMPSCI 232  Computer and Communication Networks
COMPSCI 203  Network and Distributed Systems Security
COMPSCI 212  Multimedia Systems and Applications

**Database Systems**
COMPSCI 222  Principles of Data Management
COMPSCI 223  Transaction Processing and Distributed Data Management

**Scientific and Visual Computing**
COMPSCI 206  Principles of Scientific Computing
COMPSCI 211A  Visual Computing

Seven elective courses from any set of CS, Informatics, or Statistics courses, including the above core courses, but excluding COMPSCI 290, COMPSCI 298, COMPSCI 299, or any course with a suffix of “S.”

Two of these courses can be graduate courses offered by a department outside of ICS, with written consent of the advisor (M.S. students must obtain written consent from the Computer Science Vice Chair for Graduate Studies).

Two of the courses can be undergraduate courses from the following list:

COMPSCI 111  Digital Image Processing
COMPSCI 112  Computer Graphics
COMPSCI 122A  Introduction to Data Management
COMPSCI 132  Computer Networks
COMPSCI 142A  Compilers and Interpreters
COMPSCI 143A  Principles of Operating Systems
COMPSCI 152  Computer Systems Architecture
COMPSCI 161  Design and Analysis of Algorithms
COMPSCI 171  Introduction to Artificial Intelligence
COMPSCI 178  Machine Learning and Data-Mining
I&C SCI 161  Game Engine Lab
I&C SCI 162  Modeling and World Building
I&C SCI 163  Mobile and Ubiquitous Games
I&C SCI 166  Game Design

Students may not retake courses they have used toward an undergraduate degree and receive credit toward the graduate requirements.

No more than two undergraduate courses or COMPSCI 295 may be taken to satisfy elective course requirements.

Ph.D. students are required to serve as teaching assistants for at least two quarters.

**Research Project for the Ph.D.**
Doctoral students must find a faculty advisor and successfully complete a research project with that faculty member by the end of their second year. In coordination with this project the student must also take at least one independent studies course (COMPSCI 299) with their faculty advisor. The objective of the research project is to demonstrate early in the program the student’s ability to carry out basic research in computer science.

Finally, the student must present the outcome of the research in a technical report, which must be approved by the advisor. The project may or may not be a stepping-stone toward a dissertation, and must be completed by the end of the second year, and prior to advancement to candidacy.
**Doctoral Dissertation Topic Defense**

The student must produce a substantial written document representing the dissertation plan. This must include the proposed dissertation abstract, a dissertation outline, and a detailed plan for completing the work. A dissertation defense committee is formed in accordance with UCI Senate regulations. The dissertation committee must unanimously approve the student’s proposal. At the discretion of the student’s advisor, the student may be required to give an oral presentation of the proposed plan to the committee. This must be completed by the end of the fourth year. It is expected that this will be done at least a year prior to the final examination and before most of the dissertation research and writing are undertaken. The idea is for students to demonstrate that they have a clear plan for carrying out the research for their dissertation. It also gives the student an understanding of what will be expected for final approval of the dissertation.

**Doctoral Dissertation and Final Examination**

Ph.D. students are required to complete a Ph.D. dissertation in accordance with Academic Senate regulations. In addition, they must pass an oral dissertation defense which consists of a public seminar presenting results followed by a private examination by the doctoral committee and other interested members of the Computer Science Department faculty.

Students entering the Ph.D. program with an M.S. in Computer Science must advance to candidacy within two years. All others must advance within three years. The normative time for completion of the Ph.D. is six years, and the maximum time permitted is seven years.

**Graduate Program in Networked Systems (M.S. and Ph.D.)**

The graduate program in Networked Systems (NetSys) provides education and research opportunities in the areas of computer networks and communication systems. NetSys is highly interdisciplinary, comprising software, hardware, and communication technology. NetSys involves faculty and courses from both Computer Science and Electrical Engineering. Details can be found at the NetSys website (http://www.networkedsystems.uci.edu) and in the Interdisciplinary Studies section (p. 1145) of the Catalogue.

**Graduate Program in Mathematical, Computational, and Systems Biology**

The graduate program in Mathematical, Computational, and Systems Biology (MCSB) is designed to meet the interdisciplinary training challenges of modern biology and function in concert with selected department programs, including the Ph.D. in Computer Science. Detailed information is available at the Mathematical, Computational, and Systems Biology website (http://mcsb.uci.edu) and in the Interdisciplinary Studies section (p. 1143) of the Catalogue.

**Faculty**

**Shannon L. Alfaro, M.S. University of California, Irvine, Lecturer of Computer Science**

Animashree Anandkumar, Ph.D. Cornell University, Assistant Professor of Computer Science (statistical inference and learning of graphical models, scalable network algorithms)

Nader Bagherzadeh, Ph.D. University of Texas at Austin, Professor of Electrical Engineering and Computer Science; Computer Science (parallel processing, computer architecture, computer graphics, VLSI design)

Pierre F. Baldi, Ph.D. California Institute of Technology, UCI Chancellor's Professor of Computer Science; Biological Chemistry; Biomedical Engineering; Developmental and Cell Biology; Mathematics (bioinformatics, computational biology)

Lubomir Bic, Ph.D. University of California, Irvine, Professor of Computer Science; Electrical Engineering and Computer Science (parallel and distributed computing, mobile agents)
Elaheh Bozorgzadeh, Ph.D. University of California, Los Angeles, Associate Professor of Computer Science; Electrical Engineering and Computer Science (design automation and synthesis for embedded systems, VLSI CAD, reconfigurable computing)

Michael Carey, Ph.D. University of California, Berkeley, Donald Bren Professor of Information & Computer Sciences and Professor of Computer Science

Pai H. Chou, Ph.D. University of Washington, Professor Emeritus of Electrical Engineering and Computer Science; Computer Science (embedded systems, wireless sensor systems, medical devices, real-time systems, hardware/software co-synthesis)

Rina Dechter, Ph.D. University of California, Los Angeles, Professor of Computer Science

Brian C. Demsky, Ph.D. Massachusetts Institute of Technology, Associate Professor of Electrical Engineering and Computer Science; Computer Science (compiler programming, language software engineering, fault tolerance)

Michael B. Dillencourt, Ph.D. University of Maryland, College Park, Professor of Computer Science

Rainer B. Doemer, Ph.D. Dortmund University, Professor of Electrical Engineering and Computer Science; Computer Science (system-level design, embedded computer systems, design methodologies, specification and modeling languages)

James P. Dourish, Ph.D. University College London, Chancellor’s Professor of Informatics; Computer Science (human-computer interaction, computer-supported cooperative work)

Nikil D. Dutt, Ph.D. University of Illinois at Urbana–Champaign, UCI Chancellor’s Professor of Computer Science; Cognitive Sciences; Electrical Engineering and Computer Science (embedded systems, computer architecture, electronic design automation, software systems, brain-inspired architectures and computing)

Magda S. El Zarki, Ph.D. Columbia University, Professor of Computer Science; Electrical Engineering and Computer Science; Informatics (telecommunications, networks, wireless communication, video transmission)

David A. Eppstein, Ph.D. Columbia University, UCI Chancellor’s Professor of Computer Science

Julian Feldman, Ph.D. Carnegie Institute of Technology, Professor Emeritus of Computer Science

Charless C. Fowlkes, Ph.D. University of California, Berkeley, Associate Professor of Computer Science; Cognitive Sciences; Electrical Engineering and Computer Science (computer vision, machine learning, computational biology)

Michael S. Franz, Ph.D. Swiss Federal Institute of Technology in Zurich, Professor of Computer Science; Electrical Engineering and Computer Science (systems software, particularly compilers and virtual machines, trustworthy computing, software engineering)

Daniel H. Frost, M.S. University of California, Irvine, Senior Lecturer of Computer Science; Informatics (artificial intelligence, software engineering, computer graphics, teaching of programming)

Jean-Luc Gaudiot, Ph.D. University of California, Los Angeles, Professor of Electrical Engineering and Computer Science; Computer Science (parallel processing, computer architecture, processor architecture)

Tony D. Givargis, Ph.D. University of California, Riverside, Professor of Computer Science (embedded systems, platform-based system-on-a-chip design, low-power electronics)

Michael T. Goodrich, Ph.D. Purdue University, UCI Chancellor's Professor of Computer Science; Electrical Engineering and Computer Science (computer security, algorithm design, data structures, Internet algorithmics, geometric computing, graphic drawing)

Richard H. Granger, Ph.D. Yale University, Professor Emeritus of Computer Science

Ian G. Harris, Ph.D. University of California, San Diego, Associate Professor of Computer Science; Electrical Engineering and Computer Science (hardware/software covalidation, manufacturing test)

Wayne B. Hayes, Ph.D. University of Toronto, Associate Professor of Computer Science

Dan S. Hirschberg, Ph.D. Princeton University, Professor of Computer Science; Electrical Engineering and Computer Science (analyses of algorithms, concrete complexity, data structures, models of computation)

Alexander T. Ihler, Ph.D. Massachusetts Institute of Technology, Associate Professor of Computer Science

Sandra S. Irani, Ph.D. University of California, Berkeley, Professor of Computer Science

Ramesh Chandra Jain, Ph.D. Indian Institute of Technology Kharagpur, Donald Bren Professor of Information & Computer Sciences and Professor of Computer Science

Stanislaw M. Jarecki, Ph.D. Massachusetts Institute of Technology, Professor of Computer Science
Scott A. Jordan, Ph.D. University of California, Berkeley, Professor of Computer Science; Electrical Engineering and Computer Science (pricing and differentiated services in the Internet, resource allocation in wireless networks, telecommunications policy)

David G. Kay, J.D. Loyola Marymount University, Senior Lecturer Emeritus of Informatics; Computer Science (computer law, computer science education)

Dennis F. Kibler, Ph.D. University of California, Irvine, Professor Emeritus of Computer Science

Raymond O. Klefstad, Ph.D. University of California, Irvine, Lecturer of Computer Science

Alfred Kobsa, Ph.D. University of Vienna, Professor of Informatics; Computer Science (user modeling, human-computer interaction, artificial intelligence, cognitive science, interdisciplinary computer science)

Jeffrey L. Krichmar, Ph.D. George Mason University, Professor of Cognitive Sciences; Computer Science (computational neuroscience, robotics)

Fadi J. Kurdahi, Ph.D. University of Southern California, Director, Center for Embedded Computer Systems and Associate Dean for Graduate and Professional Studies and Professor of Electrical Engineering and Computer Science; Computer Science (VLSI system design, design automation of digital systems)

Richard H. Lathrop, Ph.D. Massachusetts Institute of Technology, Professor of Computer Science (modeling structure and function, machine learning, intelligent systems and molecular biology, protein structure/function prediction)

Marco Levorato, Ph.D. University of Padua, Assistant Professor of Computer Science; Electrical Engineering and Computer Science

Chen Li, Ph.D. Stanford University, Professor of Computer Science

Kwei-Jay Lin, Ph.D. University of Maryland, College Park, Professor of Electrical Engineering and Computer Science; Computer Science (real-time systems, distributed systems, service-oriented computing)

Cristina V. Lopes, Ph.D. Northeastern University, Professor of Informatics; Computer Science (programming languages, acoustic communications, operating systems, software engineering)

George S. Lueker, Ph.D. Princeton University, Professor Emeritus of Computer Science

Aditi Majumder, Ph.D. University of North Carolina at Chapel Hill, Professor of Computer Science; Electrical Engineering and Computer Science (novel displays and cameras for computer graphics and visualization, human-computer interaction, applied computer vision)

Athina Markopoulou, Ph.D. Stanford University, Associate Professor of Electrical Engineering and Computer Science; Computer Science (networking—reliability and security, multimedia networking, measurement and control, design and analysis of network protocols and algorithms, internet reliability and security, multimedia streaming, network measurements and control)

Gopi Meenakshisundaram, Ph.D. University of North Carolina at Chapel Hill, Professor of Computer Science; Electrical Engineering and Computer Science (geometry and topology for computer graphics, image-based rendering, object representation, surface reconstruction, collision detection, virtual reality, telepresence)

Sharad Mehrotra, Ph.D. University of Texas at Austin, Professor of Computer Science

Eric D. Mjolsness, Ph.D. California Institute of Technology, Professor of Computer Science; Mathematics (applied mathematics, mathematical biology, modeling languages)

Alexandru Nicolau, Ph.D. Yale University, Department Chair and Professor of Computer Science; Electrical Engineering and Computer Science (architecture, parallel computation, programming languages and compilers)

Richard Pattis, M.S. Stanford University, Senior Lecturer of Computer Science; Informatics (MicroWorlds for teaching programming, debugging, computational tools for non-computer scientists)

Amelia C. Regan, Ph.D. University of Texas at Austin, Professor of Computer Science; Civil and Environmental Engineering

Ardalan Amiri Sani, Ph.D. Rice University, Assistant Professor of Computer Science (involves building efficient, high performance, and reliable systems)

Isaac D. Scherson, Ph.D. Weizmann Institute of Science, Professor of Computer Science; Electrical Engineering and Computer Science (parallel computing architectures, massively parallel systems, parallel algorithms, interconnection networks, performance evaluation)

Babak Shahbaba, Ph.D. University of Toronto, Associate Professor of Statistics; Computer Science

Phillip C-Y Sheu, Ph.D. University of California, Berkeley, Professor of Electrical Engineering and Computer Science; Biomedical Engineering; Computer Science (database systems, interactive multimedia systems)
Alice Silverberg, Ph.D. Princeton University, Professor of Mathematics; Computer Science (algebra and number theory)

