School of Pharmacy and Pharmaceutical Sciences

Jan D. Hirsch, Founding Dean
Andrej Luptak, Department of Pharmaceutical Sciences Chair
Alexandre Chan, Department of Clinical Pharmacy Practice Chair

209 Steinhaus Hall
949-824-1991
http://www.pharmsci.uci.edu

Founded in 2020, the UC Irvine School of Pharmacy and Pharmaceutical Sciences is the first public pharmacy school in the Los Angeles-Orange County region.

We offer the following undergraduate, graduate, and professional degrees:

• Bachelor of Science (B.S.) in Pharmaceutical Sciences
• Master of Science in Pharmacology (MSP)
• Doctor of Philosophy (Ph.D.) in Pharmacological Sciences
• Doctor of Pharmacy (Pharm.D.)

Our school encompasses two departments: Pharmaceutical Sciences (established in 2007) and Clinical Pharmacy Practice (established in 2020).

As part of the Susan and Henry Samueli College of Health Sciences (https://healthaffairs.uci.edu/the-college/), we actively collaborate with schools and programs in medicine, nursing, population and public health, and the Susan Samueli Integrative Health Institute to educate, train, and mentor the next generation of pharmaceutical scientists and clinical pharmacists.

Together, we will make positive impacts for individuals, communities, and our healthcare system.

With our range of academic programs, clinical practice and research, the UCI School of Pharmacy and Pharmaceutical Sciences spans a continuum from discovery, development, and delivery of new drugs, devices, and diagnostics all the way to optimizing medication therapy in patients and patient populations.

Enrolling in our B.S. in Pharmaceutical Sciences program is an opportunity to join one of the top pharmaceutical sciences departments in the nation while starting on your career path into this exciting field. Our MSP is a two-year, online degree program designed for working professionals looking to advance in their careers. The Ph.D. in Pharmacological Sciences program prepares students for a future in a variety of employment settings, ranging from academic research and industry to federal positions. The Pharm.D. is a four-year professional degree program that prepares graduates to be practice-ready pharmacists who are problem solvers, independent lifelong learners, team players, and leaders who will drive transformative changes in the healthcare system.

• Department of Clinical Pharmacy Practice
• Department of Pharmaceutical Sciences

• Doctor of Pharmacy (Pharm.D.)
• Pharmaceutical Sciences, B.S.
• Pharmacological Sciences, Ph.D.
• Pharmacology, M.S.

Faculty

Amal Alachkar, Ph.D. University of Manchester, Professor of Teaching of Pharmaceutical Sciences (neurotransmitter systems, molecular pharmacology, neuropsychopharmacology)

Bruce Albala, Ph.D. Syracuse University, Adjunct Professor of Environmental and Occupational Health; Environmental and Occupational Health; Pharmaceutical Sciences

Lauren Albrecht, Ph.D. Northwestern University, Assistant Professor of Pharmaceutical Sciences; Developmental and Cell Biology

Alpesh N. Amin, M.D. M.B.A. Northwestern University, Department Chair and Thomas and Mary Cesario Endowed Chair in Medicine and Professor of Medicine; Biomedical Engineering; Clinical Pharmacy Practice; Paul Merage School of Business; Population Health and Disease Prevention; Radiological Sciences

Kevin T. Beier, Ph.D. Harvard University, Assistant Professor of Physiology and Biophysics; Biomedical Engineering; Neurobiology and Behavior; Pharmaceutical Sciences (neuroscience, neural circuits, neural plasticity, molecular neuroscience, behavior, technique development, viral-genetic)
Claudia Benavente, Ph.D. University of Arizona, Associate Professor of Pharmaceutical Sciences; Developmental and Cell Biology (genetics, epigenetics, cancer, pediatric cancer, retinoblastoma, osteosarcoma)

Emiliana Borrelli, Ph.D. University of Strasbourg, Chancellor's Professor of Microbiology and Molecular Genetics; Pharmaceutical Sciences

Rémi Buisson, Ph.D. Université Laval, Assistant Professor of Biological Chemistry; Pharmaceutical Sciences

Christine Cadiz, Pharm.D. University of California, San Diego, Health Sciences Associate Clinical Professor of Clinical Pharmacy Practice

A. Richard Chamberlin, Ph.D. University of California, San Diego, Professor Emeritus of Pharmaceutical Sciences (chemical biology, organic and synthetic)

Alexandre Chan, Pharm.D. Rutgers University, Department Chair and Professor of Clinical Pharmacy Practice; Pharmaceutical Sciences

John Charles Chaput, Ph.D. University of California, Riverside, Professor of Pharmaceutical Sciences; Chemical and Biomolecular Engineering; Chemistry; Molecular Biology and Biochemistry (chemical and synthetic biology)

Olivier Civelli, Ph.D. Swiss Federal Institute of Technology in Zurich, Distinguished Professor of Pharmaceutical Sciences; Developmental and Cell Biology (novel neuroactive molecules, molecular neuropharmacology)

Melanie Cocco, Ph.D. Pennsylvania State University, Associate Professor of Molecular Biology and Biochemistry; Pharmaceutical Sciences

Dan M. Cooper, M.D. University of California, San Francisco, Senior Associate Dean, Clinical Translational Science and Associate Vice Chancellor, Clinical Translational Research and Professor of Pediatrics; Biomedical Engineering; Pharmaceutical Sciences

Fangyuan Ding, Ph.D. École Normale Supérieure de Paris, Assistant Professor of Biomedical Engineering; Developmental and Cell Biology; Pharmaceutical Sciences (quantitative single molecule biology and engineering, systems biology, nucleic-acid based therapies, single cell research tool developments)

Aimee Lara Edinger, Ph.D. University of Pennsylvania, Professor of Developmental and Cell Biology; Pharmaceutical Sciences (cancer biology and metabolism, growth control, protein trafficking)

Nana Entsuah, Pharm.D. Ohio State University, Health Sciences Assistant Clinical Professor of Clinical Pharmacy Practice

John P. Fruehauf, M.D. Rush University, Professor Emeritus of Medicine; Pharmaceutical Sciences

Kelvin W. Gee, Ph.D. University of California, Davis, Professor Emeritus of Pharmaceutical Sciences

Steven A.N. Goldstein, M.D., Ph.D. Harvard University, Vice Chancellor for Health Affairs and Distinguished Professor of Physiology and Biophysics; Pharmaceutical Sciences (ion channels, cardiac arrhythmia, sudden death, stroke, neurotoxins, hypoxia, single-molecule spectroscopy)

Celia Goulding, Ph.D. King's College London, Chair and Professor of Molecular Biology and Biochemistry; Pharmaceutical Sciences

Matthew E. Griffin, Ph.D. California Institute of Technology, Assistant Professor of Chemistry; Pharmaceutical Sciences (chemical biology)

Shawn Griffin, Pharm.D. University of North Carolina, Health Sciences Assistant Clinical Professor of Clinical Pharmacy Practice

Kalpna Gupta, Ph.D. Allahabad University, All India Institute of Medical Sciences, Professor in Residence of Medicine; Pharmaceutical Sciences

Stephen Hanessian, Ph.D. Ohio State University, Distinguished Professor of Pharmaceutical Sciences; Chemistry (organic chemistry, medicinal chemistry)

Jan Hirsch, Ph.D. University of South Carolina, Dean of the School of Pharmacy and Pharmaceutical Sciences and Professor of Clinical Pharmacy Practice

Naoto Hoshi, Ph.D. Kanazawa University, Associate Professor of Pharmaceutical Sciences; Physiology and Biophysics

Lan Huang, Ph.D. University of Florida, Professor of Physiology and Biophysics; Biological Chemistry; Biomedical Engineering; Pharmaceutical Sciences (proteomics, mass spectrometry, structural biology, chemical biology, proteasome biology, protein-protein interactions, protein complexes)