Patrick J. Smyth, Ph.D. California Institute of Technology, Professor of Computer Science; Statistics

Mark Steyvers, Ph.D. Indiana University, Professor of Cognitive Sciences; Computer Science; Psychology and Social Behavior (higher-order cognition, cognitive neuroscience, computational modeling, collective intelligence)

Alexander W. Thornton, B.S. University of California, Irvine, Lecturer of Computer Science

Gene Y. Tsudik, Ph.D. University of Southern California, UCI Chancellor’s Professor of Computer Science

Koijro Umezaki, M.A. Dartmouth College, Associate Professor of Music; Computer Science

Alexander Videnbaum, Ph.D. University of Illinois at Urbana-Champaign, Professor of Computer Science

Nalini Venkatasubramanian, Ph.D. University of Illinois at Urbana-Champaign, Professor of Computer Science

Richard Wang, Ph.D. University of California, Irvine, Lecturer of Computer Science

Xiaohui Xie, Ph.D. Massachusetts Institute of Technology, Associate Professor of Computer Science; Developmental and Cell Biology (computational biology, bioinformatics, genomics, neural computation, machine learning)

Guoqing Xu, Ph.D. Ohio State University, Assistant Professor of Computer Science

Charles S. Zender, Ph.D. University of Colorado Boulder, Professor of Earth System Science; Computer Science

Hong-Kai Zhao, Ph.D. University of California, Los Angeles, Department Chair and Chancellor’s Professor of Mathematics; Computer Science (applied and computational mathematics, inverse problems and imaging)

Shuang Zhao, Ph.D. Cornell University, Assistant Professor of Computer Science (computer graphics with a focus on material appearance modeling and physically-based rendering)

Courses

COMPSCI 111. Digital Image Processing. 4 Units.
Introduction to the fundamental concepts of digital signal and image processing as applicable in areas such as multimedia, graphics, AI, data mining, databases, vision, or video games. Topics include image representation, space- and frequency-domain transformations, filters, segmentation, and compression.

Prerequisite: (I&C SCI 46 or CSE 46) and I&C SCI 6D and (MATH 6G or MATH 3A or I&C SCI 6N). I&C SCI 46 with a grade of C or better. CSE 46 with a grade of C or better. I&C SCI 6D with a grade of C or better. MATH 6G with a grade of C or better. MATH 3A with a grade of C or better. I&C SCI 6N with a grade of C or better

Restriction: School of Info & Computer Sci students have first consideration for enrollment.

COMPSCI 112. Computer Graphics. 4 Units.
Introduction to the fundamental principles of 3D computer graphics including polygonal modeling, geometric transformations, visibility algorithms, illumination models, texturing, and rasterization. Use of an independently-learned 3D graphics API to implement these techniques.

Prerequisite: (I&C SCI 22 or CSE 22 or I&C SCI H22 or I&C SCI 33 or CSE 43) and (I&C SCI 45C or CSE 45C) and (MATH 6G or MATH 3A or I&C SCI 6N). I&C SCI 22 with a grade of C or better. CSE 22 with a grade of C or better. I&C SCI H22 with a grade of C or better. I&C SCI 33 with a grade of C or better. CSE 43 with a grade of C or better. I&C SCI 45C with a grade of C or better. CSE 45C with a grade of C or better. MATH 6G with a grade of C or better. MATH 3A with a grade of C or better. I&C SCI 6N with a grade of C or better

Restriction: School of Info & Computer Sci students have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment.

COMPSCI 113. Computer Game Development. 4 Units.
Introduction to the principles of interactive 2D and 3D computer game development. Concepts in computer graphics, algorithms, software engineering, art and graphics, music and sound, story analysis, and artificial intelligence are presented and are the basis for student work.

Prerequisite: COMPSCI 112 or COMPSCI 171 or IN4MATX 121 or ART 106B or I&C SCI 163 or I&C SCI 166

Same as IN4MATX 125.

Restriction: School of Info & Computer Sci students have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment.
COMPSCI 114. Projects in Advanced 3D Computer Graphics. 4 Units.
Projects in advanced 3D graphics such as illumination, geometric modeling, visualization, and animation. Topics include physically based and global illumination, solid modeling, curved surfaces, multiresolution modeling, image-based rendering, basic concepts of animation, and scientific visualization.

Prerequisite: COMPSCI 112 and (I&C SCI 45C or CSE 45C). I&C SCI 45C with a grade of C or better. CSE 45C with a grade of C or better.
Recommended: COMPSCI 161 or CSE 161 or COMPSCI 164 or COMPSCI 165.

Restriction: School of Info & Computer Sci students have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment.

COMPSCI 115. Computer Simulation. 4 Units.
Discrete event-driven simulation; continuous system simulation; basic probability as pertaining to input distributions and output analysis; stochastic and deterministic simulation; static and dynamic system simulation.

Prerequisite: I&C SCI 6B and I&C SCI 6N and (STATS 67 or (STATS 7 and STATS 120A)) and I&C SCI 51 and IN4MATX 43. I&C SCI 6B with a grade of C or better. I&C SCI 6N with a grade of C or better. STATS 67 with a grade of C or better. STATS 7 with a grade of C or better. STATS 120A with a grade of C or better. I&C SCI 51 with a grade of C or better. IN4MATX 43 with a grade of C or better.

Restriction: Upper-division students only. School of Info & Computer Sci students have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment.

COMPSCI 116. Computational Photography and Vision. 4 Units.
Introduces the problems of computer vision through the application of computational photography. Specific topics include photo-editing (image warping, compositing, hole filling), panoramic image stitching, and face detection for digital photographs.

Prerequisite: I&C SCI 6D and (MATH 6G or MATH 3A or I&C SCI 6N) and MATH 2B and (I&C SCI 46 or CSE 46). I&C SCI 6D with a grade of C or better. MATH 6G with a grade of C or better. MATH 3A with a grade of C or better. I&C SCI 6N with a grade of C or better. MATH 2B with a grade of C or better. I&C SCI 46 with a grade of C or better. CSE 46 with a grade of C or better.

Restriction: School of Info & Computer Sci students have first consideration for enrollment.

COMPSCI 117. Project in Computer Vision. 4 Units.
Students undertake construction of a computer vision system. Topics include automatically building 3D models from photographs, searching photo collections, robot navigation, and human motion tracking.

Prerequisite: I&C SCI 6D and (MATH 3A or I&C SCI 6N) and MATH 2B and (I&C SCI 46 or CSE 46) and (COMPSCI 112 or COMPSCI 116 or COMPSCI 171 or COMPSCI 178). I&C SCI 6D with a grade of C or better. MATH 3A with a grade of C or better. I&C SCI 6N with a grade of C or better. MATH 2B with a grade of C or better. I&C SCI 46 with a grade of C or better. CSE 46 with a grade of C or better.

Restriction: School of Info & Computer Sci students have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment.

COMPSCI 121. Information Retrieval. 4 Units.
An introduction to information retrieval including indexing, retrieval, classifying, and clustering text and multimedia documents.

Prerequisite: (I&C SCI 45C or I&C SCI 45J) and (STATS 7 or STATS 67). I&C SCI 45C with a grade of C or better. I&C SCI 45J with a grade of C or better.

Same as IN4MATX 141.

Restriction: School of Info & Computer Sci students have first consideration for enrollment.

COMPSCI 122A. Introduction to Data Management. 4 Units.
Introduction to the design of databases and the use of database management systems (DBMS) for applications. Topics include entity-relationship modeling for design, relational data model, relational algebra, relational design theory, and Structured Query Language (SQL) programming.

Prerequisite: I&C SCI 33 or CSE 43 or EECS 114. I&C SCI 33 with a grade of C or better. CSE 43 with a grade of C or better.

Same as EECS 116.

Restriction: Computer Science Engineering Majors have first consideration for enrollment. School of Info & Computer Sci students have first consideration for enrollment.
COMPSCI 122B. Project in Databases and Web Applications. 4 Units.
Introduces students to advanced database technologies and Web applications. Topics include database connectivity (ODBC/JDBC), extending databases using stored procedures, database administration, Web servers, Web programming languages (Java servlets, XML, Ajax, and mobile platforms).

Prerequisite: (COMPSCI 122A or EECS 116) and I&C SCI 45J
Overlaps with COMPSCI 137, IN4MATX 124.
Restriction: School of Info & Computer Sci students have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment.

COMPSCI 122C. Principles of Data Management. 4 Units.
Covers fundamental principles underlying data management systems. Content includes key techniques including storage management, buffer management, record-oriented file system, access methods, query optimization, and query processing.

Prerequisite: COMPSCI 122A and (I&C SCI 53 or COMPSCI 143A)
Restriction: School of Info & Computer Sci students have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment.

COMPSCI 125. Next Generation Search Systems. 4 Units.
Discusses concepts and techniques related to all aspects of search systems. After considering basic search technology and the state-of-art systems, rapidly developing techniques for multimedia search, local search, event-search, and video-on-demand are explored.

Prerequisite: I&C SCI 21 or CSE 21 or IN4MATX 41 or I&C SCI 31
Restriction: Upper-division students only.

COMPSCI 131. Parallel and Distributed Computing. 4 Units.
Parallel and distributed computer systems. Parallel programming models. Common parallel and distributed programming issues. Specific topics include parallel programming, performance models, coordination and synchronization, consistency and replication, transactions, fault tolerance.

Prerequisite: (I&C SCI 53 and I&C SCI 53L) or COMPSCI 143A

COMPSCI 132. Computer Networks. 4 Units.
Computer network architectures, protocols, and applications. Internet congestion control, addressing, and routing. Local area networks. Multimedia networking.

Prerequisite: EECS 55 or STATS 67
Same as EECS 148.
Restriction: Computer Engineering Majors have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment.

COMPSCI 133. Advanced Computer Networks. 4 Units.
Fundamental principles in computer networks are applied to obtain practical experience and skills necessary for designing and implementing computer networks, protocols, and network applications. Various network design techniques, simulation techniques, and UNIX network programming are covered.

Prerequisite: COMPSCI 132

COMPSCI 134. Computer and Network Security. 4 Units.
Overview of modern computer and networks security, attacks, and countermeasures. Authentication, identification, data secrecy, data integrity, authorization, access control, computer viruses, network security. Also covers secure e-commerce and applications of public key methods, digital certificates, and credentials.

Prerequisite: I&C SCI 6D and (I&C SCI 33 or CSE 43) and (COMPSCI 122A or EECS 116 or COMPSCI 132 or COMPSCI 143A)
Restriction: School of Info & Computer Sci students have first consideration for enrollment.
COMPSCI 137. Internet Applications Engineering. 4 Units.
Concepts in Internet applications engineering with emphasis on the Web. Peer-to-Peer and Interoperability. Topics include HTTP and REST, Remote Procedure/Method Calls, Web Services, data representations, content distribution networks, identity management, relevant W3C/IETF standards, and relevant new large-scale computing styles.
Prerequisite: (COMPSCI 132 or EECS 148) and I&C SCI 45J

Same as IN4MATX 124.
Overlaps with COMPSCI 122B.

Restriction: Upper-division students only. School of Info & Computer Sci students have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment.

COMPSCI 141. Concepts in Programming Languages I. 4 Units.
In-depth study of several contemporary programming languages stressing variety in data structures, operations, notation, and control. Examination of different programming paradigms, such as logic programming, functional programming and object-oriented programming; implementation strategies, programming environments, and programming style.
Prerequisite: (I&C SCI 51 or CSE 31 or EECS 31) and (I&C SCI 46 or CSE 46). I&C SCI 51 with a grade of C or better. CSE 31 with a grade of C or better. EECS 31 with a grade of C or better. I&C SCI 46 with a grade of C or better. CSE 46 with a grade of C or better

Same as IN4MATX 101.

Restriction: School of Info & Computer Sci students have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment.

COMPSCI 142A. Compilers and Interpreters. 4 Units.
Introduction to the theory of programming language processors covering lexical analysis, syntax analysis, semantic analysis, intermediate representations, code generation, optimization, interpretation, and run-time support.
Prerequisite: CSE 141 or COMPSCI 141 or IN4MATX 101

Restriction: School of Info & Computer Sci students have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment.

COMPSCI 142B. Language Processor Construction. 4 Units.
Project course which provides working laboratory experience with construction and behavior of compilers and interpreters. Students build actual language processors and perform experiments which reveal their behaviors.
Prerequisite: COMPSCI 142A or CSE 142

COMPSCI 143A. Principles of Operating Systems. 4 Units.
Principles and concepts of process and resource management, especially as seen in operating systems. Processes, memory management, protection, scheduling, file systems, and I/O systems are covered. Concepts illustrated in the context of several well-known systems.
Prerequisite: (I&C SCI 46 or CSE 46) and (I&C SCI 51 or EECS 31 or CSE 31)

Overlaps with EECS 111.

Restriction: School of Info & Computer Sci students have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment.

COMPSCI 143B. Project in Operating System Organization. 4 Units.
Detailed specification and design of critical components of an actual operating system including a memory manager, a process server, and a file/I/O subsystem. Hardware/software tradeoffs. Emphasis on logical organization of system and communication.
Prerequisite: COMPSCI 143A

Restriction: School of Info & Computer Sci students have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment.
COMPSCI 145. Embedded Software. 4 Units.
Principles of embedded computing systems: embedded systems architecture, hardware/software components, system software and interfacing, real-time operating systems, hardware/software co-development, and communication issues. Examples of embedded computing in real-world application domains. Simple programming using an embedded systems development environment.

Corequisite: COMPSCI 145L
Prerequisite: (CSE 46 or I&C SCI 46) and (I&C SCI 51 or CSE 132 or EECS 112)

Restriction: School of Info & Computer Sci students have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment.

COMPSCI 145L. Embedded Software Laboratory. 2 Units.
Laboratory section to accompany COMPSCI 145.

Corequisite: COMPSCI 145

Restriction: School of Info & Computer Sci students have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment.

COMPSCI 146. Programming in Multitasking Operating Systems. 4 Units.
User- and systems-level programming of modern Internet-connected, multi-user, multitasking operating systems. Shells, scripting, filters, pipelines, programmability, extensibility, concurrency, inter-process communication. Concrete examples of a modern operating system (such as, but not necessarily, Unix programmed in C) are used.

Prerequisite: (I&C SCI 46 or CSE 46) and I&C SCI 51. I&C SCI 46 with a grade of C or better. CSE 46 with a grade of C or better. I&C SCI 51 with a grade of C or better. Recommended: COMPSCI 143A.

Restriction: School of Info & Computer Sci students have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment.

COMPSCI 151. Digital Logic Design. 4 Units.

Prerequisite: (I&C SCI 33 or CSE 43) and I&C SCI 51 and I&C SCI 6B and I&C SCI 6D. I&C SCI 33 with a grade of C or better. CSE 43 with a grade of C or better. I&C SCI 51 with a grade of C or better

Restriction: School of Info & Computer Sci students have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment.

COMPSCI 152. Computer Systems Architecture. 4 Units.
Design of computer elements; ALU, control unit, and arithmetic circuits. Memory hierarchy and organization. Caches. Function unit sharing and pipelining. I/O and interrupt processing. RTL and behavioral modeling using hardware description languages. Microprocessor organization and implementation techniques.

Prerequisite: COMPSCI 151

Overlaps with I&C SCI 160, EECS 112.

COMPSCI 153. Logic Design Laboratory. 4 Units.
Introduction to standard integrated circuits. Construction and debugging techniques. Design of digital systems using LSI and MSI components. Practical use of circuits in a laboratory environment, including implementation of small digital systems such as arithmetic modules, displays, and timers.

Prerequisite: COMPSCI 151

COMPSCI 154. Computer Design Laboratory. 4 Units.
Underlying primitives of computer instruction sets. Principles of microprogramming. Microprogramming. Microprograms written for one or more systems. Typical microprogramming applications discussed and implemented or simulated.

Prerequisite or corequisite: COMPSCI 151

Restriction: School of Info & Computer Sci students have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment.
COMPSCI 161. **Design and Analysis of Algorithms. 4 Units.**
Techniques for efficient algorithm design, including divide-and-conquer and dynamic programming, and time/space analysis. Fast algorithms for problems applicable to networks, computer games, and scientific computing, such as sorting, shortest paths, minimum spanning trees, network flow, and pattern matching.

Prerequisite: (I&C SCI 46 or CSE 46) and I&C SCI 6B and I&C SCI 6D and MATH 2B. I&C SCI 46 with a grade of C or better. CSE 46 with a grade of C or better

Restriction: School of Info & Computer Sci students have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment.

COMPSCI 162. **Formal Languages and Automata. 4 Units.**
Formal aspects of describing and recognizing languages by grammars and automata. Parsing regular and context-free languages. Ambiguity, nondeterminism. Elements of computability; Turning machines, random access machines, undecidable problems, NP-completeness.

Prerequisite: (I&C SCI 46 or CSE 46) and MATH 2A and MATH 2B and I&C SCI 6B and I&C SCI 6D. I&C SCI 46 with a grade of C or better. CSE 46 with a grade of C or better

Same as LINGUIS 102.

Restriction: School of Info & Computer Sci students have first consideration for enrollment. Cognitive Sciences Majors have first consideration for enrollment. Language Science Majors have first consideration for enrollment.

COMPSCI 163. **Graph Algorithms. 4 Units.**
Algorithms for solving fundamental problems in graph theory. Graph representations, graph traversal, network flow, connectivity, graph layout, matching problems.

Prerequisite: COMPSCI 161 or CSE 161

Restriction: School of Info & Computer Sci students have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment.

Concurrent with COMPSCI 265.

COMPSCI 164. **Computational Geometry and Geometric Modeling. 4 Units.**
Algorithms and data structures for computational geometry and geometric modeling, with applications to game and graphics programming. Topics: convex hulls, Voronoi diagrams, algorithms for triangulation, motion planning, and data structures for geometric searching and modeling of 2D and 3D objects.

Prerequisite: I&C SCI 46 or CSE 46. I&C SCI 46 with a grade of C or better. CSE 46 with a grade of C or better

Restriction: School of Info & Computer Sci students have first consideration for enrollment.

COMPSCI 165. **Project In Algorithms And Data Structures. 4 Units.**
Design, implementation, execution, and analysis of algorithms for problems such as sorting, searching, data compression, and data encryption. Time-space-structure trade-offs.

Prerequisite: COMPSCI 161 or CSE 161. Recommended: I&C SCI 45C OR CSE 45C.

COMPSCI 167. **Introduction to Applied Cryptography. 4 Units.**
An introduction to the essential aspects of applied cryptography, as it is used in practice. Topics include classical cryptography, block ciphers, stream ciphers, public-key cryptography, digital signatures, one-way hash functions, basic cryptographic protocols, and digital certificates and credentials.

Prerequisite: COMPSCI 161 or CSE 161

Restriction: Upper-division students only.

COMPSCI 169. **Introduction to Optimization. 4 Units.**

Prerequisite: (I&C SCI 6N or MATH 3A) and (STATS 67 or (STATS 7 and STATS 120A))

Restriction: School of Info & Computer Sci students have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment.

Concurrent with COMPSCI 268.
**COMPSCI 171. Introduction to Artificial Intelligence. 4 Units.**
Different means of representing knowledge and uses of representations in heuristic problem solving. Representations considered include predicate logic, semantic nets, procedural representations, natural language grammars, and search trees.

Prerequisite or corequisite: (STATS 7 and STATS 120A) or STATS 67 and (I&C SCI 46 or CSE 46) and MATH 2B

Restriction: School of Info & Computer Sci students have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment.

**COMPSCI 172B. Neural Networks and Deep Learning. 4 Units.**
Neural network and deep learning from multiple perspectives. Theory of parallel distributed processing systems, algorithmic approaches for learning from data in various manners, applications to difficult problems in AI from computer vision, to natural language understanding, to bioinformatics and chemoinformatics.

Prerequisite: (STATS 120A and STATS 120B) or MATH 121A or COMPSCI 178 or COMPSCI 273A

Concurrent with COMPSCI 274C.

**COMPSCI 175. Project in Artificial Intelligence. 4 Units.**
Construction of a working artificial intelligence system. Evaluation of capabilities of the system including impact of knowledge representation.

Prerequisite: COMPSCI 171 and COMPSCI 178

Restriction: School of Info & Computer Sci students have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment.

**COMPSCI 177. Applications of Probability in Computer Science. 4 Units.**
Application of probability to real-world problems in computer science. Typical topics include analysis of algorithms and graphs, probabilistic language models, network traffic modeling, data compression, and reliability modeling.

Prerequisite: MATH 2B and STATS 67 and I&C SCI 6B and I&C SCI 6D and (MATH 3A or I&C SCI 6N)

Restriction: School of Info & Computer Sci students have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment.

**COMPSCI 178. Machine Learning and Data-Mining. 4 Units.**
Introduction to principles of machine learning and data-mining applied to real-world datasets. Typical applications include spam filtering, object recognition, and credit scoring.

Prerequisite: I&C SCI 6B and I&C SCI 6D and (I&C SCI 6N or MATH 3A) and MATH 2B and (STATS 67 or (STATS 7 and STATS 120A))

Restriction: School of Info & Computer Sci students have first consideration for enrollment. Computer Science Engineering Majors have first consideration for enrollment.

**COMPSCI 179. Algorithms for Probabilistic and Deterministic Graphical Models. 4 Units.**
Graphical model techniques dealing with probabilistic and deterministic knowledge representations. Focuses on graphical models such as constraint networks, Bayesian networks, and Markov networks that have become a central paradigm for knowledge representation and reasoning in AI and general computer science.

Prerequisite: COMPSCI 171

**COMPSCI 183. Introduction to Computational Biology. 4 Units.**

Prerequisite: MATH 2D or MATH 3A or STATS 7 or STATS 8

Same as BME 132, BIO SCI M123.

Concurrent with MOL BIO 223 and BME 232.
COMPSCI 184A. Representations and Algorithms for Molecular Biology. 4 Units.
Introduction to computational methods in molecular biology, aimed at those interested in learning about this interdisciplinary area. Covers computational approaches to understanding and predicting the structure, function, interactions, and evolution of DNA, RNA, proteins, and related molecules and processes.
Prerequisite: I&C SCI 6N or MATH 3A or MATH 6G
Restriction: Upper-division students only.
Concurrent with COMPSCI 284A.

COMPSCI 184C. Computational Systems Biology. 4 Units.
Prerequisite: COMPSCI 184A
Concurrent with COMPSCI 284C.

COMPSCI 189. Project in Bioinformatics. 4 Units.
Teaches problem definition and analysis, data representation, algorithm design, component integration, solution validation, and testability with teams specifying, designing, building, and testing a solution to a bioinformatics problem. Lectures include engineering values, discussions, and ethical ramifications of biomedical computing issues.
Prerequisite: COMPSCI 184A. COMPSCI 184A with a grade of C or better

COMPSCI 190. Special Topics in Information and Computer Science. 4 Units.
Studies in selected areas of Information and Computer Science. Topics addressed vary each quarter.
Prerequisite: Prerequisites vary.
Repeatability: Unlimited as topics vary.

COMPSCI H198. Honors Research. 4 Units.
Directed independent research in computer science for honors students.
Prerequisite: Satisfactory completion of the Lower-Division Writing requirement.
Repeatability: May be repeated for credit unlimited times.
Restriction: Campuswide Honors Program students only. Bren School of ICS Honors students only. Upper-division students only.

COMPSCI 199. Individual Study. 2-5 Units.
Individual research or investigation with Computer Science faculty.
Repeatability: May be repeated for credit unlimited times.

COMPSCI 200S. Seminar in Computer Science Research. 1 Unit.
Graduate colloquium series. Includes weekly talks by notable computer scientists.
Grading Option: Satisfactory/unsatisfactory only.
Repeatability: May be repeated for credit unlimited times.

COMPSCI 201. Foundations of Cryptographic Protocols. 4 Units.
Explores fundamental cryptographic tools, including encryption, signatures, and identification schemes. Students are introduced to the provable security paradigm of modern cryptography, focusing on understanding of security properties provided by cryptographic tools, and on proving security (or insecurity) of cryptographic constructions.
Prerequisite: COMPSCI 260 or COMPSCI 263

COMPSCI 201P. Introduction to Computer Security. 4 Units.
Introduction to computer security, including systems, technology, and management. Topics include authorization, authentication, data integrity, malware, operating systems security, network security, web security, and basic cryptography.
Prerequisite: Knowledge of Python or C++ programming is required.
Restriction: Master of Computer Science Degree students only. Graduate students only.
COMPSCI 202. Applied Cryptography. 4 Units.
Design and analysis of algorithms for applied cryptography. Topics include symmetric and asymmetric key encryption, digital signatures, one-way hash functions, digital certificates and credentials, and techniques for authorization, non-repudiation, authentication, identification, data integrity, proofs of knowledge, and access control.
Prerequisite: COMPSCI 260 and COMPSCI 263

COMPSCI 202P. Applied Cryptography . 4 Units.
Design and analysis of algorithms for applied cryptography. Topics include symmetric and asymmetric key encryption, digital signatures, one-way hash functions, digital certificates and credentials, and techniques for authorization, non-repudiation, authentication, identification, data integrity, proofs of knowledge, and access control.
Restriction: Graduate students only.

COMPSCI 203. Network and Distributed Systems Security. 4 Units.
Modern computer and networks security: attacks and countermeasures, authentication, identification, data secrecy, data integrity, authorization, access control, computer viruses, network security. Group communication and multicast security techniques. Covers secure e-commerce and applications of public key methods, digital certificates, and credentials.
Prerequisite: EECS 148 or COMPSCI 132

COMPSCI 203P. Network Security. 4 Units.
Introduction to network security, including network threats and attacks, as well as defenses against such attacks. Topics include network infrastructure security, mobile and Wi-Fi security, spam, phishing, firewalls, anonymity, secure email, secure and private cloud computing, and web security.
Prerequisite: COMPSCI 201P or COMPSCI 202P
Restriction: Master of Computer Science Degree students only. Graduate students only.

COMPSCI 204. Usable Security and Privacy. 4 Units.
Introduces usability problems in security and privacy methods, tools, and software. Overviews prominent examples of both failures and successes in usable security and privacy. Surveys state-of-the-art techniques and evaluation methodologies.
Same as IN4MATX 237.
Overlaps with IN4MATX 231, COMPSCI 203.
Restriction: Informatics Majors have first consideration for enrollment. Computer Science Majors have first consideration for enrollment. Undergraduate degree in CompSci or Informatics is strongly recommended.