Keri Hurley-Kim, Pharm.D. Touro University, Health Sciences Associate Clinical Professor of Clinical Pharmacy Practice

Mahtab F. Jafari, Pharm.D. University of California, San Francisco, Director of the Center for Healthspan Pharmacology and Professor of Pharmaceutical Sciences; Clinical Pharmacy Practice; Ecology and Evolutionary Biology (anti-aging pharmacology and preventive medicine)

Melanie Joe, Pharm.D. University of Southern California, Associate Dean of Pharmacy Professional Affairs and Health Sciences Associate Clinical Professor of Clinical Pharmacy Practice
Herman Johannesmeyer, Pharm.D. University of Arizona, Health Sciences Assistant Clinical Professor of Clinical Pharmacy Practice
John Jones, J.D. University of San Francisco, Health Sciences Clinical Professor of Clinical Pharmacy Practice
Farah Khorassani, Pharm.D. Massachusetts College of Pharmacy and Health Sciences, Health Sciences Associate Clinical Professor of Clinical Pharmacy Practice
Philip D. Kiser, Pharm.D. Ph.D. Case Western Reserve University, Assistant Professor of Physiology and Biophysics; Clinical Pharmacy Practice; Ophthalmology (vision science, retinoid biochemistry, structural biology, metalloenzymes)
Diana N. Krause, Ph.D. University of California, Los Angeles, Adjunct Professor Emeritus of Pharmaceutical Sciences
Young Jik Kwon, Ph.D. University of Southern California, Professor of Pharmaceutical Sciences; Biomedical Engineering; Chemical and Biomolecular Engineering; Molecular Biology and Biochemistry (gene therapy, drug delivery, cancer-targeted therapeutics, artificially-induced cellular vesicles, multimodal therapies)
Joyce Lee, Pharm.D. University of California, San Francisco, Health Sciences Clinical Professor of Clinical Pharmacy Practice
Frances L. Leslie, Ph.D. University of Aberdeen, Professor Emeritus of Pharmaceutical Sciences
Haoping Liu, Ph.D. Cornell University, Professor of Biological Chemistry; Pharmaceutical Sciences
Wendy F. Liu, Ph.D. Johns Hopkins University, Professor of Biomedical Engineering; Chemical and Biomolecular Engineering; Molecular Biology and Biochemistry; Pharmaceutical Sciences (biomaterials, microdevices in cardiovascular engineering, cell-cell and cell-micro-environment interactions, cell functions and controls)
Shahrad Lotfipour, Ph.D. University of California, Irvine, Assistant Professor of Emergency Medicine; Pathology and Laboratory Medicine; Pharmaceutical Sciences
Andrej Luptak, Ph.D. Yale University, Department Chair and Professor of Pharmaceutical Sciences; Chemistry; Molecular Biology and Biochemistry (chemical biology)
Thomas Martinez, Ph.D. California Institute of Technology, Assistant Professor of Pharmaceutical Sciences
Sarah McBane, Pharm.D. University of North Carolina at Chapel Hill, Associate Dean of Pharmacy Education and Health Sciences Clinical Professor of Clinical Pharmacy Practice
Reginald McNulty, Ph.D University of California, Irvine, Assistant Professor of Molecular Biology and Biochemistry; Pharmaceutical Sciences
David L. Mobley, Ph.D. University of California, Davis, Vice Chair and Professor of Pharmaceutical Sciences; Chemistry (chemical biology, physical chemistry and chemical physics, theoretical and computational)
Benjamin Morehouse, Ph.D. Brandeis University, Assistant Professor of Molecular Biology and Biochemistry; Pharmaceutical Sciences
Seyed Ali Mortazavi, Ph.D. California Institute of Technology, Professor of Developmental and Cell Biology; Biological Chemistry; Pharmaceutical Sciences (functional genomics to study transcriptional regulation in development)
Lee Nguyen, Pharm.D. University of California, San Francisco, Health Sciences Associate Clinical Professor of Clinical Pharmacy Practice
Megan Nguyen, Pharm.D. Western University of Health Sciences, Associate Dean of Pharmacy Student Affairs and Health Sciences Clinical Professor of Clinical Pharmacy Practice
Trina M. Norden-Krichmar, Ph.D. University of California, San Diego, Associate Professor of Epidemiology and Biostatistics; Biological Chemistry; Computer Science; Pharmaceutical Sciences
James S. Nowick, Ph.D. Massachusetts Institute of Technology, UCI Distinguished Professor of Chemistry; Pharmaceutical Sciences (chemical biology, organic and synthetic, polymer, materials, nanoscience)
Aya Ozaki, Pharm.D. Western University of Health Sciences, Assistant Professor of Clinical Pharmacy Practice
Brian Paegel, Ph.D. University of California, Berkeley, Associate Dean of Research and Professor of Pharmaceutical Sciences; Biomedical Engineering; Chemistry (chemical biology, drug discovery, drug discovery, miniaturization, evolution)
Danielle Piomelli, Ph.D. Columbia University, Louise Turner Arnold Endowed Chair in the Neurosciences and Distinguished Professor of Anatomy and Neurobiology; Biological Chemistry; Pharmaceutical Sciences
Lawrence Plon, Pharm.D. M.A. University of Southern California, Assistant Adjunct Professor of Pharmaceutical Sciences; Clinical Pharmacy Practice
Thomas L. Poulos, Ph.D. University of California, San Diego, Professor Emeritus of Molecular Biology and Biochemistry; Chemistry; Pharmaceutical Sciences (chemical biology)

Jennifer A. Prescher, Ph.D. University of California, Berkeley, Professor of Chemistry; Molecular Biology and Biochemistry; Pharmaceutical Sciences (chemical biology, organic and synthetic)

Samuel E. Schriner, Ph.D. University of Washington, Vice Chair and Associate Professor of Teaching of Pharmaceutical Sciences (aging, genetics, biochemistry, mitochondria)

Aryana Sepassi, Pharm.D. University of California, San Diego, Assistant Professor of Clinical Pharmacy Practice

Harinder Singh, Ph.D. Temple University, Director, Graduate Professional Success in STEM (GPS-STEM) and Assistant Adjunct Professor of Physiology and Biophysics; Clinical Pharmacy Practice (medical physiology instruction)

J. Benita Sjogren, Ph.D. Karolinska Institute, Assistant Professor of Pharmaceutical Sciences

Robert Spitale, Ph.D. University of Rochester, Professor of Pharmaceutical Sciences; Molecular Biology and Biochemistry (chemistry, chemical biology, RNA biology)

Jeffrey R. Suchard, M.D. University of California, Los Angeles, Associate Dean of Basic Science Education and Professor of Emergency Medicine; Clinical Pharmacy Practice

Darci Trader, Ph.D. Indiana University, Associate Professor of Pharmaceutical Sciences

Shiou-Chuan (Sheryl) Tsai, Ph.D. University of California, Berkeley, Professor of Molecular Biology and Biochemistry; Chemistry; Pharmaceutical Sciences

Christopher Vanderwal, Ph.D. Scripps Research Institute, Department Vice Chair and Professor of Chemistry; Pharmaceutical Sciences (organic and synthetic)

Peter Spence, Ph.D. Chinese University of Hong Kong, Associate Professor of Teaching of Clinical Pharmacy Practice

Jonathan Watanabe, Pharm.D. University of Southern California, Ph.D. University of Washington, Associate Dean of Pharmacy Assessment and Quality and Professor of Clinical Pharmacy Practice

Gregory A. Weiss, Ph.D. Harvard University, Professor of Chemistry; Molecular Biology and Biochemistry; Pharmaceutical Sciences (analytical, chemical biology, organic and synthetic, polymer, materials, nanoscience)

Cheryl Wisseh, Pharm.D. University of North Carolina, Assistant Professor of Clinical Pharmacy Practice

Weian Zhao, Ph.D. McMaster University, Professor of Pharmaceutical Sciences; Biological Chemistry; Biomedical Engineering; Chemical and Biomolecular Engineering (stem cell therapy, diagnostics, biosensors, immunotherapy, single-cell analysis)

Xiaolin Zi, Ph.D. Shanghai University, Professor of Urology; Pharmaceutical Sciences

Pharmaceutical Sciences Courses

**PHRMSCI 1. New Student Seminar. 1 Unit.**
Weekly meetings consisting of presentations by faculty, professional staff, and Peer Academic Advisors provide information about the Pharmaceutical Sciences major, campus resources, learning skills, and special programs and opportunities.