COMPSCI 206. Principles of Scientific Computing. 4 Units.
Overview of widely used principles and methods of numerical and scientific computing, including basic concepts and computational methods in linear algebra, optimization, and probability.
Prerequisite: Basic courses in multivariate calculus, linear algebra, and probability.
Overlaps with STATS 230.

COMPSCI 206P. Principles of Scientific Computing. 4 Units.
Overview of widely used principles and methods of numerical and scientific computing, including basic concepts and computational methods in floating-point, linear algebra, optimization, simulation, modeling, and probability/statistics as it relates to model evaluation.
Prerequisite: Basic knowledge of multivariate calculus, linear algebra, and familiarity with MATLAB.
Restriction: Graduate students only.

COMPSCI 210P. Computer Graphics and Visualization . 4 Units.
Interactive 3D graphics rendering pipeline, illumination and shading, ray tracing, texture-, bump-, mip-mapping, hidden surface removal, anti-aliasing, multiresolution representations, volume rendering techniques, iso-surface extraction.
Prerequisite: Familiarity with linear algebra is required.
Restriction: Master of Computer Science Degree students only. Graduate students only.
COMPSCI 211A. Visual Computing. 4 Units.
Fundamentals of image processing (convolution, linear filters, spectral analysis), vision geometry (projective geometry, camera models and calibration, stereo reconstruction), radiometry (color, shading, illumination, BRDF), and visual content synthesis (graphics pipeline, texture- bump-, mip-mapping, hidden surface removal, anti-aliasing).

COMPSCI 211B. Computer Graphics and Visualization. 4 Units.
Interactive 3D graphics rendering pipeline, illumination and shading, ray tracing, texture-, bump-, mip-mapping, hidden surface removal, anti-aliasing, multiresolution representations, volume rendering techniques, iso-surface extraction.

Prerequisite: COMPSCI 211A

COMPSCI 211P. Visual Computing . 4 Units.
Develops a comprehensive understanding of fundamentals of image processing (convolution, linear filters, spectral analysis), vision geometry (projective geometry, camera models and calibration, stereo reconstruction), radiometry (color, shading, illumination, BRDF), visual content synthesis (graphics pipeline, texture- bump-, mip-mapping, hidden surface, anti-aliasing).

Prerequisite: Undergraduate-level familiarity with Linear algebra (matrices and operations), eigenvalue, eigenvectors, linear regression; basic of algorithms; programming in C/C++

Restriction: Graduate students only.

COMPSCI 212. Multimedia Systems and Applications. 4 Units.
Organization and structure of modern multimedia systems; audio and video encoding/compression; quality of service concepts; scheduling algorithms for multimedia; resource management in distributed and multimedia systems; multimedia protocols over high-speed networks; synchronization schemes; multimedia applications; and teleservices.

Prerequisite: COMPSCI 143A and COMPSCI 161. B.S. degree in Computer Science is also accepted. Recommended: COMPSCI 131 and COMPSCI 132 and COMPSCI 133.

COMPSCI 213. Introduction to Visual Perception. 4 Units.
Introduction to the process of human visual perception. Offers the physiological and psychophysical approach to understand vision, introducing concepts of perception of color, depth, movement. Examples of quantification and application of these models in computer vision, computer graphics, multimedia, HCI.

Prerequisite: MATH 121A

COMPSCI 216. Image Understanding. 4 Units.
The goal of image understanding is to extract useful semantic information from image data. Course covers low-level image and video processing techniques, feature descriptors, segmentation, objection recognition, and tracking.

Prerequisite: I&C SCI 6D and (I&C SCI 6N or MATH 6G or MATH 3A) and MATH 2B and I&C SCI 46

COMPSCI 217. Light and Geometry in Computer Vision. 4 Units.
Examines the issues of light transport and multiview geometry in computer vision. Applications include camera calibration, 3D understanding, stereo reconstruction, and illumination estimation.

Prerequisite: I&C SCI 6D and (I&C SCI 6N or MATH 6G or MATH 3A) and MATH 2B and I&C SCI 46 and COMPSCI 211A

COMPSCI 221. Information Retrieval, Filtering, and Classification. 4 Units.
Algorithms for the storage, retrieval, filtering, and classification of textual and multimedia data. The vector space model, Boolean and probabilistic queries, and relevance feedback. Latent semantic indexing; collaborative filtering; and relationship to machine learning methods.

Prerequisite: COMPSCI 161 and COMPSCI 171 and (I&C SCI 6N or MATH 3A or MATH 6G)

Same as IN4MATX 225.

Restriction: Graduate students only.

COMPSCI 222. Principles of Data Management. 4 Units.
Covers fundamental principles underlying data management systems. Content includes key techniques including storage management, buffer management, record-oriented file system, access methods, query optimization, and query processing.

Prerequisite: COMPSCI 122A and (I&C SCI 53 or COMPSCI 143A)

Concurrent with COMPSCI 122C.
COMPSCI 222P. Principles of Data Management. 4 Units.
Covers fundamental principles underlying data management systems. Understanding and implementation of key techniques including storage management, buffer management, record-oriented file system, access methods, query optimization, and query processing.

Prerequisite: C++ programming skills, understanding of Data Structures and Algorithms
Restriction: Graduate students only.

COMPSCI 223. Transaction Processing and Distributed Data Management. 4 Units.
Covers fundamental principles underlying transaction processing including database consistency, concurrency control, database recovery, and fault-tolerance. Includes transaction processing in centralized, distributed, parallel, and client-server environments.

Prerequisite: COMPSCI 222 and COMPSCI 131

COMPSCI 225. Next Generation Search Systems. 4 Units.
Discusses concepts and techniques related to all aspects of search systems. After considering basic search technology and the state-of-art systems, rapidly developing techniques for multimedia search, local search, event-search, and video-on-demand are explored.

Prerequisite: I&C SCI 21 or CSE 21 or IN4MATX 41 or I&C SCI 31 or CSE 41
Restriction: Upper-division students only. Graduate students only.
Concurrent with COMPSCI 125.

COMPSCI 230. Distributed Computer Systems. 4 Units.
Principles of distributed computing systems. Topics covered include message-passing, remote procedure calls, distributed shared memory synchronization, resource and process/thread management, distributed file systems, naming and security.

COMPSCI 232. Computer and Communication Networks. 4 Units.

Prerequisite: EECS 148 or COMPSCI 132
Same as EECS 248A, NET SYS 201.
Restriction: Graduate students only.

COMPSCI 232P. Computer and Communication Networks. 4 Units.
Internet architecture, protocols, and services. Advanced concepts of IP and TCP, including addressing, internetworking, forwarding, routing, and implementations of flow and congestion control. Internet services such as Network Address Translation and Domain Name Servers. Overview of Local Area Networks.

Restriction: Graduate students only.

COMPSCI 233. Networking Laboratory. 4 Units.
A laboratory-based introduction to basic networking concepts such as addressing, sub-netting, bridging, ARP, and routing. Network simulation and design. Structured around weekly readings and laboratory assignments.

Prerequisite: EECS 148 or COMPSCI 132
Same as NET SYS 202.

COMPSCI 234. Advanced Networks. 4 Units.
Design principles of networked systems, advanced routing and congestion control algorithms, network algorithms, network measurement, management, security, Internet economics, and emerging networks.

Prerequisite: NET SYS 201 or COMPSCI 232 or EECS 248A
Same as NET SYS 210.
COMPSCI 236. Wireless and Mobile Networking. 4 Units.
Introduction to wireless networking. The focus is on layers 2 and 3 of the OSI reference model, design, performance analysis, and protocols. Topics covered include: an introduction to wireless networking, digital cellular, next generation cellular, wireless LANs, and mobile IP.

Prerequisite: EECS 148 or COMPSCI 132

Same as NET SYS 230.

COMPSCI 237. Middleware for Networked and Distributed Systems. 4 Units.
Discusses concepts, techniques, and issues in developing distributed systems middleware that provides high performance and Quality of Service for emerging applications. Also covers existing standards (e.g., CORBA, DCOM, Jini, Espeak) and their relative advantages and shortcomings.

Prerequisite: An undergraduate-level course in operating systems and networks.

Same as NET SYS 260.

COMPSCI 238. Advanced Operating Systems. 4 Units.
Focuses on advanced and graduate-level topics in operating systems. Presents important recent developments in operating systems, topics not covered in undergraduate operating systems courses. This includes novel operating system designs and techniques to improve existing ones.

Prerequisite: COMPSCI 143A

COMPSCI 238P. Operating Systems. 4 Units.
In-depth organization of the core operating system abstraction and its implementation (virtual memory, kernel and user mode, system calls, threads, context switches, interrupts, inter-process communication, hardware interface, etc.) and a range of recent developments in de-facto industry standard operating systems.

Prerequisite: Working knowledge of C and the Linux environment.

Restriction: School of Info & Computer Sci students only. Master of Computer Science Degree students only. Graduate students only.

COMPSCI 241. Advanced Compiler Construction. 4 Units.
Advanced study of programming language implementation techniques: optimizations such as common sub-expression elimination, register allocation, and instruction scheduling. Implementation of language features such as type-directed dispatch, garbage collection, dynamic linking, and just-in-time code generation.

Prerequisite: COMPSCI 142A

COMPSCI 242. Parallel Computing. 4 Units.

COMPSCI 242P. Compilers and Interpreters. 4 Units.
Provides in-depth study of compilers and interpreters which are the primary forms of programming language processing in computing.

Prerequisite: Knowledge of C++ programming is required.

Restriction: Master of Computer Science Degree students only. Graduate students only.

COMPSCI 243. High-Performance Architectures and Their Compilers. 4 Units.
Emphasis on the development of automatic tools (i.e., compilers/environments) for the efficient exploitation of parallel machines, and the trade-offs between hardware and software in the design of supercomputing and high-performance machines.

COMPSCI 244. Introduction to Embedded and Ubiquitous Systems. 4 Units.
Embedded and ubiquitous system technologies including processors, DSP, memory, and software. System interfacing basics; communication strategies; sensors and actuators, mobile and wireless technology. Using pre-designed hardware and software components. Design case studies in wireless, multimedia, and/or networking domains.

Prerequisite: I&C SCI 51 and COMPSCI 152 and COMPSCI 161 and (I&C SCI 6N or MATH 3A or MATH 6G or I&C SCI 6D). B.S. degree in Computer Science is also accepted.

Same as IN4MATX 244.
COMPSCI 244P. Introduction to the Internet of Things. 4 Units.
Develops a comprehensive understanding of the hardware and software technology, the communication protocols, and the security and privacy requirements underlying the Internet of Things ecosystem, particularly those using computing elements (processors, DSPs/ASIPs), sensors, and accessing cloud services.
Prerequisite: Undergraduate-level familiarity with fundamentals of integrated circuit blocks, processors, optimization/algorithm design, and some programming experience.
Restriction: Graduate students only.

COMPSCI 245. Software for Embedded Systems. 4 Units.
Prerequisite: I&C SCI 51 and COMPSCI 152 and COMPSCI 161 and (I&C SCI 6N or MATH 3A or MATH 6G or I&C SCI 6D). B.S. degree in Computer Science is also accepted.

COMPSCI 246. Dependability, Validation, and Testing of Embedded Systems. 4 Units.
Prerequisite: B.S. degree in Computer Science or basic courses in algorithms and data structures, calculus, discrete math, linear algebra, symbolic logic.

COMPSCI 248A. Introduction to Ubiquitous Computing. 4 Units.
The "disappearing computer" paradigm. Differences to the desktop computing model: applications, interaction in augmented environments, security, alternate media, small operating systems, sensors, and embedded systems design. Evaluation by project work and class participation.
Same as IN4MATX 241.

COMPSCI 248B. Ubiquitous Computing and Interaction. 4 Units.
Principles and design techniques for ubiquitous computing applications. Conceptual basis for tangible and embodied interaction. Interaction in virtual and augmented environments. Design methods and techniques. Design case studies. Examination by project work.
Prerequisite: IN4MATX 231 and IN4MATX 241
Same as IN4MATX 242.

COMPSCI 250A. Computer Systems Architecture. 4 Units.
Study of architectural issues and their relation to technology and software: design of processor, interconnections, and memory hierarchies.
Prerequisite: COMPSCI 152

COMPSCI 250B. Modern Microprocessors. 4 Units.
Fundamental concepts and recent advances in computer architecture necessary to understand and use modern microprocessors. Topics span out-of-order execution, multiple instruction issue, control/data speculation, predication, advanced cache and DRAM organizations, embedded systems, DSP and multi-media instructions.
Prerequisite: COMPSCI 250A
Overlaps with COMPSCI 243.

COMPSCI 250P. Computer Systems Architecture. 4 Units.
Study of architectural issues and their relation to technology and software: design of processor, interconnections, and memory hierarchies.
Prerequisite: Undergraduate-level familiarity with fundamentals of integrated circuit blocks, processors, and optimization/algorithm design, and some programming experience.
Restriction: Graduate students only.

COMPSCI 252. Introduction to Computer Design. 4 Units.
The methodology and use of CAD tools for computer design, accomplished by a lab in which students practice design using commercially available silicon compilers and other tools.
Prerequisite: COMPSCI 151 and COMPSCI 152
COMPSCI 253. Analysis of Programming Languages. 4 Units.
Concepts in modern programming languages, their interaction, and the relationship between programming languages and methods for large-scale, extensible software development. Empirical analysis of programming language usage.

Same as IN4MATX 212.

COMPSCI 253P. Advanced Programming and Problem Solving. 4 Units.
Provides in-depth preparation for industry interviews requiring demonstration of problem solving and programming skills. Emphasis is on understanding problem statements, considering edge cases, developing effective test cases, designing correct solutions, explaining these clearly, and implementing a solution correctly.

Corequisite: COMPSCI 260P

Restriction: Master of Computer Science Degree students only. Graduate students only.

COMPSCI 259S. Seminar in Design Science. 2 Units.
Current research and research trends in design science. Forum for presentation and criticism by students of research work in progress.

Repeatability: May be taken for credit 18 times.

COMPSCI 260. Fundamentals of the Design and Analysis of Algorithms. 4 Units.
Covers fundamental concepts in the design and analysis of algorithms and is geared toward non-specialists in theoretical computer science. Topics include: deterministic and randomized graph algorithms, fundamental algorithmic techniques like divide-and-conquer strategies and dynamic programming, and NP-completeness.

Prerequisite: COMPSCI 161

COMPSCI 260P. Fundamentals of Algorithms with Applications. 4 Units.
Covers fundamental concepts in the design and analysis of algorithms and is geared toward practical application and implementation. Topics include greedy algorithms, deterministic and randomized graph algorithms, models of network flow, fundamental algorithmic techniques, and NP-completeness.

Restriction: Graduate students only.

COMPSCI 261. Data Structures. 4 Units.
An in-depth treatment of data structures and their associated management algorithms including resource complexity analysis.

Prerequisite: I&C SCI 46 and COMPSCI 161

COMPSCI 261P. Data Structures with Applications. 4 Units.
Data structures and their associated management algorithms, including their applications and analysis.

Prerequisite: COMPSCI 260P

Restriction: Graduate students only.

COMPSCI 262. Computational Complexity. 4 Units.
Advanced course in computational models and complexity classes. Covers the fundamentals of Turing Machines, Decidability, and NP-completeness. Includes discussion of more advanced topics including polynomial hierarchy, randomized complexity classes, #P-completeness and hardness of approximation.

Prerequisite: COMPSCI 162

COMPSCI 262P. Automata and Grammars. 4 Units.
Principles and applications of automata, grammars, and formal languages. Topics include finite state machines, regular expressions, context-free grammars, pushdown automata, Turing machines, and the limits of computation, as well as text-processing applications in lexical analyzers and parsers.

Restriction: Master of Computer Science Degree students only. Graduate students only.

COMPSCI 263. Analysis of Algorithms. 4 Units.
Analysis of correctness and complexity of various efficient algorithms; discussion of problems for which no efficient solutions are known.

Prerequisite: COMPSCI 161 and COMPSCI 261
COMPSCI 264. Quantum Computation and Information. 4 Units.
Basic models for quantum computation and their foundations in quantum mechanics. Quantum complexity classes and quantum algorithms, including algorithms for factoring and quantum simulation. Introduction to quantum information theory and quantum entanglement.

Prerequisite: Basic courses in linear algebra and algorithms.

COMPSCI 265. Graph Algorithms. 4 Units.
Graph definitions, representation methods, graph problems, algorithms, approximation methods, and applications.

Prerequisite: COMPSCI 161 and COMPSCI 261

COMPSCI 266. Computational Geometry. 4 Units.
An overview of some of the basic problems in computational geometry and of some algorithmic and data-structuring techniques appropriate to their solution.

Prerequisite: COMPSCI 161 and COMPSCI 261

COMPSCI 267P. Data Compression. 4 Units.
An introduction to the theory and practice of modern data compression techniques. Topics include codes, coding, modeling, text compression, lossless and lossy image compression standards and systems, audio compression.

Restriction: Master of Computer Science Degree students only. Graduate students only.

COMPSCI 268. Introduction to Optimization. 4 Units.

Prerequisite: STATS 67 or (STATS 7 and STATS 120A) and (I&C SCI 6N or MATH 3A)

Restriction: School of Info & Computer Sci students have first consideration for enrollment.

COMPSCI 268P. Introduction to Optimization Modeling. 4 Units.

Restriction: Graduate students only.

COMPSCI 269S. Seminar in the Theory of Algorithms and Data Structures. 2 Units.
Current research and research trends in the Theory of algorithms and data structures.

Repeatability: May be taken for credit 18 times.

COMPSCI 271. Introduction to Artificial Intelligence. 4 Units.
The study of theories and computational models for systems which behave and act in an intelligent manner. Fundamental subdisciplines of artificial intelligence including knowledge representation, search, deduction, planning, probabilistic reasoning, natural language parsing and comprehension, knowledge-based systems, and learning.

COMPSCI 271P. Introduction to Artificial Intelligence. 4 Units.
The study of theories and computational models for systems which behave and act in an intelligent manner. Fundamental sub-disciplines of artificial intelligence, including knowledge representation, search, deduction, planning, probabilistic reasoning, natural language parsing and comprehension, knowledge-based systems, and learning.

Restriction: Graduate students only.

COMPSCI 272. Statistical Natural Language Processing. 4 Units.
Statistical models, machine learning algorithms, and computational tasks involved in natural language processing. Focuses on approaches that learn these models from data, and covers applications such as information extraction, dialog systems, machine translation, and question answering.

Prerequisite: COMPSCI 171 and COMPSCI 178

Restriction: School of Info & Computer Sci students have first consideration for enrollment. Graduate students only.
COMPSCI 273A. Machine Learning. 4 Units.
Computational approaches to learning algorithms for classifications, regression, and clustering. Emphasis is on discriminative classification methods such as decision trees, rules, nearest neighbor, linear models, and naive Bayes.
Prerequisite: COMPSCI 271 and COMPSCI 206

COMPSCI 273P. Machine Learning and Data Mining. 4 Units.
Introduction to principles of machine learning and data mining. Learning algorithms for classifications, regression, and clustering. Emphasis is on discriminative classification methods such as decision trees, rules, nearest neighbor, linear models, and naive Bayes.
Prerequisite: COMPSCI 271. COMPSCI 271 with a grade of B or better. Python programming knowledge is required.
Restriction: Master of Computer Science Degree students only. Graduate students only.

COMPSCI 274A. Probabilistic Learning: Theory and Algorithms. 4 Units.
An introduction to probabilistic and statistical techniques for learning from data, including parameter estimation, density estimation, regression, classification, and mixture modeling.
Prerequisite: COMPSCI 206

COMPSCI 274B. Learning in Graphical Models. 4 Units.
Models for data analysis are presented in the unifying framework of graphical models. The emphasis is on learning from data but inference is also covered. Real world examples are used to illustrate the material.
Prerequisite: COMPSCI 274A

COMPSCI 274C. Neural Networks and Deep Learning. 4 Units.
Neural network and deep learning from multiple perspectives. Theory of parallel distributed processing systems, algorithmic approaches for learning from data in various manners, applications to difficult problems in AI from computer vision, to natural language understanding, to bioinformatics and chemoinformatics.
Prerequisite: (STATS 120A and STATS 120B) or MATH 121A or COMPSCI 178 or COMPSCI 273A
Overlaps with COMPSCI 274A, COMPSCI 279S, COMPSCI 277, COMPSCI 276, COMPSCI 278, COMPSCI 274B.
Concurrent with COMPSCI 172B.

COMPSCI 274P. Neural Networks and Deep Learning. 4 Units.
Introduction to principles of machine learning and neural networks. Architecture design. Feedforward and recurrent networks. Learning models and algorithms. Applications to data analysis and prediction problems in areas such as machine vision, natural language processing, biomed, and finance.
Prerequisite: COMPSCI 271P. Knowledge of Python programming is required.
Restriction: Master of Computer Science Degree students only. Graduate students only.

COMPSCI 275. Network-based Reasoning/Constraint Networks. 4 Units.
Study of the theory and techniques of constraint network model. Covers techniques for solving constraint satisfaction problems: backtracking techniques, consistency algorithms, and structure-based techniques. Tractable subclasses. Extensions into applications such as temporal reasoning, diagnosis, and scheduling.
Prerequisite: Basic course in algorithm design and analysis.

COMPSCI 276. Reasoning in Probabilistic Graphical Models. 4 Units.
Focuses on algorithms for probabilistic reasoning using graphical models such as Bayesian Networks and Markov Networks that encode knowledge as local probabilistic relations. Tasks include finding most likely scenarios over a subset of variables, or updating posterior probability, given observations.
Prerequisite: A basic course in probability.

COMPSCI 277. Data Mining. 4 Units.
Introduction to the general principles of inferring useful knowledge from large data sets (commonly known as data mining or knowledge discovery). Relevant concepts from statistics, databases and data structures, optimization, artificial intelligence, and visualization are discussed in an integrated manner.
Prerequisite: COMPSCI 273A or COMPSCI 274A
COMPSCI 278. Probability Models. 4 Units.
Advanced probability, discrete time Markov chains, Poisson processes, continuous time Markov chains. Queuing or simulation as time permits.

Prerequisite: STATS 120A

Concurrent with STATS 121.

COMPSCI 284A. Representations and Algorithms for Molecular Biology. 4 Units.
Introduction to computational methods in molecular biology, aimed at those interested in learning about this interdisciplinary area. Covers computational approaches to understanding and predicting the structure, function, interactions, and evolution of DNA, RNA, proteins, and related molecules and processes.

Prerequisite: A Basic course in algorithms, or a basic course in molecular biology.

Concurrent with COMPSCI 184A.

COMPSCI 284C. Computational Systems Biology. 4 Units.

Prerequisite: COMPSCI 284A or (BIO SCI 99 and MATH 2D)

Concurrent with COMPSCI 184C.

COMPSCI 285. Mathematical and Computational Biology . 4 Units.

Prerequisite: MATH 227A

Same as MATH 227C.

COMPSCI 290. Research Seminar. 2 Units.
Forum for presentation and criticism by students of research work in progress. Presentation of problem areas and related work. Specific goals and progress of research.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

COMPSCI 295. Special Topics in Information and Computer Science . 4 Units.
Studies in selected areas of Information and Computer Science. Topics addressed vary each quarter.

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.

COMPSCI 296. Elements of Scientific Writing. 4 Units.
Introduces the concepts and principles of good scientific writing, demonstrates them by examples drawn from the literature, and uses a hands-on approach to apply them to documents being written by the participants.

Grading Option: Satisfactory/unsatisfactory only.

COMPSCI 296P. Capstone Professional Writing and Communication for Computer Science Careers . 6 Units.
Written and oral communication for computer science and IT careers. Production of the detailed design and development document for the concurrent capstone design class and refinement of written documents and oral communications skills needed for a successful job search.

Corequisite: COMPSCI 297P
Prerequisite: Successful completion of 24 units in the Master of Computer Science program.

Restriction: Master of Computer Science Degree students only. Graduate students only.
COMPSCI 297P. Capstone Design Project for Computer Science. 6 Units.
Design and development of app, software system, or hardware component of system based on students’ prior knowledge of advanced computer science principles. Implement at least a working prototype and test this using relevant use cases and/or input data.

Corequisite: COMPSCI 296P
Prerequisite: Successful completion of 24 units in the Master of Computer Science program.

Restriction: Master of Computer Science Degree students only. Graduate students only.

COMPSCI 298. Thesis Supervision. 2-12 Units.
Individual research or investigation conducted in preparation for the M.S. thesis option or the dissertation requirements for the Ph.D. program.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only. School of Information and Computer Science majors only.

COMPSCI 298P. Computer Science Practicum. 1-4 Units.
Internship in which students work individually at an outside organization to gain experience with the challenges involved in technology-related work.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Restriction: School of Info & Computer Sci students only. Master of Computer Science Degree students only. Graduate students only.

COMPSCI 299. Individual Study. 1-12 Units.
Individual research or investigation with Computer Science faculty.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only. School of Information and Computer Science majors only.

COMPSCI 299P. Individual Study. 4-8 Units.
Supervised individual study in computer science.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be taken for credit 4 times.

Restriction: Master of Computer Science Degree students have first consideration for enrollment. Graduate students only.

Department of Informatics

André van der Hoek, Department Chair
5019 Donald Bren Hall
949-824-2901
http://www.informatics.uci.edu/

Overview

Our world runs on information, with more and more aspects of daily life having information technologies and digital systems at their core. Topics such as open-source software, virtual organizations, online political campaigns, digital television, social media, and computer games need to be understood and advanced from both a technical and human perspective simultaneously.

This is what Informatics does.

We seek to make a positive difference in how people live, work and build in a digital world. To that end, we study interactions among information technologies and people, create innovative information technologies that serve the diverse needs of society, and educate our students to be leaders in these endeavors.

Our work is shaped by four key values:

• **Creativity.** We create new technologies, new experiences, and new ways of understanding. We believe that information technology provides a rich platform for expression, from programming environments to digital media, and creative arts.

• **Engagement.** We focus on real-world concerns, with a strong empirical focus and a commitment to understanding and advancing technology in real life, around the world.
Have a cumulative GPA of 3.0 and grade of B or higher in all required courses below:

Students transferring into the major must satisfy the following minimum requirements.

Transfer Applicants:

Freshmen Applicants: See the Undergraduate Admissions section

www.informatics.uci.edu/undergrad/bs-informatics)

Informatics majors complete one of four specializations: Human-Computer Interaction (HCI), Organizations and Information Technology (OIT), Information technology and what tomorrow's technology can offer, students learn how to adapt to the continuous new circumstances of the profession —

Overall, the major strongly emphasizes people and design; building an understanding of how existing technologies shape human behavior, society, and culture; and how we can design future technologies that better fit human and organizational practices. Given the fluid nature of people’s expectations for information technology and what tomorrow’s technology can offer, students learn how to adapt to the continuous new circumstances of the profession —

Whether it is a new client and their habits, an emerging new device or software capability, or a new team and its practices.