Grading Option: Pass/no pass only.

Restriction: Pharmaceutical Sciences Majors only. New students only.

**PHRMSCI 3. Professional Development and Careers in the Pharmaceutical Sciences. 1 Workload Unit.**
Designed to help Pharmaceutical Science majors select a career track and prepare for graduate program applications and careers in industry.

Grading Option: Workload Credit P/NP Only.

Restriction: Pharmaceutical Sciences Majors only.

**PHRMSCI 42. Life 101 . 2 Units.**
Covers the latest scientific work on the impact of nutrition, exercise, and lifestyle choices on mental and physical health. Motivates students to make positive changes by fostering personal growth.
PHRMSCI 66. Gateway to Drugs. 4 Units.
Introduces students to human physiology, how drugs work, and where they come from, common health issues and the drugs used to treat them, and well-known recreational drugs.

II

PHRMSCI 76. Ethical Conduct of Research. 2 Units.
Covers the ethical responsibilities of biomedical scientists. Topics include, as discussions and case studies, the high standards of science, the responsible conduct of research, animal experimentation, and clinical trials as they relate to the pharmaceutical sciences.

PHRMSCI H80. Drugs and Society. 4 Units.
Where drugs come from, how drugs work, how and why people abuse drugs, the costs of drug abuse on society, which drugs are commonly abused, and how drug abuse can be prevented and treated. Course intended for non-science majors.

Prerequisite: Recommended: High school chemistry and biology.
Restriction: Campuswide Honors Collegium students only.

II

PHRMSCI 90. The Art of Public Speaking. 4 Units.
Students learn to effectively prepare and present public speeches and slide presentations. Included are storytelling, informative, commemorative, and persuasive speeches, and scientific presentation. Evaluating speeches and strategies to reduce speaker apprehension is also covered.

Restriction: Pharmaceutical Sciences Majors have first consideration for enrollment.

PHRMSCI 120. Human Physiology. 4 Units.
Covers the function of the human body. All major organ systems are discussed. Designed to prepare students for healthcare careers, such as medicine, pharmacy, dentistry, and for research careers which require basic knowledge of how the human body functions.

Corequisite: PHRMSCI 120L
Prerequisite: BIO SCI 99

Overlaps with BIO SCI E109.

PHRMSCI 120L. Human Physiology Lab. 2 Units.
Designed to complement PHRMSCI 120. Computer-based lab simulations are used to study the function of the human body. Class physically meet for review sessions and exams.

Corequisite: PHRMSCI 120
Prerequisite: BIO SCI E109

Overlaps with BIO SCI E112L.

PHRMSCI 121. Human Anatomy with Pathological Correlates. 5 Units.
Covers the forms of, and relationships between, the many anatomical components of the human body, including discussion of several pathological conditions of the body as they relate to anatomy.

Prerequisite: BIO SCI 97 and BIO SCI 98 and BIO SCI 99. Recommended: Organic Chemistry series is highly encouraged.

Overlaps with BIO SCI 136, BIO SCI 170.
Restriction: Pharmaceutical Sciences Majors have first consideration for enrollment.

PHRMSCI 122L. Medical Microbiology Laboratory. 3 Units.
An introduction to the structure, metabolism, cultivation, isolation, classification, and identification of the major groups of bacteria. Additional focus on identification of infection and use of antibiotics in diseased patients.

Prerequisite: BIO SCI 99 and CHEM 51C. CHEM 51C with a grade of C- or better

PHRMSCI 142. Healthspan Sciences. 4 Units.
Covers the complex and multi-factorial process of aging and increases the understanding of factors that contribute to enhanced lifespan, including basic principles of health and wellness and scientifically proven interventions, both pharmacological and non-pharmacological.

Prerequisite: BIO SCI 98 and BIO SCI 99 and PHRMSCI 120
Restriction: Upper-division students only.
PHRMSCI 155. Neuropsychopharmacology. 4 Units.
Mechanisms underlying chemical signaling processes in the nervous system. Fundamental knowledge for understanding the cellular and molecular actions of drugs and their mechanisms of action on synaptic transmission. Applied neuropsychopharmacology including major drug classes and therapeutic uses.

Prerequisite: PHRMSCI 170A. PHRMSCI 170A with a grade of C- or better
Restriction: Upper-division students only.

PHRMSCI 163. Pharmacogenomics and Epigenetics. 4 Units.
Survey of the genetic and epigenetic basis of inter-subject variability in response to drugs. Covers drug efficacy, safety, and need for their optimization in pharmacotherapy. Emphasizes genetic mechanisms of polymorphisms in the pharmacokinetics and pharmacodynamics of representative therapeutic drugs.

Prerequisite: BIO SCI 99
Concurrent with PHRMSCI 263.

PHRMSCI 170A. Molecular Pharmacology I. 4 Units.
Molecular basis of drug-receptor action at the molecular and cellular levels. Structure-function of drug targets emphasizing enzymes, ion channels, and membrane transport proteins. Understanding how the drugs' mechanisms of action contribute to the development of more efficacious and safer drugs.

Corequisite: CHEM 51C
Prerequisite: (CHEM 51C or CHEM H52C) and (PHRMSCI 120 or BIO SCI E109)
Restriction: Pharmaceutical Sciences Majors have first consideration for enrollment.

PHRMSCI 170B. Molecular Pharmacology II. 4 Units.
Introductory survey covering the molecular mechanisms of drugs that target the nervous system, such as anxiolytics, antidepressants, antipsychotics, hypnotics, muscle relaxants, and recreational drugs; drugs related to the immune system, including antibiotics, antihistamines, and immunosuppressants; drugs used to treat cancer.

Prerequisite: PHRMSCI 170A

PHRMSCI 171. Physical Biochemistry. 4 Units.
Thermodynamics and kinetic fundamentals as applied to problems relevant to pharmaceutical sciences such as receptor/enzyme-ligand interactions. Fundamentals of biophysical methods used in the pharmaceutical sciences including structure determination and biomolecular spectroscopy.

Prerequisite: MATH 2B and PHYSICS 3C and (CHEM 1C or CHEM H2C) and BIO SCI 99
Restriction: Pharmaceutical Sciences Majors have first consideration for enrollment.

PHRMSCI 172. Topics in Pharmaceutical Sciences. 2 Units.
Presents information about various fields of research, study, careers, and graduate school opportunities in pharmaceutical sciences. Taught by guest lecturers from various disciplines including 199 research course faculty. Helps Pharmaceutical Sciences students select electives appropriate to their future goals.

Corequisite: CHEM 51C or CHEM H52C
Prerequisite: BIO SCI 99 and (CHEM 51C or CHEM H52C)
Grading Option: Pass/no pass only.

PHRMSCI 173. Pharmacotherapy. 4 Units.
An exploration of the clinical application of medications to selected disease states. Focus is on an understanding of underlying principles of pharmacology and how this knowledge can be applied to treatment of diseases.