Informatics majors complete one of four specializations: Human-Computer Interaction (HCI), Organizations and Information Technology (OIT), Health Informatics (HI), or Specialization in Individual Studies. More information is available at the Department of Informatics website (http://

Admissions

Freshmen Applicants: See the Undergraduate Admissions section (p. 52).

Transfer Applicants:

Students transferring into the major must satisfy the following minimum requirements.

Have a cumulative GPA of 3.0 and grade of B or higher in all required courses below:
1. Completion of one college-level mathematics course; preferably courses equivalent to I&C SCI 6B Boolean Logic and Discrete Structures, STATS 7 Basic Statistics or STATS 67 Introduction to Probability and Statistics for Computer Science.

2. One year of computer programming courses in an object–oriented or higher-level programming language. For example, Python, Java, C++, data structures, assembly language and machine organization. Object-oriented or higher-level programming language courses that do not directly articulate to I&C SCI 31-33 can be used to satisfy the admissions requirements. Introduction to computer science courses do not meet this requirement.

NOTES:

Additional computer science courses beyond the two required are strongly recommended, particularly those that align with the major of interest. Our first year of object-oriented programming is taught in Python. Java is used extensively in the curriculum; therefore, transfer students should plan to learn it by studying on their own or by completing related programming courses prior to their first quarter at UCI.

Courses in Visual Basic, C, and C# are not approved preparation for this major.

More information is available at Department of Informatics (http://catalogue.uci.edu/donaldbrenschoolofinformationandcomputersciences/departmentofinformatics/%20http://www.informatics.uci.edu) website (http://www.ics.uci.edu/informatics/ugrad) or at the ICS Student Affairs Office; telephone 949-824-5156; email: ucounsel@uci.edu.

Major and Minor Restrictions

Bren School of ICS majors (including shared majors, BIM, and CSE) pursuing minors within the Bren School of ICS may not count more than five courses toward both the major and minor. Some ICS majors and minors outside of the School are not permitted due to significant overlap. Visit the ICS Student Affairs Office website for Majors and Minors restrictions. (http://www.ics.uci.edu/ugrad/degrees/MajorMinor_Restrictions_Chart.pdf) All students should check the Double Major Restrictions Chart (http://www.ics.uci.edu/ugrad/degrees/Dbl_Major_Restr_Chart.pdf) and view our information page (http://www.ics.uci.edu/ugrad/degrees/Double_Majors.php) on double majoring to see what degree programs are eligible for double majoring.

Requirements for the B.S. in Informatics

All students must meet the University Requirements (p. 91).

Major Requirements

Lower-division

A. Select one of the following series:

<table>
<thead>
<tr>
<th>Course Series</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>I&amp;C SCI 31- 32- 33</td>
<td>Introduction to Programming and Programming with Software Libraries and Intermediate Programming</td>
</tr>
<tr>
<td>or I&amp;C SCI 32A- 33</td>
<td>Python Programming and Libraries (Accelerated) and Intermediate Programming</td>
</tr>
</tbody>
</table>

B. Complete:

<table>
<thead>
<tr>
<th>Course</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>I&amp;C SCI 45J</td>
<td>Programming in Java as a Second Language</td>
</tr>
<tr>
<td>IN4MATX 43</td>
<td>Introduction to Software Engineering</td>
</tr>
<tr>
<td>I&amp;C SCI 6B</td>
<td>Boolean Logic and Discrete Structures</td>
</tr>
<tr>
<td>STATS 7 or STATS 67</td>
<td>Basic Statistics or Introduction to Probability and Statistics for Computer Science</td>
</tr>
</tbody>
</table>

Upper-division

A. Informatics Core Requirements:

<table>
<thead>
<tr>
<th>Course</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>IN4MATX 113</td>
<td>Requirements Analysis and Engineering</td>
</tr>
<tr>
<td>IN4MATX 121</td>
<td>Software Design: Applications</td>
</tr>
<tr>
<td>IN4MATX 131</td>
<td>Human Computer Interaction</td>
</tr>
<tr>
<td>IN4MATX 151</td>
<td>Project Management</td>
</tr>
<tr>
<td>IN4MATX 161</td>
<td>Social Analysis of Computing</td>
</tr>
<tr>
<td>IN4MATX 191A- 191B</td>
<td>Senior Design Project and Senior Design Project</td>
</tr>
</tbody>
</table>

B. One of the following specializations:

1. Specialization in Human-Computer Interaction

   Complete:

<table>
<thead>
<tr>
<th>Course</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>IN4MATX 132</td>
<td>Project in Human-Computer Interaction Requirements and Evaluation</td>
</tr>
</tbody>
</table>

   and select three of the following:
<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>IN4MATX 133</td>
<td>User Interaction Software</td>
</tr>
<tr>
<td>IN4MATX 141</td>
<td>Information Retrieval</td>
</tr>
<tr>
<td>IN4MATX 143</td>
<td>Information Visualization</td>
</tr>
<tr>
<td>IN4MATX 153</td>
<td>Computer Supported Cooperative Work</td>
</tr>
<tr>
<td>IN4MATX 162W</td>
<td>Organizational Information Systems</td>
</tr>
<tr>
<td>IN4MATX 171</td>
<td>Introduction to Medical Informatics</td>
</tr>
</tbody>
</table>

and select two project courses from the following:

- IN4MATX 125 Computer Game Development
- IN4MATX 134 Project in User Interaction Software
- IN4MATX 148 Project in Ubiquitous Computing
- IN4MATX 163 Project in the Social and Organizational Impacts of Computing
- IN4MATX 172 Project in Health Informatics

and select four additional courses from the following:

- IN4MATX 100–190

2. Specialization in Organizations and Information Technology

Complete:

- IN4MATX 141 Information Retrieval
- IN4MATX 162W Organizational Information Systems
- IN4MATX 163 Project in the Social and Organizational Impacts of Computing
- MGMT 5 Management of Contemporary Organizations
- MGMT 102 Managing Organizational Behavior

and select four of the following:

- MGMT 107 Introduction to Management Information Systems
- MGMT 173 Business Intelligence for Analytical Decisions
- MGMT 178 Management of Information Technology
- PSY BEH 9 Introduction to Psychology
- PSY BEH 104S Social Animal: An Introduction to Social Psychology
- PSY BEH 176S Motivation
- SOCIOL 41 Small Group Dynamics
- SOCIOL 135 Social Psychology of Networks
- SOCIOL 141 Organizations
- SOCIOL 143 Social Networks and Social Support
- SOCIOL 145 Occupations and Professions
- IN4MATX 100–190

and select two additional courses from the following:

- IN4MATX 100–190
- COMPSCI 100–199

3. Specialization in Health Informatics

Complete the following:

- IN4MATX 171 Introduction to Medical Informatics
- IN4MATX 172 Project in Health Informatics

Select four from the following:

- IN4MATX 123 Software Architecture
- IN4MATX 124 Internet Applications Engineering
- IN4MATX 132 Project in Human-Computer Interaction Requirements and Evaluation
- IN4MATX 133 User Interaction Software
- IN4MATX 134 Project in User Interaction Software
- IN4MATX 141 Information Retrieval
- IN4MATX 143 Information Visualization
- IN4MATX 148 Project in Ubiquitous Computing
- IN4MATX 153 Computer Supported Cooperative Work
- IN4MATX 162W Organizational Information Systems
IN4MATX 163  Project in the Social and Organizational Impacts of Computing
COMPSCI 111  Digital Image Processing
COMPSCI 122A  Introduction to Data Management
COMPSCI 131  Parallel and Distributed Computing
COMPSCI 134  Computer and Network Security
COMPSCI 145-145L  Embedded Software and Embedded Software Laboratory
COMPSCI 171  Introduction to Artificial Intelligence
COMPSCI 178  Machine Learning and Data-Mining

and select two courses from the following:
NUR SCI 110W  Frameworks for Professional Nursing Practice
PUBHLTH 101  Introduction to Epidemiology
PUBHLTH 104  Analytic and Applied Epidemiology
PUBHLTH 122  Health Policy
PUBHLTH 124  Environmental and Public Health Policy

and select two additional courses from the following:
IN4MATX 100-199
COMPSCI 100-199
PUBHLTH 100-199

4. Specialization in Individual Studies

Informatics majors must complete a detailed proposal to apply for this specialization. All candidates must meet the following minimum qualifications for consideration:

• UCI transcript demonstrating at least 3.0 UC GPA.
• Completion of at least 46 units or sophomore standing at UC Irvine.

Proposals must include the following:

• Syllabi and/or course descriptions of intended coursework
• Academic plan demonstrating completion of 40 units of credit that significantly complements the core Informatics courses to create a coherent curriculum focused on studying some aspect of living, working, and building in a digital world.
• Students entering as freshmen should plan to submit their proposals no later than the beginning of spring quarter of the freshman year. Students entering as transfers must submit their proposals no later than the beginning of spring quarter of their first year at UCI.
• Students must submit their approval proposals to the ICS Student Affairs no later than two weeks after receiving a signature.

All proposals are to be submitted to the Department of Informatics' Undergraduate Vice Chair for approval. Failure to receive approval will require majors to choose another specialization for the major. Information about the Department of Informatics can be found at Informatics.uci.edu.

Minor in Digital Information Systems

The minor in digital information systems is designed for students who want to learn about information systems and their role in business, without preparing to be computer programmers. Many businesses, whether commerce- or service-oriented, are now driven by the information their IT systems capture about customers, their habits, and relevant aspects of the business. Students completing the digital information systems minor learn about the “why” of digital information systems, the technological underpinnings of these systems, and constraints on their design and use.

The minor is ideally suited for students in programs such as business administration, economics, civil engineering or urban studies, where digital information systems are essential to the primary task at hand.
The minor includes course work covering the opportunities and limitations of digital information systems, their design and advanced topics such as information retrieval and visualization. Students completing the minor will gain practical experience designing digital information systems and their interfaces in a variety of different domains.

The minor offers flexibility in the courses that students choose to take, and does not require prior programming experience. While it is possible to enroll in more technical classes, it is also possible to complete the minor without taking courses in programming.

Requirements for the Minor in Digital Information Systems

A. Select one of the following:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>I&amp;C SCI 10</td>
<td>How Computers Work</td>
</tr>
<tr>
<td>I&amp;C SCI 20</td>
<td>Invitation to Computing</td>
</tr>
<tr>
<td>I&amp;C SCI 31</td>
<td>Introduction to Programming</td>
</tr>
</tbody>
</table>

B. Select two of the following:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>I&amp;C SCI 3</td>
<td>Internet Technologies and their Social Impact</td>
</tr>
<tr>
<td>I&amp;C SCI 4</td>
<td>Human Factors for the Web</td>
</tr>
<tr>
<td>I&amp;C SCI 5</td>
<td>Global Disruption and Information Technology</td>
</tr>
<tr>
<td>I&amp;C SCI 11</td>
<td>The Internet and Public Policy</td>
</tr>
<tr>
<td>I&amp;C SCI 32</td>
<td>Programming with Software Libraries</td>
</tr>
<tr>
<td>I&amp;C SCI 32A</td>
<td>Python Programming and Libraries (Accelerated)</td>
</tr>
<tr>
<td>IN4MATX 43</td>
<td>Introduction to Software Engineering</td>
</tr>
<tr>
<td>I&amp;C SCI 61</td>
<td>Game Systems and Design</td>
</tr>
</tbody>
</table>

C. Select four of the following:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>I&amp;C SCI 105</td>
<td>Digital Information Systems</td>
</tr>
<tr>
<td>IN4MATX 131</td>
<td>Human Computer Interaction</td>
</tr>
<tr>
<td>IN4MATX 132</td>
<td>Project in Human-Computer Interaction Requirements and Evaluation</td>
</tr>
<tr>
<td>IN4MATX 143</td>
<td>Information Visualization</td>
</tr>
<tr>
<td>IN4MATX 148</td>
<td>Project in Ubiquitous Computing</td>
</tr>
<tr>
<td>IN4MATX 151</td>
<td>Project Management</td>
</tr>
<tr>
<td>IN4MATX 161</td>
<td>Social Analysis of Computing</td>
</tr>
<tr>
<td>IN4MATX 162W</td>
<td>Organizational Information Systems</td>
</tr>
<tr>
<td>IN4MATX 163</td>
<td>Project in the Social and Organizational Impacts of Computing</td>
</tr>
<tr>
<td>IN4MATX 171</td>
<td>Introduction to Medical Informatics</td>
</tr>
<tr>
<td>IN4MATX 172</td>
<td>Project in Health Informatics</td>
</tr>
</tbody>
</table>

1  Students cannot take both IN4MATX 43 and I&C SCI 105.

NOTE: Bren School of ICS majors may not minor in Digital Information Systems. Courses used to complete the minor in Digital Information Systems may not also count toward the requirements for the Information and Computer Science minor or the Informatics minor.

Minor in Health Informatics

The minor in health informatics prepares students to understand the expanding role of information technology in health care. Doctors, nurses, public health officials, and administrators all interact with information technology and, at times, are intimately involved in the design of information technology solutions to health care issues. Students in the minor learn about the possibilities and limitations of information technology, how its use is changing the health care profession, and how the design of information technology must be performed principally with the users and a range of domain considerations in mind.