Prerequisite or corequisite: PHRMSCI 170B

PHRMSCI 174. Biopharmaceutics and Nanomedicine. 4 Units.
Introduces theories and tools of new drug formulations. Particularly new novel therapeutics based on biological materials, pathological characteristics utilized to achieve the maximum efficacy and specificity, and drug delivery systems based on emerging nanotechnology are extensively discussed.

Restriction: Pharmaceutical Sciences Majors have first consideration for enrollment.
PHRMSCI 174L. Biopharmaceutics and Nanomedicine Lab. 3 Units.
Introduction to cancer drug screening using cellular models, and confirmation of comprehensive therapeutic efficacy using a live animal model. Includes basic cell culture, cytotoxicity assays, cell analysis, drug circulation test, and tumor eradication and imaging experiments. Materials fee.
Prerequisite: PHRMSCI 170B and BIO SCI 100

PHRMSCI 175. Drug Discovery Computing Techniques. 4 Units.
Techniques used in computer-aided drug discovery, including theory behind these techniques and practical applications. Topics include scientific computing; python; classical force fields and simulations; visualization and movie-making; quantum mechanics in drug discovery; molecular dynamics; solvation models; and several others.
Prerequisite: CSE 41 or I&C SCI 31. CSE 42 or I&C SCI 32 is recommended.
Concurrent with PHRMSCI 275.

PHRMSCI 177. Medicinal Chemistry. 4 Units.
An introduction of the basics of drug activity and mechanisms. Strategies used to identify lead compounds such as natural product chemistry, combinatorial chemistry, molecular modeling, and high-throughput screening. Relationship of molecular structure to pharmacological activity.
Prerequisite: CHEM 51A and CHEM 51B and CHEM 51C and (BIO SCI 98 or CHEM 128)
Same as CHEM 177.
Restriction: Pharmaceutical Sciences Majors have first consideration for enrollment.

PHRMSCI 177L. Medicinal Chemistry Laboratory. 3 Units.
An introduction of the basics of drug activity and mechanisms. Strategies used to identify lead compounds such as natural product chemistry, combinatorial chemistry, molecular modeling, and high-throughput screening. Relationship of molecular structure to pharmacological activity. Materials fee.
Corequisite: PHRMSCI 177 or CHEM 177.
Prerequisite: CHEM 51A and CHEM 51B and CHEM 51C and BIO SCI 100 and (BIO SCI 98 or CHEM 128)
Same as CHEM 177L.
Restriction: Pharmaceutical Sciences Majors have first consideration for enrollment.

PHRMSCI 179. Emerging Technologies in Pharmaceutical Sciences and Medicine. 4 Units.
Introduces emerging, ground-breaking technologies in pharmaceutical sciences and medicine, including pharmacogenomics, genome editing, and stem cell and engineered T cell therapies. Explores these novel technologies with both their underlying theories and forward-thinking applications.
Concurrent with PHRMSCI 279.

PHRMSCI 197. Professional Internship. 1-4 Units.
Provides students with opportunity to develop leadership and professional skills necessary for competitive placement in their chosen industry. Students gain new and field-specific skills outside the classroom environment while participating in a supervised internship for a total of 100 hours.
Grading Option: Pass/no pass only.
Repeatability: May be repeated for credit unlimited times.
Restriction: Seniors only.

PHRMSCI 198. Independent Study in Pharmaceutical Sciences. 1-4 Units.
Students interested in independent study should arrange with a faculty member to sponsor and supervise such work. A time commitment of three hours per week per unit is expected. A written report is required at the end of each quarter.
Repeatability: May be taken for credit for 4 units.

PHRMSCI 199. Undergraduate Research. 1-4 Units.
Original research in the laboratory of Pharmaceutical Sciences faculty. Attendance at regular research group meetings is also generally expected, and a quarterly written report is required. Strongly recommended for students considering research careers and/or graduate degree programs.
Repeatability: May be repeated for credit unlimited times.
PHRMSCI H199. Honors Research in Pharmaceutical Sciences. 1-4 Units.
Undergraduate honors research in Pharmaceutical Sciences. A student time commitment of 10-15 hours per week is required.
Repeatability: May be repeated for credit unlimited times.

PHRMSCI 223. Biological Macromolecules. 4 Units.
Introduction to nucleic acid and protein structure, dynamics, and function. Topics include analytical methods, molecular evolution, folding, and catalysis.
Same as CHEM 223.

PHRMSCI 241. Advanced Topics in Pharmacology. 2 Units.
Application of pharmacological principles in disease therapy. Advanced pharmacological mechanisms and in-depth study of drug action. Discussion of several major drug classes/therapeutic strategies: molecular mechanisms of action, physiological consequences of administration, and clinical use.
Restriction: Graduate students only.

PHRMSCI 242. Healthspan Sciences. 4 Units.
Covers the complex and multi-factorial process of aging and increases the understanding of factors that contribute to enhanced lifespan, including basic principles of health and wellness and scientifically proven interventions, both pharmacological and non-pharmacological.
Prerequisite: Recommended: Undergraduate courses in biochemistry, molecular biology, and basic physiology.
Restriction: Graduate students only.
Concurrent with PHRMSCI 142.

PHRMSCI 250A. Current Topics in Pharmaceutical Sciences. 1 Unit.
Intended to expose students to the primary literature and current research in the field of Pharmaceutical Sciences. Students analyze and present information for discussion. Guest speakers from academia and industry may participate throughout the quarter.
Grading Option: Satisfactory/unsatisfactory only.
Repeatability: May be taken for credit 3 times.
Restriction: Graduate students only. Math and Computational Biology Majors only.

PHRMSCI 250B. Current Topics in Pharmaceutical Sciences. 1 Unit.
Intended to expose students to the primary literature and current research in the field of Pharmaceutical Sciences. Students analyze and present information for discussion. Guest speakers from academia and industry may participate throughout the quarter.
Prerequisite: PHRMSCI 250A. PHRMSCI 250A with a grade of B- or better
Grading Option: Satisfactory/unsatisfactory only.
Repeatability: May be taken for credit 3 times.
Restriction: Graduate students only. Math and Computational Biology Majors only.

PHRMSCI 250C. Current Topics in Pharmaceutical Sciences. 1 Unit.
Intended to expose students to the primary literature and current research in the field of Pharmaceutical Sciences. Students analyze and present information for discussion. Guest speakers from academia and industry may participate throughout the quarter.
Prerequisite: PHRMSCI 250B. PHRMSCI 250B with a grade of B- or better
Grading Option: Satisfactory/unsatisfactory only.
Repeatability: May be taken for credit 3 times.
Restriction: Graduate students only. Math and Computational Biology Majors only.

PHRMSCI 251. Experimental Pharmacology. 4 Units.
Introduction to the concepts and techniques used in pharmacological science. Molecular biology, quantitative and biochemical pharmacology, fluorescent probes, behavior, genetics, animal handling, anatomical and receptor binding analysis, methods for ion channel study, the absorption, distribution, metabolism, and elimination of drugs.
Restriction: Graduate students only.
PHRMSCI 254. Introduction to Pharmacology. 4 Units.
Ligand-gated ion channels, G protein-coupled receptors, receptor tyrosine kinases, ligand-regulated transcription factors, their signaling mechanisms, trafficking, macromolecular complexes, and physiological responses.

Restriction: Graduate students only.

PHRMSCI 255. Neuropharmacology. 2 Units.
Mechanisms underlying chemical signaling processes in the brain and periphery. Molecular biology, signal transduction, transmitter synthesis, and inactivation of major neurotransmitter systems. Drugs that act on these major neurotransmitters.