The minor is ideally suited for students in programs such as nursing science, public health sciences, and pharmaceutical sciences, as well as students in Bren School majors who wish to gain strong exposure to the domain of health informatics.

The minor includes course work and fieldwork covering a variety of health care settings, including the hospital, doctor’s office, and home care. Students completing the minor will gain practical experience in understanding the health care needs of communities and individuals, and in designing information technology solutions that serve them better.

The minor offers flexibility in the courses that students choose to take, and does not require prior programming experience. While it is possible to enroll in more technical classes, it is also possible to complete the minor without taking courses in programming.
# Requirements for the Minor in Health Informatics

A. Complete:

</tbody>
</table>

1 This course may only be counted by majors outside of the Bren School of ICS.

NOTE: A student must earn a grade of C or better in all courses used to satisfy the requirements of this minor.

## Minor in Informatics

The minor in informatics prepares students to understand the relationship between information technology and people. The finance, movie, journalism, and pharmaceutical industries are just a few examples of where the use of innovative information technology has radically changed our world, in terms of what is now possible, how humans perform their jobs, and how society has critically reacted and adapted to new realities brought forth by information technology use. Students in the minor learn how existing technologies shape human behavior, society and culture, and are introduced to techniques that will enable them to design future technologies that better fit human and organizational practices.

The minor is ideally suited for students in programs such as film and media studies, education sciences or social policy, and public service, where information technology is an integral part of the profession, but not necessarily the primary focus.
The minor includes course work covering a variety of topics, including programming, software engineering, human computer interaction, and social analysis of computerization. Students completing the minor will gain practical experience in designing and building small software systems, creating novel user interfaces, and examining how information technology affects those around it.

The minor offers flexibility in the courses that students choose to take, and does not require prior programming experience. The minor does have a technical underpinning, however, with core courses that teach students how to program software.

**Requirements for the Minor in Informatics**

A. Select one of the following series:

<table>
<thead>
<tr>
<th>Course Series</th>
<th>Course Details</th>
</tr>
</thead>
<tbody>
<tr>
<td>I&amp;C SCI 31-32-33</td>
<td>Introduction to Programming and Programming with Software Libraries and Intermediate Programming</td>
</tr>
<tr>
<td>I&amp;C SCI 32A-33</td>
<td>Python Programming and Libraries (Accelerated) and Intermediate Programming</td>
</tr>
</tbody>
</table>

or

B. Complete:

<table>
<thead>
<tr>
<th>Course</th>
<th>Course Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>IN4MATX 43</td>
<td>Introduction to Software Engineering</td>
</tr>
<tr>
<td>IN4MATX 131</td>
<td>Human Computer Interaction</td>
</tr>
<tr>
<td>IN4MATX 161</td>
<td>Social Analysis of Computing</td>
</tr>
</tbody>
</table>

and at least two additional upper-division courses in Informatics.

NOTE: A maximum of two courses can be taken Pass/Not Pass toward a minor. Bren School majors should refer to the Majors/Minors Restrictions Catalogue section before attempting to minor in Digital Information Systems, Health Informatics, or Informatics. Students who are considering a major in Informatics must complete the major requirements for a letter grade.

**Graduate Programs in the Department of Informatics**

The Department of Informatics offers a number of graduate programs:

* A Ph.D. and M.S. in Informatics, both of which are research-oriented in applying a variety of technical and social approaches to understand fundamental human and digital experiences and to design transformative solutions to a variety of human, organizational, and social challenges.

* A Ph.D. and M.S. in Software Engineering, both of which are research oriented in studying complex software systems and the people that create them through the analysis of current practices by which software is designed and developed and the exploration of new methods, tools, approaches, and techniques to improve our ability to do so.

* A Master of Human Computer Interaction and Design, which is practice oriented and prepares students to apply a variety of empirical, design, and technological approaches to understanding and designing for a wide variety of user experiences.

**Admission to Graduate Programs in Informatics**

Students applying to the program may have degrees in any field, though preference will generally be given to those with a technical or social science background.

**Master of Human Computer Interaction and Design**

The Master of Human Computer Interaction and Design (M.H.C.I.D.) prepares students to apply a variety of empirical, design, and technological approaches to understanding and designing for a wide variety of user experiences. The Master of Human Computer Interaction and Design is an interdisciplinary degree program that provides deep knowledge of social science, computer science, and design. Students learn core knowledge in programming, design, and human computer interaction methods.

During the final two quarters, students participate in a capstone project and prepare portfolios representing their work. The capstone project is collaborative, facilitated by the three in-person periods of study in the program. At the completion of this program, students are able to lead and collaborate in the design, implementation, and evaluation of useful and usable technologies. They are well prepared to contribute to the multi-disciplinary teams that typically construct user experiences, software, technical systems, and human-computer interfaces. They are knowledgeable about the techniques for building successful user interfaces, the design principles that make user interfaces visually clear and appealing, and the techniques for identifying needs for software, its success, and the people and organizations that use their systems.

**Admission**

Applicants are evaluated on the basis of their prior academic record and letters of reference from people either in the student's academic history or work settings. Students applying to the program may have degrees in any field, though preference is generally given to those with a technical, social science, or design background and those with work experience. All applicants are evaluated on the materials submitted: letters of recommendation,
Requirements

All Master of Human Computer Interaction and Design students are expected to maintain a minimum GPA of 3.0 throughout the program, with no individual grade lower than a B-.

A. Complete the following:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Name</th>
</tr>
</thead>
<tbody>
<tr>
<td>IN4MATX 280</td>
<td>Overview of Human-Computer Interaction and Design</td>
</tr>
<tr>
<td>IN4MATX 281</td>
<td>User Needs Analysis</td>
</tr>
<tr>
<td>IN4MATX 282</td>
<td>Design and Prototyping</td>
</tr>
<tr>
<td>IN4MATX 283</td>
<td>User Experience Evaluation</td>
</tr>
<tr>
<td>IN4MATX 284</td>
<td>Advanced Design and Prototyping</td>
</tr>
<tr>
<td>IN4MATX 285</td>
<td>Interactive Technology Studio</td>
</tr>
<tr>

</tr>
<tr>
<td>IN4MATX 287</td>
<td>Capstone Project in HCI and Design</td>
</tr>
<tr>
<td>IN4MATX 288</td>
<td>Capstone Project and Portfolio</td>
</tr>
</tbody>
</table>

The final examination for the M.H.C.I.D. includes three components: 1) Performance on a capstone project that incorporates skills and knowledge from the entire program; 2) Individual and peer evaluations of performance within the capstone project team; and 3) Assessment of a completed portfolio.

Students making normal progress are expected to complete the degree program in approximately 12 months. A guide to sensible program completion in two years is provided, but the 12-month completion time is recommended.

Informatics

Master of Science in Informatics

The M.S. program in Informatics prepares students to apply a variety of technical and social approaches to understand fundamental human and digital experiences, and to design transformative solutions to a variety of human, organizational, and social challenges. A fundamental focus of the research is a dual view of information technology – as a technical object and as a cultural object. From a technical perspective, we are concerned with the design and analysis of advanced information technologies and digital media. But we also understand these as objects that embody social values, shape human experiences, and carry cultural meaning. Our interests lie in the relationship between these two aspects of interactive technology.

The M.S. in Informatics incorporates four connected emphases:

1. An empirical focus that emphasizes understanding of technology design and use in practice.
2. A theoretical focus aimed at understanding contexts of information system use.
3. A technological focus aimed at new capabilities and infrastructures.
4. A design focus that includes integrative and holistic consideration of technical and human considerations.

Students engage with multiple stakeholders, including faculty and researchers in other disciplines, major corporations and entrepreneurial enterprises, governmental and non-governmental agencies, and volunteer organizations such as open source communities. Through our involvement with these organizations, our research connects to the world beyond the university.

Requirements

Students must complete courses, including a research methods core, and research experience courses related to their final thesis. Students must maintain satisfactory academic progress according to the requirements of the program as maintained by the faculty and posted publicly.

A. Complete the following:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Name</th>
</tr>
</thead>
<tbody>
<tr>
<td>IN4MATX 261</td>
<td>Social Analysis of Computing</td>
</tr>
<tr>
<td>IN4MATX 232</td>
<td>Research in Human-Centered Computing</td>
</tr>
<tr>
<td>IN4MATX 209S</td>
<td>Seminar in Informatics (twice, usually in the first year)</td>
</tr>
</tbody>
</table>

B. Complete the following:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Name</th>
</tr>
</thead>
<tbody>
<tr>
<td>IN4MATX 201</td>
<td>Research Methodology for Informatics</td>
</tr>
<tr>
<td>IN4MATX 203</td>
<td>Qualitative Research Methods in Information Systems</td>
</tr>
<tr>
<td>IN4MATX 205</td>
<td>Quantitative Research Methods in Information Systems</td>
</tr>
</tbody>
</table>

C. Complete two quarters of IN4MATX 298.¹
D. Select six graduate-level electives.  

1. To coincide with the completion of the M.S. thesis.

2. The selection of courses should form a coherent educational plan to be approved by the student's faculty advisor. Although the courses may be chosen from any graduate-level courses on campus, it is recommended that at least three be chosen from within the School of Information and Computer Sciences. At most, 12 units of IN4MATX 298 and IN4MATX 299 may be used as electives.

**Final Examination**

**Plan One**

The M.S. thesis defense committee is formed in accordance to UCI Senate regulations. This committee must approve the following for the student to pass the final examination:

*Thesis document:* The student must prepare the written dissertation in accordance with Academic Senate regulations and present this document to the committee with enough advance notice for appropriate review and critique prior to an oral defense. Following an oral defense of this document, any changes required must be approved by the entire committee.

*Oral defense:* The student must pass an oral dissertation defense that consists of a public presentation of the student's research followed by an oral examination by the student's doctoral committee. To ensure the public has an opportunity to participate in this examination, the student must announce the defense title, date, and time at least two weeks prior to the event to all faculty and doctoral students in the department.

**Plan Two**

In the final quarter of study, the student must take a comprehensive examination given by Informatics faculty. The examination covers the core requirements.

Students transferring from the Ph.D. program in Informatics to the M.S. program in Informatics who pass the Ph.D. Advancement exam at a Master's level may substitute that exam for the comprehensive exam.

**Doctor of Philosophy in Informatics**

The Ph.D. in Informatics prepares students to apply a variety of technical and social approaches to understand fundamental human and digital experiences and to design transformative solutions to a variety of human, organizational, and social challenges. A fundamental focus of our research is a dual view of information technology -- as a technical object and as a cultural object. From a technical perspective, we are concerned with the design and analysis of advanced information technologies and digital media. But we understand these too as objects that embody social values, shape human experiences, and carry cultural meaning. Our interests lie in the relationship between these two aspects of interactive technology.

The Ph.D. in Informatics incorporates four connected emphases: an empirical focus that emphasizes understanding of technology design and use in practice; a theoretical focus aimed at understanding contexts of information system use; a technological focus aimed at new capabilities and infrastructures; and a design focus that includes integrative and holistic consideration of technical and human considerations. Students in the Ph.D. program engage with multiple stakeholders, including faculty and researchers in other disciplines, major corporations and entrepreneurial enterprises, governmental and non-governmental agencies, and volunteer organizations such as open source communities. Through our involvement with these organizations, our research connects to the world beyond the university.

All Ph.D. students are expected to maintain a minimum GPA of 3.5 throughout the program. In addition, no grade lower than B is counted towards satisfying any course requirements.

**Program of Study**

**Pre-Candidacy Course Requirements**

1. Required Core Courses

<table>
<thead>
<tr>

<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>IN4MATX 299</td>
<td>Individual Study (four quarters required pre-advancement, recommended at least two quarters per year in each of the first two years)</td>
</tr>
</tbody>
</table>

4. Electives in Informatics (6 Ph.D. level classes, all four units)
A set of six elective courses. The selection of courses should form a coherent educational plan to be approved by the student's faculty advisor and by the Informatics Ph.D. program director. A written record of this plan and its approval must be filed with the Ph.D. program director prior to advancement. Although the courses may be chosen from any Ph.D. level courses on campus, it is recommended that at least three be chosen from within the School of ICS.

Teaching Requirements
To enhance their education and experience in teaching, all students will be required to work as readers or TAs for at least two quarters. Additionally, before or during the first quarter in which they are working in this capacity, all students will enroll in I&C SCI 398A, a two-unit seminar. Those students wishing to gain more instruction around their teaching may also enroll in I&C SCI 398B, the advanced teaching seminar, which is also a two-unit seminar.

Field Examinations
There will be no formal field evaluations. However, each year, students will be evaluated individually and given written feedback about their progress (for first year students, this evaluation will take place before the end of Spring quarter; for continuing students, it will take place before the end of Fall quarter.) In preparation, students will write a statement about their progress and meet with their advisors who give some feedback and complete a form reporting their assessment of the student’s progress. The program faculty as a whole will then meet to discuss all the students, with a letter written to the student summarizing the assessment and, if necessary, deadlines for specific activities to be finished or goals to be achieved. This evaluation letter will state either that the student is making good progress or has been given cautionary status. The students who have certain activities to finish will be reviewed again six months after this evaluation. A second cautionary review constitutes formal failure to make adequate progress within the program.

Qualifying Exam
At the end of the student’s second year: The student develops an appropriate reading list to fit his/her areas of interest within Informatics, co-developed with the advisor. The student then writes a paper synthesizing this literature and noting the areas that are currently interesting and under-researched. The paper serves as the basis for an oral examination, generally in the Spring quarter of the second year.