Restriction: Graduate students only.

PHRMSCI 256. Experimental Design for Pharmacologists. 1 Unit.
Population and sample statistics, hypothesis testing, analysis of variance, nonparametric statistics, experimental design, power, and the use of statistical computer software.

Prerequisite: PHARM 251. PHARM 251 with a grade of B- or better

Restriction: Graduate students only.

PHRMSCI 257. Ethics in Research. 1 Unit.
Ethical conduct in research including data handling, authorship, conflict of interest, animal rights, handling of misconduct.

Prerequisite: PHARM 299. PHARM 299 with a grade of B- or better

Repeatability: May be taken for credit 2 times.

Restriction: Graduate students only.

PHRMSCI 263. Pharmacogenomics and Epigenetics. 4 Units.
Survey of the genetic and epigenetic basis of inter-subject variability in response to drugs. Covers drug efficacy, safety, and the need for their optimization in pharmacotherapy. Emphasizes genetic mechanisms of polymorphisms in the pharmacokinetics and pharmacodynamics of representative therapeutic drugs.

Restriction: Graduate students only.

Concurrent with PHRMSCI 163.

PHRMSCI 270. Advanced Pharmacology. 4 Units.
Provides a mechanism-based overview of pharmacology with strong emphasis on clinical application of pharmacology. Students learn the most recent advances in pharmacology as they relate to drug discovery, development, and clinical application.

Restriction: Graduate students only.

Concurrent with PHRMSCI 170A.

PHRMSCI 272. Special Topics in Pharmaceutical Sciences. 2-4 Units.
Reserved for current topics of particular interest in areas of pharmaceutical sciences that are not covered by other courses. The subject will vary from year to year, highlighting, for example, significant emerging fields or highly specialized but vital research areas.

Repeatability: Unlimited as topics vary.

Restriction: Graduate students only.

PHRMSCI 275. Drug Discovery Computing Techniques. 4 Units.
Techniques used in computer-aided drug discovery, including theory behind these techniques and practical applications. Topics include scientific computing; python; classical force fields and simulations; visualization and movie-making; quantum mechanics in drug discovery; molecular dynamics; solvation models; and several others.

Restriction: Graduate students only.

Concurrent with PHRMSCI 175.

PHRMSCI 277. Medicinal Chemistry. 4 Units.
Fundamentals of medicinal chemistry covering diverse aspects of drug design, discovery, synthesis, and development. Molecular basis of drug action with an emphasis on the structure-to-function continuum.
PHRMSCI 279. Emerging Technologies in Pharmaceutical Sciences and Medicine. 4 Units.
Introduces emerging, ground-breaking technologies in pharmaceutical sciences and medicine, including pharmacogenomics, genome editing, and stem cell and engineered T cell therapies. Explores these novel technologies with both their underlying theories and forward-thinking applications.

Concurrent with PHRMSCI 179.

PHRMSCI 298. Research Seminar . 2 Units.
Presentation and discussion of current problems and methods in teaching and research in pharmaceutical sciences.

Repeatability: May be repeated for credit unlimited times.

Restriction: Graduate students only.

PHRMSCI 299. Graduate Research. 1-12 Units.
Supervised original research or investigation under the direction of an individual faculty member.

Repeatability: May be repeated for credit unlimited times.

PHRMSCI 399. University Teaching. 1-4 Units.
Limited to Teaching Assistants.

Grading Option: Satisfactory/unsatisfactory only.

Repeatability: May be repeated for credit unlimited times.

Pharmacology Courses

PHARM 270. Applied Pharmacology . 2 Units.
Introduction to pharmacological techniques and current research problems; includes laboratory demonstrations and research seminars.

Restriction: Pharmacology Majors only.

PHARM 271. Principles of Pharmacology . 3 Units.
Principles of pharmacology: pharmacodynamics, pharmacokinetics, pharmacogenetics, drug interactions, and toxicity.

Restriction: Pharmacology Majors only.

PHARM 272. Receptors and Drug Targets . 3 Units.
Molecular basis of drug-receptor interaction. Receptor properties including gene and protein structure, signaling mechanisms, trafficking and physiological effects: G-protein linked receptors, ligand-gated ion channels, receptor tyrosine kinases, nuclear receptors, and ligand regulated transcription factors.

Restriction: Pharmacology Majors only.

PHARM 274. Research Techniques in Pharmacology. 3 Units.
Experimental techniques and model systems used in pharmacological research. Receptor analysis, bioassay, molecular biology, in vitro pharmacology, biochemical pharmacology, imaging, electrophysiology, in vivo pharmacology, disease models.

Restriction: Pharmacology Majors only.

PHARM 276. Experimental Design and Data Analysis . 3 Units.
Experimental design, data analysis and interpretation. Population and sample statistics, hypothesis testing, analysis of variance, nonparametric statistics, and power calculations.

Restriction: Pharmacology Majors only.

PHARM 277. Ethics in Scientific Research. 1.5 Unit.
Ethical conduct in research including data handling, authorship, conflict of interest, animal rights, and handling of misconduct.

Restriction: Pharmacology Majors only.

PHARM 278. Concepts in Drug Discovery. 3 Units.
Critical steps involved in discovery and optimization of a new drug. Target selection, relationship of molecular structure to pharmacological activities, screening methods, strategies to identify lead compounds, and preclinical characterization necessary for development of the drug for clinical trials.

Restriction: Pharmacology Majors only.
PHARM 279A. Special Topics in Pharmacology I. 1.5 Unit.
Topics of current interest in pharmacology; discussion of recent research publications.
Repeatability: May be taken for credit 1 times as topics vary.
Restriction: Graduate students only. Pharmacology Majors only.

PHARM 279B. Special Topics in Pharmacology II. 3 Units.
Topics of current interest in pharmacology; discussion of recent research publications.
Repeatability: May be taken for credit 1 times as topics vary.
Restriction: Graduate students only. Pharmacology Majors only.

PHARM 280. Master’s Project in Pharmacology. 4 Units.
Capstone research paper on topic of interest in pharmacology.
Restriction: Pharmacology Majors only.

PHARM 281. Neuropharmacology. 3 Units.
Autonomic and central nervous system pharmacology, including major drug classes and therapeutic uses. Mechanisms underlying chemical signaling processes in the brain and peripheral nervous system, including neurotransmitter synthesis, inactivation, and receptor action.
Restriction: Pharmacology Majors only.

PHARM 282. Behavioral Pharmacology. 3 Units.
Restriction: Pharmacology Majors only.

PHARM 283. Cardiovascular Pharmacology. 3 Units.
Basic understanding of drugs used in the prevention and treatment of cardiovascular disease. Mechanisms of action, clinical and adverse effects.
Restriction: Pharmacology Majors only.

PHARM 284. Endocrine, Respiratory, and Gastrointestinal Pharmacology. 3 Units.
Basic understanding of drugs used in endocrine, respiratory, and gastrointestinal conditions, including hormone replacement, contraceptives, and drugs for diabetes, asthma, obesity, ulcer, and gastric reflux. Mechanisms of drug action, clinical and adverse effects.
Restriction: Pharmacology Majors only.

PHARM 288. Seminar. 2 Units.
Presentation and discussion of current problems and methods in teaching and research in pharmacology, toxicology, and therapeutics.
Repeatability: May be repeated for credit unlimited times.
Restriction: Graduate students only.

PHARM 299. Research. 1-12 Units.
Independent research with Pharmacology and Toxicology faculty.
Repeatability: May be repeated for credit unlimited times.
Restriction: Graduate students only.

Pharmacy Courses

PHMD 200A. Interprofessional Clinical Foundations I. 5 Units.
The first course in a four-part series that covers interprofessional patient communication, medical interviewing, physical examination, and health promotion. Direct instruction in professionalism, diversity, social determinants of health, kindness, mindfulness, well-being, epidemiology, and biostatistics.
Grading Option: Honors-Pass-Fail.
Restriction: Doctor of Pharmacy students have first consideration for enrollment. Graduate students only.
PHMD 200B. Interprofessional Clinical Foundations II. 2 Units.
The second course in four-part series that covers interprofessional communication, medical interviewing, physical examination, and health promotion. Direct instruction in professionalism, diversity, social determinants of health, kindness, mindfulness, well-being, epidemiology, and biostatistics.
Grading Option: Honors-Pass-Fail.
Restriction: Graduate students only. Doctor of Pharmacy students have first consideration for enrollment.

PHMD 200C. Interprofessional Clinical Foundations III. 2 Units.
The third course in a four-part series that covers interprofessional communication, medical interviewing, physical examination, and health promotion. Direct instruction in professionalism, diversity, social determinants of health, kindness, mindfulness, well-being, epidemiology, and biostatistics.
Grading Option: Honors-Pass-Fail.
Restriction: Graduate students only. Doctor of Pharmacy students have first consideration for enrollment.

PHMD 200D. Interprofessional Clinical Foundations IV. 2 Units.
The fourth course in a four-part series that covers interprofessional communication, medical interviewing, physical examination, and health promotion. Direct instruction in professionalism, diversity, social determinants of health, kindness, mindfulness, well-being, epidemiology, and biostatistics.
Grading Option: Honors-Pass-Fail.
Restriction: Graduate students only. Doctor of Pharmacy students have first consideration for enrollment.

PHMD 201A. Principles of Pharmacy Practice I. 2 Units.
The first of a four-part series that covers the function and role of the health care team, Pharmacist Patient Care Process, immunization certification, communication and documentation, informatics, patient safety, interviewing, active listening, management/leadership, careers, resiliency, and student wellness.
Grading Option: Honors-Pass-Fail.
Restriction: Doctor of Pharmacy students have first consideration for enrollment. Graduate students only.

PHMD 201B. Principles of Pharmacy Practice II. 2 Units.
The second of a four-part series that covers the function and roles of the health care team, Pharmacist Patient Care Process, immunization certification, communication and documentation, informatics, patient safety, interviewing, active listening, management/leadership, careers, resiliency, and student wellness.
Grading Option: Honors-Pass-Fail.
Restriction: Graduate students only. Doctor of Pharmacy students have first consideration for enrollment.

PHMD 201C. Principles of Pharmacy Practice III. 2 Units.
The third of a four-part series that covers the function and role of the health care team, Pharmacist Patient Care Process, immunization certification, communication and documentation, informatics, patient safety, interviewing, active listening, management/leadership, careers, resiliency, and student wellness.
Grading Option: Honors-Pass-Fail.
Restriction: Graduate students only. Doctor of Pharmacy students have first consideration for enrollment.

PHMD 201D. Principles of Pharmacy Practice IV. 2 Units.
The fourth of a four-part series that covers the function and role of the health care team, Pharmacist Patient Care Process, immunization certification, communication and documentation, informatics, patient safety, interviewing, active listening, management/leadership, careers, resiliency, and student wellness.
Grading Option: Honors-Pass-Fail.
Restriction: Graduate students only. Doctor of Pharmacy students have first consideration for enrollment.

PHMD 202A. Self Care I: Conventional and Complementary. 2 Units.
Educates pharmacy students about healthy lifestyle choices, the importance of mental and physical health, and self-care. Provides students with methods and techniques for dealing with the stressors of a professional educational environment and life challenges.
Grading Option: Honors-Pass-Fail.
Restriction: Doctor of Pharmacy students have first consideration for enrollment. Graduate students only.
PHMD 202B. Self Care II: Conventional and Complementary. 2 Units.
The study of nonprescription products, complementary/alternative medicine, and non-pharmacological interventions for select self-treatable medical conditions commonly encountered by the pharmacist. Emphasis on the pharmacist’s consultant role in product selection and non-pharmacological recommendations.

Grading Option: Honors-Pass-Fail.
Restriction: Graduate students only. Doctor of Pharmacy students have first consideration for enrollment.

PHMD 202C. Self Care III: Conventional and Complementary. 2 Units.
Relates to patients' ability to care for themselves with emphasis on the pharmacist's consultant role and continues to explore self-treatable medical conditions commonly encountered by pharmacists, including non-pharmacologic interventions, nonprescription medications, and complementary/alternative products to treat them.

Grading Option: Honors-Pass-Fail.
Restriction: Graduate students only. Doctor of Pharmacy students have first consideration for enrollment.

PHMD 203A. Pharmacotherapy Principles to Practice I: Cardiology and Respiratory. 8 Units.
Integrates principles of biomedical and pharmaceutical sciences with evidence-based traditional and non-traditional therapies for management and prevention of disease. Topics include clinical chemistry, clinical toxicology, interprofessional health care, and public health. Covers the cardiovascular and respiratory system.

Grading Option: Honors-Pass-Fail.
Restriction: Graduate students only. Doctor of Pharmacy students have first consideration for enrollment.

PHMD 203B. Pharmacotherapy Principles to Practice II: Gastrointestinal and Nutrition. 4 Units.
Integrates principles of biomedical and pharmaceutical sciences with evidence-based traditional and non-traditional therapies for management and prevention of disease. Topics include clinical chemistry, clinical toxicology, interprofessional health care, and public health. Covers the gastrointestinal system and nutrition topics.

Grading Option: Honors-Pass-Fail.
Restriction: Graduate students only. Doctor of Pharmacy students have first consideration for enrollment.

PHMD 203C. Pharmacotherapy - Principles to Practice III: Renal and Immunology. 7 Units.
Integrates principles of biomedical and pharmaceutical sciences with evidence-based traditional and non-traditional therapies for management and prevention of disease. Topics include clinical chemistry, clinical toxicology, interprofessional health care, and public health. Covers the renal and immune systems.

Grading Option: Honors-Pass-Fail.
Restriction: Graduate students only. Doctor of Pharmacy students have first consideration for enrollment.

PHMD 203D. Pharmacotherapy - Principles to Practice IV: Endocrine System. 7 Units.
Integrates principles of biomedical and pharmaceutical sciences with evidence-based traditional and non-traditional therapies for management and prevention of disease. Topics include clinical chemistry, clinical toxicology, interprofessional health care, and public health. Covers the endocrine system.

Grading Option: Honors-Pass-Fail.
Restriction: Doctor of Pharmacy students have first consideration for enrollment. Graduate students only.

PHMD 203E. Pharmacotherapy - Principles to Practice V: Infectious Disease. 6 Units.
Integrates principles of biomedical and pharmaceutical sciences with evidence-based traditional and non-traditional therapies for management and prevention of disease. Topics include clinical chemistry, clinical toxicology, interprofessional health care, and public health. Covers infectious disorders.

Grading Option: Honors-Pass-Fail.
Restriction: Graduate students only. Doctor of Pharmacy students have first consideration for enrollment.
PHMD 203F. Pharmacotherapy - Principles to Practice VI: Central Nervous System. 5 Units.
Integrates principles of biomedical and pharmaceutical sciences with evidence-based traditional and non-traditional therapies for management and prevention of disease. Topics include clinical chemistry, clinical toxicology, interprofessional health care, and public health. Covers the central nervous system.

Grading Option: Honors-Pass-Fail.
Restriction: Graduate students only. Doctor of Pharmacy students have first consideration for enrollment.