At the end of the third year: The student will be evaluated by an assessment of a research portfolio. A portfolio should comprise three papers of publishable quality, as judged by the faculty. These papers might well be expansions or developments from term papers developed in class; the goal is to determine the student’s capacity to produce research writing of publishable quality. Student may work on papers collaboratively, but the portfolio as a whole must demonstrate writing ability through single-authored or lead-authored work. (Collaboratively written papers will be accompanied by a statement of contributions signed by all authors.)

The students are encouraged to report on projects conducted with at least two different faculty members. Advancement to candidacy is on the basis of an oral defense of the research portfolio, normally in the Spring of the third year. The advancement committee is formed in accordance with UCI campus regulations.

Doctoral Dissertation
Students are required to complete a doctoral dissertation in accordance with Academic Senate regulations. In addition, they must pass an oral dissertation defense that consists of a public presentation of the student’s research followed by an oral examination by the student’s doctoral committee. The dissertation must be approved unanimously by the committee.

Final Examination
The dissertation defense committee is formed in accordance to UCI Senate regulations. This committee must approve the following for the student to pass the final examination:

Dissertation topic: The student must present a substantial written document representing the student’s dissertation plan. This document must include the proposed dissertation abstract, a dissertation outline, a comprehensive survey of related work, and a detailed plan for completing the work. The student must present this dissertation plan to the dissertation committee, who must unanimously approve the student’s proposal.

Dissertation document: The student must prepare the written dissertation in accordance with Academic Senate regulations and present this document to the committee with enough advance notice for appropriate review and critique prior to an oral defense. Following an oral defense of this document, any changes required must be approved by the entire committee.

Oral defense: The student must pass an oral dissertation defense that consists of a public presentation of the student’s research followed by an oral examination by the student’s doctoral committee. To ensure the public has an opportunity to participate in this examination, the student must announce the defense title, date, and time at least two weeks prior to the event to all faculty and doctoral students in the department.

Normative Time from Matriculation to Degree
Students making normal progress are expected to complete their coursework and produce 2-3 research papers of publishable quality in three years. The dissertation proposal is expected midway through the fourth year, with completion in the sixth.
Software Engineering

The field of Software Engineering is concerned with the creation and analysis of the complex software systems that underlie modern society. Research in Software Engineering targets software artifacts and the people who create them. The field is large, and it encompasses engineering design research, i.e., the creation of new software artifacts with some desirable properties, as well as empirical research, i.e., the study of the effects that software development tools and methods have in the context of software development teams. Topics include software architectures, testing and debugging, software development tools, formal languages, requirements engineering, mining of large software-related data sources, reverse engineering, and development processes.

The Ph.D. in Software Engineering (SE) offers students opportunities for graduate study in the spectrum of intellectual activity in SE. The M.S. in SE complements undergraduate knowledge in related fields with a solid framework for understanding the development of complex software systems.

Undergraduate Preparation for Admission. Typically, incoming students will have an undergraduate degree in computer science, though students may have an undergraduate degree in any field. Additionally they must have significant experience in software development. The ideal applicant is one who shows a considerable analytical depth in the practice of software development, typically gained from first-hand experience with large projects. Students admitted without a major in computer science, informatics, or equivalent will be expected to take undergraduate courses to fill any gaps.

Incoming students who already have a M.S. in Computer Science or closely related field may be exempted from (part of) the pre-candidacy course requirements by petition to the Graduate Dean, as filed by the student’s faculty advisor.

Ph.D. in Software Engineering

Program of Study for the Software Engineering Ph.D.

Pre-Candidacy Course Requirements

Students must complete four software engineering core courses, six elective courses, and two quarters of seminars, literature survey, and individual study courses.

1. Software Engineering Core Courses:

<table>
<thead>
<tr>

<td>Software Architecture</td>
</tr>
</tbody>
</table>

2. Software Engineering Electives. Six elective courses chosen from the following courses offered by the School of ICS (all four units). The set of elective courses chosen by the student must be approved by the student’s research advisor. With the advisor’s permission, the student may substitute other non-seminar courses, as long as they are related to the student’s research interests.

Qualifying Examinations

Written Comprehensive Examination

Students must pass a written examination testing their knowledge of the relevant topics and literature in Software Engineering and their ability to formulate clear arguments in writing and under time constraints. This examination is based on a predetermined reading list maintained by the program faculty. Preparation for this exam is done during two quarters of IN4MATX 291S. This exam is administered at most twice a year.

The exam is graded a Ph.D. PASS, M.S. PASS or FAIL. In case of M.S. PASS or FAIL, it may be re-taken once more, within 12 months, in an attempt to qualify for a Ph.D. PASS. A second M.S. PASS or FAIL results in disqualification of the student from the doctoral program (with or without a terminal M.S. degree).

Research Assessment

Students must find a faculty advisor and successfully complete a research project with that faculty member. The research project should be done over at least two quarters of independent study with that faculty member. The goal of this research assessment is to introduce the student to the practice of scientific publication.

Based on the project, the student must produce a research paper of publishable quality. This research paper must be reviewed by three faculty members in a peer-review process, revised by the student, and approved by the three faculty members.

The research assessment is graded PASS or FAIL. In case of FAIL, the student can re-submit the paper at most one more time within the maximum period of six months. A second FAIL results in disqualification from the program.

Advancement to Candidacy Examination

Each Ph.D. student must pass the oral advancement to candidacy exam, which assesses the student’s ability to conduct, present, and orally defend research work at the doctoral level. The research project and paper are the basis for the student’s oral advancement to candidacy exam. The oral candidacy exam consists of the research presentation by the student, followed by questions from the candidacy committee.

The student must complete the course requirements, and pass the two qualifying examinations prior to advancing to candidacy. The candidacy committee will consist of five faculty members, the majority of whom must be members of the student’s program, and is conducted in accordance with UCI Senate regulations.

Dissertation Topic Defense

The student must present a carefully articulated document representing the student’s dissertation plan. This document must include the proposed dissertation abstract, a discussion of the approach, a comprehensive survey of related work, and a plan for completing the work. The dissertation plan is presented by the student to the dissertation committee, who must unanimously approve the student’s proposal. The dissertation defense committee is formed in accordance to UCI Senate regulations.

Doctoral Dissertation and Final Examination

Students are required to complete a doctoral dissertation in accordance with Academic Senate regulations. In addition, they must pass an oral thesis defense which consists of a public presentation of the student’s research followed by an oral examination by the student’s doctoral committee. The committee must approve the thesis unanimously.

The normative time for advancement to candidacy is three years. The normative time for completion of the Ph.D. is six years, and the maximum time permitted is seven years.

M.S. in Software Engineering

Course Requirements

M.S. students must complete four software engineering core courses, six elective courses, and two quarters of seminars (IN4MATX 209S). Students doing Capstone Plan I (Thesis) must complete two quarters, four units each, of Thesis Supervision (IN4MATX 298); students doing Capstone Plan II (Comprehensive Examination) must complete two quarters of literature survey courses.

The course requirements are identical to the Ph.D., diverging only in making the Literature Survey and the Individual Study courses mutually exclusive, depending on the students’ Capstone option.
Capstone Requirement

Plan I: Thesis Option. Students must take and pass the Research Assessment examination. Additionally, students are required to defend their thesis in a public exam according to UCI Senate Policy. This requirement must be completed by the end of the second year.

Plan II: Comprehensive Examination Option. Students must take the written comprehensive examination, and obtain an M.S. PASS or higher. This requirement must be completed by the end of the second year. In case of FAIL, the exam may be re-taken once more. A second FAIL results in disqualification of the student from the master’s program.

Restriction
The M.S. will not be awarded to students who currently hold a M.S. in software engineering or a related field from the same or another university.

Requirements Beyond Graduate Division Minimum Requirements

All Ph.D. students are expected to maintain a minimum GPA of 3.5 throughout the program. All M.S. students are expected to maintain a minimum GPA of 3.0 throughout the program. Failure to maintain this minimum will result in a recommendation that the student be disqualified. In addition, no grade lower than a B is counted toward satisfying any course requirements.

Faculty

Rebecca W. Black, Ph.D. University of Wisconsin-Madison, Associate Professor of Informatics

Geoffrey C. Bowker, Ph.D. University of Melbourne, Chancellor's Professor of Informatics; Visual Studies (values in design, social studies of databases, science and technology studies)

Yunan Chen, Ph.D. Drexel University, Associate Professor of Informatics; Program in Public Health (medical informatics, human computer interaction)

Roderic N. Crooks, Ph.D. University of California, Los Angeles, Assistant Professor of Informatics (science and technology studies, education technology, critical data studies, data visualization, community archives)

James P. Dourish, Ph.D. University College London, Chancellor's Professor of Informatics; Computer Science (human-computer interaction, computer-supported cooperative work)

Daniel H. Frost, M.S. University of California, Irvine, Senior Lecturer of Computer Science; Informatics (artificial intelligence, software engineering, computer graphics, teaching of programming)

Judith Gregory, Ph.D. University of California, San Diego, Associate Adjunct Professor of Informatics (values in design, translational biomedical informatics, participatory design, design and emotion)

Gillian Hayes, Ph.D. Georgia Institute of Technology, Robert A. and Barbara L. Kleist Professor of Informatics; Education (interactive and collaborative technology, human-computer interaction, computer-supported cooperative work, educational technology, ubiquitous computing)

Mizuko Ito, Ph.D. Stanford University, John D. and Catherine T. MacArthur Foundation Chair in Digital Media and Learning and Professor in Residence of Anthropology; Education; Informatics (ethnography, game studies, youth culture, learning sciences, online communities)

James Jones, Ph.D. Georgia Institute of Technology, Associate Professor of Informatics (software engineering, software testing and analysis, debugging and fault localization, static and dynamic analysis, software visualization)

David G. Kay, J.D. Loyola Marymount University, Senior Lecturer Emeritus of Informatics; Computer Science (computer law, computer science education)

Cory P. Knobel, Ph.D. University of Michigan, Assistant Adjunct Professor of Informatics (interactive and collaborative technology, values in design, modes of knowledge representation, philosophy of science and technology)

Alfred Kobsa, Ph.D. University of Vienna, Professor of Informatics; Computer Science (user modeling, human-computer interaction, artificial intelligence, cognitive science, interdisciplinary computer science)

Cristina V. Lopes, Ph.D. Northeastern University, Professor of Informatics; Computer Science (programming languages, acoustic communications, operating systems, software engineering)

Gloria J. Mark, Ph.D. Columbia University, Professor of Informatics (computer-supported cooperative work, human-computer interaction)

Melissa Mazmanian, Ph.D. Massachusetts Institute of Technology, Associate Professor of Informatics (computer-mediated communication, organization studies, information and communication technologies in practice, social response to emerging technologies, work/non-work negotiations in the information age)

Bonnie A. Nardi, Ph.D. University of California, Irvine, Professor of Informatics (computer-supported collaborative work, human-computer interaction, computer-mediated communication, user studies methods, activity theory, cultural responses to technology development)
Emily Navarro, Ph.D. University of California, Irvine, Lecturer of Informatics

Gary Olson, Ph.D. Stanford University, Professor Emeritus of Informatics (interactive and collaborative technology, human-computer interaction, computer-supported cooperative work)

Judith Olson, Ph.D. University of Michigan, Professor Emeritus of Informatics; Paul Merage School of Business; Urban Planning and Public Policy (interactive and collaborative technology, human-computer interaction, computer-supported cooperative work)

Richard Pattis, M.S. Stanford University, Senior Lecturer of Computer Science; Informatics (MicroWorlds for teaching programming, debugging, computational tools for non-computer scientists)

David F. Redmiles, Ph.D. University of Colorado Boulder, Professor of Informatics (computer-supported cooperative work, human computer interaction, software engineering, globally distributed development teams, user interfaces, software tools)

Debra J. Richardson, Ph.D. University of Massachusetts, Professor Emeritus of Informatics (software engineering, program testing, life-cycle validation, software environments)

Katie Salen Tekinbaş, M.F.A. Rhode Island School of Design, Professor of Informatics (game design, connected learning design, human-computer interaction)

Kurt Squire, Ph.D. Indiana University, Professor of Informatics (video game design, games for learning, mobile technologies, civic engagement, place-based learning)

Constance Steinkuehler, Ph.D. University of Wisconsin, Madison, Professor of Informatics (video games for impact, game-mediated cognition and learning, online social interaction, video games and policy)

Joshua Tanenbaum, M.A. Simon Fraser University, Assistant Professor of Informatics (digital games and narrative, tangible and wearable interaction, maker and DIY culture, nonverbal communication and virtual worlds)

Richard N. Taylor, Ph.D. University of Colorado Boulder, Professor Emeritus of Informatics (software engineering, user interfaces, environments, team support)

Hadar Ziv, Ph.D. University of California, Irvine, Lecturer of Informatics (software testing, requirements engineering, Bayesian modeling)

André W. van der Hoek, Ph.D. University of Colorado Boulder, Professor of Informatics (software engineering)

Affiliate Faculty

Jonathan Alexander, Ph.D. Louisiana State University, Campus Writing Coordinator and Professor of English; Culture and Theory; Education; Gender and Sexuality Studies; Informatics (writing studies, sexuality studies, queer theory, new media studies)

Courses

IN4MATX 12. Barter to Bitcoin: Society, Technology and the Future of Money. 4 Units.
Digital money has captured the broad imagination of speculators, coders, regulators, criminals and the mass media. Course puts this change in context: how do we understand money as a social, political and technological phenomenon?