PHMD 203G. Pharmacotherapy - Principles to Practice VII: Hematology and Oncologic Disorders. 6 Units.
Integrates principles of biomedical and pharmaceutical sciences with evidence-based traditional and non-traditional therapies for management and prevention of disease. Topics include clinical chemistry, clinical toxicology, interprofessional health care, and public health. Covers hematology and oncologic disorders.

Grading Option: Honors-Pass-Fail.
Restriction: Doctor of Pharmacy students have first consideration for enrollment. Graduate students only.

PHMD 203H. Pharmacotherapy - Principles to Practice VIII: Special Populations and Special Topics. 5 Units.
Integrates principles of biomedical and pharmaceutical sciences with evidence-based traditional and non-traditional therapies for management and prevention of disease. Topics include clinical chemistry, clinical toxicology, interprofessional health care, and public health. Covers special populations, ophthalmology, and special topics.

Grading Option: Honors-Pass-Fail.
Restriction: Graduate students only. Doctor of Pharmacy students have first consideration for enrollment.

PHMD 204A. Information Analytics and Numeracy I: Biostatistics. 2 Units.
Exposure to basic statistics and techniques that are commonly found in the medical and pharmacy literature, covering descriptive and inferential statistics. Students learn to choose the most appropriate statistical parametric and non-parametric tests and interpret findings from the literature.

Grading Option: Honors-Pass-Fail.
Restriction: Doctor of Pharmacy students have first consideration for enrollment. Graduate students only.

PHMD 204B. Information Analytics and Numeracy II: Drug Information, Research Methods, and Literature Analysis. 3 Units.
Addresses development of knowledge, skills, and attitudes required for biomedical inquiry and discovery, including methods for data retrieval, analysis, interpretation, and synthesis.

Grading Option: Honors-Pass-Fail.
Restriction: Graduate students only. Doctor of Pharmacy students have first consideration for enrollment.

PHMD 204C. Information Analytics and Numeracy III: Epidemiology. 2 Units.
Covers distribution of disease and health in groups of people and the factors that influence the distribution, including evaluation of therapeutic and diagnostic treatments and delivery of health care services.

Grading Option: Honors-Pass-Fail.
Restriction: Graduate students only. Doctor of Pharmacy students have first consideration for enrollment.

PHMD 205A. Molecular Basis of Health and Disease I: Microbiology and Immunology. 3 Units.
Principles of medical microbiology, immunology, virology, and parasitology. Introduction to classification, morphology, and physiology of microorganisms, particularly those that cause human pathology - bacteria, viruses, fungi, protozoans, parasite, and worms - and the body’s immune response.

Grading Option: Honors-Pass-Fail.
Restriction: Graduate students only. Doctor of Pharmacy students have first consideration for enrollment.

PHMD 205B. Molecular Basis of Health and Disease II: Microbiology and Immunology. 3 Units.
Principles of medical microbiology, immunology, virology, and parasitology. Introduction to classification, morphology, and physiology of microorganisms, particularly those that cause human pathology - bacteria, viruses, fungi, protozoans, parasite, and worms - and the body’s immune response.

Grading Option: Honors-Pass-Fail.
Restriction: Graduate students only. Doctor of Pharmacy students have first consideration for enrollment.
PHMD 205C. Molecular Basis of Health and Disease III: Clinical Chemistry. 2 Units.
Emphasis on normal human physiology and pathology as it related to clinical chemistry and assessment of disease states with the context of the Pharmacist Patient Care Process. Alterations of clinical chemistry results due to drug therapy are covered.

Grading Option: Honors-Pass-Fail.
Restriction: Graduate students only. Doctor of Pharmacy students have first consideration for enrollment.

PHMD 210. Principles of Pharmacology. 3 Units.
Provides an overview of the basic principles of pharmacology, covering pharmacodynamics - effects of drugs on the body - and pharmacokinetics - the process by which a drug is absorbed, distributed, metabolized, and excreted by the body.

Grading Option: Honors-Pass-Fail.
Restriction: Graduate students only. Doctor of Pharmacy students have first consideration for enrollment.

PHMD 211. Principles of Public Health. 4 Units.
Covers the framework, principles, and core responsibilities of public health research and practice from multidisciplinary perspectives. It also provides the necessary foundation for further studies using crosscutting approaches essential for public health practice.

Grading Option: Honors-Pass-Fail.
Overlaps with PUBH 200.
Restriction: Graduate students only. Doctor of Pharmacy students have first consideration for enrollment.

PHMD 212. Principles of Pharmacogenomics. 2 Units.
Walks students through the basics of genetics and genomics. Particular emphasis is placed on the use of genetics or genetic testing to assist in patient treatment regimens and evaluation of disease.

Grading Option: Honors-Pass-Fail.
Restriction: Doctor of Pharmacy students have first consideration for enrollment. Graduate students only.

PHMD 213. Pharmaceutical Biochemistry. 4 Units.
Topics include the biological, chemical and cellular roles of carbohydrates, lipids, proteins, nucleic acids, hormones, enzymes and vitamins. In addition, the chemical and cellular basis of digestion, intermediary metabolism, biological oxidation and metabolic antagonism are discussed.

Grading Option: Honors-Pass-Fail.
Restriction: Doctor of Pharmacy students have first consideration for enrollment. Graduate students only.

PHMD 214. Pharmacy Law and Ethics. 3 Units.
An introduction to California and federal legal requirements that impact pharmacy practice, emphasizing the legal and ethical principles applied by pharmacists in their decision-making. Explores approaches for resolving ethical dilemmas in patient care.

Grading Option: Honors-Pass-Fail.
Restriction: Doctor of Pharmacy students have first consideration for enrollment. Graduate students only.

PHMD 215. Health Policy and Pharmacoeconomics. 3 Units.
Introduces students to the organization, financing, and delivery of health care services in the U.S. The relationship of providers, patients, payers, etc., are analyzed. Management and research principles utilized to manage drug therapy are introduced.

Grading Option: Honors-Pass-Fail.
Restriction: Doctor of Pharmacy students have first consideration for enrollment. Graduate students only.

PHMD 216. Clinical Toxicology. 2 Units.
Fundamentals of pharmacology and mechanisms of action are reinforced and applied to learn the clinical effects of acute/chronic exposure derived from environmental, dietary, occupational and pharmaceutical sources. Students focus on information literacy skills and clinical management of poisonings.

Grading Option: Honors-Pass-Fail.
Restriction: Graduate students only. Doctor of Pharmacy students have first consideration for enrollment.
**PHMD 220. Medical Physiology with Anatomic Correlates. 5 Units.**
Concepts of physiology and mechanisms of body function at various levels of organization from cellular to organ systems. Emphasis on quantitative understanding of various body processes. Human anatomy is integrated with physiological concepts. Anatomic-physiologic relationships facilitated through virtual labs.

Grading Option: Honors-Pass-Fail.

Restriction: Doctor of Pharmacy students have first consideration for enrollment. Graduate students only.

**PHMD 230. Cannabis Pharmacology and Therapeutics. 2 Units.**
Provide knowledge about the cannabis plant and the derivative constituents. Introduce the scientific basis for development of cannabis-derived medicinal drug products. Provide evidence-based information to navigate the mass of cannabis information and counsel patients in its use and safety.

Grading Option: Satisfactory/unsatisfactory only.

Restriction: Doctor of Pharmacy students only.

**PHMD 231. Anti-Aging Pharmacology. 1 Unit.**
Addresses why we age and what we can do about it. Introduces the five models of aging. Covers the major pathways of aging and drugs that have been demonstrated to extend lifespan in model systems.

Grading Option: Satisfactory/unsatisfactory only.

Restriction: Doctor of Pharmacy students have first consideration for enrollment.

**PHMD 232. Pharmacotherapy Principle to Practice: Hematopoietic Stem Cell Transplantation and Cellular Therapy. 2 Units.**
Integrates principles of biomedical and pharmaceutical sciences with evidence-based traditional and non-traditional therapies for management and prevention of disease in patients receiving hematopoietic stem cell transplantation and cellular therapies.

Grading Option: Satisfactory/unsatisfactory only.

Restriction: Doctor of Pharmacy students have first consideration for enrollment.

**PHMD 240. Mental Health, Medications, and the Media. 2 Units.**
Examines the portrayal of psychiatric disease states and psychoactive drugs through the lens of the media. Critically evaluate documentaries, movies, and television series that portray topics such as drug misuse, psychedelic use, and disease states.

Grading Option: Satisfactory/unsatisfactory only.

Restriction: Doctor of Pharmacy students have first consideration for enrollment.

**PHMD 241. Travel Health. 2 Units.**
Learn to provide effective pre-travel itinerary-based assessment, planning, and consultation related to vaccine-preventable diseases, prevention of other infectious and non-infectious travel-related diseases, and self-treatable conditions not requiring a diagnosis. Topics include yellow fever, malaria, altitude sickness, and emerging tropical diseases.

Grading Option: Satisfactory/unsatisfactory only.

Restriction: Doctor of Pharmacy students have first consideration for enrollment.

**PHMD 242. Advanced Cardiology Pharmacotherapy. 2 Units.**
Focuses on cardiology specialty topics such as arrhythmias, acute decompensated heart failure, cardiogenic shock, sudden cardiac arrest, advanced cardiovascular life support, and the pharmacist’s role in Code Blue situations, medical devices for hemodynamic monitoring and cardiac support, and heart transplantation.

Grading Option: Satisfactory/unsatisfactory only.

Restriction: Doctor of Pharmacy students have first consideration for enrollment.

**PHMD 250A. Managed Care Pharmacy I. 2 Units.**
Introduction to the principles and practice of managed care pharmacy, including collection and synthesis of clinical data, assessment of economic data, and decision-making for a Pharmacy and Therapeutics Committee.

Grading Option: Satisfactory/unsatisfactory only.

Restriction: Doctor of Pharmacy students have first consideration for enrollment.
PHMD 260. Leadership and Management. 2 Units.
Provide an introduction to various leadership roles in the field of pharmacy, as well as management techniques to engage and inspire team building, cultivate a productive work environment, and develop future leaders in the industry.

Grading Option: Satisfactory/unsatisfactory only.

Restriction: Doctor of Pharmacy students only.

PHMD 261. Health Coaching and Wellness for Pharmacists. 2 Units.
Trains student pharmacists to use health coaching techniques to care for those with different clinical conditions and goals. Reviews adult learning theories and skills, such as motivational interviewing, as they apply to health coaching. Reviews elements of clinician wellness.

Grading Option: Satisfactory/unsatisfactory only.

Restriction: Doctor of Pharmacy students have first consideration for enrollment.

PHMD 262. Overcoming Healthcare Disparities in Pharmacy Practice. 2 Units.
Providing an understanding of the causes for healthcare disparities and then proposing pharmacy practice-based solutions for overcoming them. Engaging with community partners and healthcare professionals for real-world experiences.

Grading Option: Satisfactory/unsatisfactory only.

Restriction: Doctor of Pharmacy students have first consideration for enrollment.

PHMD 274A. Pharmaceutics I. 4 Units.
The first in a foundational series designed to develop an understanding of the science behind drug formulation, mechanisms, pharmacokinetics and interconnections with the Pharmacist Patient Care Process.

Grading Option: Honors-Pass-Fail.

Restriction: Doctor of Pharmacy students have first consideration for enrollment. Graduate students only.

PHMD 274B. Pharmaceutics II. 5 Units.
The second course in a foundational series designed to develop an understanding of the science behind drug formulation, mechanisms, pharmacokinetics, and interconnections with the pharmacist patient care process. Topics include drug substances, dosage forms, and therapeutic effects. Includes laboratory.

Grading Option: Honors-Pass-Fail.

Restriction: Graduate students only. Doctor of Pharmacy students have first consideration for enrollment.

PHMD 274C. Pharmaceutics III. 4 Units.
The final course in a foundational series designed to develop an understanding of the science behind drug formulation, mechanisms, pharmacokinetics, and interconnections with the Pharmacist Patient Care Process.

Grading Option: Honors-Pass-Fail.

Restriction: Graduate students only. Doctor of Pharmacy students have first consideration for enrollment.

PHMD 277A. Medicinal Chemistry I. 4 Units.
Application of organic chemistry, biochemistry, molecular biology, physical chemistry, pharmacology, and physiology to understand the theory and mechanics of modern day medicinal chemistry. Topics include receptor-protein structure, dynamics, and interactions; drug development and design; and pharmacodynamics, and pharmacokinetics.

Grading Option: Honors-Pass-Fail.

Restriction: Doctor of Pharmacy students have first consideration for enrollment. Graduate students only.

PHMD 277B. Medicinal Chemistry II. 6 Units.
Walks students through medicinal chemistry, broadly defined. Students utilize the knowledge gained in organic chemistry, biochemistry, molecular biology, physical chemistry, pharmacology and physiology in an integrated fashion as applied to modern medicinal chemistry. Continuation of Medicinal Chemistry I.

Grading Option: Honors-Pass-Fail.

Restriction: Graduate students only. Doctor of Pharmacy students have first consideration for enrollment.
PHMD 280A. Scholarly Project I. 1 Unit.
Provides students an opportunity to develop independent thinking, with particular focus on maturing analytical skills. Students are encouraged to develop an independent project, with a mentor, to study pharmacy-related aspects of multiple areas. First phase identifies project focus.

Grading Option: Honors-Pass-Fail.

Restriction: Doctor of Pharmacy students have first consideration for enrollment. Graduate students only.

PHMD 280B. Scholarly Project II. 1 Unit.
Provides students an opportunity to develop independent thinking, with particular focus on maturing analytical skills. Students develop an independent project, with a mentor, to study pharmacy-related aspects of multiple areas. Phase 2 focuses on final evaluation of project.

Grading Option: Honors-Pass-Fail.

Restriction: Doctor of Pharmacy students have first consideration for enrollment. Graduate students only.

PHMD 281. Clinical Trial Design. 2 Units.
Provide the basic principles for design of randomized clinical trials; provide a foundation in clinical trial phases and design; and recognize key stakeholders in clinical trials.

Grading Option: Satisfactory/unsatisfactory only.

Restriction: Doctor of Pharmacy students only.

PHMD 290. Doctor of Pharmacy Epilogue. 2 Units.
Reinforces and assesses student pharmacist’s performance on cumulative learning outcomes; pre-APPE and APPE knowledge, skills, and attitudes; entrustable professional activities; team- and practice-readiness; and to demonstrate that student pharmacists are achieving outcomes required by the ACPE.

Grading Option: Honors-Pass-Fail.

Restriction: Doctor of Pharmacy students have first consideration for enrollment. Graduate students only.

PHMD 298. Research Seminar . 2 Units.
Designed to engage students and expose them to seminar speakers that come to discuss research or case studies in pharmaceutical sciences and pharmacy.

Grading Option: Honors-Pass-Fail.

Repeatability: May be repeated for credit unlimited times.

Restriction: Doctor of Pharmacy students have first consideration for enrollment. Graduate students only.

PHMD 299. Independent Research. 1-4 Units.
Supervised investigation and study of topics relevant to the practice of pharmacy not covered in other courses. Intended to facilitate a small number of students performing a deeper dive into topics of particular interest to them.

Grading Option: Honors-Pass-Fail.

Repeatability: May be repeated for credit unlimited times.

Restriction: Doctor of Pharmacy students only.
